LONDON AND GREENWICH RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the proprietors of the London and Greenwich Railway Company, was held on Tuesday at the London Tavern, Bishopsgate-street, WILLIAM SHADBOLT, Esq., in the chair.

There was a very large attendance.

The SECRETARY (I. Y. Akerman, Esq.) having read the advertisement calling the meeting,

The CHAIRMAN, after a few introductory remarks, requested the Deputy-Chairman to read the Report of the Directors.

The DEPUTY-CHAIRMAN (Josiah Wilson, Esq.) accordingly read as follows:—

REPORT.

SINCE the Special General Meeting in August last, your Directors have been principally engaged in carrying into effect the Acts of last session, in pursuance of which, a resolution was passed for the creation of new shares. In acting upon this resolution, your Directors were anxious to secure at once so much of the capital necessary for the new works as would give every confidence in entering into the requisite contracts, and still to avoid burthening the Company with more shares, at the depreciation agreed to by the meeting, than was rendered imperative by existing circumstances; and, having afforded ample time to all the shareholders, who were so disposed, to take up the new shares allotted to them, they deemed it due to the original proprietors, as well as to those who had taken up the new scrip, to close the appropriation so soon as they had issued as many shares as would place them in a position hereafter to raise money on mortgage, in conformity with the Act. There accordingly remains 50,000*l.* to be raised, either by mortgage or by shares, as the Directors may consider most conducive to the interests of the Company.

In the execution of the new works, contracts have been made for constructing upwards of one mile and a quarter of the viaduct, being three-fourths of the whole; and your Directors have satisfaction in stating, that they have been undertaken by able and experienced contractors, within the estimates which they had from your engineer, a report from whom on this subject will be read to the meeting.

Your Directors think it proper to advert briefly to the negociations which took place at the instance of the London and Croydon Railway Board, on the subject of the tolls, and which cannot but be known to many of the Shareholders, in consequence of the correspondence having been printed and circulated. From the first, however, there was a broad difference of opinion between the two boards as to the basis on which the tolls should be charged, and your Directors considered the proposals of the Croydon Railway Board as tending to neutralize the additional powers guaranteed by the recent Act to this Company. Still, believing that a system of proportioning tolls to fares would be conducive to an increase of traffic, they would (under a guarantee of suffering no diminution of receipts thereby), have consented to a trial of reduced tolls and reduced fares on the Croydon traffic; but your Directors considered the scale of tolls offered as too low in proportion to the fares, and they think no stronger proof of this could be required, than the fact that the Croydon Board were unwilling to allow the use of their line from Corbet's Lane to New Cross, on the scale they had themselves suggested; and they even refused to allow the use of it at the same rate per mile as they now pay this Company,—a toll which the Croydon Directors consider too high.

The traffic of the last half year shows an increase in the number of passengers of 80,284 compared with the same period of 1839, and an increase in receipts from passengers of 206*l.* 1*s.* The increase of passengers has subjected the Company to additional expenses for mileage duty, and for the use of carriages under contract, amounting together to 271*l.* 15*s.* 10½*d.* This arises from the introduction of third class carriages, a measure which your Directors adopted rather in deference to the wishes of many of the Shareholders, and to the practice of other railways, than from convictions of their own. This subject, however, is now under the consideration of your Board.

Your Directors have proceeded steadily in execution of the intention expressed by them in the Report adopted at the meeting in February last, of relaying the line, the necessity for which, was pointed out by the Superintendent Engineer, and confirmed by Colonel Landmann. The work has not proceeded quite so rapidly as they could have wished, owing to the time occupied by asphalting the arches, a measure strongly recommended by your consulting Engineer. Towards repaying the expense of this, your Directors have applied 500*l.* out of the funds reserved from the profits of 1839, and 500*l.* out of the earnings of the last year; and they recommend that a portion of each year's profits be appropriated to this object, till the whole expense is liquidated.

The instalments on the last created shares having placed a considerable amount at the disposal of your board they deemed it the most for your advantage to employ a portion of it in discharging the loan from your bankers, by which means the commission of 500*l.* per annum has ceased since last September. They have preferred this mode rather than the disposal at present of the remaining bonds and preference shares of the second capital, or of the surplus land, for this object, believing that they will be able thereby to replace the amount on more favourable terms hereafter.

The accounts for the year show an increase in the total receipts of 1858*l.* 7*s.* 8*d.* over the year 1839, principally arising from the toll paid by the Croydon Railway, which was not open in the early part of 1839; but your Directors have pleasure in stating, that though the traffic on your own railway has produced a less gross receipt than in 1839, they have succeeded in reducing the expenditure to a greater extent than this deficiency, and that in almost every department, except the rates and passenger charges above alluded to. There being now, however, a larger amount of preference shares than last year, the net profit for the original shareholders is 6942*l.* 17*s.* 0*d.*, against 6296*l.* 0*s.* 2*d.*, in 1839. Adding this profit to the balance of the reserved fund, there remains a surplus of 7744*l.* 7*s.* 2*d.*, out of which your Directors recommend that a dividend of 7*s.* on each original share be paid, which will leave a reserve fund of 752*l.* 1*s.* 2*d.* applicable to the expenses of the current year.

Your Directors feel it their duty to bring before your notice a representation which has been made to them by your Secretary, with a recommendation that you should sanction under the circumstances, the payment to him of the sum of 250*l.* in consideration of his services during the earlier years of the Company, before your present Directors were in office, and when the means did not exist to give him an adequate salary.

According to the provisions of the Act, three of the Directors retire from office this day, viz. JOHN WALBANKE CHILDERS, Esq., M.P.; THOMAS CORNEY, Esq.; and JAMES CUNLIFFE, Esq. The two former gentlemen now offer themselves for re-election, and your Directors recommend ANDREW BONAR, Esq., as a gentleman every way highly qualified to promote your interests, in the place of JAMES CUNLIFFE, Esq., who has retired from the Board.

In conclusion, your Directors have only to state, that in endeavouring to bring every important point under your consideration, it has been their wish to avoid extraneous matter and to render their report as succinct and concise as possible. Such additional information, however, as may be required by the Shareholders it will now, and at all times, give them pleasure to afford, and they beg at the same time to assure you that they will, as long as they remain in office, consider a steady adherence to your interests as their paramount duty, disregarding every attempt that may be made to divert them from pursuing this object.

WILLIAM SHADBOLT,
London, 9th February, 1841. Chairman.

To the Chairman and Directors of the London and Greenwich Railway Company.

42, Fish-street Hill, 6th February, 1841.

GENTLEMEN,—I have the honour to Report for your information, and that of the approaching general meeting of the proprietors, that in conformity with an Act of Parliament obtained last session, empowering the Company to increase the width of the London and Greenwich Railway, from the London station to the junction with the Croydon Railway, so as to admit of four lines of way instead of two as heretofore. Two contracts have been entered into for widening the railway as above mentioned, and which extends over about 2,400 yards, leaving only about 660 yards of the line, and the addition to the station to be contracted for. And I have much pleasure in adding, that the prices at which the above contracts have been entered into, remove all doubt as to the sufficiency of my estimated cost of the whole.

It may also be satisfactory that I should state, that the contractors have engaged to complete the works in such time as removes every uncertainty as to the completing of the new works within the period limited by Parliament, notwithstanding that the weather of late has been unfavourable to the execution thereof.

I have the honour to be, Gentlemen,
Your most obedient humble servant,
GEORGE LANDMANN.

To the Chairman and Directors of the London and Greenwich Railway Company.

February, 1841.

GENTLEMEN,—In submitting to you my Report as to the several departments under my charge, as well as to the efficiency of the stock, and the improvements and alterations to the permanent way now in progress of execution, I beg leave to state.

With regard to the locomotive department that by your advantageous contract entered into for the supply of coke, and by the introduction of improvements in the engines, a considerable saving over the last year has been effected not withstanding that for part of the year another description of carriage has been added to the trains, for the use of third-class passengers, nor can I anticipate that any addition to the present stock can be required for some time, as the engines are in a more efficient state of repair than they have hitherto been.

The cost of locomotive power per train has been 1*s.* 2¾*d.* per mile, and I confidently expect that when the permanent way between Deptford and London is entirely relaid, the expenditure under this head will be still further reduced.

In the police department the expenditure is somewhat more than it was last year, and I cannot think that any further reduction can be made with due regard to the public safety or that of the works.

With regard to the relaying of the line together with the asphalting of the arches, recommended by your Engineers, nearly 500 yards have been completed, and the new rails on cross sleepers laid thereon, and so soon as the season of the year will permit the remainder will be proceeded with.

The trains having for the last three months passed over the line relaid, have afforded me an opportunity of witnessing its stability and smoothness of motion with which I am perfectly satisfied.

In conclusion, I have much pleasure in stating that 1,566,736 passengers have been safely conveyed over the line during the past year.

I have the honour to be, Gentlemen, your most obedient servant,

GEO. M. MILLER, Resident Engineer.

RESOLUTIONS.

Moved by John Homer, Esq.; seconded by Lyon Samuel, Esq.:

"That the Report now read be received, adopted, and entered on the minutes; and a printed copy thereof sent to each proprietor together with a statement of the accounts."—Carried unanimously.

Moved by A. K. Hutchison, Esq.; seconded by Dr. Outram:

"That a dividend of seven shillings per share on the registered shares of the original capital of the Company be, and the same is hereby declared, payable to the proprietors on or after the first of March next."—Carried unanimously.

Moved by George Mouey, Esq.; seconded by A. K. Hutchison, Esq.:

"That the sum of two hundred and fifty pounds be paid to the Secretary, agreeably to the recommendation of the Directors."—Carried unanimously.

Moved by the Rev. J. R. Lyon; seconded by Lyon Samuel, Esq.:

"That J. Walbanke Childers, Esq., M.P., Thomas Corney, Esq., and Andrew Bonar, Esq., be elected Directors of this Company."—Carried unanimously.

Moved by John Homer, Esq.; seconded by Dr. Outram:

"That the best thanks of the proprietors are due, and are hereby tendered, to the Directors for their arduous and earnest exertions to promote the interests of this Company on every occasion."—Carried unanimously.

Moved and carried unanimously,

"That the thanks of the Proprietors are due, and are hereby given, to the Auditors, Messrs. Perry and Bower, for the able discharge of the duties of their office."

Moved and carried unanimously.

"That the thanks of the Proprietors be given to Colonel Landmann and the other Officers of the Company."

WILLIAM SHADBOLT, Chairman.

Moved and carried unanimously,

"That the best thanks of the Meeting be given to William Shadbolt, Esq., for his able and urbane conduct in the Chair."

J. Y. AKERMAN, Secretary.

* Including £500 applied to relaying the line.

The Reports were received with much approbation.

Mr. HOMER (of Birmingham) rose to move the adoption of the Reports. He was aware of the heavy responsibility which attached to any person who proposed the sanction of the proprietors to documents containing so many and so heavy items as were usually comprehended in a Railway Report. In the Report now before the meeting some of the items might at first sight appear large, but from his experience with respect to other Companies he was satisfied that they were not larger in this instance than in others, if so large. When he looked back to the position occupied by the Company at the period of the preceding meeting in February last, he thought the situation in which they were now placed was comparatively favourable. (Hear, hear.) *Then* they had a Parliamentary contest before them, and were menaced by the determined opposition of three powerful Companies; *now* happily all differences were terminated. (Hear, hear.) Having in 13 or 14 different days witnessed the great exertions made by the Directors during the contest alluded to, it was with considerable confidence that he now rose to move the adoption of their Report—a Report which he thought was very satisfactory, as showing that the Company had made a marked advance to prosperity, and that their affairs were even in a much better condition than might have been expected. (Hear, hear.) The Parliamentary contest had certainly been no easy one. They had had fourteen counsel arrayed against their two, and there had been twice as many attornies on the side of their opponents as on their own. Their professional advisers had, however, conducted the business in a very excellent manner, and the goodness of their cause had carried them successfully through. (Hear, hear.) With respect to the accounts, there was no one item in them which led him to doubt their perfect accuracy, or to suspect a want of care and attention on the part of the Directors. He would not make a long speech, for he believed that business was better got through without unnecessary talking, and for his own part, he generally formed his judgment as to the mode in which the affairs of a railway Company were conducted from a few leading facts. Such facts were contained in the Report just read—facts which satisfied him that the management of their affairs was in good hands. (Hear, hear.) These facts spoke for themselves, and did not require to be enlarged upon, or varnished by him. He believed the Directors to be worthy of support, and for that reason, and that reason alone, did he support them. (Hear, hear.) He had great pleasure in moving, that the Reports now read be received, adopted, and entered on the minutes, and printed copies forwarded to each of the proprietors.

Mr. SAMUEL seconded the motion.

Mr. MONEY (formerly Chairman of the Company,) said, if the motion had not been seconded from another quarter, he himself should have been happy to do so. (Hear, hear, hear.) He felt that it was a very satisfactory document. (Hear, hear, hear.) It showed that they were now placed in a very favourable position,—a position which he certainly had not anticipated. (Hear, hear.) There was a new and very pleasing feature in the Report, for now every thing was plain and simple, nor was there, he believed, the slightest desire either within the Board-room or without, to conceal or varnish over any part of the Company's affairs. (Hear, hear, hear.) The contrary course had been the bane of the undertaking. Assertions had been made by those who ought to have known better as to the position of the Company, which assertions had never been realised. Parties having once found themselves deceived had become mistrustful, and a re-action had been the consequence, which had reduced the condition of the undertaking to a lower ebb in public estimation than it would otherwise have sunk to, or than it really merited. *Then* they had been deluded; *now*, he firmly believed they had matters presented to them as they really were. (Applause.) He would repeat that in his opinion the Report was most satisfactory, and he hoped that such would be the opinion of the meeting at large. (Hear, hear.) With regard to one part of it, he believed that the contracts for the new works had been let at a price lower than had been anticipated, lower considerably than the estimates of Colonel Landmann, the Engineer—a circumstance which reflected great credit not only upon that officer but upon the Directors. (Hear, hear.) With respect to the Directors he thought it necessary to say one word, as at the last meeting he had given notice of his intention to propose on the present occasion the appointment of a Committee of Investigation. That proposition he would now entirely withdraw. (Hear, hear.) He truly and honestly believed that the Directors as a body were anxious to promote to the best of their judgment, the true interests of their constituents, (hear, hear), although, nevertheless, he should be glad if some changes were made in the present Board. The two gentlemen who had on the present occasion gone out of office and again offered themselves were of such a character that he had no doubt whatever, that the proprietors would wish unanimously to re-elect them. (Hear, hear.) Of Mr. Childers, he had the pleasure of knowing something, and doubtless all present were acquainted with him, to some extent, as a public man. Of his colleague report spoke equally favourably, and also of the new candidate, so that on the present occasion there could be no doubt upon whom the choice of the proprietors would fall. (Hear, hear.) On the occasion of any future vacancy, he would suggest that as the Directors were for the most part men extensively engaged in private business, two or

Digitized by Google

three persons should be chosen whose leisure would permit them to be of service not only in the Board-room, but in keeping an eye upon the details of business upon the line. Such parties might, for example, see whether reductions could not be made in the engineering department, as he (Mr. Money) believed there might, if a strict superintendence, such as he suggested, were carried into effect. (Hear, hear.) He hoped that on a future occasion the Directors themselves, and the shareholders at large, would give this matter the consideration which it deserved. (Hear, hear.) With respect to the Committee of which he had given notice, he had only again to say, that he did not now consider it necessary to persist in his proposal. (Hear) He was satisfied that the Directors as a body were using their utmost endeavours to promote the prosperity of the undertaking and that therefore it would be injurious while important matters were still uncompleted to make any change. Even if the present Board had not been really so deserving of confidence as he conscientiously believed them to be, he should have felt it his duty to withdraw his motion, lest it should have been supposed that he had any sympathy with certain parties who got up a recent meeting, at which charges were brought against the Board, which he believed could not be, and which certainly were not, substantiated.* (Applause.) These charges he firmly believed were not true. (Much applause.) He had thought, and continued to think, that one or two members of the Board might be changed with advantage, but upon the whole he was perfectly satisfied with their honour and zeal on behalf of the Company. (Hear, hear.) He was glad to find from the Report that the whole of the new capital required was not to be raised by shares issued at so large a discount. His own views were, that not so much as had been raised in this way—in fact, that not any part at all of the new capital—should have been so raised, but as it had been otherwise decided, he was happy to find that it was now proposed to raise one-third part, or nearly so of the amount by bonds. While on this subject he begged to be allowed to say one word on a matter personal to himself. It had been stated in the public press that he was chargeable with inconsistency in subscribing for 1,000 new shares, after opposing that mode of raising the further capital required. Such, however, was not the case; indeed he should have been inconsistent if he had *not* taken the new shares. His argument then, and his opinion now, was, that the arrangement sanctioned upon that occasion bore hard upon the poor proprietor who was not able to take the new shares, and whose property was depreciated by the creation of new stock. The creation of that stock having, however, been determined upon, it would have been inconsistent in him, and very foolish, if he had not taken up his proportion of the new shares, by which alone he could be placed on the same footing as before, when a holder of old shares. (Hear, hear.) For his own part he was perfectly indifferent to the censures or criticisms of the press, being satisfied that his character for consistency and his conduct generally in relation to the affairs of this Company, should be judged of by his fellow proprietors. (Hear, hear.) He was glad that in the Report it was proposed to do an act of justice to a most deserving officer of the Company, Mr. Akerman, the Secretary. (Hear, hear, hear.) He had known that gentleman long and well, and a more useful, honourable and devoted officer did not exist. (Hear, hear.) He knew that Mr. Akerman had exerted himself beyond his professional duties in getting out the shares of the Company, and in supporting its interests by every means in his power. The very scanty income which he had hitherto derived from the Company must have subjected him to many inconveniences, and would probably have damped the ardour of one less devoted to the welfare of the undertaking. So far, therefore, as his (Mr. Money's) vote would go on this occasion, the proposal contained in the Report should have the warmest support, and he hoped and believed that there was not a gentleman present who would dissent. (Great applause.) It had already been remarked that long speeches were not necessary, and although he (Mr. Money) had certainly trespassed upon the time of the meeting longer than he intended, he would once more repeat that everything in the position of the Company was most satisfactory. He hoped they might now look forward with confidence to the time when their property would bear a value proportioned to its real merits. (Hear, hear, hear.)

Mr. M. A. GOLDSMID (a Director) here rose, and was proceeding to vindicate himself from the charges insinuated against him at the meeting above referred to, when he was called to order by

Mr. Alderman WILSON, who thought it foreign from the business of the day to enter into a refutation of what had passed at a meeting which appeared to have been a hole and corner one, and with the proceedings of which he (Mr. Alderman Wilson), and probably nine-tenths of the proprietors now present, were totally unacquainted.

Mr. Goldsmid seemed very anxious to be heard, but it was the opinion of the Chairman, and seemed to be that of the meeting generally, that the proper time had not arrived, even if it were necessary, to notice at all what had transpired on such an occasion as that referred to. Ultimately Mr. Goldsmid gave way, reserving his right to return to the matter at a future stage of the proceedings.

A PROPRIETOR inquired if the asphalting of the arches had been effectual in excluding the rain, &c.

The CHAIRMAN—Most certainly.

Mr. Alderman WILSON suggested that the accounts should be printed along with the Report.

To this the Directors at once assented, as did also the proposer and seconder of the motion, which was amended accordingly. It was then passed unanimously amid great applause.

Mr. HUTCHINSON moved the second resolution, declaring a dividend of 7s. per share on the original shares payable in March next. He was glad to find that the dividend had somewhat improved. Last year it was 5s., now it was 7s.

The CHAIRMAN expressed a hope that next year it would be still larger.

Dr. OUTRAM joined in that hope, and begged to second the motion. There was one circumstance in connection with this railway which deserved notice. Although during the past year so many accidents to life and limb had unfortunately occurred upon other lines, not one serious casualty had happened to any passenger upon the Greenwich line since its first opening. (Hear, hear.) This was unprecedented he believed, and reflected great credit upon all parties concerned in the management of the traffic. (Hear, hear.) The honourable gentleman then adverted in a humourous strain to the formidable array of "big-wigs," which had opposed them before Parliament, and concluded by congratulating the proprietors upon the fact, that the feelings of rivalry which had characterised their then opponents were fast disappearing, and were being succeeded by those of confidence and kindness.

The CHAIRMAN bore testimony to the important services which Dr. Outram had rendered to the Company during the Parliamentary contest.

The motion was then carried unanimously.

Mr. MONEY said he had great pleasure in moving a resolution in reference to the Secretary's allowance as referred to in the Report.

Mr. HUTCHINSON seconded it.

Mr. TIMOTHY TYRRELL said there was, probably, no person in the room who had had better opportunities of judging of the Secretary's merits. [The learned gentleman then passed a very high eulogium upon Mr. Akerman, which repeatedly called forth the warm plaudits of the meeting. He attributed in a great degree the completion of the line to Mr. Akerman's activity, energy, and assiduity; and said, the urbanity, forbearance, and kindness of that gentleman, had done more than anything besides to get rid of the feelings of asperity and distrust with which the Company had at one time been regarded. He only regretted that the funds of the Company were not in a condition to admit of adequately remunerating him. They were not now awarding a gratuity, but doing something towards the discharge of a debt due to a gentleman who, during the many years which he had so zealously devoted to this undertaking, had received, in all, a less amount of money than some Secretaries of other Companies, with much less merit, had received in a single year.]

The CHAIRMAN having expressed the pleasure which he felt in putting the motion, it was carried by acclamation.

The SECRETARY (at a subsequent period of the proceedings) made an appropriate acknowledgement.

The Reverend Mr. LYON (of Pulford, Cheshire), proposed the re-election of Messrs. Childers and Corney, and the election of Mr. Bonar, expressing his high opinion of the qualifications of these gentlemen, who were personally unknown to him, but of whom he had heard the most satisfactory accounts.

Mr. SAMUEL having seconded the motion,

Mr. GOLDSMID claimed his right to address the meeting. As the honourable gentleman who had previously called him to order had designated the meeting where his character had been most unwarrantably assailed, a "hole and corner" meeting, he would pass over that part of the case, and come to the objection which had been urged against him from more respectable quarters, namely, that being a member of the Brighton Board he ought not to have prolonged his connection with the Greenwich Board, whose interests were at one period supposed to be in opposition. In reference to this he could only repeat what he had on former occasions stated, namely, that he had abstained from attending any meeting of the Brighton Board at which the matters in dispute between the two Companies had formed the subjects of discussion, and had placed his resignation in the hands of his colleagues in the Greenwich Direction, to be acted upon should they at any time consider that his duties to the two Companies clashed. His colleagues had since requested him to resume his duties, and he had done so. He believed that all danger of collision between the two Boards was past, but should any difference hereafter unfortunately arise, his position might probably enable him to conduce to their removal, and he should be happy to exert his influence to that end. He would moreover pledge himself to tender the resignation of his seat at one or other of the Boards, should circumstances arise to render it necessary. With respect to the other points which he was fully prepared to enter upon, he should at present say nothing, as he saw that no impression had been made upon the proprietors, and as he was conscious of his own innocence of the charges which had been brought against him by the parties to whom he had already alluded. (Hear, hear, hear.)

Mr. ENTWISLE (a Director) said, he, too, was now a Director of the Brighton Board, but his position differed somewhat from that of his honourable friend, as he (Mr. Entwisle) had been appointed since the last Greenwich meeting, and Mr. Goldsmid had been twice chosen a Director of this Company since joining the Brighton Board, of which, indeed, he had been first a member. He (Mr. Entwisle) had made arrangements for resigning his seat at the Greenwich Board in the course of a few months, when certain matters in the progress of which he had taken an active part had been brought to a conclusion.

Mr. MONEY was much pleased with the determination to which the last speaker had come. He thought it was only exhibiting a proper deference to the sentiments of the proprietors as repeatedly expressed at public meetings. He (Mr. Money) was of opinion that no man could properly do his duty at two Boards, whose affairs brought them into contact if not collision. Either his proceedings at the one must neutralise what he had done at the other, or he must keep away from both, which would be a neglect of duty, or lastly, he must do as he (Mr. Money) had once seen a professional gentleman do in a foreign country where advocates

* The meeting at the George and Vulture Tavern, Cornhill. See *Railway Times*, of Dec. 6, 1849.

Digitized by Google

were scarce, plead the cause of one party as his client, and when that had been done, proceed to demolish his own arguments as counsel for the other side. (Hear, hear, and a laugh.) No man could fairly advocate the interests of both.

Mr. MAYHEW was sorry to hear that two of their Directors belonged also to a Board whose interests were opposed to those of this Company. (Cries of "No, no.") He thought the undertaking must of necessity be thereby deteriorated, for secrets might be carried from the one Board to the other; at any rate it was impossible that any mind which had been properly impressed with what had transpired at one Board, could go to an opposing Board and give an impartial consideration to what might be brought forward. It would generally be found that parties would lean to that side which presented the greatest emolument. Leaving this matter, however, he wished to put a question relative to the new works, namely, whether efficient means had been taken for their completion, so as to guard against the infliction of the heavy penalties imposed by the Act, in the event of their not being finished within a specified time.

The CHAIRMAN said, the same penalties which were imposed on the Company had been imposed on the contractors, under bond, so that there need not be the slightest apprehension on that score. (Hear, hear, hear.)

The DEPUTY-CHAIRMAN could not agree with those who seemed to think that the interests of the Brighton Company and those of the Greenwich Company were opposed—that as the one rose the other must fall. (Hear, hear.) On the contrary, he believed that the true interests of both were now inseparably connected. (Hear, hear, hear.)

Mr. MACLAUREN did not agree in that opinion. He wished to know upon what grounds the Directors had entertained a proposition for lowering the *toll* below the sum specified in the Act of last session.

The DEPUTY-CHAIRMAN said, it was on the ground that an alteration might prove mutually advantageous.

Mr. MACLAUREN (amid manifest signs of impatience on the part of the meeting) proceeded to argue, as far as we could understand him, that the Directors ought to stand upon the Act, and not entertain any proposition which would have the slightest tendency to diminish the income of the Company arising from the toll.

Mr. ENTWISLE replied at some length, and stated that the Directors had entertained no proposition except one which would have secured to them the maximum revenue now received, and given them a good chance of an increase.

Mr. HUTCHINSON thought no change in the toll (upon the strength of which the new capital had been raised) ought to be made without the full sanction of the proprietors, after having all the details before them.

The DEPUTY-CHAIRMAN said, the Directors were entirely of the same opinion, and never should, indeed never could, take any step to change or modify the tolls without the consent of the proprietors. (Hear, hear, hear.) All negociations on the subject were now at an end.

After a good deal of desultory discussion on this point,

The CHAIRMAN stated, that in recommending Mr. Bonar to the suffrages of the proprietors, the Directors had selected his name as first on the alphabetical list of shareholders qualified by character, abilities, and large holding, to have a seat at the Board, and they should hereafter pursue the same course. Mr. Bonar was a gentleman whose merits were well known, and he held 200 shares, while his connections in Scotland were also largely interested in the undertaking. (Hear, hear, hear.)

The motion relative to the election of Directors was then carried unanimously.

Some conversation followed as to a proposal which had been made at a former meeting, to put up the names of candidates singly. The Directors expressed their willingness to adopt this course in future.

Mr. HUTCHINSON observed, that he would have brought forward a candidate whom he considered to be highly qualified, had it not been that he was anxious that the fullest unanimity should prevail. (Hear, hear, hear.)

Mr. CORNEY returned thanks for the honour that had been conferred on himself and colleagues. He had entered the Direction with a determination to do every thing in his power to forward the best interests of the undertaking, and so assured did he feel of its ultimate prosperity, that he had since increased his pecuniary interest in it ten-fold. (Hear, hear.) He had only to add, that he had witnessed in the Direction such unanimity of action and such praiseworthy exertions in behalf of the Company, even to the sacrifice of their own private business, that he considered it an honour and a pleasure to be associated with them. (Hear, hear, hear.)

The DEPUTY-CHAIRMAN said, with respect to a suggestion that had fallen from Mr. Money, as to the propriety of having two or three Directors who could devote a great portion of their time to the superintendence of the line, there were in fact four members of the present Board who could give their services to the undertaking morning, noon, and night, and almost literally did so. He himself was one of them. The remuneration which he received as a Director, was as nothing to the trouble which the office imposed upon him, and if he had no other inducement to remain, he would gladly retire to his retreat in the country; but he had many thousand pounds embarked in the undertaking, and it was to watch over their own property and the property of their fellow shareholders that the gentleman referred to and himself devoted their time to the management of the Company's affairs. (Applause.)

Mr. HOMER moved that the best thanks of the proprietors be given to the Chairman and Board of Directors for their arduous and earnest exertions to promote the interests of the Company upon every occasion. The honourable proprietor referred to the great exertions made by the Directors during the late Parliamentary contest. He had had many opportunities of witnessing their zeal, having come up with a petition to Parliament from the shareholders at Birmingham, and remained in town for several weeks. He believed the Deputy-chairman had not missed a single day's attendance before the committee. (Hear, hear.) The honourable gentleman next adverted to the holding of office in two Companies, and gave it as his opinion, that in a case like this, where Parliament had settled all their differences, no danger could arise. In another Company in which he was deeply interested, the Birmingham and Gloucester, Capt. C. Moorsom had not only been recently chosen one of the Directors, but elected Chairman, although he was a Director in at least one other Company whose line joined their's. Capt. Moorsom's high qualifications were considered of great importance, and his connection with other Companies in their vicinity, instead of being looked upon as a drawback, was an additional recommendation. When negociations were in progress and bargains had to be made, it might be improper to sanction plurality of office, when the interest in the one Company was larger than in the other, but in the present instance he did not think that any valid objection could be urged. (Hear, hear.)

Dr. OUTRAM seconded the motion, which was carried unanimously.

The CHAIRMAN returned thanks, and expressed a hope that the next meeting would pass off in as satisfactory a manner as the present.

Mr. COOPER suggested the publication of the Directors' Report, and statement of accounts, at least ten days previous to the meetings, as it was impossible to bear so many items in mind.

The DEPUTY-CHAIRMAN said, the Report had only been finally agreed upon that morning, so that in that instance it would have been impossible to carry out the suggestion.

Mr. ENTWISLE believed, that those Boards who had tried the experiment in deference to the wishes of their proprietors rather than from their own conviction of its expediency, now complained of its effect, in taking off almost all interest from the proceedings at the public meetings.

Mr. WHEELER (a Director) was of opinion that the proposal for the previous printing of Reports and accounts had in most instances been originated for share-jobbing purposes. Even now, when the accounts lay at the office for inspection ten days previous to the meetings, country proprietors complained loudly of the advantage which was thus given to parties in town to traffic in shares.

Mr. COOPER said, he knew that the plan had worked well in other Companies.

After a few words from Mr. Mayhew, who suggested that the proprietors at large should be informed that the accounts lay at the office for inspection previous to the meetings, the subject dropped.

A vote of thanks to Messrs. Perry and Bower, the Auditors, was then passed unanimously, and

Mr. PERRY returned thanks.

Mr. MONEY stated that some remarks which he had made at a previous meeting had been misconstrued, as reflecting upon the mode in which the Company's accounts were kept. He begged most distinctly to disclaim any such intention, as nothing could be more perfect than the system adopted by Mr. Adron, the gentleman who so ably superintended this department.

On the motion of Mr. Money a vote of thanks to Col. Landmann and the other officers of the Company was carried unanimously.

Colonel LANDMANN made an appropriate acknowledgment, expressing a hope that as this was not the first occasion on which he had been honoured by the approval and confidence of the proprietors, so neither would it be the last.

The meeting then broke up.

PRESTON AND LANCASTER RAILWAY COMPANY—SPECIAL GENERAL MEETING.

ON Wednesday last a meeting of the above Company was held in the Town Hall, Lancaster, being the first half-yearly meeting since the opening of the line. It is exactly a year ago, the 10th February, 1840, that the foundation stone was laid; and the grand ceremonial opening took place on the 25th of June in the same year. Taking all things into consideration, few lines have been carried forward with greater spirit, nor been opened under more favourable auspices.

GEORGE BARROW, Esq., the Chairman, said, he was happy to meet the shareholders on this occasion, as they were not called upon to pay but to receive, as the Directors considered themselves in a situation to make a dividend of 2½ per cent. Much advantage would arise to Lancaster on the price of coals being rendered cheaper by transit on the railway. The Company saved a considerable sum by working their locomotive power in conjunction with the North Union. One thing, however, had been proved by their half-year's traffic, *that the expenditure in the first instance for good* gradients was amply compensated for in the great saving in the expense of working the line. After some observations, all of which will be found embodied in the Report, the Chairman said, in answer to a question by a shareholder, that he doubted not but that, as he had said at their first meeting, the first year would pay 5 per cent., the second 7½, per cent., and the third 10 per cent.

The SECRETARY then read the following

REPORT.

In conformity with the practice of other Railway Companies, the Directors have convened this Special General Meeting of the Proprietors to submit to them a statement of the receipts and expenses of the first half-year's traffic on this Railway, although their Act of Parliament directs only one general meeting to be held in each year.

It will be observed that the receipts for merchandize and coal have hitherto been only very small, as the warehouses and stock of waggons, and other arrangements necessary for carrying on an extended goods traffic have only just been completed, and the coal stations will yet require two or three weeks before they will be ready for use.

An increasing revenue from these sources may now be confidently anticipated, and more especially as arrangements have been made with Mr. Hargreaves, the sole carrier on the North Union Railway to become a carrier on

Digitized by Google

this line also, who will commence the running of trains daily for the conveyance of merchandise and coal on the 19th inst.

The Directors have great pleasure in being able to state that not a single passenger has sustained injury on this railway, from accidents or otherwise, since the opening, although upwards of 68,000 passengers have been conveyed over the line during that period.

The Directors feel themselves justified in recommending that a dividend of 17s. 6d. per share be paid on the whole shares, and a dividend of 11s. 3d. on the three-quarter shares, which will be equal to 2½ per cent. for the half year on the paid up capital, and still leave a surplus of 1,900*l.* 13s. 0d. in the hands of the Company to cover any depreciation in the value of the engines, carriages, and other stock.

The Account Current for the Half-year ending 4th January, 1841.

It was proposed and resolved—

"That the Report and Statement now read be adopted, printed, and sent to each proprietor.

"That a dividend of 17s. 6d. per share on the whole shares, and of 11s. 3d. per share on the ¾ shares be paid to the now registered proprietors of each share, such dividends to be payable on the 10th day of March next.

"That the thanks of the proprietors are due to the Directors for their services.

"And that the thanks of this meeting be given to the Chairman."

LONDON AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of this Company was held yesterday at the Queen's Hotel, Birmingham Station, Birmingham, George Carr Glyn, Esq., in the Chair.

The meeting was numerously attended.

The advertisement calling the meeting having been read, it was resolved unanimously that the common seal of the Company be affixed to the register of Proprietors, which was done accordingly, in the presence of the Meeting.

The minutes of the last Half-yearly Meeting were then read.

On a motion having been put for their confirmation—

Mr. Wilson rose to object to a resolution passed upon that occasion, empowering the Directors to appropriate from the funds of the Company the sum of 1000*l.*, towards the expences of erecting a church, for the accommodation of the Company's servants at Wolverton—the site and endowment of which had been granted by the trustees of the Ratcliffe estate. The honourable gentleman said the vote had been objected to by a large body of the Proprietors from conscientious scruples. He then read a memorial which had been forwarded to the Board, from 28 dissentients, members of the Society of Friends; and referred to an Opinion given by the Attorney-General, against the legality of the vote. The memorial stated that the subscribers dissented from the grant—first, because it was illegal, and foreign from the objects for which the Company had been incorporated; secondly, because it was inexpedient that matters of religious belief should be introduced into the discussions of the Company, as likely to engender and perpetuate feelings of hostility; and thirdly, because they deemed it unjust, and an infringement upon their Christian privilege, that the members of one sect should be called upon to contribute to the support of the faith of another.

The Chairman said the motion now before the meeting, went only to the extent of approving of the record of the minutes, as being a faithful transcript of what had taken place at the last meeting. He would recommend therefore, that any discussion upon the principle of the vote should be postponed till after the ordinary business of the meeting, in order that they might be more in order.

After some conversation, this was agreed to, and the motion was carried unanimously.

The Chairman then rose, and spoke to the following effect:—I think, gentlemen, that the accounts of the last six months, which are now in the hands of most of you, will show, that the results of this undertaking, since we had last the pleasure of meeting you, have been very satisfactory. There is one point, indeed, upon which we have experienced some little disappointment—I mean as regards the anticipated accession of traffic from the opening of the Midland Counties, the North Midland, and other northern lines. If, however, that traffic has not hitherto been so large as some of us expected, there is little doubt, that, ultimately, the well-grounded calculations of the promoters will be realised (Hear, hear.) The satisfactory character of the results of the last half year, has induced the Directors to lay before the proprietors, a plan for the gradual liquidation of the mortgage debt—a plan which we thought it prudent to defer, until the prosperity of the undertaking had become, to a certain extent, fixed. I need not, gentlemen, go into the details of that plan, as it has already been fully set forth in the circulars addressed to you individually. From your answers to these circulars, we learn that it has been approved of by nearly every proprietor resident in England, but in order to give it effect it will be necessary to sanction it by a formal resolution this day. The other part of the debt which I may call the bond debt consists, as you are aware, of the amount raised in anticipation of calls during the pressure of the money market, and unless some special circumstances should intervene, the instalments still due upon the original and quarter shares will be called up to pay this debt—an arrangement which will place at the command of the Directors the sum of nearly 35,000*l.* to be applied to the general dividend of the Company. So much for matters immediately affecting ourselves. Connected with this point, there is another which bears upon the character of the undertaking. We may now, gentlemen, congratulate ourselves upon the well ascertained and, indeed, generally acknowledged, superiority of railway travelling, as compared with every other mode—a superiority which has been fully tested during the present unusually severe winter. The arrival of the trains, particularly of the mail trains, has been most satisfactory, and although punctuality rather than speed has ever been the object of this Company, until their arrangements should be fully completed, we have, during the last six months, been enabled to quicken the day mail, and shall on the 6th of April, at the request of the Post-office authorities, expedite the night mail also, as nothing gives us greater pleasure than to avail ourselves of any means whereby the advantage of the public service and the public convenience may be promoted. There is another subject, gentlemen, very important to your interests, upon which it is proper that I should say a very few words. You will recollect that at the last meeting a resolution was passed, empowering and desiring the Directors to oppose with the utmost vigour the Manchester and Birmingham Extension project. That resolution, gentlemen, we have carried out and shall continue to carry out. We are not as yet fully aware whether the promoters of that scheme will renew their application to Parliament during the present Session, but I believe such to be their intention; and acting upon your resolution, and upon our own conviction, we, as Directors of this Company, shall in that case meet them with the most resolute opposition. (Applause.) The scheme we believe to be uncalled for, and unnecessary, and totally inefficient even as regards the increased convenience of Manchester which it professes to consult, for we are convinced that no time whatever would be saved by the proposed route, as compared with the London and Birmingham and Grand Junction lines. That conviction, gentlemen, and the consideration of the increased responsibility and risk which must necessarily attend another junction at Rugby would have led us, the Directors, had we not been fortified by your resolution of last year, to bring the matter forward now, as one which is of much moment to the well-being of our undertaking. I regret, gentlemen, the expense and anxiety which this opposition has occasioned, and will probably continue to occasion; but we should ill discharge our duty to you if we did not carry out to the fullest extent the determination to which you have come. (Much applause.) To pass from matters immediately affecting ourselves to others that have a more extended application, I need scarcely remind you, that in addition to the general Railway Act of last Session, another measure, with the same objects, has this year been brought forward. With regard to the Act of last Session, it is but justice to the Board of Trade, to whose management it was intrusted, to say that they have exercised its powers with great moderation and discretion. The new Bill proposes to confer much larger powers than the Board of Trade at present possess; but without entering into details, I need only repeat that the principle upon which the Directors of this Company have always proceeded, and always I hope will proceed, has been not merely not to oppose, but cordially to assist in carrying out, any measure which may appear likely to promote the public safety and the public convenience, at the same time that they are prepared most strenuously to resist all interference with the property of their constituents, or with the internal arrangements of their business—(Hear, hear.)—This course they will pursue upon the present occasion, although from the spirit which has been displayed in reference to the proposed measure, and from the clauses of the Bill itself, I do not apprehend that any difficulty will arise. While on this subject, I may just allude to the mode of levying the passenger tax upon railways, which may probably be brought before Parliament in the course of the present session. We, as a Company, do not complain of the method at present adopted, but there are other Companies who do, and we are perfectly willing that an alteration should take place, provided always it be not proposed, as was proposed by certain parties last session, to sanction a measure, which however unequal and unfair the present system may be considered, would have substituted a greater inequality and a large extent of injustice. I know not, gentlemen, that I need trespass further upon your time, except perhaps it be to notice the continued attacks, which for some time past have been made through the press upon the London and Birmingham Railway. For these at-

Digitized by Google

tacks so far as individuals are concerned, neither the Directors nor the individuals themselves who are so grossly assailed, care one jot. (Hear, hear.) They deem them altogether unworthy of notice; but the attacks, gentlemen, upon your property are as base, as I believe they are unprecedented. It has been said that tunnels have been in a dilapidated and dangerous condition, that embankments have fallen to pieces, in a word that the road has been in such a condition as to suggest the propriety of entirely shutting it up—all this has put forth with, I doubt not, a premeditated design to depreciate your property. (Hear, hear, hear.) I need not, gentlemen, go into a detailed refutation of these groundless and calumnious assertions, but I will undertake to say, as a sufficient answer to them all, that the London and Birmingham Railway has been, and is, in a perfect travelling condition. (Hear, hear, hear.) I give this public contradiction to these unfounded charges, not because they are of themselves deserving of notice, but least they should leave an unfavourable impression upon the minds of timid proprietors. With your permission gentlemen, the Secretary will now read the Report. (Great Applause.)

The SECRETARY (R. Creed, Esq.) accordingly read as follows:—

REPORT.

THE Directors have to report that the traffic for the six months which ended on the 31st December last, has considerably exceeded that of any preceding half-year. The accounts which have been laid before the proprietors at the present meeting, shew a receipt on the revenue statement (D) under the usual heads of passengers, &c., parcels, merchandize and cattle, of 405,040*l.* 14*s.* 0*d.*, being 61,846*l.* 7*s.* 9*d.* more than for the six months to 30th June last, and 61,130*l.* 11*s.* 6*d.* more than for the same period to 31st December, 1839; a result which is the more satisfactory, that it is not accompanied by any corresponding increase of charge.

"Maintenance of way," which, in addition to the contract price for keeping the road in good working condition, comprises all extra expense for slips, and for repairs of station buildings, is 6.228*l.* 18*s.* 8*d.* less than for the preceding half-year; a reduction of charge which is due to the generally improved state of the works, and especially of the principal embankments, which by their increased stability and consolidation have presented an effectual resistance to the heavy winter floods.

The per centage of the locomotive and other charges, as compared with the receipts, is in every case less; and the gross charge on the traffic (excluding the mileage duty to government, and parish rates) will be found, in the last half-year, to be as 30*l.* 5*s.* 7*d.* per cent. to the gross receipt, instead of 34*l.* 10*s.* 0*d.* per cent. which it was in the preceding half-year.

Deducting from the net profit of 186,689*l.* 11*s.* 8*d.*, the sum of 20,822*l.* 14*s.* 11*d.*, which was taken from the reserved fund, pursuant to the resolution of the last general meeting, there remains a disposable balance of 165,866*l.* 16*s.* 9*d.*, on which the Directors recommend that a dividend be declared of 4*l.* per 100*l.* share; 1*l.* per 25*l.* share; and 19*s.* 2*d.* 2 5ths. on 24*l.*; called before the 31st December, and paid on each 32*l.* share; leaving a sum of 10,866*l.* 16*s.* 9*d.* to be carried to the credit of next account.

In referring to the progressively increasing traffic of the railway, as evinced by the half-yearly reports, the Directors may be allowed to notice the gratifying fact, that out of 1,483,128 passengers, conveyed on an average 65½ miles each, from the 17th September, 1838, to the 31st December last, according to the Stamp Office Returns, not one accident attended with loss of life or limb to a passenger has occurred, although during the whole of this period the works were undergoing those extensive repairs which are inseparable from great excavations and embankments, and requiring the frequent passage along the line of trains heavily laden with materials. If then, under these circumstances of disadvantage, the Directors are enabled to exhibit results, which, in the infancy of the undertaking could only have been attained by regulations well considered, and with few exceptions carefully observed, it must be admitted that railways afford ample assurance for the safety of travelling, and that the London and Birmingham line possesses resources adequate to any extent of traffic.

The Directors having carried the proceedings of the Harrow inquest before a higher tribunal, purposely abstain from any comment on the extraordinary verdict of the jury.

Reverting to the statement of accounts which are before the meeting, the Directors have to remark that the expenditure on the stock or capital account, (C) has been, with few exceptions, for the objects to which they called attention in their last Report, namely, extension of stations, and the additions to the Company's carrying stock which an increasing traffic requires.

The recommendation of the Directors to create new shares, under the powers of the Company's Acts, for the redemption of the mortgage debt of 1,375,000*l.* having been acceded to by the proprietors individually, a resolution of approval by the present meeting will be required to give effect to the measure.

The Directors have to announce the resignation of Mr. Edward Wilson, and their election of Mr. Christopher Hird Jones, to supply his place. They have also to report the lamented death of one of the original Directors of the Company, John Sturge, Esq., and that they do not propose to fill up the vacancy.

The following Directors go out of office at the present meeting, and are re-eligible, Edward Cropper, Esq., Robert Garnett, Esq., George Carr Glyn, Esq., David Hodgson, Esq., Thomas Tooke, Esq., and Joseph Walker, Esq.

12th February, 1841.

APPENDIX.—*Comparative Mileage of Passenger Traffic for the Half-years ended 31st December, 1839, and 31st December, 1840.*

	Number of Passengers.	Miles Travelled.	Average Number of Passengers per Day.	Average Number of Miles travelled by each Passenger.	Equal to the undermentioned number of Passengers travelling the whole distance (viz. 112 miles) per day.
Half-Year ended 31st Dec. 1839.....	341,420	22,284,830	1,855½	65¼	1,091
Half-Year ended 31st Dec. 1840.....	394,688	25,931,163	2,146	65¼	1,258

Summary of Mileage from 17th September, 1838.

	Number of Passengers.	Miles Travelled.	Average Number of miles travelled by each passenger.
To 31st December, 1838 . .	151,941	9,461,984	62¼
30th June, 1839 . . .	267,144	17,391,035	65
31st December, 1839 . .	341,420	22,284,830	65¼
30th June, 1840 . . .	327,930	21,675,287	66
31st December, 1840 . .	394,688	25,931,163	65¼
Total . . .	1,483,123	96,744,299	65¼

The CHAIRMAN then moved a resolution to the effect that the Report be received, adopted, and circulated; and that a dividend at the rate of 8 per cent. per annum be declared.

The DEPUTY CHAIRMAN (F. Ledsam, Esq.) seconded the resolution, which was carried unanimously.

The CHAIRMAN then brought forward a resolution sanctioning the creation of new shares, as proposed in the circular before referred to, and which is as follows;—

Extract from the Minutes of the Board of Directors, at a Meeting held at the Euston Station, on the 22nd January, 1841.

"RESOLVED,—1st. That pursuant to the powers granted to the Company by the Act of the First Victoria, cap. 64, sec. 7 and 8, it be recommended to the General Meeting of Proprietors, appointed to be held at Birmingham, on the 12th February next, to make an order for the creation of so many distinct and integral shares of the amount of 32*l.* each, as are required to represent the capital of 1,375,000*l.* raised under the powers of the 3rd William IV., cap. 96; 5th and 6th William IV., cap. 56; and 1st Victoria, cap. 64, by mortgage of tolls.

"2nd. That the shares to be created, be offered in pursuance of the provisions of the said Act of the 1st Victoria, cap. 64. sec. 7, to the Proprietors of shares in the said undertaking, according, and in proportion to their respective interest in the joint stock of the Company, namely, one share of 32*l.* for every share of 100*l.* of such joint stock.

"3rd. That in cases where the interest of a Proprietor in the joint stock of the Company may be of less amount than 100*l.*, a sum be paid to such Proprietor in cash, equal to the value of a proportional part of the newly created 32*l.* share, or that such Proprietor pay at his option, the sum required to entitle him to such 32*l.* share.

"4th. That a deposit of 2*l.* be required on each 32*l.* share when allotted; such deposit, and the calls on the shares, to be applied exclusively to the liquidation of the Company's mortgage debt of 1,375,000*l.*, and the calls to be so made as to meet the payment of the debentures for such mortgage of tolls.

"5th. That the proprietors of the newly created 32*l.* Shares be entitled to a rateable portion of the dividend which may be declared on the net profits of the Company, for the three months ending 30th June next, and for every following half year, subject to a deduction after the rate of Five per cent. per annum, for interest on such portion of the Shares as may not have been called for, to pay off the Debentures as aforesaid."

Mr. TAYLOR proposed that instead of shares of 32*l.* they should be 33*l.* 6s. 8d., as being a fractional part of the original 100*l.* shares. This, on the shares altogether, would produce a sum of 1,275,000*l.*, the amount of the mortgage debt. The honourable proprietor illustrated his views at some length, and suggested the propriety of converting the whole of the Company's shares into fractional parts of the original shares. He knew that the last created 32*l.* shares were not looked upon so favourably as the other shares. The honourable proprietor concluded by proposing, as an amendment, the creation of shares of 33*l.* 6s. 8d. each.

Mr. J. BARTON seconded the amendment.

The CHAIRMAN said, he entirely concurred in the expediency of writing up the whole of the shares into 100*l.* shares as soon as possible, but it might be doubted whether the present was the proper time. Perhaps, in some future Act—he hoped not their own, for he hoped they would have no occasion to apply for another—powers might be obtained to convert the whole of the shares into stock, which would be a still better arrangement, and one which was not only common in banks and insurance companies, but was found of great practical convenience in giving facilities for the investment of sums so low even as 25*l.*, in an undertaking which was considered beneficial.

In answer to a question from Mr. Taylor, it was stated by the Secretary, that the stamp duty would be no hindrance, being *ad valorem* in reference both to stock and shares.

Mr. PARSONS hoped that the suggestion as to the conversion of the shares into stock would be carried out. From what had fallen under his own observation, he was convinced that it would be of great practical utility. There could be no doubt that persons estimated their property very differently, according as it consisted of shares or stock.

After some further conversation, the amendment was withdrawn. The original motion was then carried unanimously.

Mr. KEMPSON inquired whether any interest accrued upon the weekly receipts of the Company.

The CHAIRMAN said there was always a certain balance in the hands of the Company's bankers to remunerate them for their trouble. All the rest of the receipts were put out to interest with country bankers and elsewhere.

Mr. KEMPSON said he had put the question because he did not observe any item of this kind in the statement of accounts.

The Secretary called the attention of the honourable proprietor to the item in account D, "To loan creditors," where he would find a balance of interest, "after deducting interest received on bankers' balances."

Mr. J. W. BASSET then proposed the re-election of the six Directors named in the concluding paragraph of the Report.

Mr. COBB seconded the motion.

Mr. TAYLOR enquired, upon what principle "stock" was taken.

The SECRETARY said the whole of the new purchases were debited to capital, but by a note attached to account C., it would be perceived that the total amount on the debit side of capital was subject to certain reductions, among others by the amount of the fund for depreciation of stock; in other words, the capital account would have been debited so much less if it had not been credited by the reserved fund.

The CHAIRMAN said the current expenses were placed against the current receipts; new engines, &c. were placed against the depreciation fund.

The motion was then carried unanimously.

The CHAIRMAN returned thanks for himself and colleagues. They rejoiced to find that they continued to enjoy, and it should ever be their anxious endeavour to deserve, the confidence of the proprietors. (Much applause.)

In answer to a question it was stated that the number of Directors was now 18.

Mr. PHIPSON (formerly a Director) enquired whether the same allowance was made to the 18 as was formerly made to the 24.

The CHAIRMAN said, the amount of allowance awarded by the proprietors was still appropriated. The salary of individual Directors remained, however, the same, the balance, or allowance of the other six, being divided among the existing members according to their attendance on Committees.

Mr. PHIPSON said, from what he had seen of the zealous and arduous labours of the Directors, while he himself had the honour of a seat at the Board, he should not grudge their allowance, even if it were double its present amount. (Applause.)

Mr. WILSON then renewed his statement respecting the grant for the Wolverton church. The discussion which ensued, extended to a great length, but from the late period of the week, we must content ourselves with the leading points. The honourable proprietor, who explained that he himself was a member of the Church of England, and, therefore, far from hostile to the object for which the money had been voted, again read the memorial, of which the substance is given above, and a letter from the Secretary, informing the memorialists, that the Directors referred them to the General Meeting. He next read the following Case laid before the Attorney General, and that learned gentleman's Opinion: —

CASE.

Herewith are left prints of all the London and Birmingham Railway Acts, viz.—

3rd William IV., cap. 96.
5th and 6th William IV., cap. 56.
1st Victo. cap. 64.
2nd Victo. cap. 39.

The Company, it is submitted, appears by every one of those Acts, and by every enactment contained therein, to have been formed purely for trading or commercial purposes, and is wholly a trading or commercial Company, without in the remotest degree having for its object the support or dissemination of either moral or religious principles, much less those of any particular sect or denomination.

However, at the last GENERAL MEETING, of the proprietors, it was, amongst other things,

"RESOLVED, That 1000*l.* be placed at the disposal of the Directors, for the purpose of building a church at Wolverton, on land to be given by the Trustees of the Ratcliffe Estate, for the use of the workmen and their families congregated at that station."

The money, it is understood, has not yet been advanced.

On the part of a numerous body of proprietors be pleased to advise.

1. Whether such an appropriation of the Company's funds is warranted by the Company's Acts?

2. If not, what is the most eligible course for the proprietors who object thereto to adopt, to prevent the money being paid?

OPINION.

However laudable the object of the resolution in question may be, and however desirable that it should be carried into effect, I am bound to say, that in my opinion, such an appropriation of the funds of the Company is not authorized by the Company's Acts.

2. The remedy for dissenting proprietors, I conceive would be a bill in equity, praying an injunction.

(Signed) J. CAMPBELL.

Temple, Dec. 14, 1840.

The honourable proprietor then suggested the propriety of raising so small a sum by voluntary subscription, expressing the pleasure which he himself and others would have, in contributing in that

Digitized by Google

shape. He concluded by moving, that the resolution of last year, granting the 1,000*l.* be rescinded.

Mr. CADBURY (of the Society of Friends) seconded the motion. He enlarged upon the impolicy of introducing a cause of contention into a company of individuals holding every shade of political and religious belief, and upon the injustice of compelling members of one persuasion to support the propagation of the tenets of another. He earnestly disclaimed (as did all who followed on the same side) every wish to oppose the vote except on the ground of principle, and expressed the greatest anxiety for the moral and religious instruction of the Company's servants, but thought this might be effected without the necessity of doing violence to the consciences of others. He enquired in what position the Company would be placed, should a grant hereafter be sought for the erection of a Roman Catholic or Methodist chapel, or a Quaker's meeting-house, and such grant be carried by a majority, at any public meeting? Doubtless, the members of the Church of England would *then* object, as the Quakers and Dissenters did *now*. How did they know, that, having contributed to the erection of a church, they might not hereafter be called upon to contribute to its repair, or even to the endowment of a minister? He trusted that the question would be considered dispassionately and as involving a great principle,—a principle, which it would be peculiarly inconsistent in him at that moment to sanction, seeing that his goods were under seizure for church rates. Even if there were no other objection to the vote, its illegality ought to make them rescind it. It might be said, that if he and his brethern had their share of the grant refunded, they would have no reason to complain, but that did not meet the case, as it was the principle to which they objected. It was not by any feeling of opposition to the Directors, that he was actuated, for he felt deeply indebted to them for what they had done to promote the prosperity of the Company, and nothing but a strong sense of duty could have induced him to assume even the appearance of opposing them.

The CHAIRMAN, in a very forcible speech, went over the various points of the case. Any apology for bringing forward such a motion as this, was, he said, totally unnecessary. The high character of the dissentients was sufficient to show that they had taken up the matter upon no factious grounds, and it was only that the character of the Directors might stand equally clear that he now rose to address the meeting. The Directors might, in their capacity of proprietors, have strong feelings upon the question, but, as Directors, they had only to obey the wishes of their constituents, whether those were to grant the 1000*l.* or withdraw it. With respect to the legality of the vote, he regretted that in the Case which had been submitted to the Attorney-General, the attention of that learned gentleman had not been drawn to particular clauses in the Company's original Act, for if it had, he felt convinced that his Opinion would have been somewhat modified. Such at least was the conclusion which had been come to by the Company's legal advisers. Was it true, as set forth in the Case, that the Company had been formed "without, in the remotest degree, having for its object the support or dissemination of either moral or religious principles?" If such were the fact, then was he most unfit to carry out the views of the Company. (Hear hear, hear.) "I think, (continued the hon. gentleman,) that a high religious duty is incumbent upon the Company in this matter, (Great applause,) and I think that the mode in which this vote was originally proposed by a Dissenter, reflected the greatest credit upon him and upon us. (Renewed applause.) Are these times, when we have collected together a large body of men, violent in their habits, to leave them without the means of moral and religious instruction? (Hear, hear.) No, gentlemen; I could not justify such a course to myself, nor, could you to the country." The honourable gentleman then proceeded to say, that he and his colleagues would be bound to obey the wishes of the proprietors, if a majority of them sanctioned a grant for the purposes of Dissenters, and thought the objections now urged would apply equally to the grant made some time ago, for the establishing of schools, at Wolverton. Where was the objection to stop? It might be said they had no right to expend the funds of the Company in building houses for their workmen, or some might agree to the houses, but object to the gardens. They had given houses, they had given gardens, they had given schools, but they were not to give a church—nor a meeting house, for the principle involved that likewise. Should such a principle be carried out to the extent which some persons contended for, he, for one, should regret his re-election that day (Hear, hear.) He could not think, however, that now they had entered their protest, gentlemen, to whose conscientious scruples he paid the highest respect, would seek to carry the question farther. (Much applause.) With respect to the apprehension of farther grants, it would be borne in mind, as stated at the last meeting, that the Ratcliffe Trustees had not only consented to build the church, upon a contribution being made by the Company, but had agreed to endow it handsomely and to charge themselves with its repairs. He confessed it was the liberality with which the Ratcliffe trustees came forward to meet and check so crying an evil, that had greatly weighed with him, and he doubted not with the gentleman who brought the original motion forward, to support the grant. He himself had had the pleasure of communicating to the Ratcliffe trustees the vote to which the proprietors had come, and these gentlemen had expressed their acknowledgements in very handsome terms. It was not necessary to enter further into the question. He would maintain that power existed in the proprietors to make such a grant, and that there was a strong necessity for it, could not be denied. No doubt the money could be raised by private subscription, but as the Company were indirectly the parties benefitted, he saw no reason why they should not, in their corporate capacity, promote so laudable a purpose. (Much aplause.)

Mr. JONES (the gentleman who originally proposed the grant) made a few remarks, and suggested that a *pro rata* amount of the 1,000*l.* should be returned to any parties who objected.

Captain C. MOORSOM (a Director) said he sympathised with the conscientious scruples of the memorialists, and if the vote were now proposed for the first time, probably he would oppose it, although a member of the Church of England. Looking, however, at the peculiar position in which they stood, with regard to the Ratcliffe Trustees, he thought the arrangement must be considered in the light of a bargain.

The CHAIRMAN said it was so far a bargain, that the church would not be built if the 1000*l.* were not granted.

Captain MOORSOM said it came therefore to this, that they must either consent to the grant, or have no place of worship at all at Wolverton. (Hear, hear.)

A PROPRIETOR said, no doubt the Dissenters would build a place of worship if the trustees would give the land.

Mr. TAYLOR admitted the great want of religious instruction at Wolverton, and although a Dissenter, he would not complain of supporting the Church of England, as it was the church of the majority of Englishmen, and, probably, of a majority also of the proprietors of this Company. He complained, however, that such a matter should originally have been brought forward without notice, and hoped means would be taken to prevent it being drawn into a precedent. He should have preferred a voluntary subscription, and in that case would have given much more than his proportion of the 1000*l.*

Mr. SOUTHALL (of the Society of Friends) said, he had taken shares in the Company, believing it to be merely a trading speculation, and it would be hard to compel such as him, as a body who had always testified against a State Church, to sell their shares, or to participate in these proceedings.

The Rev. Mr. BEDFORD thought the memorialists had done all they ought to do, when they protested against the grant. He, being not merely a member, but a minister, of the Church of England was called upon, through the taxes, to contribute to the support of Roman Catholic and Dissenting institutions, and although he certainly thought the money might be better applied, he conceived that he was bound to submit to the decision of those who thought otherwise. So strongly did he feel on this subject, that he had intended to move a vote of thanks to the Ratcliffe Trustees, for their liberality. (Hear, hear, hear.) On the old-fashioned principle, that those who built houses should provide the means of religious instruction for the occupants, he thought the Company who had assembled so large a body of men at Wolverton, should do the same.

After a great deal of further discussion on the general question, in which Mr. Hodgson (a Director), Dr. Blakiston, Mr. Phipson, Mr. Kay, and other gentlemen took part, a conversation ensued as to the legal power to make the grant. Mr. George Barker, one of the Company's Solicitors, contended that they possessed such power. He founded his opinion, not so much upon any particular clause in the Act, as upon its general scope, which gave the Directors, he said, full power to carry into effect any thing relative to the undertaking. Various clauses of the Acts were read. An opinion from Mr. Parker (another of the Company's Solicitors,) was also read, in which that gentleman insisted principally upon the inconvenience and endless disputes, which would arise if doubts were once to be encouraged as to what the Proprietors in general meetings assembled could strictly do.

Mr. BASSET took occasion to say, that having entered his protest, he felt, that as a member of the Society of Friends, he had eased his conscience.

At last, several suggestions having been made and rejected,

Mr. SCOTT proposed an amendment, that the *pro rata* part of the 1000*l.* (about 4½*d.* per share) be returned to any parties applying for it within a month.

Mr. KEMPSON seconded the amendment, and after a renewed discussion, a show of hands was taken, when there appeared,

For the amendment . . .	25
Against it	17
Majority for the amendment	8

It was explained that the deficiency, if any, of the 1000*l.*, would be filled up by voluntary subscription—which a proprietor said was virtually making the whole vote voluntary.

A motion arising out of the preceding matter was then proposed by Mr. Taylor. Some legal doubts having been started, it was agreed to put it in the shape of a recommendation—that in future, no motion, involving a vote of more than 100*l.* for objects, respecting the legality of which there might be any doubt, be brought forward at any meeting, without a fortnight's previous notice to the Secretary, in order that the proprietors might be fully forewarned.

This was carried with but one dissentient, the Chairman having expressed the pleasure he had in seconding it.

MR. BASSET inquired whether a gentleman named Pettit, had not invented some safety signal.

The CHAIRMAN said, he had, and it would be seen in operation on the railway that afternoon. [This contrivance has for its object, to enable the guard upon the top of any of the coaches to sound a whistle on the engine. It was repeatedly tried on the four o'clock up-train yesterday, (by which the writer of this came) and answered perfectly. We shall, probably, notice it more fully next week.]

Mr. PARSONS suggested that printed copies of the Directors' Report be distributed a few days previous to the meetings.

The CHAIRMAN said the subject had been alluded to at the last meeting, and he had then stated

Digitized by Google

that it was one which deserved much consideration. With regard to the accounts, there could be no difficulty, but he feared that if the Report were supplied beforehand, it would be difficult to collect together a number of proprietors sufficient to constitute a legal Meeting.

Mr. GARNETT (a Director) said, the proposed plan would be productive of considerable inconvenience to the Board. At present it was their custom to assemble together from different parts of the country on the day previous to the Meeting, and having agreed to the Report, then to remain till the Meeting had been held. If it were arranged that the Report should be issued previous to the Meeting, it would be necessary that the Directors should assemble twice, or be absent from the General Meeting.

Mr. TAYLOR suggested that the Report should at least be put into the hands of the proprietors as they entered the room, in the same way as had been done with the accounts that day. He believed this plan had been adopted by the Grand Junction Board.

The CHAIRMAN said the suggestion was a useful and practicable one, and should be attended to.

The CHAIRMAN having declared the business of the day at an end,

Mr. PHIPSON said there was still one duty which the Proprietors had to perform, and a very pleasant duty it was, namely, to return their very cordial thanks to the Directors for their unwearied zeal in promoting the Company's interests. (Much applause.)

The motion having been seconded from several parts of the room, was carried by acclamation.

The CHAIRMAN, in returning thanks, said the compliment which the meeting had been pleased to pay was particularly acceptable to the Directors, as originating with an old colleague, and expressed a hope that no unpleasant feeling would remain from the discussion—he would not call it an angry one—which had taken place that day. (Hear, hear, hear.)

A vote of thanks to the Chairman for his conduct in the chair, was next passed unanimously.

The Rev. Mr. BEDFORD was then about to bring forward his motion for a vote of thanks to the Ratcliffe Trustees, but as there was some doubt whether the Chairman had not vacated the Chair previous to the subject been mooted, the motion was not pressed.

The meeting then broke up.

EASTERN COUNTIES RAILWAY DIRECTION.

Liverpool, 9th Feb., 1841.

Mr. EDITOR—I beg to thank you for your insertion of my letter of the 2nd inst., in which, however, your printer made the awkward blunder of substituting one "poor gentleman" for "four." I ought to have told you that Mr. Hoyes had actually resigned—on the ground, *ostensibly*, of his marriage, but in reality for the same reasons that led to the retirement of that invaluable Director, Captain Meorsom. Both Mr. Hoyes and his cousin Dunbar, are *gentlemen*, and too courteous to violate the usages of well-bred people, in the terms of their letters of resignation; but at the same time, of too sterling a stamp to deny their real motives, should any of the inculpated Directors, or any of the much abused Shareholders think fit to question them on the subject, in public or any where else.

That gentlemen like these should retire "*in disgust*," is scarcely to be wondered at, considering how much the high-sounding professions and big promises of the Liverpool Directors, after the election of February, 1839, have been falsified by the increasing discount of the shares, and discredit of the line, ever since. And how galling it must be to men of sense and spirit, to sit at a board sharing in the *responsibility* of actions over which they can exercise no control, because of the arrogance of two or three * * * * and the subserviency of a pack of * * * *.

At the next General Meeting, there is, I hear, to be a large infusion of new blood. But what blood? Such blood as that of "all the Howards," or such as has, "crept through scoundrels since the flood?" Why are the shareholders not informed of the names of the persons whom the Directors intend to put in nomination? Why is the existing bye-law, which requires the previous publication of these names, thus deliberately set at naught? True, the Directors have given notice of a motion at the next General Meeting, for its repeal; but how they can be absolutely certain it will be carried? And what right have they to act beforehand, as if it were actually repealed? May I ask whether a report current here, is true that one chief reason for this repeal is, that certain persons, who have no objections to slip quietly into the Direction, have refused, point-blank, to stand as Candidates, if they are to be advertised in the newspapers, as desirous of taking office with such a set of * * * *. Repeal the bye-law, indeed! I should like to know what for. What did it impede or prohibit? Simply this, the Directors and shareholders from being taken by surprise, by the sudden proposal of Candidates for the Direction, of whom they neither knew, nor could have time to ascertain, anything. And what will its repeal facilitate? What, but this abominable consummation of jobbery and trickery—that the Liverpool clique of Directors, will be able, without consulting the Shareholders, or even their own colleagues to fill up all vacancies with their own creatures—persons ashamed to show their faces, or have their merits canvassed—and thus to perpetuate their own ill-acquired power, and stifle all inquiry into their gross mis-management.

I remember having read in your journal of another excellent bye-law being repealed at the instance of these plotters, but that was a bye-law of the Board only, which provided that there should always be at least a week's notice given to every Director of every motion of importance. And there again the object was concealment and circumvention—the promotion of the ends of an intriguing faction, to the sacrifice of all other interests.

As a simple shareholder I would say, that if such are the sort of reforms introduced by our pretending townsmen, the sooner we get rid of them and their six guinea trips, and their twenty-five shilling daily feeds, the better for the railway, and for all concerned.

But before so excellent a bye-law as that which it is now proposed to repeal, is done away, I do trust the shareholders will insist on a little inquiry into the objects to be served by that repeal; and whether the repeal is carried, (by help of proxies of course) or no, that some one will ask the new candidates for office, whether they approve or not of the six guinea and other charges of the individuals with whom they are not ashamed to desire to be associated? whether they do not think 1000*l.* a-year is rather too much to pay for a corresponding secretary and spy to our Lord-street jobber's hole clique? whether every Director ought not to be expected to pay for his own stationery, especially if the chief use made of it be to make out false bills of travelling expenses, and receipts for ditto? and fifty other questions which will readily occur to any one honestly intent on probing to the bottom the many leprous spots of this most leprous body-corporate.

I am, Mr. Editor,
Your obliged and obdt. servant,
A SHAREHOLDER & SHIPOWNER.

THE EASTERN COUNTIES RAILWAY COMPANY *v.* ROMFORD POOR RATE.

Romford Special Session, February 9.—Present, Thomas Mashiter, Esq. Chairman; Edward Ind and Octavius Mashiter, Esqrs.

This appeal, which was heard on the 3rd November last, and adjourned from that day to several subsequent days, came on again to-day for final hearing.

Mr. Gadsden, of Furnival's Inn, attended on behalf of the appellants, and Mr. Griffin on the part of the respondents.

Mr. Gadsden said his clients were willing to save the expense of appeal, and with that view had endeavoured to come to some arrangement, but he regretted to say, without effect; he had no doubt but the assessment would be reduced here, without incurring the expense of appealing to the Quarter Sessions, at Chelmsford. It was a question of great importance, and no doubt justice would not be denied. The Act of Parliament 6 and 7 William IV. c. 96, recited, "that the poor's rates shall be made upon an estimate of the net annual value of the several hereditaments rated thereunto, that was to say, of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes, and tithe commutation rent charge, if any, and deducting therefrom, the probable average annual cost of the repairs, insurance, and other expenses, if any, necessary to maintain them in a state to command such rent." The railway had taken 42 acres of land in the parish of Romford, from which, at present, no rateable profit arose, therefore the Company should not be rated at more than the original proprietors. He would prove that in other parishes, through which the railroad ran, they were not rated at more than the property was originally assessed. The principle, he contended, on which they should be rated, was, the rent at which the same might reasonably be expected to let from year to year, free from all usual tenants' rates and taxes, &c.; it became, therefore, a question for the Bench to determine, what the railway, in its unfinished state, would let from year to year, after deducting 20 per cent. tenants' profits and expense of repair. Mr. Gadsden then quoted the case of the Grand Junction Railway, and the parish of Hartford, Chester, where a deduction of 300*l.* a mile, was made for the expenses of repair, and tenant's profit of 20 per cent; he now, therefore, simply drew their attention to the state of the railroad in question, and the accounts of the Company. Mr. G. then produced an account, by which it appeared that the

Gross receipts of the Company for six months, ending 5th July, 1840, amounted to	£7,784 0 0
Expenditure for the same period, exclusive of any tenants' profits . .	8,500 0 0
Loss to the Company, 716*l.*	
Also an account commencing 12th July, 1840, and ending 3rd January last, by which it appeared that the Gross receipts of the Company during that period were	15,402 0 0
Payments during same period . .	14,500 0 0
Balance in favour of the Company . .	902 0 0

These accounts he would prove; and he then contended that these deductions should be made, as well as an allowance of 20 per cent. tenants' profits, before they proceeded to assess the Company.

Mr. Gadsden then called Mr. Sidney Braithwaite, who stated that he was sub-engineer to the Eastern Counties Railway, and considered 360*l.* a mile per annum, the expense of repairing road, exclusive of wear of rails. New rails were required about every fourteen years, and the cost of putting them down would be about 4,000*l.* a mile; it would take 234 tons of rails to lay a mile, that would cost 3,200*l.*, sleepers 526*l.*, keys 70*l.*, chairs 454*l.*, and pins 120*l.* some part of the present line cost more.—Examined by Mr. Griffin; the rails on this line are the heaviest laid down; the actual cost of the maintenance of this line is 416*l.* a mile, independent of various labourers' wages.

Nathaniel Davis, accountant to the Company, stated that their takings and expenses amounted to the sum mentioned by Mr. Gadsden.

Mr. Griffin expressed his regret that he had not been able to settle this matter; his friend Mr. Gadsden had alluded to an appeal to the Quarter Sessions, he did not, however, consider that such a proceeding would become requisite, the question was one of account. Mr. G. then commented at great length upon the items of expenditure included in the accounts and concluded by stating that the questions to be considered were two, viz.: had the Company a right to include, in their accounts produced, the expense of repairing the road, and had he (Mr. G.) allowed sufficient for tenants' profit, namely 10 per cent.

The magistrates then retired for some time, and at length decided that the present assessment of 800*l.* as the rateable value should be reduced to the sum of 578*l.* 15*s.*—*Chelmsford Chronicle.*

TO CORRESPONDENTS.

Mr. T. W. Rathbone, Mr. Edward Cropper, Mr. David Hodgson, and Mr. Richard Harrison, *are the four Directors of the Eastern Counties' Railway who stand* PUBLICLY CHARGED *with drawing from that Company six guineas for the travelling expenses of every journey they make from Liverpool to London and back,* ALTHOUGH THEY TRAVEL THE WHOLE OR GREATER PART OF THE WAY FREE. *A handsome reward will be given to any person producing—an authentic denial of the charge from any one of the persons above named. Apply to the steward of the* Reform Club.

R. S.'s *communication has already appeared in a country paper, and contains besides, nothing new.*

W. W. (Carlow).—*We should be glad to receive an authentic account of the experiments alluded to.*

Philo-Creed. — *Quite superfluous; nobody minds "Old Quicksilver."*

A Shareholder in the Edinburgh and Glasgow Railway.—S. in the Brighton.—*Quid. nunc.*—A Great Western Shareholder—Timon—R. F. L.—B. B.—*Received too late to admit of more than this general acknowledgement.*

The Parliamentary Proceedings *and several other articles are thrust out at the last moment by the length of the Birmingham meeting.*

We give to-day a gratuitous Supplement for the purpose of laying before our readers an article on the position of Carriers with reference to Railways—a subject which at the present moment possesses a more than ordinary interest. The article referred to merits an attentive perusal.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 13, 1841.

We now lay before our readers a copy of the new Bill introduced by Mr. LABOUCHERE and Lord SEYMOUR, "for the better regulation of railways." As the speech of the former must have led our readers to anticipate, it does little more than put in a statutory shape the principal recommendations contained in the able Report of the officers of the Railway Department of the Board of Trade, which we published at length last week.

Of the general spirit of the measure we feel bound, after mature consideration, to express our nearly unqualified approval. We were apprehensive that the discretionary powers proposed to be committed to the Board of Trade were of too general and undefined a character; but we must confess that on trying, ourselves, to mark out some limits within which these powers might be safely circumscribed, we could not discover any better than the Commissioners themselves have proposed.

No habitual reader of this periodical will doubt our devotion to the cause of railway progress, or our promptness to resist all external interference which may injuriously affect the property and interests of railway proprietors; yet, neither can they have observed anything which should lead them to expect from us a thick-and-thin advocacy of railway interests, as separate from the interests of the public—if indeed such separation exist, which we do most unfeignedly disbelieve. Our province as a railway organ is to expose all abuses in the administration of railways, of whatever nature, and whatever may be the conclusions to which the exposure may lead; and from this task we shall not shrink.

The resolutions of the Birmingham Conference of Railway Directors are, in substance, deprecatory of Government interference, of any sort or in any degree, because "unremitting vigilance and habitual caution" on the part of Railway Directors, with the aid of "such improved arrangements and mechanical adaptations as a more matured experience may suggest," will, in the judgment of the Conference, "*amply* accomplish the desired object." Yes—greater vigilance, greater caution, readier attention to the suggestions of experience and of mechanical skill, and a more earnest desire of improvement, than any hitherto manifested in the administration of railways, might accomplish all that is wanted. But what reason have Railway Boards given the public to look with any *certainty* for such things at their hands? Is not the very admission that they are wanted, proof of itself that the Boards must have hitherto fallen greatly short in their duty? And would the admission have been made but for that external pressure on the part of the public, which past mismanagement has provoked? Long and earnestly have we advocated in our columns the necessity of improved mechanism as (before all things) the means of safety to the public as well as profit to the proprietors, and we should be rejoiced, could we see in the language of the Conference any indications of a sincere and settled purpose of reform in this particular. But judging from the past, we must say our faith in it is but small. If the Conference meant by their words anything more than *shelter against the passing storm*, they would have stated frankly and specifically in what respects the existing mechanical arrangements are confessedly defective, and how far they were resolved to go in improving them. But instead of this, they indulge in the vaguest possible generalities, and leave it to the Government Commissioners — whose Report they might have anticipated by a whole fortnight—to point out not only the various mechanical improvements, which are admitted on all hands to be required, but others which may fairly be considered as still matter of experiment. We put it to the Boards whether this was not most impolitic conduct on their part. The wise course for them to have pursued would have been, to be the first to proclaim their knowledge of their own defects, and a fixed determination to apply definite and suitable remedies, with the least delay possible—nay, to have followed up without the loss of a day, their *words* by *acts*—and thus to have demolished all pretext for interference. But this they would not do, till the pressure from without has—to state the simple truth—*tripped up their heels*. Their position as monopolists without responsibility has produced, as usual, a result most injurious to themselves and to all dependent upon them. We speak advisedly when we say that they have been in point of fact the retarders of progress—real discouragers of improvements. They seem to have looked upon mechanical inventors as though they were their "natural enemies;" and not a few are the instances which have been recorded in our pages, of superciliousness and tyranny displayed in order to dishearten and to crush. Even well tested improvements, of the utility of which practice has left no manner of doubt, have been most slightingly regarded, from no better motives, we fear, than mere insolence of office, infirmity of temper, or inexplicable caprice.

It is very possible that these wrong doings may not—all or many of them—have been the acts of the Boards themselves—that they are to be attributable to Jack-in-office underlings alone. But the result is the same as regards the public, and the legislature has acquired an undoubted right on the part of the public to interpose for their protection, in such manner as the circumstances of the case may seem to it to call for.

Any interference bearing the aspect of a *Government job* we should be the first to resist; but a measure freer from every taint of the kind than the present Bill "for the Regulation of Railways," we never met with. No one can deny that it was called for by the unanimous voice of the public; and to the credit of its framers be it said, that it goes no further than the interests of the public imperatively demand.

We deem it to be no fault in us to feel as much interested for railway users, as for railway owners. We regard the monopoly vested in Railway Companies as a something, but held by them in trust for the good of the public in the first place, and for the profit of the shareholders in the next. And having these views on the subject, we think we but act the part of friendly monitors in telling our railway friends of all ranks and degrees, plainly, that unless railways are much better managed than they have ever yet been, they will give the legislature a right to interfere to a much greater extent than has been ever yet contemplated.

The public have a clear right to be well served in return for the exclusive trade conferred on the Railway Companies; and they have a further right to be as cheaply served as may be consistent with a fair remuneration to the proprietors. Some railways, having an undisturbed monopoly of a line of road of great traffic, charge the full fares authorised by Act of Parliament. But if it could be shown that they were working wastefully, and that by better arrangements (such as it is the direct tendency of the present Bill to promote) they could make the same profit, and yet carry passengers at half the price, the public would have a strong moral claim — whatever their legal right might be—to step in and enforce the better arrangements, in order that the saving in price might be ensured. For it could never be in the contemplation of the legislature, to retard public progress to such an extent, as to sanction the carrying of one passenger at the same cost which might suffice to carry two. He was said to be a great benefactor to his country who made two blades of grass grow where only one grew before; but of a surety, he is a still greater, who enables two men instead of one to go abroad into this fair world, and learn wisdom of all that it contains. We have always been strong opponents of duplicate lines, but in a case of the description just suggested, the legislature would be warranted in sanctioning the construction of a duplicate line, whose proprietors would engage to carry passengers at half the price of the first, and could show that they might do so with a reasonable profit to themselves. It is upon this principle of justice to the public that we urge upon the proprietors of the existing railways, the necessity of themselves taking the initiative in all mechanical as well as other improvements tending to safety and economy. The difference between good and bad management cannot be better illustrated than by the example

Digitized by Google

of the Manchester, Bolton and Bury line, noticed by a correspondent in our last number.

No railway that we are aware of, has hitherto set on foot any regular system of mechanical experiments; yet it must be evident that without the institution of such experiments any progress made must be exceedingly tardy. It may be alleged that it would be unfair for any one railway to be at the expense of experiments for the benefit of all. We think so too; but we think that this objection might be met by a legislative enactment, obliging all Railway Companies to use the *safest* mechanism, and entitling the railway taking the lead to a proportionate compensation for its outlay. But there is yet another difficulty in the way—there requires a provision for unprejudiced judges. The members of the Boards generally are notorious for their ignorance of mechanical questions, and they are at the mercy of irresponsible professional advisers. In many instances these advisers have a direct interest against improvements not of their own planning; in many cases they have an indirect interest. No proposed improvement should be left to the mercy of such judges. The power of deciding at what point any new improvement ceases to be a matter of experiment, and ought, *for the sake of the public*, to be universally adopted, can only be safely submitted (to use the words of the Commissioners) to "public and irresponsible officers, who have no conceivable motive for abusing it;" and this is all that the present Bill proposes to do.

We may here observe, that so far from the Government officers evincing anything like a disposition to overstep in the least the bounds of their Commission, their Report is rather to be condemned for the extreme chariness of interference with the supposed prerogatives of Railway Boards, which it manifests throughout. On the subject of mechanical improvements they offer but two suggestions, adopted from the separate Reports of Sir FREDERIC SMITH, and even these have been considerably narrowed in the process of transfusion. They are as follows:—

1. That every description of *passenger* carriage shall be provided with buffer-springs.

2. That the last carriage and at least every fourth carriage in *passenger* trains should be provided with a proper break.

But what the original report of Sir FREDERIC SMITH recommended, was—

1. That whenever goods are conveyed by the same trains as passengers, the *goods waggons* should be constructed in all respects with as much care and precision, and with equally good materials, as the passenger carriages.

2. That passenger trains should at least have one truck to every *third* carriage—the last carriage of the train being a break carriage.

3. That *every* carriage, waggon, truck, and horse-box should have *buffer* springs.

We hold Sir Frederic Smith to be in the right on all these points, and trust that the wording of the new Act will be so varied in Committee as to enable the Board of Trade to carry out his views to the fullest extent. It is not sufficient that the *passenger* carriages only should be provided with buffers, because almost all trains are made up of a mixture of vehicles; and even if this were not the case, as long as goods trains run on the same rails with passenger trains, liabilities to collision will occur. It is an incontrovertible fact that accidents to passenger trains do frequently arise from the breaking down of goods trains previously, and in almost all cases the break down is the result of defective construction.

Freely moving, and therefore well-built, carriages, require less buffer power than such as are the reverse; but it is in evidence, that scarcely any pains are taken with the construction of carriages intended for goods merely; and such being the case, we would at least compel the Companies to lessen the evil as far as possible, by the use of powerful buffers. Nor would we be satisfied with the application of buffers to *every* passenger carriage, truck, van, goods' waggon, and horse-box. We would carry out the principle to an extent which seems not to have been dreamed of as yet—unless we may except some observations in the excellent essay by Sir GEORGE CAYLEY, tending to a like conclusion. It must be obvious that in cases of collision it is the engine which strikes the blow, and that the carriage nearest to it must suffer the severest shock, unless the buffers could be so graduated as to exert most power in the last carriage, and to diminish in power in the ratio of approximation to the head of the train. But this, for reasons which we need not stay to discuss, is not a practicable arrangement. Neither do we see how any arrangement, *free from danger*, could be made, by which all the buffers could act in unison, unless it were such as to permit the train to *shorten* its length. We are satisfied that those arrangements of buffers are the best which admit of this shortening; and to compensate as far as possible, for the impinging force of the engine on the first carriage, we would insist on *every engine* being provided with buffers in front, not only of great power, but of power exerted through a considerable space. We are more urgent on this point, because we foresee that as traffic increases great danger must ensue from the present imperfect construction of the goods trains, which are a fruitful source of accidents, unless the utmost possible care be taken to moderate the shocks from collisions. The provision that 'no train shall follow another in less than fifteen minutes,' will not be found availing, unless the trains are all calculated for the same rates of speed. t

We quite agree with the Commissioners tha "the general principle of enforcing nothing of an *experimental* nature" ought to be strictly adhered to. It would be equally unwise and unjust to depart from it. But at the same time we think that the public should be protected against the contingency of Railway Boards *refusing* to give a fair trial to improvements which offer a reasonable prospect of adding to the public safety and convenience. We are by no means satisfied that it is right to leave the initiative in such matters with the Companies. Improvements in the internal communications of a great nation ought not to be dependent on the will or caprice of such chance-constituted, and generally obstructive, bodies as those. We are quite sure that Sir FREDERIC SMITH, if called upon, could at once point out every branch of railway mechanism in which further experimental knowledge is required; and we defy any one to show the least harm that could result from a power being given to the Board of Trade to enforce the recommendations of so able and intelligent an officer—so long as they extended no further than to the matter of experiment and trial. It would be well, we think, if Sir FREDERIC and the other officers of the Railway Department of the Board of Trade had some line of railway placed at their command fit for the trial of all requisite experiments. Railway improvers would then be certain of having fair play, and that certainty could not fail to stimulate amazingly the inventive genius of the country, to assist in perfecting our system of railway conveyance. The railways are in truth virtually closed against all improvement from without. The seas and the rivers are open—the highways too, are open to all improvers; but the railways can only be approached through patronage—given without judgment in most cases, and with interested motives in not a few. They constitute a special case in which Government is called upon to interfere for the public protection. Neither do we see any reason why railways *benefitting* by the knowledge acquired by the institution of such experiments by the officers of Government, should not be called upon to contribute proportionally towards the expense of them. At any rate all deodands should become the property of such an experimental establishment; certainly they could not be appropriated to a better purpose than that of diminishing the causes for levying them.

The provisions made for the licensing of engine-drivers are excellent, with the exception of that which requires every candidate for examination to have a *permit* from some Railway Company, on the unfairness and evil tendency of which we beg to refer to a clever letter from "the Chairman of the Working Men's Conference Committee," (whether a fictitious personage or no, matters nothing) published in another part of our paper.

Excellent also is the plan of accumulating a fund of statistical information, by means of periodical returns from the Companies on all points of *public* interest. The power proposed to be given to the Board of Trade, of enforcing exactness and punctuality in such returns will prove a great check on the Companies, and prevent many an improper practice. If it be alleged that this is inquisitorial, we can only say that the conduct of some of the Boards has been of a character that nothing can remedy, but an inquisitorial jurisdiction on the part of an unprejudiced and independent authority. If this were likely to produce any mischief to the pecuniary interests of the shareholders, we should be inclined to demur; but we feel assured that the very contrary will be the case. From secrecy and mystification the shareholders have been already enormous sufferers; and nothing but good can we see likely to arise to them, were all the transactions of their respective Directories laid perfectly open to the public. The interest of the shareholder is a pecuniary one, and must be greater or less in proportion as a railway is well or ill managed. He therefore can have no sinister interest, unless in the case of his being a proprietor in one of two competing lines; but even in that case, it is not by secrecy he can have any thing to gain. But where railway Directors and railway servants have jobbing interests to promote—interests distinct from those of the shareholders at large—then, indeed, secrecy becomes the weapon of weapons—a weapon wherewith the most cruel havoc may be made of every other interest, public as well as proprietary.

We believe that in the long run the interests of the shareholders will be found identical with the interests of the public. The public require to be carried in the speediest manner consistent with safety, and at the cheapest rate which, with a due observance of economy in working, will leave a fair profit to the proprietors. Proprietors are not as a class speculative holders, but permanent investers; and it is not for their interest to make such exorbitant profits, once and away, as to excite mischievous emulation. What they want are *moderate* and *steady* dividends, which will not tempt specula-

Digitized by Google

tive cupidity or give the public a claim to legislative interference, in the shape of duplicate lines, or in other shapes not less stringent and obnoxious.

Jealous as we are of all *discretionary* powers vested in governing bodies, we yet see in the fact that the *discretionary* powers heretofore conferred on Railway Boards, have been so much abused, a case of necessity clearly made out, for allowing considerable latitude to the superintending and controlling authority now proposed to be created. Nor can we imagine to ourselves, any body of men better qualified to exercise such an authority with prudence and moderation, and yet with all needful energy, than the gentlemen who have furnished the very able Report, on which the present Bill, and these, our humble commentaries, are founded.

We regret to observe from the reports in the Morning papers of Wednesday of what transpired in the House of Commons on the previous evening, that some doubt seems still to exist whether Government will take up the case of Irish railways during the present Session. The following are the terms in which the subject is noticed in the *Morning Chronicle* and other papers:—

"Mr. Smith O'Brien wished to ask the noble lord the Secretary for Ireland, whether he intended to bring before the house any proposition relative to railways in Ireland; and also whether it was intended to propose any amendment of the Irish Poor-law Act?

"Lord Morpeth *replied in the negative.*"

In the *Times*, the question is given in nearly the same words, but it is added that

"Lord Morpeth *was understood* to say that it was not intended to introduce any Bill on either subject."

We trust that his lordship has, in this instance, been *mis*understood, in so far as the railway question is concerned. Lord Morpeth and his colleagues can *now* have no reasonable excuse for refusing to bring forward the measure again, respecting which they not long since professed themselves to be so anxious.

The results of the winter meetings, so far as they have yet proceeded, of those Railway Companies whose lines have been for some time in operation, are of good omen. The Newcastle and North Shields Company have secured a dividend at the rate of 6 per cent. per annum, the London and Birmingham Company 8 per cent., the Liverpool and Manchester 10 per cent. (besides a bonus to the holders of original shares), and the Grand Junction 14 per cent. In connection with the Company first named, there is a circumstance of much promise adverted to in the Report of the Directors, which we lately published in full, namely, that in the first year a dividend of 5 per cent. on the capital was paid out of the *bona fide* profits, and at the rate of 6 per cent. for the first half of the second year. We trust that the Company's prosperity will continue to be progressive.

There is little, certainly, in the rates of dividend above mentioned, to bear out the extravagant anticipations of profit from railway property which were at one time entertained, but still there is sufficient to encourage those Companies, whose works are yet unfinished, to persevere. It is a remarkable fact that in no instance which has come under our notice, where a line has been opened for a reasonable length of time, has the original calculation of traffic been found to be overcharged; on the contrary, the actual receipts have in most cases far exceeded the expectations of the most sanguine of the promoters. That the result as regards net profit has too frequently fallen far short of what was confidently expected, is attributable to many causes, but principally to the enormous excess in engineers' estimates, which has marked the progress of almost every such undertaking. Much of this excess on lines already completed, might have been prevented had proprietors been properly mindful of their own interests, and if *their* disappointment do not stir up other parties to greater vigilance, it is useless to attempt to arouse them.

In the instances we have cited above, it is probable that the half year's dividends would have been sensibly greater, but for the occurrence of so many lamentable accidents during the last six months. This circumstance is adverted to and deplored in more than one of the Reports, and supplies an additional reason for increased care in the discharge of the important trust committed to railway officers. We know of instances within our private circle of acquaintance, in which the alarm caused by these frightful catastrophes has prevented parties from travelling even by railways which happily have been exempt from them. It is useless to tell such persons that railway travelling is on the whole much safer than travelling by coach, by steamboat, or by private conveyance. The fact unquestionably is so, but nevertheless, the very nature of a railway accident, the dreadful manglings and mutilations of which it is productive, and we regret to add, the gross negligence which has too frequently characterised occurrences of this kind, are calculated to produce a much deeper impression on the mind than casualties of a more usual character; and hence one railway accident will do more to prejudice the public against railway travelling than twenty accidents by coach, with reference to the old system of locomotion.

The dividends just declared will, we hope, have a tendency to induce many persons who may be averse from speculation, to invest their property permanently in this description of stock. They have already the certainty of a much better return than can be secured from the public funds, with every prospect of a progressive increase. As particular railways have advanced to completion, this feeling on the part of permanent investers has become more and more apparent, and if it had no other good effect, it would deserve all the encouragement that can be extended to it, inasmuch as it tends to extirpate the practice of share-jobbing which has been the bane at once of Companies and individuals.

These dividends, and others which we trust we shall shortly have occasion to notice, will moreover foster the feeling which is spreading over the country in favour of an extension of the railway system to those towns and districts which are still without its facilities—a feeling perfectly distinct from that which led to the formation of some of the earlier lines. It is now not so much the hope of direct profit as the certainty of indirect advantage, which is prompting the displays in favour of railway communication, which such places as Doncaster, Falmouth, Salisbury, and Norwich, have recently exhibited. If it can be shown that, in addition to local benefits, there is a reasonable expectation of pecuniary return, these and various other projects will be still more warmly supported. We do not, of course, consider such main lines of communication as the London and Birmingham, the Grand Junction, and the Liverpool and Manchester, fit standards by which to measure the probable success of schemes such as we have just alluded to. The localities of the three great lines just named, cannot be paralleled; but nevertheless, undertakings of much more humble pretensions may be equally remunerative. If the traffic is sure to prove much less, so may (or rather, we should say, so *must*) the cost of construction, and thus the tangible results to the promoters be not less satisfactory in the one case than they have already proved to be in the other.

The proceedings at the London and Greenwich Railway meeting, held on Tuesday last, and fully reported in another part of this day's number, passed off with remarkable unanimity—to the sore mortification, doubtless, of the schemers, to whom we had occasion to allude last week. If any one will take the trouble to refer to the proceedings of the self-styled "principal proprietors," at the George and Vulture Tavern, as noticed in the *Railway Times* of the 5th December last, and compare the boastings then made, and the charges more than insinuated against individual members of the Board with the significant silence of the clique on Tuesday, when the gentlemen calumniated had an opportunity of meeting them face to face, he will be at no loss to form a pretty accurate estimate of the parties referred to. The terms in which Mr. Money—a gentleman by no means prejudiced in favour of the present Board—disclaimed all connection or sympathy with them, were worthy of his high standing and of the great stake he holds in the undertaking.

We are glad to see that the Company's affairs are improving—not very rapidly certainly, but, there is every reason to believe, surely and steadily. The Directors appear to have set about carrying out the decision of Parliament relative to the widening of the line with commendable activity; and now that the animosities which preceded that decision have had time to die away, it is to be hoped that nothing will henceforth be allowed to disturb or interfere with that spirit of cordial co-operation which it is most desirable for the interests of each of the four companies who are so closely associated, should prevail.

We animadverted in our last on the practice which is gaining ground among Railway Boards of *suppresing* in their notices of the Yearly and Half-yearly Meetings of their respective proprietaries, the names of Directors going out of office and offering themselves for re-election at these Meetings, as also the names of any new candidates for office. We can imagine nothing so certainly calculated to make a farce of the elective privileges of railway constituencies as this; and had supposed that the thing was so utterly indefensible, that nobody could be found so lost to common sense and shame, as to stand up in its defence. We seem, however, to have forgotten for the moment, that there were such black swans as our friends of the Eastern Counties' Board in existence. From the notice given of the next General Meeting of the Eastern Counties' Company, it appears that there is an existing bye-law of that Company, by which it is provided "that it shall not be lawful for any shareholder to put in nomination at any General or Special General Meeting of the Company any other shareholder, to be a Director of the Company, *unless notice, in writing, shall at least fourteen days previous to such meeting have been lodged with the Secretary of the Company stating the*

Digitized by Google

name, address, and profession of the shareholder intending to become a candidate, or who is to be proposed as a candidate at such meeting; and that the names of all candidates for any vacancy in the Direction to be proposed at any such General or Special Meeting *shall be published* ALONG WITH THE NOTICES CALLING *the General or Special General Meeting.*" But this very excellent bye-law—wanting only a slight verbal amendment to render it everything that could be desired (the substitution of "at least ten days before" for the words which we have marked in small capitals, since the written nomination of a Director might not be lodged till *after* the publication of the notices calling the meeting), the Directors now propose "to repeal!" We feel inspired with a great curiosity to know who the worthy gentleman is who has undertaken to make this most impudent proposition, and what he can possibly say in its behalf. It may indeed be an unpleasant thing to Liverpool gentlemen to be advertised (after the manner adopted in a recent case), as "A. B., Esquire, of the Swan with Two Necks, Lad Lane," or "C. D., Esquire, of the Pig and Whistle, St. Pauls," when they only happen to be "*putting up*" there, while staying in town; but better a thousand times that there should never be another Liverpool person in this Direction, than that any more should be *smuggled* in under the pretence of being Londoners, or the shareholders be deprived of the advantage of knowing beforehand all about the individuals, for whom their votes are to be solicited on the day of election. We recommend to attention a spirit-stirring letter on this subject from "A Shareholder and Shipowner," which will be found among our correspondence.

THE *Courier* evening newspaper has taken upon itself to lecture the gentlemen of Norfolk on the course they are at present pursuing to secure for their county the benefits of a railway communication with the metropolis. It can discover in all they are doing, nothing but ignorance and prejudice, and very civilly recommends to them to "place the matter in hands better understanding the subject, and perfectly unprejudiced." Not the least amusing part of the affair is, that our contemporary assures us withal, that he "*has taken some trouble to understand the subject.*" We propose to show that such pains as he has taken in the matter have been altogether thrown away, and that he has yet both the true bearings of the subject and the true interests of Norfolk *all to learn.*

The grand point which our worthy brother of the broad sheet essays to establish is this—that "the route which would do the most general good and return the best interest to the shareholders, is by the towns selected for the Eastern Counties' line," namely, Chelmsford, Colchester and Ipswich. And this proposition is advanced with sundry prelusive flourishes, which show evidently that he takes it to be one of very considerable novelty and originality. He is first "*inclined* to think so"—then he is "*prepared* to prove" it—and anon come his *proofs* in regular battle array. Now, odd as the *Courier* may probably think it—especially after its "trouble to understand the subject,"—it is an undoubted fact, that it has done nothing more in all this, than demonstrate anew what has been long ago proved over and over to the perfect satisfaction of all concerned. For what reason—does the *Courier* suppose—was the route in question "selected for the Eastern Counties' line," and approved of by Parliament? What other could it be than that it "would do the most general good and return the best interest?" If in the course of its researches "to understand the subject" it had but chanced to stumble upon those recondite sources of information the Reports of the House of Commons, it would have discovered that more than four years ago a Committee of that House, including all the members for Essex, Suffolk, and Norfolk, reported unanimously in favour of the identical route, which it now so superfluously undertakes to champion against all gainsayers. Nay more, that a vast majority of the inhabitants of the three counties approved of the adoption of the Eastern Counties' line—were perfectly awake to all the advantages to be derived from it—and did all that men could do to make sure of its being executed.

We will here, however let our friend into a little piece of railway history, for which he would seek in vain in Parliamentary Records. In 1835-6 there were three competing schemes before Parliament for a railway from London into Norfolk;—the Eastern Counties', the Great Northern, and the Northern and Eastern. The promoters of the Great Northern offered only a railway as far as Norwich; but those of the Eastern Counties' and Northern and Eastern, protested with emulative zeal, that anything short of the port of Great Yarmouth was not for one moment to be thought of! The race, therefore, became between the two last, and it was easy to see that that which could boast the greatest amount of local influence, would be the most likely to win. A deputation was therefore dispatched by the Eastern Counties' party, to canvass the three counties, and their language was every where the same. "We do not come to you because we want money; all we desire is your countenance and support. We could dispose of more than all our shares in London and Liverpool, (as witness these deeds already so numerously and respectably signed,) and we should do so at once, but that Parliament will be more or less inclined to favour our undertaking, according to the number of subscribers to it, belonging to the districts which it is intended to benefit. A subscription for a share or two, however, will serve the purpose of showing good will as well as for a hundred. Indeed, more than ten or so we cannot allot to any one individual, and would much prefer your taking only two or four each; for the reserves we have been able to make for the people on the line, are after all but small;—to Norwich and Yarmouth, a thousand; to Ipswich, five hundred; to Colchester and Chelmsford, each a couple." How the Northern and Eastern party went to work on the occasion it is needless now to inquire; for certain it is that so catching was the mode of solicitation adopted by their Eastern Counties' rivals, and so superior besides in itself the scheme which they advocated, that they carried the counties completely along with them. *All the shares reserved for and offered to the counties were taken up by the counties;* and the promoters of the Eastern Counties' line went before Parliament with a subscription list, which in point of number of local subscribers, if not of the amounts subscribed by them, was equalled by few subscription lists of the time. And the ultimate consequence was, the passing of the Act for the Eastern Counties' Railway, and the final withdrawal of the two rival lines.

So matters rested for a time—the Eastern Counties' Company rejoicing in their success, and honestly intent on going through with the undertaking in which they had embarked—and the counties rejoicing in the certain prospect which they imagined they now had, of speedily participating throughout their length and breadth, with other parts of the kingdom in the benefits of railway transit. But at length a change came over the counsels of the Railway Company. Some fellow of no principle, (perchance—

"Some busy and insinuating rogue;
Some cogging, cozening slave to *get some office,*")

suggested that the railway would be vastly more profitable to the shareholders were it to stop short at Colchester instead of being carried on to Norwich and Yarmouth—that the shareholders ought to look to themselves only in the matter—and that as the three counties of Essex, Suffolk, and Norfolk, form a peninsula, the chief access to which is through Colchester, the Company might stop their line there, with a perfect certainty (to use the words of their own poetical, and as respectable as poetical, Chairman, Mr. Bosanquet,) that,

"—— all the traffic of the East
Must surely through it flow."

And wicked as the suggestion was—groundless in point of fact as every day is now proving it to have been—it found acceptance in the sight of a majority of the proprietary. Of course the proposition was not presented to them as we have now done it, in all its naked deformity. Oh no! For

"When devils their blackest sins put on
They do suggest at first with heavenly shows."

The traffic beyond Colchester was represented as being wholly inadequate to the support of a railway! The estimates proved before Parliament were utterly fallacious and deceptive! The subscribers had been shamefully taken in, and it was but following out the first law of nature, to look to their own self-preservation! And—vilest slander of all—the Counties themselves cared nothing about a railway, or at all events cared only for one, in so far as it might be made with other people's money and not their own—and had subscribed of choice for but a miserable fraction of the capital (albeit they had subscribed for all that had been offered to them). And by such "shows," no doubt, there were many just and honourable men who were led to give their support to the stop-short scheme, who if they had been aware of all the hollowness of the pretexts on which it was founded, and had been duly sensible of the gross breach of public and private faith, which it involved, would have been the first to reprobate and denounce it.

One step or two more and the history of the case will be complete. The Counties' seeing themselves betrayed and deserted by the Railway Company which they had by their preference and patronage, called into existence, and on which they had entirely relied for a railway communication from London to Yarmouth, have been recently doing their best to find out a remedy for their perfidy. First, they try how far the Courts of Law will go in enforcing the Company's engagements to the public, but they find that though the Courts are with them on the merits of the case, their forms of procedure in matters of this sort are so favourable to contumacious defendants, with ample corporate funds at their command to squander in litigation, as to render the obtaining of justice through their medium, the business of an age rather than (as it should be) of a day.

The gentlemen of Norfolk then look about

Digitized by Google

to see whether they cannot obtain a railway communication with the metropolis in some other direction than through the Colchester "Traitors' Gate," and this movement of theirs brings on the carpet the plans of Mr. Rastrick and Mr. Gibbs, the former of which they have, after a full and apparently impartial examination of both, seen fit to prefer.

It is at this stage of matters the *Courier* presents itself on the arena, and in manifest ignorance of much if not of all that has taken place, as well as of the present relative position of parties, presumes to tell the gentlemen of Norfolk, that they know not what they are about! "Why not unite," it asks them, "with the Eastern Counties' Company to carry into effect the original line?" But *how* unite with parties who tell you that they have abandoned all that part of their original line which lies beyond Colchester solely *because it could not pay*, and that the proper direction in which the Eastern Counties' line ought to be extended into Suffolk and Norfolk is *not* by Ipswich, but by Sudbury and Bury St. Edmunds? False pretexts both, we know, yet on that very account insuperable bars to the union you advocate—which is a union for the purpose of an *Ipswich* line. Chelmsford, Colchester, Ipswich, Norwich, and Yarmouth, ought to be united, says our contemporary, "as great links in one chain," and were even double the capital required for the purpose, there can be no doubt that "a much higher rate of interest would accrue from the double capital and the whole line, than from the present capital and short line." All this is most true; but the *Courier* commits a great mistake in imagining that it is the gentlemen of the county of Norfolk who require to be convinced of it. The parties to whom it should address its arguments and exhortations, are the stop-short jobbers and deceived and misled proprietors of the Eastern Counties' Railway Company, who persist in maintaining that the short line is the thing for them, and proclaim aloud that a line in extension from Kelvedon to Bury, to be taken up and executed *by other people*, is the *only* line beyond Colchester which may expect to have their approbation and support.

The *Courier* proceeds, in the same profound ignorance of facts, to ask whether the Eastern Counties' Company "have not been left in the lurch already by the backwardness of the county gentlemen as well as those of the city of Norwich?" We trust that after the statements we have made on this head, the accuracy of which is incontestable, the *Courier* will feel it due to the County and City gentlemen, to recall the groundless imputation conveyed by this question. The true state of the case is precisely the reverse. It was the gentlemen of the County and City who were left in the lurch, and the Eastern Counties' Company who were the base deserters. The Company could do no more than subscribe all their capital, and the Counties could do no more than take all that was offered to them.

But no line, quoth our contemporary, can be deserving of support which will not "repay the capitalists who may come forward to assist in the construction;" and "there *can be no doubt* the line by Cambridge and Bishop's Stortford would not affect that object." Your "can be no doubt" is a famous beggar of questions. We have in former articles on this subject given our *reason* for thinking that such a line will pay well; not so well, possibly, as the original Eastern Counties' line if carried out would have done, yet well enough to induce capitalists to advance the money requisite for its execution—and our contemporary has not given a single *reason* for assuming that it will not.

The same question, however, which was so tauntingly put to the gentlemen of Norfolk, in the paper of memorable and "unannullable" impertinence lately issued by the Company on the subject is here repeated. "Finally, we will ask the gentlemen of Norfolk whether they are prepared to subscribe the 2,000,000*l.* and the *et ceteras* necessary to construct the road they have so hastily predetermined on?" We will take leave to answer for them that they are not, and that neither is there the smallest occasion. Were they to make a railway with their own money alone they would be doing what no body of county gentlemen in England have yet done for themselves, or have been ever asked or expected to do. Subscribe to it largely they no doubt will, but their chief dependence must needs be on the subscriptions of others. Nor will they have to look long for such subscriptions, if they can only show that there is a reasonable prospect of a good return. Capitalists everywhere will be ready enough to participate in the adventure, and those of Lancashire we may be assured not less so than others. If they cannot do that, then the whole project must of necessity fall to the ground, and the sooner it is abandoned the better will it be for themselves as well as others.

The only parties left unredressed by the success of the East Anglian scheme will be the people of Ipswich and its neighbourhood; nor is it possible to view the position to which they are reduced by the treachery of the Eastern Counties' Company without feelings of the deepest sympathy and regret. A line from Norwich by Thetford and Newmarket to Cambridge, will leave all the lower parts of the county of Suffolk just as unprovided with railway communication, as they will be by the stoppage of the Eastern Counties' at Colchester or Kelvedon. Unless they make branch lines for themselves (a thing not at all to be expected) to Norwich on the one side and Colchester on the other, with perhaps a third to Newmarket, they will never be able to make up for the advantages they would have derived from a great integral line like the Eastern Counties' passing through them. The people of these parts, by no indifference or neglect of their own, but through a gross breach of faith towards them on the part of others, will in fact be quite shut out from the railway circle. One considerable consolation, however, they have, in the possession, through the port of Ipswich, of a communication by steam-vessels with the metropolis, which, though not so speedy as one by railway would be, is yet a great deal cheaper. And here, again, we shall very surely see retribution following fast upon the heels of fraud, for as the East-Anglian Railway will divert into another channel all that Norfolk traffic which the stop-short jobbers reckoned so confidently upon having secured to themselves for ever, so will the steamers from the Orwell carry off thousands and hundreds of thousands of passengers who, if the Eastern Counties' Railway had been carried to their doors, would have infallibly preferred it before all other means of conveyance.

In the last communication of our indefatigable and generally most correct correspondent, "Q. in the Corner," he states that the "tricksters of the Eastern Counties' Company boast of having the Northern and Eastern Company bound fast under hand and seal, not to sanction or promote either directly or indirectly any line which may operate prejudicially to the Eastern Counties'," "and that he believes this to be the fact." We have been favoured with an authentic statement of the provisions of the Agreement between the Eastern Counties' Company and the Northern and Eastern referred to, and we are satisfied that on this point "Q." has been misinformed. It merely binds the Northern and Eastern not to sanction the entrance of any line from the eastern counties of England into the metropolis, except through the Eastern Counties' Shoreditch station. The Northern and Eastern Company are therefore perfectly free to encourage and support the proposed junction of the East Anglian line with theirs at Bishop's Stortford; *and there is no doubt they will do so.*

THE proceedings at the half-yearly meeting of the London and Birmingham Railway Company held yesterday in Birmingham, were of a very interesting character, but the great length to which our Report has run, leaves us space only to direct attention to them, and to express our gratification at the continued prosperity of that great undertaking.

WE have a budget of good tidings this week respecting the Bristol and Exeter Railway. First, all the forfeited shares have been disposed of at good prices; secondly, upwards of 180,000*l.* have been paid by the shareholders since last general meeting; and, thirdly, the paid up capital now exceeds 700,000*l.*, which places the Company in a position to avail themselves of the power given them by the Act to raise 500,000*l.* by way of loan, which will obviate for some time the necessity of making further calls on the shareholders, "With the security," says the *Bristol Gazette*, "they have to offer—(having the guarantee of the rental to be paid by the Great Western Company, besides their own responsibility) the Directors will be enabled to take a commanding position in the money-market; so that, with this resource, with a large balance in hand, with about 50,000*l.* or 60,000*l* on account of the allotted shares, which will be forthcoming in a month from the present date, there will be no lack of means for prosecuting the works with vigour during the ensuing summer, while the probability is that the shareholders will not be again called upon until after the lapse of many months—perhaps a year or more. We understand that not the slightest doubt exists of the line being completed to Bridgewater by June next, if not before. The wooden bearers are now in course of being laid."

WE beg to direct the attention of such of our readers as take any interest in the fortunes of that *great corporate misfortune*—the Eastern Counties' Railway—or in the merits of the long standing dispute between its Directors and this Journal, to the report given in another part, of the final proceedings at the Ilford Petty Sessions, respecting the rate at which that railway should be assessed for the relief of the poor of the parishes through which it passes. It may be remembered that ever since this line has been partly opened to the public, the Directors have in their Reports invariably pretended that they were working it at a *considerable profit*; and that we have as invariably maintained that their representations on this head (as on but too many others), were grossly and wilfully false. The Directors have shown in various way vast indignatio

Digitized by Google

and fury, at this impeachment by us of their veracity and honesty; but *that is all*—they have never been able, and indeed have never attempted, to show by facts and figures that they were "not guilty."

And now what do we behold? Two of the principal servants of these very Directors—their sub-engineer and their accountant—proving *on oath*, in a public court—that during the six months ending July 6, 1840 (at which time the Directors pretended to have *realized* a profit of no less than 3,948*l.* 12s. 10d.!) their carrying trade had been attended with an actual loss of 716*l.*; and that during the period from July 12, 1840 to January 3, last, the total gain amounted only to 902*l.*—that is to say, that taking into account the opening of the Northern and Eastern line during this latter period, which has seldom yielded to the Eastern Counties' Company less than 150*l.* a week, the working of its own line, from London to Brentwood, has been carried on *at a still weekly increasing loss!!!* Such facts need no comment. The career of so shameless a body of impostors, cannot surely be of much longer duration.

—o—

THE *Falmouth Packet* in alluding to the proposed railway through Cornwall and Devon states that at a meeting of the Committee, held in Truro on Saturday week, the Earl of Falmouth in the chair, it was determined that the plans, books of reference, and whatever else is required by the rules of Parliament, should be deposited by the 1st of March. "We understand (adds our contemporary) that Capt. Moorsom reports very favourably of the undertaking, and that the original estimate of 8 per cent. per annum on the capital necessary to complete the railway may confidently be anticipated."

—o—

WE learn from the *Monmouthshire Merlin* that the Town Council of Newport have adopted a memorial to the Postmaster General, praying him, when the railway connecting Gloucester with the Great Western is completed from Swindon to Cirencester, that the mails for Newport, and, in fact, all places between Chepstow and Swansea, may be sent by that route to Gloucester, and thence through the forest to Chepstow, instead of forwarding them to Bristol, as at present. By this means, it is said, several hours would be saved, and Newport in fact be as well off, in point of post-arrangements, as Bristol.

—o—

AMONG the petitions presented to the House of Commons during the week, were two from the Newcastle and North Shields and Glasgow and Greenock Companies, praying for a removal or modification of the tax on railway passen gers.

—o—

THE mails have now been put upon the Birmingham and Gloucester Railway.

RAILWAY OFFENCES AND OFFENDERS.

ON Monday the Directors of the London and Croydon Railway had two of their servants, named M'Carthy and Hatfield, taken before Mr. Jeremy, of the Greenwich Police Court, charged with neglect of duty. It appears that the men had omitted to arrange the switches at the Dartmouth Arms station, in consequence of which a train came into collision with some coal trucks. Fortunately no person was injured, the speed of the train having previously been slackened in order to stop at the station. Mr. Jeremy very properly fined the men 10*l.* each, with an intimation, that but for the good character they had previously borne, he would have sent them to the treadmill. We are glad to find that there is at least one magistrate in the metropolitan district who evinces a proper regard for the public safety. We trust the Directors have done *their* duty by summarily sending the offendersa drift.

The next case which deserves to be classed under this head is one which we trust is not so bad, as it appears to be from the following statement in the *Manchester Chronicle*. The Railway referred to is the Grand Junction:—

"On Tuesday Mr. John Gadsby of this town, who had been requested by some of the members of the Anti-Corn-Law League, to convey from Walsall by express the result of the election, was desirous to proceed to Manchester himself. As the five-o'clock train from Birmingham does not usually stop at Walsall, Mr. Gadsby engaged a gig to go direct to Wolverhampton, where the train invariably stops. A message, however, was sent through the postmaster of Walsall, by the station-keeper, that the train would stop there that afternoon. Mr. Gadsby, therefore, instead of going to Wolverhampton went to the station, which is about a mile and a half from the town. On arriving there he found four gentlemen waiting to go to Manchester. The station-keeper immediately took his fare, and booked him. After waiting for 15 or 20 minutes the train came up and stopped, but strange to say, the conductor refused to take the gentleman up, saying his instructions were to pull up for a parcel for Messrs. Wilmer and Smith, of Liverpool, and as nothing was said about passengers, he would not and could not take them. Meantime, however, Mr. Gadsby had got into one of the carriages, and shut himself up, snugly enough as he thought. Mr. Baker, of the Post-office Hotel, one of the gentlemen who were detained, remonstrated with the conductor, explaining how they had been misled, and that their fare had been taken; but all to no purpose, as he positively refused to take them, The train then moved on, but Mr. G. being missed by the policeman of the station, the conductor again ordered the train to stop. The policeman then requested Mr. G. to get out, but he refused saying he had paid his fare, and would not stir; upon this the policeman sprung into the carriage, when Mr. G. said, he would give twenty guineas if he might go on, but the policeman put his hands on Mr. G.'s shoulders, and out he went. Now, if such conduct is to be tolerated, where are travellers to look for security? Mr. Gadsby, we understand, has commenced an action against the Directors for damages, and we hope he will be successful, as we know that, to him, under circumstances which need not here be named, but which will transpire on the trial, the loss was considerable."

If the facts really be as above described, the conductor was unquestionably much to blame in adhering so pertinaciously to the letter of his instructions. As the matter, however, seems likely to be investigated elsewhere, we refrain from entering further into it at present.

Somewhat connected with this case is another noticed in the same paper. From a letter addressed to the Directors of the Company by a correspondent whose name, it is said, may be known on application at the office of any of the papers mentioned, we extract the following:—

"A case of what appears to me most unpardonable negligence, occurred on Tuesday last, and as far as I am able to see into the matter, will require more than a common defence. Still, had not the public rather than an individual been the party most aggrieved, the thing would have been permitted to pass over without comment. The case is this, the Walsall election took place on Tuesday last, and as more than usual interest was occasioned to learn as early as possible the result, I took care that that result should, so far as I was concerned, be as quickly made known as possibly it could be. To accomplish this a special messenger was despatched to the Walsall station, at Bescot Bridge, with the final close of the poll, and with instructions that the parcels committed to the messenger's charge should be delivered to the Clerk of the Company there, and from whom he was to bring back a receipt, and also information that they had been forwarded. Such a receipt was brought back by the messenger, with an intimation that they had also been forwarded by the train at about 20 minutes past five, p. m. Now, it so happened, that the parcel addressed to the *Manchester Chronicle and Salford Standard* was not received that night, though some one from their office was in waiting for it at the station; *nor did it arrive until Thursday morning, and then through the Liverpool Post-office.* Another parcel was also sent to a private gentleman by the same conveyance; and this, too, only came to hand on *the morning of the 5th.* There were also *then* forwarded parcels for the *Courier, Standard, and Times*, Liverpool papers; and from the silence of the *Courier* on Wednesday, the day of publication, I fancy that that journal, as well as the *Times* and *Standard*, were all in the same predicament."

In reference to this letter, the Editor says, "it was currently stated that the Directors had ordered that an express should be forwarded to Liverpool, and that none should be permitted to come to Manchester! How this was we know not; but it is the fact, that the Liverpool communications were all punctually delivered, while none of those for Manchester came to hand until the next day." The matter ought, if possible, to be cleared up, for nothing can tend to prejudice railways in public estimation so much as any apparent exhibition of favouritism or caprice in the exercise of the powers entrusted to their Managers.

On Thursday the 4th instant, John Adamson, of New Shildon, engine-driver, was summoned before the Rev. George Fielding, and R. E. D. Chaftoe, Esq., the sitting magistrates, at Bishop Auckland's (Durham), charged on the information of Mr. Thomas Manton, the superintendent of Police on the Stockton and Darlington Railway, with being drunk whilst in charge of the *Dispatch* engine, and a train of coal waggons on that railway. He left his engine and adjourned to a public-house near the line, and got drunk. The merchandise train from Stockton came up at the time and found the road obstructed. The magistrates fined the man 1*l.* and 17s. costs under Lord Seymour's Act, and the Company have dismissed him from their service.

Christopher Palphramand, of Redworth, blacksmith, was fined 10s. and 7s. costs for riding on a waggon on the above railway, without a ticket, contrary to the bye-laws of the Company.

John Taylor, of Middridge, shoemaker, fined 5s. and 9s. 6d. costs, for walking on the same railway, from Aylcliffe station to "Walkers' lane."

Benjamin Croft, of Redworth, waggon-driver, fined 7s. for absenting himself from his horse and waggons, whilst on the Stockton and Darlington Railway.

John Carter, of Aycliffe, cartwright, fined 7s. for riding on a waggon without leave.

William Thomas, was summoned before the Rev. Mr. Brewster, at Yarm, and fined 6s. and 13s. costs, for being on the same railway with waggons, after sunset, without having a signal light.

A DEPARTING GENUS.—We advise the curators of the British Museum, if they wish to procure a perfect specimen of that truly English animal, a genuine stage-coachman, to be quick in catching him, as in a very short time he threatens to become an extinct species of the *genus homo*. One thing is very certain, that in this locality their rubicund countenances are likely very soon to become as scarce as Queen Anne farthings; and it is with a twinge of regret that we announce that this evening, from railway arrangements, three mail coaches cease running through this city; these are the London mail *via* Birmingham, and the Bath and Bristol mails. Their horns will blow for the last time in our streets to-night; and besides, two stage-coaches, the *Brilliant* and *Blue*, tak their last journey to-day—*sic transit gloria viæ*. We shall miss them sorely, as will many more whose purposes the lightning-quick railway cannot serve, and to whom this desolation of the road will, we fear, turn out a great privation. —*Worcester Herald.*

SUNDAY RAILWAY TRAVELLING IN SCOTLAND.

To the Editor of the Railway Times.

SIR,—A strong effort is at present being made in Scotland to prevent the running of Sunday mail trains on the railways in progress there, and the exertions of a number of well-meaning, but injudicious *soi-disant* conservators of public morals, have at least, in one instance, been crowned with success. The Directors of the Glasgow and Greenock Railway, have been prevailed on to refuse carrying the mail on that line, and the Directors of the Glasgow and Ayr Railway, have also been tampered with, and they have withdrawn the offer they had made to Government, to carry the mail on their line, as the doing so would have been an immense advantage to the west of Scotland as well as to Ireland; the present mode of conveying the mail, by a boy on horseback, or in a gig, is a disgrace to the 19th century. The arguments used, I understand, are, that carrying the mails by railway, on Sunday, would be a "desecration of the Sabbath," and would be injurious to the religion and morals of the community. Now, it appears to me, that we have no proof, that the running of the mail trains on Sunday, has a tendency injurious to the religion or moral feelings of the community. Scotland is the only nation where such an idea has prevailed, or has ever been suggested, and it is rather a startling fact, that on comparing the state of crime in Scotland, where such notions are encouraged, with that of England, where no obstacles are opposed to Sunday trains, it has been found, from returns lately made, that the increase of crime in Scotland, as compared with the increase in England, is, to an extent that is almost incredible. It would, perhaps, be going too far, to attribute this change in the relative circumstances of the two countries, entirely to the new sources of improvement that have been opened to the working-classes of England by the Sunday trains; but when we consider that thousands of our fellow-citizens are doomed to spend six days of the week in a baneful confinement, were too often tempted to spend the hours of the seventh, in idleness or debauchery, but are now encouraged by the temptation of a cheap and agreable conveyance, to spend the Sabbath, if not as a day of rest, at least, as a day of recreation, salutary both to body and mind, we will naturally pause before we condemn the Sunday trains as a desecration of the Sabbath, or as injurious to religion or morality. The introduction of railways was hailed, by the more enlightened part of the community, not only as a means likely to promote the prosperity of the country, but also as a powerful aid in improving and cultivating the minds of the inhabitants; and I would earnestly recommend those who are so loud in declaiming against the Sunday trains, to consider well before they attempt to impede the legitimate progress of this vast national improvement, and to consider if it be not a bigotted and narrow-minded severity that induces them to refuse to a numerous class the only opportunity they have of reaping the incalculable benefits which quick transition and freedom of intercourse are so well calculated to afford both to body and mind. At all events, let the Sunday trains have, in Scotland, a fair trial, as they have elsewhere, and should they be found in any way detrimental either to religion or morality, let them at once be put a stop to.

I am, Sir, yours, &c.,

M. N.

Glasgow, Feb. 10, 1841.

SIGNALS.

To the Editor of the Railway Times.

SIR,—In addition to the numerous suggestions which the railway accidents have already called forth, will you allow me to make *two only*, on the subject of signals.

1st. It is proposed, amongst the rules and regulations agreed upon at the conference, that the *white light stationary* should indicate that *all is right*; but that if *waved up and down* it should be a signal *to stop*. Now it must certainly be dangerous to use *the same color*, for the purpose of indicating *circumstances so different*. The *green* light proposed by the officers of the Board of Trade (or a *blue* light) is decidedly preferable as a signal for *caution*; leaving the *red* light as a signal to keep the required distance from a moving train, or (in every other case) *to stop*.

2nd. The difference also between the *one long whistle* to indicate *a coming train*, and the *vibratory whistle* as a signal to the guards and breaksmen to put on their breaks and *stop*, may not always be sufficiently marked. For one of these purposes the *gong* might be advantageously substituted.

The remark made by the Chairman of the Grand Junction Company at their last meeting, that "if good result from one suggestion out of ten, the advantage will amply repay the time lost in the consideration of the other nine," must be my excuse for trespassing upon your attention.

I remain Sir, yours constantly,

A READER OF THE RAILWAY TIMES.

9th February, 1841.

THE RAILWAY WORKING MEN AND THEIR MASTERS.

To the Editor of the Railway Times.

SIR,—The "working men" are much obliged to you for your impartiality in inserting the account of their Conference and Resolutions sent you by a "Lover of Fair Play." It may be that they are no more all in the right than their masters—indeed it must be so; but it is only fair to observe, that their object was rather to show that they were not *all in the wrong* (as had been very industriously reported), than to set forth the whole of the causes of the late melancholy accidents.

It is only necessary to contrast the published proceedings of the Masters with the Report of the Government officers since laid before Parliament, to be satisfied that it was high time for the men to say a word or two for themselves. The public were told that those of the masters "who were most conversant with the management of railways, stated their conviction that *by far the greater part of the accidents* which had occurred *were referable to the neglect and disobedience of orders on the part of railway servants*," and that "in these sentiments *every person who delivered his opinion concurred*." But what say the Government officers? Why that "out of 35 railway accidents which have occurred in the course of five months, *twenty-one* are attributable among other causes to "*defective arrangements*"—with which "defective arrangements" of course none but the masters could have any thing to do. Oh most candid and impartial Masters! Twenty-one motes in their own eyes, and they could not see one of them! If reason were wanting for Government interference with railway Directors, this should be reason enough. Who so much in need of being looked after as those who have not an eye to their own footsteps? Who, can "see all other's faults," but are as blind as bats to "their own"? The Government officers, it is true, reported the same time, that at 18 of the 35 cases of accidents are mainly "attributable to misconduct of servants." Yet still the servants are *by three* less culpable than their masters, who can see nothing in their own conduct at all to blame! Then, how much of that "misconduct of servants" may not have been owing to negligence or misrule on the part of their employers? It is an old saying, that bad masters make bad servants. The working men have no desire to screen the delinquents of their class from any blame or punishment which they may have justly incurred—for by no class of men, perhaps, is good conduct held in higher esteem; but their common experience has taught them, to make great allowances, for the effects of want of capacity, and just and kindly feeling on the part of employers, in producing disrespect, indifference, and neglect on the part of servants.

To the proposed plan of licensing engine-drivers, the working men see no objection; but they do, with you, Mr. Editor, strongly object to its being made a condition of obtaining a certificate of efficiency that they should previously obtain a *permit for examination* from some Railway Company. Why should such a bar be raised between the men and their examiners? Are the favourites of Boards and Directors alone to be encouraged? Why should not the market be as open for talent, in this branch of industry, as in any other? Does the medical student require to have a permit from a body of patients before he applies for a degree? Or an articled clerk to buy the good-will of "a rich and obstinate lot of clients," before he can obtain an attorney's license? No reason, whatever is given by the Government officers for investing the Railway Companies with a power so unprecedented, and it is hard to conceive what *good* reason can possibly be assigned for it. If it is desired to raise up a superior class of men of this description, Government and the public may depend upon it, that the opener and freer the competition is left the better.

I remain, Sir, your obliged servant,

ABEL HANDY,

Chairman of the Committee of the Working Men's Conference.

Stockton, 8th February, 1841.

RAILWAY COMMUNICATION BETWEEN LONDON AND DUBLIN.

(From the *Worcestershire Chronicle.*)

AT the late meeting at Caernarvon, Mr. J. R. Gore stated that Sir F. Smith considered there ought to be two lines of road between such important places as London and Dublin—the Chester and Worcester lines. We shall not at present enter into a discussion on the necessity of constructing two lines of railway between London and Dublin, but show, by incontestible evidence and incontrovertible facts, that the line *via* Oxford, Worcester, Ludlow, Newtown, and Portdynllaen, is "the best and most rapid communication on the English side." The Government Commissioners themselves declare that *in point of time to be consumed upon the journey the advantage would be decidedly in favour of the Worcester line.* It may be said that this is only spoken of the competing lines to Portdynllaen, but that it is equally applicable to *all* the competing lines is evident by the fact that the longest of the two other competing lines to Portdynllaen, referred to by the Commissioners, is only 3½ miles longer than the chosen line to Holyhead. The Commissioners, in the course of their Report, admit the much higher rate of speed which can be attained on the Great Western than on railways of the more usual gauge. They state the nature of the country from Dudcot, where the Worcester line would join the Great Western, to Worcester, is eminently calculated for a railway, and has been judiciously chosen to admit of high velocities. They observe, further, that from Worcester to Newtown the gradients are very favourable, and that from Newtown to London, a distance of 180 miles, there would only be a mile and a seventh of tunnel. From Newtown to Carno, nothing of a formidable character presents itself, and it is only between Carno and Dolgelly, an insignificant distance, that "serious difficulties," to use the words of the Commissioners' report present themselves. Now, it must be evident to all who are acquainted with the nature of the country, the constant succession of mountains, intersected by valleys in which the streams flow, which Wales presents, that any railway traversing the length or breadth of that country must be, more or less, obstructed by difficulties. But Mr. Brunell expresses a confident opinion that a better line than the one between Carno and Dolgelly, where the difficulties interpose, would be found upon further examination, and the Commissioners signify their concurrence in his opinion. The Commissioners give the total average of time to be expended between the London and Dublin Post Offices as follows:—

	Hrs.	Min.
By Chester and Portdynllaen.....	18	16
By Chester and Holyhead, the line recommended by the Commissioners	17	44

Now, suppose the Dublin mail left London at eigh

Digitized by Google

o'clock at night, as at present, it would reach Dublin by the latter and shorter route at 44 minutes past one in the afternoon of the following day, but the return mail, in order to arrive in London at seven a.m., so that letters from Dublin might be included in the first general delivery, would be compelled to leave Dublin at 16 minutes past one, or nearly half an hour before the arrival of the London letters at the post-office; so that to answer a letter by return of post would be as much out of the question as now. But by the Worcester line it is not only *possible* to answer letters passing between the capitals by return of post, but an interval of five hours and 26 minutes would elapse between the arrival of the *up* or London, and the departure of the *down* or Dublin mail. This we shall proceed to demonstrate by undeniable facts. We assume the terminus of the Great Western Railway at Paddington to be that of the Worcester line. The time occupied in the transit between London and Dublin may then be stated as follows:—

	Hrs.	Min.
From the London Post-office to the railway station	0	30
260¼ miles of railway, assuming, on the authority of Mr. Brunel, an average speed of 36 miles per hour over the whole distance in the direction *from* London, and allowing a reduction to 25 miles per hour on the inclined plane in returning: average of the up and down journeys	7	16
Time allowed for embarkation per steamer, (Commissioners' Report)	0	15
Sea voyage (Commissioners' Report)	6	16
Disembarkation, and travelling between the Kingstown and Dublin Post-offices (Commissioners' Report)	0	30
Total time expended between London and Dublin Post-offices	14	47

In the calculation we have used, where they were available, the times given in the Commissioners' Report, and in the rate of travelling on the railway our authority is Mr. Brunel. We will suppose a mail to leave London at eight, P. M. It reaches Dublin at 47 minutes past ten on the following morning, while the return mail, in order to reach the former capital by seven, A. M. on the next morning, would set out from Dublin at 13 minutes past four in the afternoon, so that nearly five hours and a half would be allowed for delivering letters, answering them, and getting them ready for dispatch by the return mail. Of course they would be sorted on the journey. That the line *via* Worcester and Port Dynllaen affords the most rapid means of railway communication between the two countries is affirmed in the Commissioners Report, and is borne out by every fact we have adduced. If the best means of railway communication between the two kingdoms be that which only can secure to their capital cities the advantages of corresponding by return of post, then the railway by Worcester and Port Dynllaen is the best. If the Irish people wish to secure this "best and most rapid line of railway communication," by which the journey between London and Dublin will be reduced by three hours more than the nearest of all the other lines—that by Holyhead and Chester—can reduce it; if they desire to secure to themselves, the vast advantages—the inestimable benefits which must accrue to manufacturers, commerce, trade, and the interests of society in general from the establishment of this best and most rapid means of communication with Ireland—the railway by Worcester and Port Dynllaen—let them make their voice heard by petition, and by means of their representatives in the House of Commons.

THE CASE OF THE POSTMASTERS AND STAGE COACH PROPRIETORS, *v.* RAILWAYS AND STEAM BOATS.

(From the *Times*.)

In considering the important question of the appointment of taxes upon the different means of internal communication, it is to be constantly borne in mind, not only that it is unjust and inexpedient for the Legislature to give a monopoly to any body of carriers, either by steam or by animal power, but that the Legislature never intended to do any such thing. "It is established," say the officers of the railway department of the Board of Trade, "upon the authority of the reports of the recent select committee upon railways," first, "that railway companies using locomotive power possess a practical monopoly for the conveyance of passengers upon their several lines of railway;" and secondly, "that this monopoly is the result of circumstances contemplated neither by the Legislature nor by the companies themselves, the extensive powers contained in their acts of incorporation having been obtained under the impression that the interests of the public were sufficiently secured by fixing a maximum rate of tolls, and providing for free competition in the supply of locomotive power and other means of conveyance." If Parliament, therefore, could do away with the exclusive use by the companies of their own roads, it would only be effectuating its original intention, and giving to the public that security against monopoly which was the condition of the legislative aid granted to those undertakings. In viewing such stipulations as matter of contract between the public and the railway proprietors, we are not hazarding any random theory, but stating a principle expressly laid down by Lord Eldon in 1824 (in the case of the Glamorganshire Canal Navigation Company), and ever since recognized in our courts of equity as law. "When I look upon these acts of Parliament," said that eminent Judge, "I regard them all in the light of contracts made by the Legislature on behalf of every person interested in any thing to be done under them; and I have no hesitation in asserting, that unless that principle is applied in construing statutes of this description, they become instruments of greater oppression than any thing in the whole system of administration under our constitution. Such acts of Parliament have now become extremely numerous; and, from their number and operation, they so much affect individuals, that I apprehend those who come for them to Parliament do in effect, undertake that they shall do and submit to whatever the Legislature empowers and compels them to do, and that they shall do nothing else; that they shall do, and shall forbear, all that they are thereby required to do and to forbear, as well with reference to the interests of the public, as with reference to the interests of individuals."

In the present case the railway proprietors contracted for enormous privileges and facilities, which Parliament only could give. The public contracted for a freedom of competition with those proprietors on their own railways. This essential condition of the contract has never been fulfilled; for it is now discovered, that, "under existing circumstances, a monopoly is inseparable from the nature of those establishments, and from the conduct of their business with due regard to the *safety* of travellers."

The railway proprietors, therefore, have hitherto had the exclusive benefit of the contract, and the public have a right to demand some equivalent for advantages which they stipulated for, but which, it seems, they cannot obtain. For the companies to pretend to anything like a vested interest in their present monopoly, or to deny that the Legislature is entitled, nay bound, in mere justice to the community, to do all in its power to encourage a collateral competition in place of that direct competition which they meant to secure, would be the height of effrontery and folly.

The monopoly which the railways now enjoy is capable of being resolved into three elements; first, a monopoly of conveyance upon their own roads; secondly, a monopoly of conveyance between their termini and intermediate stations; and, thirdly, a monopoly superseding the means of conveyance upon parallel lines of road, to a very considerable distance. The first of these monopolies they have and must retain, from the necessity of the case, as we have already noticed; the second they would retain under an equalized scale of taxation, or, in the event of the abolition of all taxes upon the means of communication, on account of that superior speed, with which no animal power can compete in the direct line upon equal terms. The third monopoly is that by which the public are aggrieved, being caused in a very great degree by the unfair pressure of taxation upon animal power; and this it is in the power of the Legislature, by a just and prudent adjustment of duties, to restrain within reasonable and comparatively narrow bounds.

When the Committee of the House of Commons on internal communication taxes was appointed, in 1837, this was rather a prospective than a present evil; but even then the posting and coaching interests, had, upon several of the chief lines of road, suffered heavy losses from the competition of untaxed steam conveyance by water. In 1837, the aggregate produce of the post horse duties licences to postmasters, and assessed taxes on carriages let to hire, was upwards of 270,000*l.* and it must be remembered, that this sum is exclusive of the assessed taxes on draught horses, which amounted to 59,611*l.* In the same year the total amount of stage coach duty, was 1,409.996*l.* Upon steam packet travelling there was, as we have said, no duty at all; and this extraordinary state of things continues to this day.

Upon the comparative rates of land travelling by steam and by animal power, the committee reported, that "a great inequality existed," "all land travelling, where the motive power was animal, being heavily taxed, while land travelling, where steam was the motive power, was comparatively lightly burdened;" and that "as far as an approximation could be made to the truth, by comparing the rate of duty and the average number of passengers conveyed, it appeared, that for every such passenger, the railway proprietors paid one-eighth of a penny per mile of duty, the stage coach proprietors fully one-fourth, and the postmaster three-fourths of a penny." "It seems absolutely essential," they added, "that this great disproportion should speedily be put an end to, not only in common fairness to the different parties who have embarked their capital in a line of business, which they now find rapidly leaving them, but also with a view to the maintenance of the public roads, the use of which can never, under any circumstances, be dispensed with."

Since that time nothing has been done, except a very slender and almost nominal reduction of the duty upon carriages let for hire—a reduction affecting the postmasters only—and that in a tax which (essentially unfair and oppressive as it is) constituted in 1837 less than one-sixth part of their burdens. All the witnesses interested in the question who were examined by the Committee agreed in the opinion, that a great proportion of the competition, from which animal power is now unjustly excluded, would be restored if both the competing parties were taxed upon a principle of equality; but that for that purpose nothing less than the total abolition of the post-horse, and equitable adjustment of the stage-coach duties, would suffice. Having on previous occasions expressed ourselves at length upon the part of this subject which relates to stage-coaches, we shall confine ourselves for the present principally to the consideration of the question as it affects the posting interests.

Mr. Henry Gray, Chairman of the Association of Postmasters, stated to the Committee, that "if the mileage duty was entirely taken off, posting might be reduced to a shilling a mile." He was asked to suggest any alterations which he should desire, in order to put himself on a fair level of competition with the steam power. His answer was, "if the steam power is not taxed, I am quite sure we cannot compete with them, unless the mileage duty on post-horses is abolished entirely." Mr. Thomas Cass, a postmaster of great respectability at Stevenage, in Hertfordshire, (upon the Great North Road) stated, that from the competition of untaxed steam power by water he had found his trade decrease within the ten years preceding in such a proportion that he found the greatest difficulty in carrying it on. To the question, "What do you conceive would be necessary to put you upon a fair competition with the rival power?" he answered, "The entire abolition of the post horse duty; there is nothing else that would enable us to run at 1s. a mile; and then, carrying the number of passengers we continue to do with a pair of horses, we might, with some chance of success, contend with any mode of travelling, because the roads are good, and we could carry many people with a pair of horses, which we do continually." "Do you contemplate," he was asked, "from the extension of steam power by land as well as by water, that you will be obliged to reduce your establishment?" "I consider," he replied, "it will annihilate the business altogether, unless relief be afforded in the abolition of the duty. I think there cannot be two opinions about it." Mr. John Watsop, another postmaster, carrying on business to a large extent at Alconbury-hill, deposed to precisely the same effect. "With respect," he added, "to the tax upon each person travelling, I certainly would not seek to have the burden taken from my own shoulders and placed on another's;" but "he thought nothing could save him and men situated like himself, unless they were placed on a footing with their rivals by a total abolition of the duty." "The decrease affected his house, as well as the posting business." Mr. Cass also stated, "that the house was as bad as the yard."

This evidence, delivered in 1837, which shows at once the urgency of the pressure of unjust taxation upon a most useful and respectable class of men, and the sufficiency of mere justice to enable them at once to serve their own interests and those of the public by competing with railroads, is a mere foretaste of what

Digitized by Google

has literally happened since. *Then* the railway system was in its infancy—*now* it is in full operation through several highly important lines of country. At a distance of from 30 to 40 miles, and under circumstances where they have no advantage over coaches or post horses, except that of superior cheapness, and would not have that advantage if taxation were more equally distributed, they attract everything to themselves. The inns are closing in all directions, and the ruinous depreciation of such property is beyond all previous experience. In one instance which has come to our knowledge, an inn on the Western road, bought only a few years since for 4,000*l.*, is now let for 20*l.* per annum, and in many places nominal tenants are put into inns merely to keep the tap open, without paying any rent. By all this, not only is acute and unmerited distress inflicted upon individuals, but the revenue suffers materially in the reduced amount of assessed taxes, and in the reduced consumption of many taxable articles, as we recently took occasion to show.

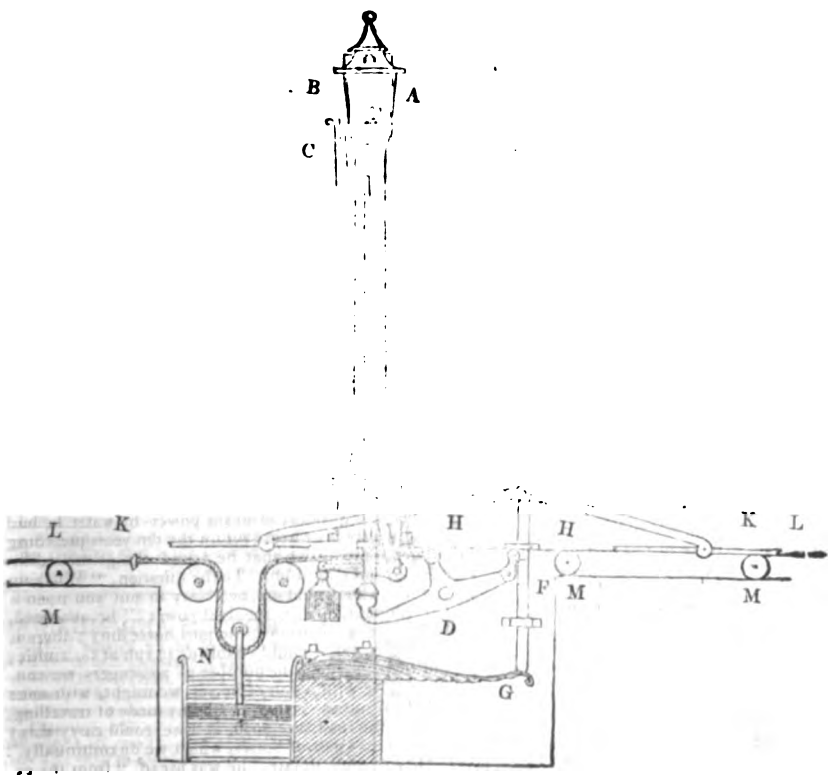
The consequent inconvenience to the public it would not be easy to describe. Some idea may be formed of it from the circumstance that not long since a foreigner of distinction, and an eminent English statesman, with his lady, having occasion in very inclement weather to travel by the same railway, and to stop at the same station, in the neighbourhood of a formerly well frequented road, found, on their arrival, that there was only one chaise and pair of post horses to be had; so that one of the two parties was obliged to wait at the station till this solitary chaise and pair returned from doing duty with the other. Nor is the mischief confined to inconvenience; the turnpike roads are falling into decay; and in many places the amount for which the tolls are let being insufficient to pay the interest of the debts incurred, the mortgagees have taken, or are about to take, possession of the tolls, and the roads must inevitably fall out of repair, and become a burden to the parishes through which they pass, if something is not done to bring the traffic back again. The evidence of Sir John Hall before the Committee of 1837, as to the manner in which the competition of steam might be expected to operate, and had even then begun to operate, upon turnpike trusts in Scotland (where the road trustees have generally incurred personal liability for the benefit of the roads), is well worthy of the serious attention of the legislature.

We pass over, among other collateral effects of the oppression of the stage-coach and posting interests, the effect which must necessarily be produced upon the breed of horses. It is a mere fallacy to suppose that the same class of horses which formerly excited the admiration of travellers, will now be employed upon the short cross lines of road by which railways are supplied; a very inferior animal is found to be sufficient for that purpose. So long as we have occasion to maintain cavalry regiments, any cause which tends to diminish the supply of good horses must be regarded as a national evil. Even the wisdom of the 19th century has not yet invented a plan for mounting cavalry upon steam-engines.

In conclusion, we have only to repeat, that what we demand is but a slight and inadequate compensation for that security against monopoly to which the public were entitled by the very terms of their contract with the railway Companies, and of which circumstances, combined with the supineness of the legislature and the wilful partiality of the Government, have hitherto defrauded them. We ask for nothing but common justice and protection for the various important interests identified with conveyance by animal power, nor will anything less than the total repeal of those duties which constitute the excess by which the posting is now taxed above the railway interest—the mileage duties on posthorses and the assessed taxes on carriages let for hire—be sufficient to give that protection and justice.

ESSAY ON THE MEANS OF PROMOTING SAFETY IN RAILWAY CARRIAGES, BY SIR GEORGE CAYLEY, BART.

Fig. 1.



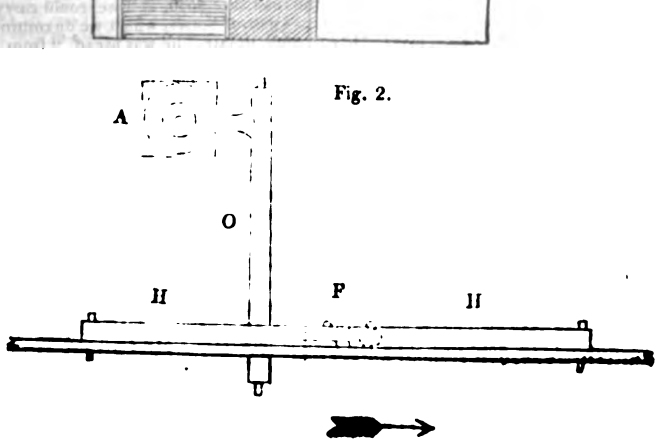


Fig. 2.

The French, in their imitation of the ice mounds which form so striking a portion of the amusements of winter in Russia, were the first to use the railroad with great speed. The average velocity of the carriages on their Montagne Russe, I ascertained in the year 1818, to be 17 miles per hour; but a part of the course was purposely retarded by remounting to a slight elevation, so that the speed was full 30 miles per hour in some part of the way.

To render these carriages secure on the rails, four small wheels were placed under a projecting part, immediately beneath those which supported the carriage; the lower wheels did not touch the under part of the rail, unless the velocity caused the upper ones to jump half an inch, or perhaps an inch, when they effectually prevented the carriage being thrown off.

In the construction of new railways, some modification of this principle might be adopted, and a middle rail, as was lately well suggested, might, by having projecting sides, be made to answer this purpose. There is one danger to be apprehended, in thus, as it were, tying the carriages to the rails; so long as the machinery keeps sound, it ensures all going right; but if any part breaks, there may arise as great a shock from the wedging of the broken parts as from meeting a solid obstacle; indeed small objects on the rails might induce, by this sort of wedging, a greater injury than might arise from being thrown off the rail.

Many of these cases, like most other known affairs, admit only of a choice of evils; and experience can alone determine fully which gives the greater safety.

No means of locomotion for man has yet been devised in which fatal accidents do not occasionally occur; even his own feet have betrayed him into falls destructive of life. The horse kills his thousands annually, from the saddle, and still more perhaps from the vehicles he gives motion to. The gallant sailing vessel is lost on the sea shore; the steamer is not so caught, but as a full equivalent, adds the chance of being blown up to that of being drowned. Railways must never be expected to be exempt from this common condition of the power of moving, more especially if we consider what a quantity of it is condensed into so short a space of time: a man with his horse and gig travels thirty miles a day, but on the railroad he gets over this day's work in an hour; and if he spends his day on the railroad, he will only be at par, should he meet with ten or twelve times as many accidents as might occur to his gig that day. It is satisfactory, as regards the future prospects of railway conveyance, that the greater part of the accidents that have lately occurred on the various railroads have arisen from the want of proper precautions, rather than to matters inseparable from the nature of this mode of conveyance.

It was my intention when commencing this Essay, to take a cursory view of the moral as well as mechanical means of obviating danger on railways; but the public attention is now quite sufficiently awake to the whole case; and especially, to the former part of it. The late Railway Conference cannot fail to lead to the best results. I quite agree in its opinion, that any hasty legislation on the subject would be extremely dangerous to the public and the proprietors; indeed the former must necessarily suffer with the latter, for unless the spirit of the speculation be kept brisk and lively, all attention would languish, and a sleeping agency soon bring the thing into disuse. But though it would be unwise to legislate in the present crude state of our knowledge on this subject, it would be abundantly wise to appoint a Committee of Enquiry to take down all the best evidence impartially; and to give it to the public aided by a well digested and lu-

Digitized by Google

minous report. This could not fail to elicit such suggestions from talented and experienced individuals as would eventually lead to sound legislation. *

I shall close these observations by describing a mechanical means of warning trains of the approach of danger, which, if properly carried out, will nearly ensure them from any collision with others. To do this, it is, however, necessary to make it a positive law, that the up trains shall always keep to one set of rails, and the down trains to the other.

Mr. Curtis has, I find, anticipated me in applying the tension of rods or wires to transmit signals from one station post to another at a considerable distance. I shall therefore leave it in his better hands, excepting so far as respects its application to the case alluded to, which that gentleman has not noticed.

An ordinary train of thirty tons going at 22½ miles per hour, after the force of the engine is cut off, proceeds, according to the experiments of Mr. Gregory on the Croydon railway, about 380 yards before it stops; but when the steam was cut off from an assistant engine behind the train, and its break screwed down the engine stopped in less than its length. If, therefore, the drags proposed, be placed on all the carriages of a train, it would be stopped in a few yards.

Suppose that signal posts be placed at a mile distance from each other on each side of the railroad, the one for the up, the other for the down trains;* let these posts be furnished with lamps for gas lights by night, and with red signals for both night and day work. By a contrivance which will be detailed for those who may choose to wade through such matters, every train that comes up to one of these posts, causes its red signal to be hoisted, which continues up till the train proceeds a mile further, and has arrived at the next post, in passing which, the signal on the *first* post is withdrawn; and thus, should an accident cause the train to stop, before it reaches the *second* post, the signal for danger will be up in the face of the succeeding train, without trusting to fallible human attention.

For the purpose of obviating the possible want of attention in the conductor, more especially in the case of fogs, a *bell* should likewise be so arranged as to ring on the train passing any post showing the red signal; or, according to Mr. Rotch's plan, the steam whistle may be set in action. As soon as the conductor, by some of those means becomes aware of approaching danger, he must proceed slowly and cautiously to the point where the preceding train has stopped. The only danger that can occur with proper attention to these mechanical signals, is, when the stoppage, from accident happens immediately after a train has passed its guardian signal post; because at night, or in a fog, the conductor of the following train might not see the signal in time to enable him to stop it completely; yet, as it appears, from the experiments of Mr. Gregory, a proper application of drags, as previously noticed, will be sufficient to effect this in a few yards, the risk, therefore, is very slight; and even this risk may be still further diminished, if every train, as it undoubtedly ought to be, were furnished with an alarm bell, to be rung, by one of the officials from the time of any accident, till all be right again.

A round rod of iron a quarter of an inch thick, and one mile in length will weigh about 850lbs., and is qualified to exert a tension without injury, of more than 1,000 lbs.: if supported on small pulleys or rollers, every six feet, the friction in moving it for a few inches, which is all that is required for the intended purpose, will amount to a mere trifle; any tension therefore within the limits of 1,000 lbs., may thus be commanded between posts one mile asunder. Let A. Fig. 1, be a gas lamp, showing the ordinary white light, and B, a pane of transparent red glass of the full size of the side of the lamp, set in a frame which is connected with a sliding rod, passing down the hollow shaft of the column which supports the lamp: this frame, and part of the adjacent glass, is painted bright red, for a day signal, but is so mastered by the shade C in front of it, that it cannot be seen till lifted up, so as to correspond in position with the plate of clear glass forming the side of the lamp which it then covers, and exhibits the red signal both by night and day. The rod supporting this red frame passes down below the lamp post, and the termination of it is furnished with a flat plate, which rests on the circular end of the beam D, which beam turns freely on an axis in its centre, so that when depressed at one end, the other is elevated, and by this means the rod and its signal are lifted when required. On this rod there is a projecting tooth which receives a catch by a weight or spring E, so that when the signal is hoisted, it cannot come down till this catch be liberated, when it instantly descends till the plate at the end again rests on the circular projecting post of the lifting beam, to be ready for the next occasion. The opposite end of the beam is connected with an upright rod F, which at its lower end rests on a spring G, and has its upper end jointed into one of the two oblique moveable bars H, H. These bars when forcibly pressed down, can become horizontal; the ends being, in order to effect this purpose, jointed in connection with the railway bars K, K, Figs. 1 and 2, and their point of union connected by a bolt working in a groove of sufficient length to permit the free action of these bars, from an oblique to an horizontal position.

It is evident, from this construction, that if a carriage passing along the rail, has a small projecting wheel so fixed as to roll over these bars at the level of their hinges, they must bring them gradually into a horizontal position, and thus compress the spring G, and by the beam D, elevate the signal B.

When the carriage has passed the beam D, the connected bars H H, return to their former position; but the catch connected with the weight E, retains the signal in its place, until the carriage arrives at the next signal lamp, when, by communicating a strong tension to the mile of wire, passing over the pullies M M, the catch is liberated, and the signal falls behind its mask; thus showing that that mile of railway is clear for the next train. The pull which liberates the catch is communicated at the signal post in advance by an apparatus, similar to what is here shown, as connected with the one a mile in the rear.

From the top of an upright arm in the beam D proceeds a strong cord, passing over two pullies and under a third at N. When it has passed the third pulley it is made fast to the wire L, and thus connected with the signal lamp in the rear; by this means the same movement which elevates the signal at this post, withdraws it at the other. This part of the apparatus is rendered more complicated in appearance by its being necessary to compensate for the expansion and contraction of a mile of wire, which, in this climate, may have a range of about 40 inches. The vessel at N is filled with tar, or any viscid fluid that does not readily freeze; the middle pulley is placed on the top of a piston rod, the piston of which fits, though not quite so as to touch the cylinder holding the tar; by this arrangement the piston, which must be duly weighted to suit the purpose, if it do not overpower the catch, slowly accommodates itself to the expansion or contraction of the wire; but powerfully resists, by atmospheric pressure, the sudden pull of the arm of the beam D, so as to transfer it to the distant signal, as required. Many other methods might be shown for producing these effects, which are in fact of the most ordinary class of mechanical movements: I have arranged these more to point out the facility with which so desirable an object may be accomplished, than as the best means of executing the work.

It is necessary further to remark that the position of the lamp A with respect to the rails is shown on the ground plan of fig. 2; hence, several of the arms shown in profile as contiguous in fig. 1, are not, as there represented, in the same plane, but are placed at the further extremity of a long axis, as seen at fig. 2, which does not affect the efficiency of their mutual action, as already described.

Although the machinery has here been confined to the size of an ordinary lamp, there is no reason why the whole of it, especially the signal part, may not be made of any required magnitude.

If a train pass a lamp when the signal is up, a bell attached to the post ought to be rung, or the steam whistle of the engine opened by some simple contrivance brought into gear or withdrawn by the movements of the rod supporting the signal, which any engineer will readily accomplish.

The mechanical arrangement of the points, by which trains are turned off from one set of rails to another, is complete enough when properly applied, but the conductor of a train must wholly trust for that application to another—he has no means of perceiving whether all is right or not. This is a fault that ought to be rectified, which might readily be done by connecting the movement of the points, from an arm attached to them under ground, with some visible signal at the side of the road, so that the conductor may become fully aware how they are placed before he comes up to them.

Hitherto the means of safety for trains, as a whole, have been considered; but as the officers on whose conduct depends the security of all the rest, proceeds with the engine in front, it may not be thought unfair to let these take a somewhat greater share in the danger, especially if in so doing we materially diminish that of all the others. The engine would pull the train with equal efficiency if a rope of fifty yards intervened; as is practically seen in the case of horses towing barges with a great length of rope; by this means if any accident stopped the engine there would be sufficient space for the train to be stopped by the drags before it came up with the engine. Should this arrangement be adopted it would be necessary to have an officer at the head of the train in addition to those with the engine, for the purpose of working the voluntary drags, if they may be so termed, and regulating the speed on inclined falls of the railway; but these must be so constructed as also to act mechanically on the occasion of the engine being stopped, and not trust to human attention on so momentary and usually unexpected a contingency. As these voluntary drags turn freely on an axis, let us suppose that whenever the train is at rest they are brought by a slight spring or weight just up to the point where their action would commence, by the wheels getting upon them, so that if the train were moved forward they would act. If the rope from the engine be made fast to a lever so connected with the spring which brings the drags into play; that as long as the engine continues to pull, the action of the spring is overcome, they will not impede the progress of the train; but if the engine stops, the drags are instantly at work. The officer at the head of the train may make a voluntary use of these drags at any time, by means of a lever with which he intercepts the tug of the engine from bearing upon the springs; and he should have the command of a break for the purpose of regulating the speed. He may also be provided with a stop-bolt or catch, to prevent the drags acting when inconvenient.*

I cannot conclude this essay upon some of the leading mechanical desiderata for promoting safety on railways without expressing an earnest hope that this noble, most useful, and delightful invention—which gives to man a so much wider scope of action, and must, therefore, proportionately accelerate his civilization and improvement—will obtain the most serious attention, and cautious support of an enlightened Legislature; and that railway conveyance may thus soon be ripened into a security which at present is so lamentably wanting.

* One set of posts in the middle might do for both.

† A hand bell of good size would be most likely to be ready, in the event of the engine being upset, and ought to be kept in some conspicuous place in addition to the fixed one.

* As it would not be convenient that every momentary variation in the tension of the engine should bring the drags to act, some given time must be allowed to intervene between the one ceasing and the other commencing to act, say that in which the train would proceed ten yards. This may be regulated to any extent, if no better means be devised, by making the springs draw up a small piston working against atmospheric pressure (under oil which can only pass the piston at a given speed through an aperture properly regulated by a stop-cock) before they can bring the drags to work. One piston a foot in diameter and making a foot stroke, placed in the leading carriage, will be sufficient for the whole train; and it requires no nicety in its construction; hammered sheet iron even may be used for the cylinder in which it works.

TO ENGINEERS AND MILLWRIGHTS.—To be disposed of by Private Contract, a limited number of Licences for erecting Messrs. WHITELAW and STIRRATT'S PATENT WATER MILL.—A description of this Water Mill will be found in a pamphlet just published. The Mill may also be seen in operation at the Shaw Water Works, Greenock; at Mr. Stirratt's Manufactory, Paisley, and other places. From its simplicity, regularity of motion, absence of liability to wear and tear, adaptation to every kind of water-fall, however high; its giving more available power from a given quantity of water and height of fall, and the cost of erection being less than one-third the price of an overshot water-wheel, it will no doubt supersede the use of the other altogether.

Parties taking Licences early will secure to themselves superior advantages.

For further particulars and terms of Licence, apply to Robertson, Mechanics' Magazine and Patent Office, 166, Fleet-street, London; Mr. Whitelaw, 4, Wellington-street, Glasgow, or, to Mr. Stirratt, 61, High-street, Paisley.

TO ENGINEERS, MILLWRIGHTS, AND OTHERS.
Just Published, with five Copperplate Engravings, price One Shilling,

A DESCRIPTION of WHITELAW and STIRRAT'S PATENT WATER-MILL, with an account of the performance of one of these machines lately erected at Greenock. To which is added, a practical method of determing the power which may be obtained from any given fall of water; with directions for re-economising the water which runs down a fall, and of rendering available as a water-power the rain which falls on high lands. By JAMES WHITELAW, Engineer, Wellington-street, Glasgow.

Published at the Mechanics' Magazine Office, 166, Fleet-street, London; and sold by D. Robertson, 188, Trongate, Glasgow.

TO CONTRACTORS.—Parties willing to Contract for executing about—

One Million Cubic Yards of Dredging,

One Hundred Thousand Cubic Yards of Spade Excavation, and

Fifty Thousand Cubic Yards of Rubble Stone-tide-weirs. (In aid of which a Dredge, Pontoons, &c., will be furnished to the Contractor,) are requested to inspect the Plans, Sections, Specifications, and Stipulations, at Captain Denham's Office, Fleetwood, on Monday, the 22nd inst., at Twelve o'clock, and on the following morning to examine the low water feature of the proposed operations preparatory to depositing Tenders as will be suggested at the said inspecting visit.

H. M. DENHAM,
Consulting Marine Surveyor.

Harbour Works Office, Port Fleetwood, February 5, 1841.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200., upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of 5 per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1842, or 1845.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff; or to Messrs. Glyn, Halifax, Mills and Co., Bankers, London; Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of soft and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, an manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4,) and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
ditto, ditto, with reserve of leads	1	14	0

December, 1840.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *viâ* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the drivers 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

The names of the Directors will be published on Saturday next. The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

TWENTY VERY SUPERIOR CART HORSES. To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, February 19, 1841, commencing at one o'clock, precisely, Twenty remarkably fine shaped, fresh, young, powerful Cart Horses, the genuine property of Mr. George Burge, have been employed on the Great Western Railway, and sold in consequence of the contract on which they have been working being completed.

Colours,—Bays, Blacks, Browns, Roans, and Greys.

The above lot of young seasoned Cart Horses are worthy the careful attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased expressly for the above Contract, and now in remarkable fine condition.

Also, Two capital Four-wheel Chaise Horses.

On view and catalogues had two days before the Sale.

A great variety of New and Second-hand Carriages, of every description, always on Private Sale, at this Establishment, remarkably cheap.

BY DIRECTION OF THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.—To be Sold by Auction, by MOORE & WEAVER, on Friday, February 19th, 1841, at the Bredon Station, on the Birmingham and Gloucester Railway, three miles from Tewkesbury in lots, 2,318 Wrought-Iron Rails, containing nearly 200 tons; 1,111 Chairs; 173 Earth-waggons, the greater part 4 feet 8½ inch gauge, the remainder 3 feet 7 inches; 4,650 Sleepers 70 pieces of Deal, of various lengths, and Scantling; 32 long Deal Spars; a large quantity of Fire Wood; and numerous other useful articles. The whole of which will be particularized in catalogues to be had at the "Midland Counties' Herald" Office, Birmingham; White Lion Hotel, Bristol; Greyhound Hotel, Bath; at all the Stations on the Birmingham and Gloucester Railway; of Mr. B. Thomas, Auctioneer, Cheltenham; and of Moore & Weaver, Auctioneers, Tewkesbury.

GREAT NORTH OF ENGLAND RAILWAY.—NOTICE is hereby given, that the Tenth Half-yearly General Meeting of the Company of Proprietors of the GREAT NORTH OF ENGLAND RAILWAY, will be held at the Railway Office, at Darlington, in the County of Durham, on FRIDAY, the 5th day of March, 1841, at Eleven o'Clock in the forenoon, at which time and place the Proprietors of the said Company, or their Proxies, lawfully constituted, are requested to attend.

Dated this Ninth Day of February, 1841.

FRA. MEWBURN,
Clerk to the Company.

Great North of England Railway-office, Darlington.

TO THE NOBILITY, GENTRY, MERCHANTS, and RAILWAY COMPANIES, &c.—Situation wanted by a middle-aged Gentleman of active business-like habits, who has received a good education, and possesses a knowledge of Legal, Mercantile, and Agricultural pursuits, and in whom the strictest confidence may be placed.

The Advertiser would be glad to take a confidential situation in any public or mercantile situation, or as Steward, Agent or Secretary to any Nobleman or Gentleman. Unexceptional testimonials from several of the nobility and gentry, merchants and professional gentlemen in the West Riding of Yorkshire may be given.

Apply by letter (post paid), B. A. Box, 123, Post-office, Bradford, Yorkshire.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham.
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every exectitation. It has been used in Shipping Five Years.

CLASS for RAILWAY ENGINE DRIVERS and OTHERS.—Pupils desirous to qualify for appointments on Railways can now enter the Class for instruction at the ROYAL POLYTECHNIC INSTITUTION. The Professor is assisted by an experienced Locomotive Engineer and Railway Engine Driver, for the purpose of insuring the best practical demonstrations. Sectional and other Models of the latest and best construction are used in the illustrations. The Syllabus and terms of Mr. R. J. Longbottom, Secretary, 309, Regent street.

INDIAN IRON. TO ENGINEERS, MECHANISTS, AND OTHERS.

The purity and superior quality of the iron made from the magnetic ores of India, as well as of the steel manufactured from it by the natives, are generally known and appreciated.

The INDIAN IRON COMPANY having obtained from the Honourable East India Company's Madras Government exclusive privileges of mining, and cutting fuel, have established at Porto Novo, charcoal iron works, for smelting these ores on the European plan. The ulterior process are carried on at the charcoal iron works, at Carmarthen.

The iron has been tried for all purposes for which iron of the highest quality is required, and after severe tests it can be affirmed to be peculiarly strong and tough. It is naturally somewhat redshort from the richness of the ore, but after numerous trials, and improvements, this fault has been overcome, and the Company are enabled to offer to the public a first-rate quality of iron, which will work well at all heats.

The quality of the pig iron is peculiarly adapted for malleable iron castings.

All parties who seek in the iron which they use, the above named qualities, are confidently requested to inspect the specimens, in various shapes, which may be seen at the offices of the Company, who are now ready to receive and execute orders without delay.

Applications to be addressed to G. W. Scott, Esq., at the Offices, No. 18, King's Arms-yrad, London; to Messrs. Jevons, Sons, and Co., Liverpool; to John Protheroe, jun., Esq., Bristol; or to H. R. Bowman, Esq., at the Iron works, Carmarthen, South Wales.

London, Feb. 1, 1841.

VALUABLE BUILDING GROUND.—To LET, on a Building Lease, for the Term of Fifty Years, a piece of Ground about Three Acres, more or less, on one of the healthiest situations in the kingdom, and about 150 yards from the Station at Weybridge, in the county of Surrey, on the South-Western Railway. Also about Three Acres, more or less, adjoining the other, which will be Let for the term of Twenty-one Years.

For Particulars apply to the Churchwardens and Overseers of the parish of Weybridge.

STOCKTON AND HARTLEPOOL RAILWAY. The Public are informed that on the 10th day of February, 1841, this line was opened for Passengers and general Merchandise, and furnishes a cheap and expeditious link of communication between Newcastle-upon-Tyne, Sunderland, Hartlepool, Stockton-upon-Tees, Darlington, and thence (when the Great North of England Railway is opened) with York, Hull, Leeds, Manchester, Birmingham, London, &c.

THE TRAINS LEAVE TRAVELLING NORTH.

STOCKTON TO HARTLEPOOL.

Morning, at 8 and ½ past 10 o'clock.
Afternoon, at 3 and 5 o'clock.

The 8, ½ past 10, and 3 o'clock trains start on the arrival of the Stockton and Darlington Railway trains which leave Darlington at ½ past 6, and ½ past 9, (morning) and 2 o'clock (afternoon).

N.B.—The trains leave Hartlepool for Sunderland at ½ before 9, and ½ past 11 o'clock (morning), and 4 o'clock (afternoon).

TRAVELLING SOUTH.

HARTLEPOOL TO STOCKTON.

Morning, at 9, and ½ past 11 o'clock.
Afternoon, at 4, and 6 o'clock.

N.B.—The trains leave Sunderland for Hartlepool at ½ before 9, and 11 o'clock (morning) and 4 o'clock (afternoon.)

The trains leave Stockton for Darlington at 20 minutes past 12, 20 minutes past 4, and 7 o'clock (afternoon).

FARES.

First Class	2s. 0d.
Second Class	1s. 6d.

NORTH MIDLAND RAILWAY.—Notice is hereby given, That the BOOKS which are kept in this office for the registration of transfers of shares in the Company will be CLOSED, in pursuance of the provisions of the Act of Incorporation, from Tuesday, the 16th day of February until Friday, the 26th day of February inst., both days inclusive.

By order,
H. PATTESON, Sec.

Offices, Warnford-court, Throgmorton-street, London, Feb. 1, 1841.

NORTH MIDLAND RAILWAY.—Notice is hereby given, that the Ninth Half-yearly General Meeting of Proprietors of the North Midland Railway will be held in London, in pursuance of the provisions of the Act of Incorporation, at the London Tavern, Bishopsgate-street, on Friday, the 26th day of February inst.

The chair to be taken at 1 o'clock precisely.

GEORGE CARR GLYN, Chairman } of the Board
JAMES HUBBARD, Deputy Chairman } of Directors.
HENRY PATTESON, Secretary to the Board.

Office, Warnford-Court, Throgmorton-street, London, Feb. 1, 1841.

EDINBURGH AND GLASGOW RAILWAY.—NOTICE is hereby given, That the Sixth Half-yearly General Meeting of Shareholders in this Company, will be held pursuant to the Act of Incorporation, in the Company's Office here, on Monday, the 22nd instant, at One o'clock.

Certain shares, in consequence of the non-payment of several calls due thereon, having been declared forfeited, under minutes of the Board of Directors of 20th April, 30th June, and 30th November, 1840, the Declaration of Forfeiture will be submitted to the meeting for confirmation in terms of the Act.

The Transfer Books will be closed on and after the 15th instant, till after the meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the meeting, (section 134,) otherwise they will not give a right to vote at the meeting.

Blank Forms of Proxy may be had, on application at this office.

In terms of section 137, the proprietor of any share on which any Call shall be due, will not be entitled to vote in spect of such share.

By Order of the Directors,
(Signed) JOHN LEDBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
7, North Queen Street, Glasgow, 4th February, 1841.

THE HULL ADVERTISER.—Established half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England: while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	78,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan *(Manufactured by Machinery, and registered pursuant to Act of Parliament)* offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10s. to 15s. per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Just published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d. The Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 122, Fleet-street, and sold by all Stationers and Booksellers.

Just published,

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

Just published, price Five Shillings, the

LOCOMOTIVE ENGINE POPULARLY EXPLAINED, and illustrated by Lithographic Designs; to which are added, Rules and Tables for ascertaining its amount of useful effect, resistance, &c. Also, interesting Statistical Particulars connected with Railways, for general information. By WILLIAM TEMPLETON.

Just published, price Six Shillings, the MILLWRIGHT and ENGINEER'S POCKET COMPANION. Comprising Decimal Arithmetic, Tables of Square and Cube roots, Practical Geometry, Mensuration, Strength of Materials, Mechanic Powers, Water Wheels Pumps and Pumping Engines, Steam Engines, Tables of Specific Gravity, &c. &c. To which is added, an APPENDIX, containing the Circumferences, Squares, Cubes, and Areas of Circles, Superficies and Solidities of Spheres, &c. &c. By WILLIAM TEMPLETON. Fifth Edition.

Also, just published, price Six Shillings, the ENGINEER'S COMMON-PLACE BOOK of PRACTICAL REFERENCE; consisting of Practical Rules and Tables; adapted to Land, Marine, and Locomotive Steam-engines: to which are annexed Square and Cube roots of Numbers, Areas and Circumferences of Circles, Superficies and Solidities of Spheres, &c., &c., &c. By WILLIAM TEMPLETON.

London: Published by Simpkin, Marshall, and Co., Stationers' Hall-Court; sold also by Egerton Smith, and Co. Mercury-office, Liverpool; and by all Booksellers.

PATENTS AND BUSINESS IN FRANCE. The notice on French Patents, advertised to appear after the present Session of the Chamber of Deputies, will now be incorporated, in the sixth edition of Mr. OKEY'S work on the COMMERCIAL and CIVIL INTERCOURSE of the subjects of GREAT BRITAIN and FRANCE, which is now in the Press, and will appear as soon as the author's avocations will permit.

35, Rue du Faubourg, St. Honore, Paris.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, that the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the WHITE LION HOTEL, in the City of Bristol, on THURSDAY, the 4th of March, at Eleven o'Clock, for the Election of four Directors in the room of those who retire by rotation, and for other affairs.

The Chair will be taken at Twelve o'Clock precisely.

FREDERICK RICKETTS, Chairman.

The retiring Directors may be re-elected.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Saturday, the 20th of February, and not re-opened until after the said General Meeting on the 4th of March.

By Order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th February, 1841.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—NOTICE is hereby given, that the Directors will receive, at their Office in Broad-street, Bristol, on or before Friday, March the 19th, at Twelve o'Clock, TENDERS for the execution of the several works comprised in Seven Contracts, extending from the station at Bridgewater, to the proposed station at Taunton, a distance of eleven miles 35 chains. These Contracts comprehend the entire completion of the Works, including the Ballasting, but exclusive of the laying the permanent rails.

Drawings and Specifications will be exhibited on and after Monday, February 15th, at the Resident Engineer's Office, Coronation-road, Bristol.

Printed Forms of Tender may be had at the same place, and at the Company's Offices, Broad-street, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office in Broad-street, Bristol, at Twelve o'Clock on the said 19th day of March.

J. B. BADHAM, Secretary.

Bristol and Exeter Railway-office, 30, Broad-street, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

GREAT WESTERN RAILWAY.—Notice is hereby given, that the next HALF-YEARLY GENERAL MEETING of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's office, Princes-street, in the city of London, on Thursday, the 25th of February next, at 11 o'clock, for the election of six Directors in the place of the same number who will retire by ballot, and for other purposes of business. The chair will be taken at 12 o'clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy Chairman.

The Directors retiring by ballot are re-eligible under the provisions of the Act. The Transfer Books will be closed on Monday, the 15th of February, and will not be re-opened until after the said Half-yearly General Meeting on the said 25th of February. Clause 128 provides that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least five days before the Meeting.

By Order,
CHAS. A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Offices, 2, Princes-street, Bank, London, and Corn-street, Bristol, Jan. 5, 1841.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £16,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

FRANCIS WHISHAW.

Gray's Inn, and Hampstead, Middlesex, January, 1841.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 13, 1841.

SUPPLEMENT TO THE RAILWAY TIMES.

[GRATIS.

No. 163. Vol. IV.—No. 7.] SATURDAY, FEBRUARY 13, 1841.

THE CARRIERS' CASE CONSIDERED IN REFERENCE TO RAILWAYS.

(From a Correspondent.)

"He entirely concurred in the principle that railways were more or less of a monopoly, which was placed more or less in the hands of the Directors. The Government was therefore perfectly justified in taking every possible precaution for the protection of the public."—*Lord Stanley on the Introduction of Mr. Labouchere's Bill for the Regulation of Railways. 4th Feb.* 1841.

"SUCH is the story of Thales the Milesian. For this is a device for getting money, and though they fasten it upon him, because of his wisdom, it is in truth a very general kind of thing. They say that when people were upbraiding him for his poverty, and saying that philosophy was a profitless thing, he perceiving by his knowledge of the stars that there would be an abundant supply of olives, while it was yet winter, having got possession of a little money, secured all the olive presses of Miletus and Chios; and gave earnests for them, hiring them for a small sum, because no one bid against him: but when the season came and they were in great request, he let them out without loss of time, just as it pleased him: and collecting large sums gave proof how easy it is for philosophers to get riches if they wish it, but this is not the matter about which they are concerned. Thales then is said to have given proof of his wisdom, after this manner. But it is, as we said, a very general plan for getting money, *if a man can secure to himself a monopoly.*

"There was a man in Sicily, who having money deposited in his hands bought up *all the iron from the iron works*, and afterwards when the merchants came from the different markets, he was the only seller,—not having made any very exorbitant increase in the price—but yet upon the fifty talents he gained an hundred. When Dionysius discovered this he desired him to carry his property away with him—not to remain in Syracuse any longer, since he had struck out ways of trade that were not convenient to his policy. The device of Thales was the same thing with this—*for both so contrived that there should be to themselves a* MONOPOLY."—*Arist. Pol.* l. 7.

ARGUMENT.

Railways opened to the Public—Different Arrangements as to Conveyance of Goods and frequent Changes—Attention of Parliament recently drawn to Railways—Importance of Sound Principles of Internal Traffic—Their Application to Railways—*Freedom* the first great Principle—*Competition* essential to and constituting Freedom—Denied, see Grand Junction Report—Quarrel between Grand Junction Company and the Trade—Opposition in Parliament—Evidence of the Carriers; of the Company—Short Reference to Legal Proceedings—*Conclusion*, "That Parliament, in order to protect the Public, must secure Competition," consistent with Parliamentary recommendations and professed wishes of the Company themselves—Importance of *early* Remedies.

THE CARRIERS' CASE CONSIDERED, &c.

"There be but three things which one nation selleth unto another: the commodity as Nature yieldeth it; the manufacture; and the vecture or carriage: so that if these three wheels go, wealth will flow as in a spring tide. And it cometh many times to pass, that '*meliorem superabit opus*'—that the work and carriage is worth more than the material, and enricheth a state more."—*Bacon.*

Ten years have now elapsed since the first leading railway was made available for the carriage of goods and passengers. The communication between London and the north of England has been completed rather more than two years, and the system, so far as it regards the transit of passengers, may be said to have reached its fixed and settled state. Merchandise has been carried along the London and Birmingham and Grand Junction Railways, almost from the day on which trucks and carriages could pass along them; but the arrangements for this portion of the traffic have from time to time undergone considerable changes, and have evolved much difference of opinion, and brought into collision many conflicting interests.

Many circumstances have occurred in the mean time, which have attracted the attention both of Parliament and of the public at large to the general system and management of railways; and it is likely the Session of 1841 will see these important undertakings made both in principle and in detail the subject of renewed and vigilant investigation.

Attention will be drawn in the first instance to the many fatal collisions and accidents which (in consequence of the great railway mileage laid open to the public during the last twelve months) have occurred during the recess; and by Coroners' Inquests, and through the medium of the Press, have produced no small excitement. The preservation of *life* will occupy (as it ought) the earliest consideration of the legislature; a due regard to the preservation of property, and the protection of existing interests, it may be expected, will find in the proceedings of Parliament no mean nor unimportant place.

Under these circumstances the general principles which affect the transmission of goods from one part of this island to another, deserve to be fairly considered on the broad scale, and impartially applied in their bearing upon the details of railway management.

It cannot be necessary to waste words in dilating upon the extreme importance of these principles, or the national inconveniences which must inevitably follow the misunderstanding or misapplication of them. The free reciprocation of produce and articles of commerce from one district to another is to the body politic precisely what the free circulation of the life's blood in the natural veins and arteries is to the animal economy.

Freedom then is the very essence of domestic trade, or in other words of internal prosperity and improvement.

In the following pages it is proposed to consider how far the public rights have been secured by Parliament against the possibility of invaion by interested parties; how far they have in fact been invaded; and what consequences may be expected to ensue from a continuance of the present systems, or any of them as now adopted and enforced by the different Railway Companies.

Within the last twenty years much has been said and written on the subject of free trade; but whatever modifications of opinion may be entertained as to the possibility of carrying out perfectly pure principles of commercial freedom between different nations, it is apprehended that no single (disinterested) individual can be found who will doubt the impolicy, not to say the *madness*, of imposing restrictions upon the free course of inland traffic. Here there is no national jealousy or hostile interest, no real or imaginary balance of trade, no established treaty, no question of customs and finance to encumber the plain proposition, "that if the exchange of goods be useful at all, the more freely and cheaply they can be exchanged the better."

Upon this then, without further argument, we may rest as upon a first and acknowledged principle; there is a corollary which would seem to follow from it, "that this freedom implies a competition amongst many parties, open to the whole public, essential to the very existence of this freedom, and, in fact creating it by the absence of any limitation, except the broad commercial ones by which the proportion of demand and supply is regulated."

But this corollary has not been so fortunate as its parent principle; and since it has been impugned it may be worth while to consider and to establish it. The Report addressed by the Directors to the proprietors of the Grand Junction Railway at their half-yearly general meeting on the 10th August last, contains the following passage:—

"It may be proper briefly to advert to the proceedings of the Committee on Railway Communication in the last session of Parliament, as far as they affected this Company. An attempt was made by parties engaged in the carrying trade to create an impression unfavourable to the system on which the merchandise business of this railway is conducted. The attempt however, the Directors believe, has been entirely defeated by the evidence offered on behalf of the Company; and the immediate advantage which the public have recently obtained by the extension of this Company's arrangements, through the efforts of the Directors to the London line, has furnished a conclusive proof of the motive of the opposition; which although professing solicitude for the public convenience, was in reality to keep up a system whereby the public have been unnecessarily heavily taxed for the profit of carriers.

"The reduction in the carriage on goods between Lancashire and London, effected by the introduction of this Company's system on the London line, as compared with the rates charged when the business on that line was solely in the hands of the carriers, is on an average from 15*s.* to 25*s.* per ton; or upwards of 25 per cent.; and in many articles exceeds this. The Bill for the regulation of railways, introduced by the Chairman of the Committee in question, was attentively watched by the Directors, and their efforts in concert with other railway bodies, have been directed to procure a modification of the proposed enactments which were calculated to prejudice the interests of the Company, and to interfere widely with the internal management of their property."

The first point which arrests the impartial eye in reading this remarkable passage, is the cool assumption to themselves of a deep solicitude for the welfare of the public at large, quietly introduced by the Directors, while they seem to sneer at a similar assumption of disinterestedness alleged to have been made by the parties opposing them in Parliament. It requires no very deep acquaintance with human nature to suppose, that both the carriers and the Company will look steadily at their own respective interests, and that the public (so far as these worthies are respectively concerned) will prosper or the contrary, just as sound or unsound principles of political economy are brought to bear upon this question. "Every man shift for all the rest, and let no man take care of himself," was the maxim of Caliban, but not of the carriers, nor of the Grand Junction Railway Company.

But (as a humorous writer has said upon another subject) human life has been so distressingly shortened since the Flood, that one has no time to spare in refuting absurdities like this. It is gratifying, therefore, to observe that one of the parties to the proceedings above referred to has expressed a less zealous spirit of self-denial, and a more reasonable apprehension of the bearings of this question. The following extract from a letter addressed by Messrs.

---

* Fare raised upon the Grand Junction Railway, from 1*l.* 1*s.* 0*d.* to 1*l.* 3*s.* 0*d.*

† Original shares cost 100*l.*, present price 214*l.*, exclusive of bonuses created on new shares.

Digitized by Google

Pickford to the Grand Junction Company, may throw some light upon the spirit in which the opposition of last session was in fact conducted:—

"Since he (the Treasurer) has alluded to the objects and interests of the carrier, it may not be out of place that we should state them plainly for ourselves. We want 'a clear stage and no favour,'—perfect freedom of competition for all parties upon equal terms. We do not profess to be disinterested or unduly patriotic in this matter. It needs no deep knowledge of political economy to be aware that, when all compete on equal terms, the public servant will only prosper so far as his interests are commensurate with those of his master, the public. And for ourselves, many years' experience has taught us to be perfectly satisfied with our share of the bargain upon these terms. So you, on your part, may venture to assure yourselves that, if you can really perform for 70s. what the carriers, competing with each other, did for 100s., you will speedily get all the business, without any of these vexatious interferences, and without denying to us those advantages of mutual arrangement which the London and Birmingham Company afford equally to all parties."—*Railway Times* of January 2, 1841.

This passage contains a plain statement of a plain truth: viz., that where all the world is invited to compete on equal terms, the profits of the trade will be reduced to the lowest level on which the business can be done. This proposition requires no faith in the public spirit of private traders. That water finds its own level is not more true, nor more consonant to every man's every day experience.

Let us see then what was the evidence laid before the General Committee in the Session of 1840 by the opponents of the Grand Junction Railway; and try if we can discover the aims and motives as well of the Company themselves as of their opponents, the public carriers.

"In respect to merchandise," says the Report, dated 9th August, 1839, "the London and Birmingham Company have adopted the system of open competition, and, supplying the locomotive power and waggons, have since the completion of their arrangements allowed all carriers under certain regulations to pass over their line of road.

"On the other hand the Grand Junction Company appear to have been desirous of following a contrary system; but in consequence of the regulations adopted by the London and Birmingham Company, they have admitted private carriers engaged in the London trade upon their line, *but have retained to themselves the conveyance of all Birmingham and Lancashire goods.*"

This was pretty well for a commencement; but the matter did not rest here. The next move was a masterpiece of policy; and bore upon its face the semblance of greater liberality towards the carrier as well as towards the public. In the close of the year 1839, the public carriers were invited to enter into arrangements with the Company by which the Birmingham and Lancashire traffic was to be thrown open to competition amongst the carriers and the charge to the public to be reduced.

"'Tis time to fear when tyrants seem to kiss."

The carriers indeed were invited to come upon the line; but under stringent agreements compelling them "*not to charge less than*," and in other respects to comply with the rules and regulations of, the Company; and the rates to the public were reduced, but subject to the foregoing reservation, and for a purpose which will shortly be explained.

The Grand Junction Company found that under the system as it stood in 1838, they having a monopoly of the carriage between Lancashire and Birmingham could get no business of any weight or value as general carriers. The public were accustomed to their former servants, the common carriers, whose widely ramified connections throughout the country gave them greater facilities for the safe, rapid, and economical dispatch of business, than were or could be afforded by a Railway Company. Perhaps, too, somewhat of Horne Tooke's opinion that "Public Companies have no bodies to be kicked, and no souls to be d——d," might influence their choice in preferring the private trader to the public Company.

It became, therefore, necessary to supplant the elder brethren of the craft, and possess themselves of their connections. Here was a fitting opportunity for the voice of Jacob and the rough right hand of Esau. Accordingly the carrier was to all appearance freely admitted upon the line; but as it has since turned out, he was admitted not as an independent trader in which capacity alone his competition could be formidable, but as a mere subsidiary or servant of the Company. By the agreement put in evidence by Messrs. Pickford, it appears that the whole sum paid by the public for carriage to that firm, was paid over monthly to the Company (who therefore were the only real principals in the matter), subject to a *discount* of so much per cent. upon the whole amount, which Messrs. Pickfords were to retain for their *agency* in the matter. Thus the business was secured to the Company, who had the lion's share. How the lion serves his auxiliaries in the pursuit of prey, does not seem to have been changed since the days of Esop.

The per centage afforded to the carrier was the payment for all the cost, risk, and labour incident to that which constitutes the real difficulty—and to the public the main value of the carrier's trade. The pay was small enough when it was a per centage upon the higher rates: but in order gradually to get rid of the carrier, and yet retain the connection which the carrier had brought, it was necessary to reduce this pay, or in other words to reduce the rates out of which this per centage was allowed. Now, about this procedure there was a great apparent plausibility: it seemed reasonable that the carrier should sacrifice the small share while the Company gave up the larger. It was, in fact, unreasonable, not because the *reduction* was in itself unreasonable, but because the form of the original agreement was such as the Company should never have been able to impose, nor the trader have been compelled to submit to—a form under which instead of having, as before, the fair play of the whole trade, he was in fact so cramped and confined in his new and unnatural position, that he could only pay his way, while the rates charged to the public continued high. The Company could far better afford to lose the whole reduction, situated as they were under this agreement, than the carrier his proportionate share of his small discount.

But the Grand Junction Company had in fact no notion of incurring this whole loss. They quickly fell upon a far better and more efficacious remedy, by which the carrier could be driven from the line, and the reduction against themselves need not be made to its full extent. In short the *reduction* we have spoken of, may be compared to the upper or moving jaw of that vice in which the carrier was to be screwed, and the invention we have now to relate may be likened to its fixed or nether jaw. Suppose then 30s. to have been the average rate per ton when the agreement with the carrier was framed and 20 per cent. the stipulated discount, 6s. was the carrier's share, for which he had to collect at one terminus, and distribute at the other, to load, to unload, to contract for safety in transmission through the different ramifications of traffic beyond the controul of the railway (which liability lies upon the original receiver of the goods), and in short to answer the well known duties and liabilities of the common carrier. When rates were reduced to 25s., 5s. only remained as the carrier's share, and it is not too much to affirm that the 1s. lost to him was of more importance than the 4s. lost to the Company. But this was not all. By an ingenious and not very creditable understanding between the Grand Junction and the Liverpool and Manchester Railway Companies ("whose Boards are almost the same" vide Mr. J. Moss, Railways 386) it was resolved that the carrier, acting as agent to the former, should be compelled to allow out of his per centage a sum of 2s. 6d. at Liverpool, and of 2s. 3d. at Manchester, to the latter Company, for certain services which he did not require, and of which he did not wish to avail himself. By this means his 5s. was at once reduced to 2s. 9d. or 2s. 6d.; the lower jaw of the vice was fairly fixed upon him. For example, suppose it barely possible (which is far too large a supposition) that he could have made a subsistence out of his 2s. 9d., the whole rate being 25s., a reduction to 20s. left him with 4s. only for his share, and when he had paid out his 2s. 3d. he had only 1s. 9d. left to cover his whole expenses. He was then in the jaws of a vice, which the Company could gradually tighten at their own pleasure, and so squeeze the carrier more and more, until when they should have secured his business and connections to themselves, they might give the final turn to the screw, and crush him altogether.

So much, then, for agreements with the carrier, and ostensible reductions in the rates.

Matters were in this position when (in the session of 1840) the Grand Junction Company, having made arrangements with the proprietors of the Chester and Crewe and of the Manchester and Birmingham Railways, came to Parliament with a Bill for incorporating the former of these railways with their own.

Against this Bill the carriers petitioned,* alleging as the grounds of their opposition—

"That the extensive powers conferred upon the said Company by the said several Acts of Parliament, invest them with the uncontrolled means of exercising a complete monopoly of the carrying trade of goods, inconsistent with, and utterly destructive of, the fair and open competition for the conveyance of goods on the railway, which must not only tend to the great injury of your petitioners, but must ultimately be of most injurious effects to the public.

"That your petitioners submit that all common carriers, as well as the public at large, are entitled to have the same benefit of a fair and open competition in the carriage of goods as they enjoyed previously to the formation of the said railway.

"That your petitioners humbly submit that the incorporation of the two Companies will have the effect of extending the monopoly already described, and of increasing the general amount of tolls to be demanded by the said Company in order to reimburse the holders of shares, for the purpose of enabling the said Company to effect such incorporation.

"That your petitioners submit that all necessary clauses should be inserted in the proposed Bill, for

* A petition on this subject was presented to Parliament by about 1,700 persons, merchants and others, interested in trade between London and the north of England, praying for the prevention of monopoly.

Digitized by Google

the purpose of establishing a fair, open, and free competition for the carriage of goods on the said Grand Junction Railway, as proposed to be consolidated by the Bill, and for the regulation of the amount and proportions of the tolls and charge for locomotive power to be taken by the said Company, and for otherwise regulating the conveyance of goods on the said railway."

Another petition was presented by Mr. Baxendale, the principal partner in the well known house of Pickford and Co., in which, besides alleging grounds similar to those first cited, he further urged "that such incorporation of two separate and independent companies, could only tend to secure and extend the power of monopoly already described, and is further injurious to the public and your petitioner, by unnecessarily increasing the capital of the existing Grand Junction Railway Company, and thereby increasing or tending to *increase the general amount of toll* to be demanded by the said Company, in order to reimburse the holders of shares, for the purpose of enabling them, the said Company to effect such incorporation."

It was proposed by Mr. Austin on behalf of the Petitioners to the Committee of the House of Commons that certain very stringent clauses should be inserted in this Bill, requiring the Company to deal with all parties upon equal terms.

Mr. Talbot for the promoters declined to enter into any detailed answer to the observations of Mr. Austin, contending that the provisions insisted on by him were such, as if adopted, in one instance, ought in justice to be applied to all railways. He enforced the consideration by observing that the same subjects were now under the consideration of the General Railway Committee upon evidence adduced, he believed, by Mr. Baxendale amongst others, and that it was not impossible that any decision come to by this Committee might be rendered nugatory by some subsequent resolution of general application adopted by the General Committee, which would by force of a clause in the present Bill, become incorporated with its provisions. He could not, however, he said refrain from expressing his doubts of the identity of the interests of the Carriers with that of the public as assumed on the other side and expressed his own conviction that the interests of the public would be best consulted by *a well regulated monopoly* in the Company as Carriers.* In support of this opinion he instanced the case of the Liverpool and Manchester Railway Company, who were exclusively Carriers on their own line and attributed the higher rate of cost of carriage on the London and Birmingham line as contrasted with that on the Grand Junction Railway, to the circumstance that in the former case the Company were not Carriers at all while on the latter the Company acted as Carriers in conjunction with others.

These clauses were rejected by the Committee, whose decision was made known to the parties in these words by the noble member for Liverpool.

"I am directed by the Committee to inform the parties that they have come to this conclusion, that they will not admit these clauses, *thinking it better to leave legislation on this subject to some general Act to be recommended by the Select Committee on Railways, and adopted by the legislature.*"

A similar application to the Upper House led to a similar result. And thus the carrier was (like the ancient worthy between two seats) thrown over to the remedy which time (propitious Deity!) and the General Committee might possibly afford in the general case, and was denied redress in the one particular instance of the only railway which had exercised its powers in an oppressive manner.

As therefore the carriers' case was not gone into before these Committees, it becomes necessary to refer to the evidence produced by the carriers before the General Committee.

In order, however, to render complete the observations above cited, it should be observed that the clauses suggested by the carriers to the Upper House, were the identical clauses inserted by the wisdom of Parliament in an Act obtained by the London and Birmingham Company (who do *not* pursue the tyrannical system of the Grand Junction Company,) in the year 1839. So much for the remark (in which by the way we coincide to the very letter) "that the provisions suggested were such as if adopted in one instance, ought in justice to be applied uniformly to all."

In proceeding, therefore, to extract from the evidence reported by the Select Committee on Railways, such portions as may seem to bear most directly upon the present question, it is necessary to premise that very few of the witnesses can claim to be altogether free from bias in the views and opinions they express, since most of them are either Directors and servants of the Grand Junction Railway or common carriers. As, however, it is our present purpose to see what really are the aims and objects of these rival parties, it is a material part of the inquiry that we should hear them in the first instance from themselves as they have expressed them to Parliament.

The evidence of Mr. Bury has, however, a very different value. There is no individual in this country better qualified to estimate the degree of control which considerations of safety render it necessary should be placed in the hands of a Railway Company that this gentleman, who has the exclusive superintendance of the locomotive power on the London and Birmingham line. Mr. Bury cannot be expected to *undervalue* the importance of vesting strong powers for this purpose in the regulating authorities of the line. Mr. Bury says—

"5158. And you find no difficulty in working upon the present system?—No.

"5159. Which do you think is the most advantageous?—That the carriers should be admitted upon the line.

"5160. Do you think they can do it cheaper than the Company can?—I think very considerably.

"5161. Does that extend to the carriers conveying the goods?—A private carrier would convey the goods, and if I may so say, handle the goods at less expense than the Company could; he would adopt those plans which would seem to him to be the best; and as regards his general connection with the country, the public would be very much benefited.

"5162. If the London and Birmingham Company were to become carriers, they would be obliged to increase their establishment?—Yes.

"5163. And they could not, in your opinion, collect the goods through London so easily as private carriers?—I do not think the Company could do it.

"5164. After the lines of railroad are open to Newcastle, for example, first there would be the Midland Counties', then the North Midland, then the York and North Midland, then the North of England; would it be possible, supposing that your Company were to become carriers, that you could make arrangements with all those different Companies so as to convey the goods, without any trouble to the consignor or consignee, from one end of the kingdom to the other?—I think they might do it, but it would be done much better by individual carriers.

"5165. Individuals would be able to make arrangements all over the line, and with each Company, which would be more advantageous and cheaper to the public?—That is my opinion. I do not think that Railway Companies ought to have anything to do with carrying.

"5166. Mr. Thornely.—You are aware that the Liverpool and Manchester have always acted as carriers upon their railway?—Yes.

"5167. Do not you think that it would be better to have one carrier than 10 carriers?—No; I think the Liverpool and Manchester would have derived more money if they had not had the carrying.

"5168. Mr. Greene.—There is a competition among the carriers in collecting the goods?—There is more energy and activity.

"5169. They seek for business?—Yes, which the Company cannot do. At the first opening of the Liverpool and Manchester, the thing was new; it was not known how it could be done, and they were obliged to enter into the business."

MR. JOSEPH BAXENDALE, 31ST MAY, 1839.*

"Then every carrier now, by bringing his goods to the London and Birmingham Railway, has his goods carried without any preference of one to the other?—Decidedly, to the utmost extent.

"Are the Company themselves carriers?—No.

"*Do they intend to become carriers?—Certainly not: they are upon a much sounder principle.*

"Then it is your opinion that Railroad Companies ought not themselves to be carriers?—Decidedly so, and for this reason—that a Railroad Company being a carrier, would necessarily crush a large body of small capitalists. It is quite out of the question that a Railroad Company can be carriers, and admit other carriers upon the line, without doing serious injury to those carriers. I think I can give you a case in point:—A few months ago the Grand Junction Railway became carriers, and they, finding that they made little way, admitted a certain number of carriers (Pickford and Co., for instance, were the first upon the line), *upon condition that they did not charge less than a certain sum per cent. for a variety of articles mentioned in a schedule.* The Company themselves being carriers, said, "We make a charge of 2s. a cwt., or 40s. a ton, for such a description of goods; we will admit you upon the line, but you must be bound, neither directly nor indirectly, to charge a less sum than we charge; we will allow a certain per centage, be it 20 or 25 per cent., to pay your expenses and to leave you a profit—that is to say, to pay the expenses of collecting the goods in Manchester or Liverpool, delivering the goods in Birmingham, and keeping the various accounts, and the risk of debt." *And thus they regulate the rate of freight which the public pay.* Now the mode adopted by the London and Birmingham, which Company has had greater complaints made against it of monopoly than any other Company, appears to be the only sound mode of proceeding: they act upon the same principle as the canals, only finding a larger capital for the benefit of the traders; the canal finds the water-way only—the London and Birmingham Railway finds the railway, the locomotive power (analogous to horse power upon canals), and also the waggons, *thus enabling the public to have the utmost possible competition*; and, by the bye, they not only find the railway, the locomotive power, and the waggons, but they also find the stations or warehouses wherein to transact the business, so that it is not possible for a more liberal system to be adopted, or a system that will allow the small

* Mr. Talbot is a lawyer of deservedly high reputation and therefore—

"He must be presumed to have known the general law of the land. By that all monopolies are illegal."—*Lord Tenterden.*

"Monopolies are against the law, and are declared so by 21 Ja. I., cap. 3"—*Mr. Justice Bayley.*

"All monopolies are illegal."—*Mr. Justice Littledale.*

See the Law Reports of Messrs. Barnewall and Cresswell, 10th Volume, p. 826.

* See the evidence of Mr. Rathbone, 2nd Report, p. 226; also Messrs. Tibbetts, Derham, and Harnett, &c. &c.

traders to compete, than the system of the London and Birmingham.

"As far as your knowledge goes what effect have the two systems upon the carriage of goods upon the respective railways, the Grand Junction and the London and Birmingham?—If you ask upon what line the greatest satisfaction is given, most assuredly on the London and Birmingham line to carriers in general.

"What effect has the circumstance of the *Grand Junction Company* being carriers themselves had upon the existence of small carriers upon their line?—*The small carriers have not come upon their line.*

"Have any small carriers come upon the London and Birmingham line?—*Yes, carriers that have only a single waggon a day, and many that have come upon it have only one or two or three waggons per week.*

"What becomes of their goods when they arrive at Birmingham to be forwarded on to Liverpool or Manchester?—I do not think that the carriers upon the Grand Junction line would continue upon the Grand Junction line had they the power of moving upon another line, but as there is only the option of using the Grand Junction, or transferring the goods from the railway to the canal, the great carriers necessarily make use of the Grand Junction.

"What do you mean by the expression carriers coming upon the line. To what extent does that go, do you mean that they work their own engines?—No, they do not work their own engines, the engines are found by the respective Companies.

"Then the expense paid for the use of the road of the locomotive power of the waggons and of the stations is the same in the case of the Grand Junction and the London and Birmingham?—*No, the London and Birmingham charge a certain sum per ton, and they leave the traders to compete amongst each other to convey goods at the lowest possible rate.*

"Then suppose the Company were to carry goods themselves, charging only a fair per centage, would not the public pay a less sum than if it was left to those different carriers to charge as much as they could beyond the sum paid to the Company?—I should think not.

"Would it not be cheaper if in the hands of the Company, who would have a larger quantity to do than by having different parties upon the line, one having four tons and another six tons to carry, and so on?—I should say it would be impracticable. I should say the thing could not work."

We now arrive at that evidence offered on behalf of the Company, to which so much influence is, in rather a self-satisfied mood, attributed by their high mightinesses, the Directors, *themselves the witnesses.* And because it does appear to be a very choice specimen of that ambidexterity in argument, with which truth is said to arm her chosen advocates, that they may combat for her on either hand with equal ability and zeal, it may be more effective at this point of our inquiry to set it forth in parallel lines: and—

1st. The Railway is a public road.

"769. Has Sir Wm. Follett's opinion been taken on it?—It has.

"770. What was the purport of his opinion? —The purport of his opinion was, that the Liverpool and Manchester Railway was open to all persons on a Sunday as well as on any other day, and that it was not in the power of the Directors to close it."—*Mr. Earle*, 14th Dec. 1837.

It is *not* a public, but an *exclusive* road.

"734. Why should a railroad be allowed a profit upon carrying mails more than a turnpike one?*—Because a turnpike road is kept in repair by the public, but ours is an exclusive road, and one which Parliament has sanctioned."—*Mr. Moss*, 14th Dec. 1837.

* This distinction in favour of the railway is wholly groundless. The public support one just as much as they do the others, and no more: viz. by the payment.

2dly. The Company make their profit only as toll-owners, and do not wish to become carriers.

"542. Mr. Gillon:—May not that reluctance be partly attributable to this, that the railway proprietors have the power at any time, by running toll-free upon their own road, of running any competing company off the road?—We do not wish to be carriers at all; we would much rather simplify our own trade, and as far as Manchester and Liverpool were concerned, get persons to contract to supply us with locomotive power upon any terms; but though we advertised in Liverpool three months we had not a single bidder when the day came.

"543. You said the railway was a very profitable concern; then it is entirely as toll proprietors that you find it so?—From tolls only. If we were to separate the one from the other, and take the tolls each day that we are entitled to take, we should get nothing for our engines. For instance, the fare to Birmingham is a guinea, which we calculate, upon the average, to amount to 16*s.*, which is not more than the tolls.

"544. Chairman.—Then you make your profit as toll-owners, not as carriers?—Just so.

"574. Is the Committee to understand that the desire of the Grand Junction Directors is to be relieved as much as they can be from the details of management?—Certainly.

"575. And that you would be very desirous to find persons to become carriers?—To find us the power and everything. It is the unanimous feeling of the Board to endeavour to get persons to do that."—*Mr. Moss*, 12th Dec. 1837.

The Company wish to become *exclusive* carriers.

"3411. You find that the Railway Company must derive its profits not only from tolls, but from the conveyance of passengers and goods?—Yes; but I do not think the Railway Company are entitled to derive profits from the conveyance of passengers and goods beyond a moderate profit upon the money they are compelled to employ in the carrying department.

"3412. You think they must undertake that business themselves, instead of leaving it, as you formerly supposed they would, to other parties to undertake?—Decidedly; I think it is quite imperative.

"3673. Is it your opinion that it is hardly possible for a Railroad Company to be carriers upon their own line, and private carriers continue also?—It is my opinion that it is judicious for a Company to be exclusive carriers upon their own line; that it is best for the public and best for the Railroad Company."—*Mr. Moss*, 28th Mar., 1840.

3rdly. This contradiction would have been attributed to a *change* of opinion, resulting from subsequent experience:

"3407. You gave evidence before a Committee in the end of 1837, upon the subject of mail conveyance, did you not?—I did.

"3408. Do you remember at that time stating that the Grand Junction Railway Company did not wish to be carriers at all?—I do not remember the words, but I think it is very likely; there was at that time a strong feeling at our Board that the carriers ought to be employed.

"3409. Do you remember stating that the Railway Company only considered themselves as toll proprietors, and wished to derive their profits from tolls only?—I think it is very likely.

"3410. Subsequent experience has induced you to alter your views upon that subject?—It has."—28th Mar 1840.

If it had not appeared that the Company contemplated becoming carriers, *when their Acts were obtained.*

"3406. The Grand Junction Company are themselves carriers now?—*Yes; they have been so from the first, and they contemplated being carriers when the Act of Parliament was obtained.*"—28th Mar. 1840.

4thly. Unless the Company are *exclusive* carriers the trade will continue to charge high rates.

"3675. If he were not restricted in price by an agreement with you, would he not be in competition with you?—If he was not restricted in price, he would not be in competition with the Company; he would charge his own extravagant price, the same as on the London and Birmingham."—Mar. 1840.

If the Company are carriers *at all*, the trade will *not be able* to maintain a higher rate than is charged by the Company.

"3629. There is no statement in that agreement that they should never charge more?—The Company being carriers would prevent them charging more.

"3676. If you carried for less, and delivered for less, you would bring down his prices?—It would be impossible to have two prices, one for ourselves, and another for our agent.

"3678. Then if they were enabled to do that portion of the business which they do for themselves at a lower rate than the Company would do it at, the public would benefit thereby?—If they charged the public less; but they cannot do it so low as the Company; and they do not in fact charge the public less.

"3679. Then if they cannot do it so low as the Company, they cannot exist as carriers?—No.

"3680. Then as you are enabled to do your business better and cheaper than they are, they inevitably must go off the line?—Yes.

"3630. In Mr. Chorley's letter or memorandum of the 17th December, 1838, in his agreement with Messrs. Pickford, there is this expression: 'Messrs. Pickford and Co., not to charge their customers, either directly or indirectly, less than the rates specified in the table;' you take very great care that they shall not charge less than you do, but you do not take care that they shall not charge more?—We having fixed upon those rates which were hung

Digitized by Google

5thly. The arrangement by which the Company purpose to become exclusive Carriers, is by engaging Messrs. Horne and Chaplin to be Carriers on the London and Birmingham line in conjunction with the Grand Junction Company, and *not simply as agents of the latter Company.*

"3542. We are now discussing an arrangement with Chaplin and Horne, who will agree for 10s. a ton to receive all the goods in London; that is, they charge the public only whatever they pay the London and Birmingham and ourselves, and the extra 10s. a ton; for this amount they deliver the goods in every part of London.

"3556. When did this arrangement commence? — Mr. Chaplin informs me he is ready to commence immediately.

"3557. Then after that period the Grand Junction will become carriers of goods all the way from Liverpool and Manchester to London? — Yes: *at least Chaplin and Horne will be the carriers*, they undertaking to pay us our price, and the London and Birmingham Company theirs.

"3558. *They will be carriers from Liverpool and Manchester to London?—Yes: paying the two Companies their sums, and only charging 10s. a ton for the trouble in London.*

"3579. Mr. Loch.—Where does Chaplin begin to take up goods, at Liverpool or Birmingham?—We should take them up in Liverpool.

"3580. And deliver them to Chaplin and Horne at Birmingham?—Yes: they will have a warehouse at Birmingham, in case of goods arriving too late, to put them in, but in the ordinary course all the goods would go on direct in the same waggon they do now.

"3581. Are they to receive their remuneration in the same way as the carriers do that now use your line?—No: we should perhaps lower the rate, generally speaking; we have not yet fixed what price, but whatever price we charge, that they are to consider as the first step; then there is the price of the London and Birmingham the next step, and they engage for 10s. beyond those sums to do all the work.

"3665. With regard to your arrangement with Chaplin and Horne, *are they simply your agents?*—They are to act as deliverers of goods in London; the London and Birmingham not being carriers, they must pay the price to the London and Birmingham, and deliver the goods themselves.

"3666. They *are to be the carriers* so far as the London and Birmingham are concerned?—Yes.

6thly. This arrangement has been made with Messrs. Horne and Chaplin, with a view to benefit the public. (Save the mark!)

"3560. Mr. Easthope—Do I understand you, that you have been led to make this arrangement with Chaplin and Horne, in order to reduce the charge of carriage to the public?—Certainly.

"3529. It has been stated to the Committee that the competition between the Railway Company and private carriers is not likely to continue long, inasmuch as the Company will be enabled by one means or another to drive the private carriers off their line?—I should say that it is rather that the Company do not see the necessity of employing private carriers to be their agents, as they must do all the business.

"3674. You think that it is hardly practicable for the private carrier to remain long in competition with the Company?—I should say he was never in competition with the Company; but it is not judicious to employ the private carrier as the agent of the Company, which he now is."

---

up in our office, people would naturally come to us if carriers had charged more than we did."—March, 1840.

But it is not true to say that Messrs. Horne and Chaplin are such carriers, since they ARE simply agents to the Grand Junction Company.

"And that the Grand Junction Railway have had no dealings with the said firm of Chaplin and Horne, over or along the said Grand Junction Railway, or any part thereof, or as partners of the said Company, and *no connection or conjunction with the said firm, save in the way of agency.*

"And that the said Messrs. Chaplin and Horne, *are not, and never have been*, connected or concerned in any way whatever with the conveyance of goods, either on the Grand Junction Railway, *or the London and Birmingham Railway*, or any part thereof respectively, in connection with the said Grand Junction Railway Company, *otherwise than in the way of agency.*"—Affidavit of Mr. Moss, filed in the Court of Queen's Bench, January, 1841.

"GRAND JUNCTION RAILWAY.

"Liverpool, Jan. 27, 1841.

"Messrs. Pickford & Co.

"Gentlemen,—Having, as promised in my letter of the 25rd, laid your letter of the 21st before the Directors of the Grand Junction Railway, at their first weekly meeting, held this day, I now reply thereto on behalf of the Company; and wish you distinctly to understand that the Grand Junction Railway Company do not, and never did, since the determination of their special agreement with you, give to, or withhold from you, any 'advantages, benefits, allowances, or reductions,' which were not equally given to, or withheld from, all other persons also, and have never intended or contemplated doing so.

"Also, that Chaplin and Horne have been, and are simply and solely our agents in London, for collecting and delivering goods, and performing other services of the like nature; and are not, and never were, in any way whatever, carriers over the Grand Junction Railway, or any part of it, and that we do not provide any power or carriages at all for them or for any other persons in their name. * *

"I have stated the above in order to preclude any possibility of misapprehension, though I cannot avoid believing (not only from the affidavits which we had prepared on the application made by you to the Court of Queen's Bench, and which have been shown to you, but from our prior communications), that you must have been fully aware of the relation in which the Grand Junction Railway Company and Messrs. Chaplin and Horne stand towards each other.

"I am, Gentlemen, your obedient servant,

(Signed)

"J. R. CHORLEY."

—*Railway Times*, 6th February, 1841.

But it is not *judicious* to employ the carrier as agent to the Company.

This evidence stands out so well in bold relief when exhibited in this shape, that it would be idle to weaken it by any commentary. It is matter of surprise to see what strange contradictions will result, when individuals are called on matters of opinion before a Parliamentary Committee. Speaking to *facts* is a plain and simple matter, but when they are questioned and cross-questioned about their views and sentiments (in matters too in which for the most part their feelings are engaged and their interests are stake), they seem to be thrown adrift without helm or compass upon the wide sea of vague surmise. "Statistics (said Mr. Canning, on a similar occasion), are mercenaries that may be pressed into any service." The Grand Junction Railway Company appear in the foregoing extracts (to say nothing of any other attributes which may make the resemblance stronger), what Mrs. Malaprop would call "a Cerberus in trade: three gentlemen at once." Certainly, if any solution remain for them from the difficulties into which they have been thrown by their own contradictions, it will be that notable good fortune on which Baron Munchausen fell, when he stood between the alligator and the lion. Craftily stooping as the lion sprang, the monster missed his aim and stuck in the alligator's throat.

The rising of Parliament (for Directors like other great persons who shall be nameless, sit easier in their seats during a recess), brought with it a still more open declaration of hostility on the Company's part. The agreements we have spoken of were determined, and the carrier was from this period excluded from the line, except upon paying the full charge, as made to the individual consignee. In other words, every body whose goods were carried upon the line was compelled to employ the Company as his carter, porter, insurer, &c., whether he wished it or no, and to pay them their hire in that capacity. One exception alone was made—that of Messrs. Chaplin and Horne, who were employed either as partners of, or agents to the Company. It has been seen that it is not very easy to decide which, nor for the purpose of our present argument is it in the slightest degree material. No person, therefore, can now have his goods carried upon the line, unless he employ, or at least pay, the Company or their deputies, as his carrier. To this iniquitous procedure the weaker carriers succumbed. On the part of Messrs. Pickford, who still manfully maintain the conflict, legal proceedings have been taken, and are now in progress, which it is not the province of this paper to discuss. It is from affidavits filed in the course of these proceedings that some of the quotations above cited have been taken.*

It is worthy of all observation that throughout this contest the Directors' plea has been, "it is quite a mistake to talk of competition *on* the railway; the real competition is between the railway on one side and the canal carriage on the other." And is it come to this? Have all the loud professions of public benefit vanished into thin air? Have all these enormous powers been conferred by Parliament, and these acknowledged evils been incurred, that with much close nursing under an arbitrary and protective system, railways may hold their way with the canals? This is too absurd. Railways have many great advantages which canals do not possess; and the public will expect to reap a *proportionate* benefit to themselves.

Having then considered what have been the ob-

* It has been rendered sufficiently clear from these proceedings, whatever may be their legal issue, that the Company are in fact carrying out resolutely into practice, the monopoly which they so candidly avow in words.

Digitized by Google

jects and what the arguments of the respective parties in this contest, it is time to revert to the main question, which, so far as public interest is concerned, now remains at issue. That the carriers have the carrying interest and the Directors that of the Grand Junction Railway steadily before them is clear enough. The country and the Parliament should consider whether either or which of these parties would adopt the soundest principles of general political economy.

One should have thought that if any position in this science had been more clearly established than another, it was this, that monopoly in every shape should be avoided, and every branch of industry thrown as widely open to free and fair competition as possible.

It never was heard that a set of road trustees reserved to themselves the privilege of providing the only horses, chaises, waggons, carts upon the line of their turnpike road. The pretence would have been scouted. So it is with railways, so far as the manifest intention of Parliament is concerned, expressed in every Railway Act. So, however, it was not in fact; because originally no provision had been made for the supply to private individuals of fuel and water along the line of railway; and no provision for this purpose has been attempted since, because paramount considerations of safety to human life have seemed to render it necessary that the control of locomotive power should be vested in a single hand.

Granted then that control to this extent must be vested in the hands of a railway company:—but what conclusion follows? Surely that railway Companies require a more efficient superintendence and a more jealous eye of law than other bodies need:—surely that if necessity has required them to be intrusted with powers which in ordinary cases it is not thought right to intrust, these extraordinary powers should be co-extensive only with that necessity, and within those bounds should be exercised under the salutary recollection of a serious responsibility.

"On this account (the safety of the public) it is necessary that the Company should possess a complete control over their line of road, although they should thereby acquire an entire monopoly of the means of communication. But if these extensive powers are to be granted to private Companies, it becomes most important that they should be so controlled as to secure the public as far as possible from any abuse which might arise under this irresponsible authority."—(See Second Report of Select Committee on Railways, 1839, p. 7.)

So much for principle. Now then for practice. Instead of exercising with delicacy powers so unusual, the Grand Junction Company have been emboldened to stretch to the utmost every advantage they could possibly obtain. And now they have thrown off the mask entirely, and openly profess their intention of assuming, in the words of Mr. Talbot, "a well-regulated monopoly to themselves."

Conscious, no doubt, that there is here a strong *prima facie* case against them, they are exceedingly desirous to avoid any searching discussions upon the policy of their system, and shelter themselves under general asseverations that their own interests are, and ever will be, identical with those of the public.

"It will be found to be the opinion of some of the witnesses, that the interests of the Railway Companies and of the public can never be at variance, and that the Managers of these great establishments, acting with an enlightened view of their own interests, will always have a due regard to the general advantage of the community. A more strict investigation has, however, shown that this assumption is not without exceptions. A main object which the Directors of a Company must have in view is to obtain a good return for the capital expended, while it is the primary interest of the public that the intercourse should be regularly maintained with the greatest safety, speed, and economy. To a certain extent it is undoubtedly for the advantage of the Company to satisfy the wishes and supply the wants of the community, especially on those lines where other means of communication yet exist and maintain a competition, although feeble, against these powerful establishments. But cases have already arisen in which the interests of private Companies and of the public have been found to be opposed to each other; and it appears probable that in proportion as this new system shall supersede other modes of travelling, other inconvenient consequences will ensue, unless some authority be established to watch over and protect the interests of the public. The fear of a rival line may in some instances be a check upon the conduct of a Company, but there are few districts in which the public will have any opportunity of selection, and obvious and serious difficulties must arise in carrying this means of control into execution."—(See Second Report of Select Committee on Railways, 1839, p. 7.)

Now in considering this portion of the subject, it should never be forgotten that competition, in order to be effectual, must be *unlimited*. It is quite true that trade, like water, finds its level; but then (like water) it must be *wholly* unconfined. We shall have occasion to notice this presently in speaking of competition with rival lines.

In support of their views the Company have had the hardihood to appeal to the rates, which they say have been greatly reduced to the public, in consequence of their acknowledged *monopoly* upon the line, and this in face of the agreements "not to charge less," which they have imposed upon the carriers—in face of that conduct on their part to which we have above referred, under the similitude of the vice or screw!

It will be remembered that in Mr. Baxendale's petition it was alleged that the tendency of the Chester and Crewe Act would be *to raise* the rates against the public—and what has been the consequence? Immediately after the passing of that Act, *passengers' fares were raised nearly 10 per cent. upon the whole line of the Grand Junction Railway;* at the very same time the carriage rates for goods were reduced under the circumstances above mentioned.

Precisely so. The Crewe Act had *secured* the monopoly in passengers, and fares were raised; the carriers were yet upon the line, and the monopoly in goods was still matter of the keenest conflict, and so rates fell. When the monopoly in goods shall likewise have been secured,—will *rates* THEN rise or fall?

It needed no philosopher to find out that while the contest for monopoly was raging, rates *must* fall. Lowliness (in this as in other matters) is young ambition's ladder. It needs no prophet now to say what the effect *will* be, when opposition has been swept away, and when the Company can have its will.

The upshot of the whole is, that upon passengers who pay 25*s. per cwt.* (or thereabouts) fares are raised; upon goods which pay the same sum *per ton*, rates are reduced. The Company have *proved too much* in this. It is not moreover to be forgotten that the Company are doing the whole work now, and incurring all the costs and liabilities of the common carriers for a less sum than before this contest was commenced, they required to be paid them by the trader for the mere use of the railway, trucks and power. Soundly, therefore, as well as shrewdly, may Messrs. Pickford and Co. ask, "But if it should appear that you are adding to those of the toll owner the far greater expences and liabilities of the carrier, without reserving to yourselves any remuneration for your risk and labour, who could avoid the conclusion that you are actuated by some motives of temporary policy and look forward to reimburse yourselves handsomely hereafter."—(See *Railway Times*, 2nd January, 1841.)

Besides all this, everybody knows (and no one better than the Company) that a reduction in the rates of traffic purchased by an increase in the fares of passengers, is a very Flemish bargain for the public.

And this leads us to consider the effect of *rival lines* as a means of competition, and so a protection to the public. And this is in truth a very insufficient protection, if indeed the right conclusion be not rather that it is a mere increase of the burden, a doubling of the evils of monopoly. Competition, as we observed before, must be *unlimited*, or it is not in Adam Smith's vocabulary *competition*. The whole body of any existing trade (it is to be conceived) may unite together for the purpose of maintaining a high price: but where it is open to any single member of the public on perceiving a favourable opportunity thus offered him to come in and compete, the public is protected,—there is *real* competition. It is easy for two railways to combine; and when two such rivals do agree, their unanimity indeed is wonderful to fleece and oppress the public. Or one may be purchased by another, and cease altogether to exist as a rival independent interest. If the carriers indeed combined to rob the public, any individual who thought he could do the work cheaper, might enter at once upon the field: but if two Railway Companies shall coalesce, it is not quite so simple an affair to start one or many rival railways.

And so the Chester and Crewe has been bought by the Grand Junction, who now send only two trains in a day to Chester, because they have the Chester people completely in their power, and entertain, it is said, the very virtuous purpose of ruining the Birkenhead and Chester Railway, that they may buy that too, and at a cheaper rate. So competition raged for a while between the Birmingham and Derby and the Midland Counties' Railway, and for a while rates were wonderfully low. But—

"Brother, brother, we're both in the wrong,"

The Boards met, arranged their difference, and lo! the blessings of a competing line! fares were at once raised, and became *higher than they had been before the competing line was opened*. Of course they did, because the same traffic had to pay two lines instead of one.

But it is needless to multiply examples. We revert in conclusion to the principles with which we set out in this inquiry, few and simple. "Perfect freedom of competition for all parties upon equal terms"—(we borrow the phrase from Messrs. Pickford)—is the plain intelligible rule.

If the Grand Junction Railway Company are willing to compete with the private trader upon equal terms, let them compete. But, if under the guise of cheapness and competition, they do in fact

Digitized by Google

seek unfair advantage, and resort to oblique manœuvres; if, in short, it become apparent that their freedom is incompatible with the freedom of the trade at large—what is to be done? Precisely what the law has directed shall be done with any individual whose personal freedom is incompatible with that of society at large. The individual ceases to be free. The Company must be restricted within their natural and original capacity of Railway owners, and compelled to adopt that system which other Railways with sound judgment both as regards their own and the general interest, have hitherto been satisfied to adopt.

On the whole then, the only sound system which the legislature can pursue on this important subject is a return as nearly as the case will admit, to those principles of common sense and common law, which have prevailed in the parallel cases of canals and turnpike roads and are intended in the Railway Acts: and making provision for security to *life*, laying the Railways open to the whole public. To the tolls the Companies are entitled by their Acts of Parliament: let a separate charge, made equally upon all persons, and subject to control from the *Board of Trade, be levied by them for the supply of trucks and power; for the rest let Parliament provide "a perfect freedom of competition for all parties upon equal terms."

By this means Parliament would secure to the Railway Companies all to which they are entitled under the equity of their Acts, or the natural justice of the case, viz.

1st. The toll authorised to be charged, as payment for the use of the line.

2dly. A fair and equal charge for that locomotive power, which, since those Acts were passed, it has appeared expedient to leave in their hands.

3dly. If they undertake the duties of a common carrier, the fair remuneration for their risk and labour.

For the public, Parliament would secure a return (as nearly as the case will admit) to those sound principles of commercial freedom by which the internal traffic of the country has hitherto been governed.

These observations are offered to the public with great confidence, because they appear to suggest the only practicable method for carrying into effect the following resolutions (all but *unanimously*†) agreed to by the Select Committee, and by them reported to the House on the 14th May, 1840,—viz.

"1. That it is the opinion of this Committee, that Railway Companies using locomotive power possess a practical monopoly for the conveyance of passengers on the several lines of railway, and that under existing circumstances this monopoly is inseparable from the nature of their establishments, and from the conduct of their business, with due regard to the safety and convenience of the public.

"2. That in the absence of any effectual check from the operation of free competition on their respective lines, this Committee think it advisable to subject this monopoly to some general superintendence and control.

"3. That it is the opinion of this Committee that this control will be most advantageously entrusted to some department of the Executive Government."

There is great pleasure likewise in the reflection that this will contribute in no small degree to carry out the wish of the Company themselves to establish (since there must be a monopoly at all) a *well-regulated* monopoly. As the conclusion and upshot of the whole, may be adopted the following opinion of Mr. Moss:—

"405. Would it not be better for the Company on the one hand, and the public on the other, that you should be positively (*i. e.* in the matter of locomotive power. See the Evidence *in loco*) monopolists, and your rules and regulations *subject to the control of competent authority?*—I am of opinion, decidedly so."

It cannot too often be repeated, or too strongly pressed upon the attention of Parliament and the public, that by their own confession, the Grand Junction Company stand without defence. Out of their own mouth they are condemned. They seek a monopoly. This is their own avowal, and it puts them out of court. No matter on what pretext, or with what specious and plausible array of argument—they seek a monopoly. Contemning the first principles of common law—contravening the plain intentions of the legislature in passing their Acts of Parliament—riding rough shod over all the Saxon principles which form the framework of society in England—in scorn of public policy and established usage—they have acquired a monopoly, and they avow it. Nay, more, as if this were not enough, they avow their settled resolution since the London and Birmingham Company will not pursue the same practice to *pursue it for them*; they assume, in other words, to dictate to other Companies and say, "upon your line there *shall* be a monopoly: you may be the monopolists if you will, or you may leave it for us: but a monopoly we can and will establish." It is not too much to say that this attempt is without parallel in the inland trade of England. The Duke of Bridgewater in all his power was a joke to the Grand Junction Company. Our forefathers *talked* but little of political economy, but they resisted manfully even the imposition of necessary tolls upon turnpike roads, and the powers consequently vested in trustees, which appeared to them excessive. The consequence in 1773 was the first General Act for bringing those useful undertakings within due control. We descant upon free trade, and talk largely of the march of intellect; meanwhile monopolies are raised around us, and vexations and difficulties innumerable present themselves to those individuals whom accident has compelled to fight the public battle.

Let not this appear to any one a small or unimportant question. The cancer of monopoly has commenced in no remote extremity—palsies no distant or useless member of the body politic. The trunk is already seized—and, except the remedy be vigororously administered at once, it will rapidly extend to every ramification of the system. Prompt interference *now* will save the trade, and give the public good security. It is too often the temporising argument of men who make the difficulties from which they shrink, "it will be time enough!" There will *not* be time enough: delay will not lessen the stringency—it will only impair the efficiency of those remedies which, if there be any truth in experience, or any sense in political economy, Parliament must eventually provide. Let us learn a lesson from the artful monopolist—he well knows the value of *time* to the wrong-doer; he well knows that when his present proceedings have once destroyed the trade it will not be easy to restore it. The growth of trade is gradual—it takes root slowly—it puts forth its branches one by one, and—

> "Grows like the summer grass, fastest by night,
> Unseen yet crescive in its faculty."

You may suffer it to be uprooted,—or you may ward off the hostile blow. Once struck down, who shall plant it again, maturely grown and full of vigour? The time, no one knows better than the monopolist himself, the time is NOW.

* Difficulties similar to those under which the carrier now labours arose with respect to the Post Office in 1837, 1838; and it was ultimately determined that they should be settled always by arbitration. This plan seems to be the best in the present instance, the arbitrator being the Board of Trade.

† Dissentiente, Mr. Easthope, Chairman of the South Western Railway.

CHATHAM RAILWAY—IMPROVED NAVIGATION OF THE CREEK.

On Friday week last a meeting of subscribers and others interested in the improvement of the navigation of Dartford Creek, was held in the Town-hall, Dartford, to take into consideration the propriety of petitioning Parliament against the obstruction of the Darenth by the projected Chatham Railway Company, who propose traversing the marshes, throwing a bridge over the river. Lord Wynford, who seems to have attended on the part of the Railway Company, assured the meeting that it was useless to bring any opposition to the new undertaking, as a sufficient number of shares were already taken to secure its reception by Parliament, and that Mr. Goldsmidt alone had subscribed 300,000*l*. On this announcement it was intimated that the committee would offer no opposition if the line was carried above the tide-way or Phœnix Mills.

CONSPIRACY TO DEFRAUD THE MIDLAND COUNTIES RAILWAY.—A conspiracy to defraud this Company of the sum of 225*l*. was attempted this week in Leicester, under the following circumstances:—A short time since it had been found necessary to affix a notice in the office of the railway, stating, that in order to guarantee the safe delivery of money parcels, a per-centage on the amount, in the shape of an insurance, would be required. A youth of the name of Richards, a cripple, and formerly a clerk in a respectable coach office in the town, called at the parcel-office of the Company with a small parcel purporting to contain 225*l*., and addressed to a farmer in Derbyshire. He tendered the amount of insurance on the parcel, for which the clerk in the office gave him a receipt. The porter, of the Railway Company happening to call at the time, the parcel was handed over to him. He said that the parcel should be opened there or at the Company's office. He accordingly opened it; it contained nothing but a letter inclosing two pieces of waste paper. The letter which, with the address on the parcel, was in the handwriting of the youth, purported to be from a person of the name of Biggs in London. It stated that the money alleged to be inclosed was in requital of kindness formerly done the writer by the farmer in Derbyshire, and that on receipt of it a letter in acknowledgement should be directed to a person named Walker, post-office, Leicester. The youth Richards was taken into custody, and underwent an examination before the borough magistrates. He made an unreserved disclosure of the entire transaction, and has implicated two other persons in this conspiracy, at whose instance, he said, and for the consideration of a sovereign, he had been induced to attempt this fraud. From the disclosures made by the youth, one of the parties has been apprehended; he is a job-smith, and a leader of the Chartists in the town. He too underwent an examination, when his indentity was fully established as party concerned, and he was held to bail to take his trial for the offence.—*Globe.*

DUBLIN AND DROGHEDA RAILWAY.—The works of this line are proceeding well, and the shareholders are exhibiting increased confidence. Several of them are paying up in advance, the best proof they can possibly give of their good opinion, and the shortest and most effectual way of carrying out that opinion to their own benefit.—*Liverpool Standard.*

RAILWAY MANAGEMENT.

To "Examiner."

SIR,—Were I not precluded by the necessity of keeping within the Editor's limits to correspondents, I should have pleasure in discussing with you, not for purposes of controversy, but for information, many of the interesting points you raise.

However great its demerits may appear to me, it is amongst the advantages I admit an anonymous signature to possess, that it enables me, now that our correspondence, from the near winding up of the subject, is probably drawing to a close, to give testimony to a singleness of purpose,—a straight-forward going to the subject,—an honesty in all propositions,—the consideration of the general weal, untainted by the thought of party or personal profit, which have eminently distinguished, and gained respect for, your signature.

You advocate the paying Managers by a per-centage upon profits, because you think that by interesting them in the welfare of the concern, you secure the exact and honest discharge of their duty. Unless the rate you allow affords an income preposterous in amount for the service of such officers, I doubt its weighing in the balance, against the profits of that corruption which it is in the power of out present irresponsible Directors, Secretaries, and Managers to charge, in one way or another, to our debit. But my Managers, if they had the will, would not have the power, to abuse the confidence reposed in them to any serious extent. All expenditure should be made under contract; tenders should be opened only in the presence of two Directors, the Secretary, and the parties tendering, and the lowest tender should be received. (Here I must make a digression. Directors now reserve the right of excluding the lowest, or I believe any particular tender,—an exceptionable practice which calls for reform. Why, but for purposes of enmity or favoritism, is the lowest, or any tender, excepted? Why is not all fair and above-board,—the cheapest man having the job? They will tell you, that one has not capital, and that another has not knowledge; but these are flimsy excuses, and fit for nothing but to pave the way to the favourite offer, and a 500*l.* note in an embossed envelope? Let the supply be made by sample, or by specification; let the party tendering give ample security for due performance; and I shall be glad be glad to hear an honest and valid reason for rejecting *any man's* tender). By *my* method, an additional check would be instituted; the Managers should report to a Committee of two; the Committees should report to general meetings of Boards and independent auditors (independent mainly because they would be temporary, chance-chosen, and members of no clique,—having no leaning to or alliance with Directors or Managers), would look with the eye of vigilance at the conduct of all parties. One Manager, or even three highly-paid Directors, are, I think, objectionable, inasmuch as you place the management in too few hands. What is to prevent an easy understanding between three persons to work your road "for the benefit of the few at the cost of the many"? Experience proves that it is only by numerous checks that you can prevent colusion—by opening the acts of every one to too many to afford the hope of concealment, that you can protect yourself against fraud or wrong-doing in some shape or other. There is much truth in your observations upon this subject, and I admit that servants paid by invariable salary sometimes stagnate at their work; yet it is not generally so, for we see the public business of all nations paid for in that manner, and if not well, tolerably done? Even the snuff-boxes to the foreign secretary, and the fit-out plate to ambassadors, are, I believe, discontinued, and they rely upon their pay once told. Still the world wags without douceur, gratuity fee, or per-centage. If I can go further than the payment of a once-determined salary, it will be by granting a gradual increase for length of service, and a pension when worn out. You depend wholly on bribing your people into honesty and exertion, but in this country, where population treads so closely upon subsistence,—where there is a daily increasing disproportion between numbers and albour, is the fear, in this case the salutary fear, of losing a good appointment, worth nothing to you? I consider it to stand high amongst my guarantees for the faithful and industrious discharge of duty. I had a laugh over the naval illustration of your theory, and am surprised at the forbearance of your mess. In such youthful days I would have assembled a cock-pit court-martial had I been in the service, and, the sentence awarding it, have cut the weekly accounts from the caitiff's collar, and have given him a good cobbing; whatever country the rascal hailed from he, he disgraced it.

The eight Directors (you sometimes lose sight of the distressing fact, that you must take things as you find them, not as you would have them) will be of the quality, the gods please. Of the three classes you name, I hope they will turn out to be *connoisseurs*, for then they will be "pat to our purpose," but who, or what they may be, it is one of the benefits I anticipate from reform, will depend upon chance. The security for their being better than present Directors lies in the manner of their selection. It lies in their superannuation and ineligibility for re-appointment in less than three years, and in placing share-list auditors, each acting only for a year, to look after them,—checks and sureties for the right administration of your affairs, of neither of which have you at present the advantage. Drawn from any share-list for the qualifications I have stated, I do not apprehend the want of talent you appear to fear. Most men have a bent or aptitude for something, and in dividing into committees, each would offer himself for the executive duties of that branch with which he was most conversant. To choose good Managers, and upon a vacancy happening, a clever and active Secretary, because their appointments would be permanent, will be a main point. With eight share-list Directors, and three share-list Auditors, I should have no doubt of perfecting a system of management which would ensure pretty nearly the maximum of safety to the public and of profit to the proprietor. Do what you will, you must repose confidence somewhere, and it is safer in the hands of eight Directors and three Auditors, changed at short periods, than in those of one or three permanent Managers or Directors, though the railway knowledge of the latter should at first exceed ten times that of the former. What we want is to break up the existing alliances among all railway ranks, by which each and every one best serves his interest in protecting the interests of his colleagues and official associates. Directorships now are really vested interests, and it is to their permanence that we owe, in my opinion, a large proportion of our railway losses.

I think the largest shareholder, be he rich or poor, is likely to do his duty as Director paid or unpaid. Were he as indifferent to money as you suppose the rich are, he would not submit to the trouble and vexation of being a railway proprietor. I have no objection to give auditors an equal salary with Directors, having proposed their being unpaid only to make them more independent, and to place them in the highest position. I intended their being unpaid as a compliment.

Your Directors must either be as they now are, the nominees of Directors, or they must be brought in by popular election, or they must be chosen for some kind of share-list qualification. Under the first form all our losses have happened; under the second, and the supineness of shareholders, the present oligarchy would be perpetuated, and you have no chance of successful reform, but through selection from the share-lists. It is just possible that now and then, you might fail in securing an average amount of talent, but at all events in shaking the bag and pulling out the first that rose, you would be unlucky indeed were you worse off than you are now. A new broom sweeps clean, and in changing my brooms often, I should at least make a happy exchange of industry for present torpor and neglect, and get rid of the combination which at present shuts you out from all knowledge of your affairs.

You give a larger meaning to the engineer prohibition to try mechanical improvements than I intended. It would go only to the prevention of such experiments as would interfere with the course of trains, or damage the road. An inventor should have all facilities afforded him, even to the assistance of the servants of the line. In one word, I would treat him liberally, and take care besides that he paid no toll or per centage.

I do not see that beyond repairs you should become a manufacturer. An engine is completed at the inventor's workshop; so is a carriage, a horse-box and a truck. You buy them ready for use, cheaper and better than you could make them. There is nothing wanting to make them harmonise with your road, but accuracy of gauge. Giving inventors the means of trial, you do all that is necessary in you to forward improvement. The improvement itself rests with the coach builder, the mechanical engineer and so on, persons who devote their whole lives and thoughts each to his business, and who, therefore, were you and your establishment to attempt to keep pace with them, would soon run you full down.

I do not care what you call him, but you must have an officer now known under the name of Secretary. The correspondence, the arrangement of the office, the making up the accounts, the representation of the Company in courts of law (and until there is a cashier, the receipts and payments), all rest upon him. If able and honest, he is the most valuable officer in the Company. At present the office is executed in a slovenly, in some cases a shameful, manner, owing to the system which prevails He is the friend or protege of the Board, and therefore allowed to reside where he pleases—at a distance from his duty—which makes his efficiency impossible, instead of living at the main station, and rarely leaving the line. The result is his casual appearance, where he ought ever to be. Need we wonder that the return of profits upon so many lines is Nil?

There is no doubt that security ought to be taken from all persons holding offices of trust—that an interest should be made upon balances—that Companies' receipts should be held by Companies' servants, and not by bankers, private or joint stock, in short, that railway business should be wholly conducted by railway establishments, and not only risk from bankers' failure be avoided, but the interest be forthcoming which any other trader would make.

I cannot acknowledge any agreement under which a banker lays claim to holding balances, upon the plea of having taken shares. Who had a right to make such an agreement? Am I to lose my proportion of a half year's receipts by the failure of such a banker, because some gambling provisional Committee forced some unprofitable undertaking into activity, by such a stock-jobbing process? It is the consequence of such agreements that makes me urge so strenuously a change of management. To such agreements it is owing that one half of our fifty millions is not worth a brass button. To such agreements we must look, and to the unholy compacts which gave rise to them, for the cause of all the false statements, the deception, the collusion, the worthless estimates, the equivocation, the mental reservation, the disregard of truth, the low state of railway morality, which disgracefully distinguish all the operations, as between Managers and shareholders, of this fine invention. If you know of any railway banking carried on upon such an understanding, I hope you will unscrupulously show up the instance; for the parties ought to be exposed.

But to what purpose do we labour while shareholders will not act? We might as well talk to a deaf adder as to our railway proprietary. They are very idle, or must be very rich, since the rescue of fifty millions is not worth their attention. We have shown them that large sums have been spent in stock-jobbing, and passed in *audited* accounts (Directors nominees were the auditors) as railway expenditure—that for want of security for railway servants, at least one large sum has been lost through breach of trust—that without a shadow of reason for the enormity, and in the face of better example, the Directors of three Companies have voted themselves 1,000*l.* per annum extra pay;—

Digitized by Google

that an addition to capital has been raised, to pay dividend, that the price of shares in the market might be supported—that Directors travelling at free cost by one railway, charge other Companies exorbitantly for the same journies—that thousands of railway money have been lost by the employment and future of private bankers;—that 500*l.* a-year has been paid by a Company to a private banker for keeping an account with them. Yet, "contented creatures," they are quiet, if not satisfied. The wrongs of shareholders are sufficient to rouse even peace herself to anger, still they are silent as the dumb, or utter no cry but "hear! hear!" 174,000*l.* is charged for rails, which was disbursed under the protection of that mysterious word "extra," and only one man notices, and no one complains of, fictitious accounts. The conduct of shareholders is marvellous—it is unaccountable. No play upon their credulity is of extent enough to be worthy their indignation. The oligarchy reigns uncontrolled and triumphant—nay, laughs them to scorn—and well they may.

But it is some satisfaction to think that though we have no support from our co-partners, we yet are forcing Directors to alter, if not to mend their ways, to give us the semblance, if not the substance of reform. The railway, like the hydraulic-press, may be slow in its action, but at length it applies a force few bodies can resist, and certainly not, Railway Directors. Will any man believe that, but for the stir the press has made, we should have heard of the loudly trumpeted diminution of working expense, or of a general voluntary reduction in the number of Directors, or that the appointment of auditors to new Companies should be made imperative by the Acts, or that Directors in other cases would of themselves have appointed auditors? No such thing. It is the pressure from without; it is the Editor's denunciations of, and "Examiner's" inquiries into, the present system of management, which have compelled them to move, and they are *cunningly* setting about the work of change. Finding matters could not remain as they are, they are reforming after their own fashion, and to suit their own views. He must be besotted who values at the price of a farthing the services of auditors appointed by or through the interest of Directors; they are worse than our having no auditors at all, because they are a lull, a cajolry, a blind, a hoax, a shareholder's opiate, and of no earthly use to us. Hopeless as the endeavour is to awaken them to a sense of their railway danger, I will once more warn shareholders, before the meetings are over, that nothing short of *auditors taken from the share lists in rotation, and Directors for largest holding, residence near the lines, and alphabetical order*, can or ever will realise for them, the amount of dividends to which they are entitled.

A RAILWAY SHAREHOLDER.

MANCHESTER AND BIRMINGHAM RAILWAY.

"Candidus" to the Editor of the Railway Times.

SIR,—Your polite admission of my previous letter into your number of the 25rd of January, encourages me to request the insertion of a brief rejoinder to the gentleman who has distinguished his contribution to your columns by the appropriate signature of "Sap." I shall have need upon this occasion to make no very long incursion upon the limits of your own space, and the leisure of your numerous readers.

Our friend with the felicitous name commences his letter with a disavowal that he is interested in the success or failure of the Manchester and Birmingham Railway; but as he presently proceeds to inform us that he is a proprietor in the Grand Junction line, and is of opinion that "the Manchester railways" are competing undertakings with that in which he has embarked his money, I fear that I cannot quite concede his claim to the praise of disinterestedness and candour. When an ordinary mortal entertains the notion, however erroneous it may be, that the prosperity of a speculation in which he is the possessor of shares is threatened by a rival project, he is wont to regard his competitors with feelings of a far different nature from those of indifference and calmness. Jealousy and aversion are too apt to take possession of his mind; his judgment is distorted by prejudice, and his sense of impartiality and justice succumbs to his interest and his fear. From the operation of these passions, almost inevitable to every meaner breast, I fear that even our friend "Sap." cannot be expected to be quite exempt;

> "Quoth Hudibras, what moves my mind
> Is that which moves all human kind."

Your correspondent next directs his attention to the consideration of the cost of our railway. Here I am unable to dissemble my delight that my calculation meets with little contradiction from so formidable a champion. Time, which dissipates all delusions, would at length appear to have put an end to the errors and misrepresentations which formerly prevailed upon this subject, and the exaggerated estimates of our adversaries are now too gross to find favour even in the eyes of a "Sap." He grumbles out a surly acquiescence in the calculation of our own Directors, and is contented to believe that we may complete our railway to Crewe, for 1,900,000*l.* *Utinam sic omnia!*

On the yet more momentous question of profits, I have again the satisfaction to state that the points on which my opinion differs from that of your correspondent, are neither very numerous nor very great. "Sap." computes the weekly receipts of the Grand Junction Railway at 8,350*l.*, and admits it to be proved by Parliamentary evidence that one third of the passengers who travel along that line are contributed by the town of Manchester. If "Sap." will have the goodness to refer to the report of that Company for the half-year ending on the 31st of December last and which as I need hardly point out to him, extends over the least lucrative portion of the year, he will find that their gross receipts amount to two hundred and thirty two-thousand five hundred and sixty three pounds or almost exactly to nine thousand pounds per week. Having corrected himself in this error he has only to bear in mind, that not only one third of the passengers but fully three fifths of the goods and parcels are furnished by the town of Manchester, and he will, I trust, admit that my estimate for the Manchester and Birmingham Railway of a weekly revenue of four-thousand pounds, or a participation to the extent of four ninths in the proceeds of the Grand Junction line is rather to be commended for its moderation, than censured for its extravagance.

For our local traffic between Macclesfield and Stockport, and Manchester and Crewe, your correspondent is disposed to allow us an annual income of 41,000*l.* That sum, added to the 208,000*l.* which I have calculated, I hope, with the sanction of "Sap.," that we shall derive from the direct traffic between Manchester and Birmingham, amounts to 249,000*l.*—a sum exceeding by the odd 9,000*l.* my former estimate of our revenue. Who that reads this letter will not envy me the good fortune of having so generous an antagonist as "Sap.?" "*Gratulabantur omnes fortunam meam qui talem hostem haberem!*"

But "Sap.," if not a very skilful, is at least a very valiant, disputant. While he admits, with an acquiescent growl, the general soundness of my premises, he directs against my unlucky details all the energy and wrath of his attack. The sum of 1,900,000*l.* expended on the construction of 30 miles of railway, is at the rate of 63,000*l.* per mile, and to anticipate from it the net revenue of 121,000*l.*, is to calculate upon a clear weekly profit of 15*l.* per mile. Our branch from Macclesfield to Stockport will do no more than pay its own expenses; and to expect any considerable benefit from the use of a portion of the Grand Junction line is to believe that "the moon is made of cheese," and to hope "to catch a weasel asleep." In spite of the formidable denunciations, I will at least venture to express a wish that when "Sap." next appears before the public in the capacity of a controversialist, he will be certain that he is himself awake. "*Aliquando bonus dormitat Homerus,*" exclaims the Roman satirist: Homer sometimes nods in his chair; and if Homer, why not "Sap."?

Let me endeavour to the utmost of my power to relax the prejudices and disperse the shadows that distort and darken the mind of "Sap." If a railway between Liverpool and Birmingham were not already in existence, I suppose that no man in his senses would undertake to construct one from Manchester which should terminate at Crewe. Ending where our railway now does, it can be looked upon in no other light than as a canal cut to a navigable river, or a lane running into a high road. Having abandoned our original intention of forming a separate and parallel line to Birmingham, our principal expectation of profit for the abbreviated railway which we are now constructing was necessarily to be derived from our connection with that great and lucrative undertaking in which "Sap." professes to be a shareholder. Our first object, under these circumstances, was to arrange the terms upon which we should be permitted to participate in the use of that portion of the Grand Junction Railway which lies between Crewe and Birmingham. Had we agreed to purchase this privilege by the annual payment of the interest of such a sum of money as should have been equal to half the amount expended in the construction of that distance, I cannot but think that such a bargain would have been both equitable and just. But anxious that the proprietors of the Grand Junction Railway should have every reasonable cause to be satisfied with the contract into which we entered with them, we did not hesitate to accord far more liberal and advantageous terms. We stipulated to make them an annual payment of 1,000*l.* per mile for the distance over which we travelled, or the interest, in other words, of such a sum of money as was equivalent to five-sixths of the whole expense incurred in constructing it. What, then, is the position of the proprietary of the Grand Junction Railway, so far as they are affected by the important agreement entered into upon the 19th of October, 1839? Why, that they have succeeded in preventing the formation of a parallel and really competing line to Birmingham, and that they have obtained for the loss of their Manchester traffic so large an amount of compensation as will enable them to travel over 54 of their 115 miles at no greater cost of construction than 2,500*l.* per mile. To an arrangement thus advantageous it is not to be wondered that all the Directors and a very great majority of the shareholders in that undertaking should have yielded an eager and immediate assent. "Sap." it would seem from his letter disdains to join in the general harmony. Like the eccentric Mr. Tyrrell, of South-Eastern notoriety, he glories in his solitary opposition; defies with magnanimous stupidity alike the dictates of his own interest and the example of his fellow proprietors; and, like the hero of Dryden's ranting tragedy, exclaims with equal modesty and sense—

> "What matters it tho' all mankind agree?
> What is mankind? Why, nothing without me!"

Such is the position in which the Grand Junction proprietary have been placed by the agreement between the two Companies. Let us now see how it has affected the shareholders of the Manchester and Birmingham line. By the expenditure of 1,900,000*l.* they will, on the admission of "Sap.," construct their 40 miles of railway between Stockport and Macclesfield and Manchester and Crewe. By the appropriation of the interest in round numbers of 1,100,000*l.* more, they have purchased a participation in the use of the 54 miles between Birmingham and Crewe. Thus, for a capital of three millions of money, they will have secured a line of railway 94 miles in length, which is at a somewhat less rate than 32,000*l.* per mile; while to anticipate from it an annual income of 240,000*l.* is but to hope for the not immoderate receipts of 18*l.* per mile per week, or somewhere about three-fourths of the amount which we are actually deriving from the portion of our line already open! So melt into thin air the visions of the son of Horam the story-teller of the east!

But "Sap.," like our countrymen at Bannock-

Digitized by Google

burn when they witnessed the dispersion and flight of the force upon which they most relied—

"Too strong in courage and in might
Still deems himself to yield the fight."

Like a new Antæus he returns to the charge invigorated by discomfiture and exhilirated by defeat. What right, he asks in a triumphant tone, have the proprietors of the rival railway to expect to become the sole carriers of the traffic between Manchester and Birmingham? Is it not possible to arrive at Birmingham by way of Warrington and Crewe as well as by going to Crewe direct? If any one should prefer to travel along both sides of a triangle, does the Statute Book contain a law that shall limit him to the base? Such a route, it must be admitted, is both more circuitous and more expensive; but every Englishman is free, and can freedom boast a prouder privilege than to travel by a longer and dearer instead of a shorter and cheaper road? Now that Manchester does not contain a single individual who may be disposed to give this perverse preference to distance and expense is more than I will venture to assert. The fraternity of "Saps" will be found, I fear, to flourish there as well as at Liverpool. But I will venture to express a hope that the number of these eccentric individuals may not be greater than can be conveniently conveyed in a single carriage, and I trust that the Directors of the Grand Junction Railway, struck with the singularity of the spectacle, and grateful for the extraordinary preference thus manifested towards themselves, will provide a special vehicle for their accommodation, and convey them to Birmingham without expense. Perhaps, too, the London and Birmingham Company equally enamoured of such heroic conduct, and unwilling to be outdone by the shareholders of the Grand Junction Railway, may emulate the liberal example and transport them from Birmingham to London on the same easy and unexpensive terms. They will then be within a short distance of Hanwell, Bedlam, and St. Luke's.

But "Sap." has yet another arrow remaining in his quiver. As the Manchester and Birmingham Company will not be able to start more than "two or three" trains a day to Birmingham a large portion of the Manchester traffic will necessarily have to be conveyed by the Grand Junction Railway. Let not "Sap." flatter himself with expectations so visionary as those. I presume not to pry into the plans of our Directory, but I think I may venture to answer for them that they will not lose the profits to be derived from the transport of passengers and goods for want of carriages in which to take, or engines with which to propel them. Perhaps, indeed, if we are reduced to extremities, even "Sap." himself may be induced to consent to sell us a few second-hand ones.

I have now, I believe, gone through with as much gravity as the occasion demanded, all the assertions of your correspondent. Should any future and more formidable antagonist be disposed to throw down his gauntlet of defiance, I shall hope to find in your impartial columns the favour of an equal and fair arena in which to shiver a spear against him.

I have, Sir, the honour to remain,
Your very obedient servant,
CANDIDUS.

[The above, as we intimated last week in our notices to correspondents, is not in the best tone or taste, but we give it precisely as it came to hand.—ED. R. T.]

MANCHESTER AND LEEDS RAILWAY—TRAFFIC RETURNS.

To the Editor of the Railway Times.

Sir,—Three months ago our Directors thought proper to refuse you the traffic returns—what has been the consequence? Since then our shares have steadily declined up to the present time—the fall has been on 100*l.* of our stock from 45 premium to par! for in October the old shares, 70*l.* paid, sold at 30 premium, and the halves, 30*l.* paid, at 15 premium, they are now selling a trifle above par.

During all this time the London and other shareholders residing at a distance have been kept in a state of anxiety and suspense, uncertain whether this enormous decline is owing to the traffic proving a failure or to the stock-jobbing manœuvres of parties speculating for a fall and circulating false reports as to the traffic on the line.

The Manchester shareholders may form some idea as to this matter, by inquiring of parties who have travelled on the line lately; or they may call at the Railway Office and examine the books, but I appeal to you, sir, whether the suppression of the traffic returns is not to us London shareholders *a gross act of injustice.*

Our Directors have pledged themselves to publish the traffic returns on the opening of the line throughout; should they fail in doing so, I hope you will aid us with your powerful pen to compel them. I am, Sir, your obedient servant,

JOHN BULL.

London, February 8, 1841.

REGULATION OF RAILWAYS.

A BILL FOR THE BETTER REGULATION OF RAILWAYS.

NOTE.—The words printed in SMALL CAPITALS are proposed to be inserted in the Committee.

[*Preamble.*] WHEREAS by an Act passed in 3rd and 4th years of the reign of her present Majesty, intituled, "An Act for Regulating Railways," provision was made for the supervision of railways:

And whereas it is expedient, for the safety of the public, to make further provision for that purpose:

[*Commencement of the Act.*] Be it enacted, by the Queen's most excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that this Act shall come into operation on the PASSING THEREOF.

[*Construction.*] And be it enacted, that the provisions of the said recited Act and of this Act, shall be construed together as one Act, except so far as the provisions of the said recited Act are hereby repealed, or shall be inconsistent with the provisions of this Act.

[*Notice before opening railway repealed; 3 and 4 Vict., c. 97, s. 2.*] And whereas by the said recited Act it is enacted, that after two months from the passing of the said recited Act, no railway, or portion of any railway, shall be opened for the public conveyance of passengers or goods until one calendar month after notice, in writing, of the intention of opening the same shall have been given by the Company to whom such railway shall belong, to the Lords of the Committee of her Majesty's Privy Council appointed for Trade and Foreign Plantations: And whereas, by the said recited Act it is also enacted, that if any railway, or portion of any railway, shall be opened without due notice as aforesaid, the Company to whom such railway shall belong, shall forfeit to her Majesty the sum of 20*l.* for every day during which the same shall continue open, until the expiration of one calendar month after the Company shall have given the like notice as is hereinbefore required before the opening of the railway, and any such penalty may be recovered in any of her Majesty's Courts of Record; Be it enacted, that the said recited provisions of the said Act shall be, and they are hereby, repealed.

Notice of intended opening and of completion.] And be it enacted, that no railway, or portion of any railway, shall be opened for the public conveyance of passengers until ONE CALENDAR MONTH after notice in writing of the intention of opening the same shall have been given by the Company to whom such railway shall belong, to the Lords of the Committee of her Majesty's Privy Council appointed for Trade and Foreign Plantations, and until *ten* days after notice in writing shall have been given by the said Company to the Lords of the said Committee that the said railway, or portion of railway, is sufficiently completed for the safe conveyance of passengers, and ready for inspection.

[*If railway opened without notice, Company to forfeit 20l.*] And be it enacted, that if any railway, or portion of any railway, shall be opened without such notice as aforesaid, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of TWENTY POUNDS for every day during which the same shall continue open until the said notices shall have been duly given and shall have expired; and every such penalty may be recovered in any of her Majesty's Courts of Record.

[*Board of Trade empowered to postpone opening.*] And be it enacted, that if the Lords of the said Committee shall be of opinion that the opening of any railway, or portion of a railway, would be attended with danger to the public, it shall be lawful for the Lords of the said Committee from time to time to order and direct the Company to whom such railway shall belong to postpone such opening, for any period not exceeding *one calendar month* at any one time, until it shall appear to the Lords of the said Committee that such opening may take place without danger to the public; and if any such railway, or any portion thereof, shall be opened contrary to any such order and direction of the Lords of the said Committee, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of TWENTY POUNDS for every day during which the same shall continue open contrary to such order and direction, and such penalty may be recovered in any of her Majesty's Courts of Record.

[*Board of Trade empowered to direct returns.*] And be it enacted, that the Lords of the said Committee may order and direct any railway Company to make up and deliver to them such returns of accidents occurring in the course of the public traffic upon the railway belonging to such Company, and also such returns of the arrangements for conducting the public traffic thereon, as the Lords of the said Committee shall deem necessary for their information with a view to the public safety; and if any returns herein mentioned shall not be so delivered within SEVEN days after the same shall have been required, every such Company shall forfeit to her Majesty the sum of TWENTY POUNDS for every day during which the said Company shall neglect to deliver the same, and every such penalty may be recovered in any of her Majesty's Courts of Record.

[*Provisions respecting false returns repealed.*] And whereas by the said recited Act it is enacted, that every officer of any Company who shall wilfully make any false return to the Lords of the said Committee shall be deemed guilty of a misdemeanor; and whereas it is expedient to extend the said provision, be it enacted, that the said provision shall be and is hereby repealed.

[*Provision respecting false notices, returns, &c.*] And be it enacted, that every officer of any Company who shall wilfully give or make any false notice or return, or certificate or other instrument or document which shall be required to be given or made for the purposes of this and the said recited Act, to or for

Digitized by Google

the use of the Lords of the said Committee, shall be deemed guilty of a misdemeanor.

[*Board of Trade empowered to issue regulations for the prevention of accidents.*] And be it enacted, that it shall be lawful for the Lords of the said Committee to issue from time to time such regulations as they shall deem necessary for the prevention of accidents upon railways; provided always, that such regulations shall not prescribe anything of an experimental nature, nor interfere with the number of trains, nor with the times of starting trains, nor with the speed of travelling on any railway further than is necessary for the purpose of preserving an interval of not more than fifteen minutes between succeeding trains; provided also, that no such regulation as aforesaid shall be binding upon any railway Company, unless the Lords of the said Committee shall have given to such Company twenty-one days notice of their intention to issue the same.

[*Penalty for not observing regulations*]. And be it enacted, that if any Company shall fail to observe any such regulation of the said Committee, such Company shall forfeit to her Majesty the sum of *twenty pounds* for every day during which such Company shall so fail to observe any such regulation; and every such penalty may be recovered in any of her Majesty's courts of record.

[*Board of Trade to make minutes in certain cases to be laid before Parliament.*] And be it enacted, that whenever the Lords of the said Committee shall order the postponement of the opening of any railway, or portion of a railway, or shall issue any regulation for the prevention of accidents, in pursuance of the provisions in that behalf in this Act contained, they shall make a minute specifying the grounds of such order or regulation; and copies of every such minute shall be laid before both Houses of Parliament within ONE MONTH after such minute shall be made, if Parliament be then sitting, and if Parliament be not sitting, then within *one month* after the commencement of the next session of Parliament.

[*Provisions of* 3 & 4 *Vict. c.* 97, *as to bye-laws, &c. extended.*] And whereas by the said recited Act, the Lords of the said Committee are empowered to disallow all bye-laws, orders, rules, or regulations made by railway companies, which shall impose penalties for the enforcement thereof upon persons other than the servants of such companies, and for that purpose all such bye-laws, orders, rules, or regulations are thereby required to be laid before the Lords of the said Committee: and whereas it is expedient to extend the provisions of the said Act to all such bye-laws, orders, rules, or regulations as are of a public nature, and that without regard to the penalties thereby imposed; be it enacted, that all bye-laws, orders, rules, or regulations made, or to be hereafter made by any railway company which are of a public nature, and relate to or affect other persons than the proprietors, officers, and servants of such company, shall be returned to the Lords of the said Committee, and shall be subject to the powers and provisions in the said Act contained in regard to the bye-laws, orders, rules, and regulations therein mentioned.

[*Engine-drivers to be licensed.*] And be it enacted, that on and after the —— next after the passing of this Act, no person shall be employed on any railway as an engine-driver in the course of the public traffic unless he shall have been licensed in pursuance of the provisions of this Act in that behalf; and if any person shall be so employed on any railway without having first deposited his license with the Company to which such railway shall belong, such Company shall forfeit to her Majesty the sum of FIVE POUNDS for every day during which such person shall be so employed, and every such penalty may be recovered in any of her Majesty's Courts of Record.

[*Proviso for cases of emergency.*] Provided always, and be it enacted, that in cases of emergency it shall be lawful for any Railway Company to employ any competent person, whether duly licensed or not, to act as engine-driver in the course of the public traffic, for any period not exceeding seven days, or such further period as shall be sanctioned on each occasion by the Lords of the said Committee; provided always, that whenever an unlicensed person shall be employed, the Company shall give to the Lords of the said Committee within forty-eight hours after such employment, notice thereof, together with a statement of the reasons thereof.

Board of Trade empowered to examine and licence engine-drivers.] And be it enacted that it shall be lawful for the Lords of the said Committee to cause to be examined any person nominated by any Railway Company for the purpose of being licensed to act as engine-driver, and to license any such person as shall appear to the Lords of the said Committee to be duly qualified for that purpose, and if and when they see fit, to revoke or suspend the license of any such person.

[*Board of Trade empowered to appoint examiners.*] And be it enacted, that it shall be lawful for the Lords of the said Committee to appoint, from time to time, two or more persons, one of whom shall be the Engineer of the Company, or some engineer selected by the Company by whom the candidates to be examined shall have been nominated, to examine the candidates for licenses to act as engine-drivers, and the said examiners shall examine such candidates at such times and in such manner as the Lords of the said Committee shall appoint.

[*Register of licenses to be kept, and to be evidence.*] And be it enacted, that there shall be kept in the office of the Committee of Privy Council for Trade and Foreign Plantations a register of licenses, in which shall be entered the particulars of every license granted in pursuance of this Act; and in all Courts, and before any justice of the peace, and upon all occasions whatsoever, certified copies of the entries made or contained in such register shall be received as evidence, and be deemed sufficient proof of all matters and things therein registered or contained, without requiring the production of any such register, or of any license or other document upon which such entries shall be founded, and without any further proof than the production of such certified copies, and every person shall be at liberty to inspect any such register at all seasonable times without payment of any fee or reward.

[*Board of Trade empowered to provide badges for engine-drivers.*] And be it enacted, that it shall be lawful for the Lords of the said Committee to provide badges to be worn by licensed engine-drivers, and every engine-driver to whom any such badge shall have been given shall at all times during his employment upon any railway in the course of the public traffic thereon, and when he shall be required to appear before any justice of the peace, wear such badge conspicuously upon his breast, in such manner that the number thereon shall be distinctly visible and legible.

[*Penalties upon engine-drivers, &c.*] And be it enacted, that if any person shall act as an engine-driver upon any railway in the course of the public traffic thereon without having a license, or if any licensed person shall transfer or lend his license or badge, or shall act as engine-driver in the course of the public traffic, or attend when required before any justice of the peace, without wearing such badge in manner hereinbefore required, he shall forfeit to her Majesty for every such offence a sum not exceeding FIVE POUNDS.

[*Penalty for forgery, or possessing forged license or badge.*] And be it enacted, that if any person shall forge or counterfeit, or shall cause or procure to be forged, counterfeited or resembled, any license or badge to be provided under this Act, for any engine-driver, or if any person shall sell or exchange, or expose to sale, or utter any such forged or counterfeited license or badge, or if any person shall knowingly and without lawful cause (the proof whereof shall lie on the person accused) have or be possessed of such forged or counterfeited license or badge, every person so offending, and every person knowingly and wilfully aiding, abetting or assisting any person in committing any such offence as aforesaid, shall be deemed guilty of a MISDEMEANOUR.

[*Custody of licenses and badges.*] And be it enacted, that every Railway Company shall retain in their custody the license of every engine-driver employed by them, so long as such engine-driver shall be in their employment; and in case such engine-driver shall leave or be dismissed from or shall die in their service, such Company shall forthwith give notice thereof in writing to the Lords of the said Committee, and shall retain the license of such engine-driver until they shall have received directions from the Lords of the said Committee as to the disposal of such license; and if such Company shall not give such notice as aforesaid, or shall dispose of such license without or contrary to the directions of the Lords of the said Committee, every such Company shall forfeit to her Majesty for each offence the sum of TWENTY POUNDS, and every such penalty may be recovered in any of her Majesty's Courts of Record.

[*Enforcement of penalties under* 5*l.*] And be it enacted, that every penalty not exceeding the sum of FIVE POUNDS for any offence against the provisions of this Act, for the enforcement of which no proceeding is hereby expressly provided, shall be enforceable summarily before any justice of the peace having jurisdiction within the place wherein such offence shall have been committed; and in default of payment, upon conviction, of any such penalty, the offender shall be immediately committed to prison, for any period not exceeding ONE CALENDAR MONTH, unless such penalty shall be sooner paid; and every such penalty shall be returned to the next ensuing Court of Quarter Sessions in the usual manner.

[*Communications to the Board to be left at their office; communications by the Board how to be authenticated; what shall be deemed good service on Railway Company.*] And be it enacted, that all notices, returns and other documents required by this Act, or by the said recited Act, to be given to or laid before the Lords of the said committee, shall be delivered at or sent by the post to the office of the Lords of the said committee; and all notices, requisitions, orders, regulations, appointments, certificates, certified copies, licenses and other documents in writing, signed by one of the secretaries of the said committee, or by some officer appointed for that purpose by the Lords of the said committee, and purporting to be made by the Lords of the said committee, shall for the purposes of this and of the said recited Act be deemed to have been made by the Lords of the said committee; and service of the same upon any one or more of the Directors of any Railway Company or on the secretary or clerk of the said Company, or by leaving the same with the clerk or officer at one of the stations belonging to the said Company, shall be deemed good service upon the said Company.

[*Meaning of the words "Railway" and "Company."*] And be it enacted, that wherever the word "Railway"; is used in this or in the said recited Act, it shall be construed to apply to all Railways used or intended to be used for the conveyance of passengers in or upon carriages drawn or impelled by the power of steam or by any other mechanical power; and wherever the word "Company" is used in this or in the said recited Act, it shall be construed to extend to and include the proprietors for the time being of any such Railway, whether a body corporate or individuals, and their lessees, executors, administrators and assigns, unless the subject or context be repugnant to such construction.

[*Act may be repealed this session.*] And be it enacted, that this Act may be amended or repealed by any Act to be passed in the present Session of Parliament.

RAILWAY COMMUNICATION WITH SCOTLAND.

THROUGH the exertions of Mr. Nicholson, of Kendal, we were enabled to give in the *Railway Times* of January 2, a copy of the Report of Sir Frederic Smith and Professor Barlow, the Government Commissioners, upon the competing lines of railway from Lancaster to Carlisle. As, however, the Appendices to that Report were not accessible at that time, and as the subject is one of very great interest, we now give the documents entire, as just printed by order of the House of Commons:—

Third Report of Lieutenant-Colonel Sir Frederic Smith, of the Royal Engineers, and Professor Barlow, to the Lords of the Treasury, in pursuance of the Addresses of the House of Commons of the 14th and 20th August, 1839.

Railway Committee Office, James-street, Buckingham-gate, 14th Nov. 1840.

SIR—The Report which, in obedience to the instructions of the Lords Commissioners of the Treasury, dated the 26th of November, 1839, we had the honour to transmit to you on the 16th May last, respecting the competing lines for a railway communication between London and Glasgow, contains a distinct expression of our opinion, that of the three projects which had been submitted to us for that portion of the distance which extends from Lancaster to Carlisle, the preference was due to the project brought forward by Mr. Larmer, for a railway up the valley of the Lune, and by Orton and Penrith.

We, however, observed that this line would not extend to the district of Kendal the benefits of railway communication; and being aware that this thriving town would not only afford great support to any railway passing near it, but at the same time derive important advantages from such a mode of transit, we had directed the attention of the Surveyors to this subject, and suggested the expediency of fresh surveys being made, in order to ascertain the practicability of uniting Mr. Larmer's project by the valley of the Lune with that of Mr. Bintley by the valley of the Kent, so as to carry the line within a short distance of the town of Kendal.

It appears that nearly at the period when our Report on these northern lines were forwarded to you, some gentlemen connected with Kendal, and who are very desirous of carrying a railway near to that town, employed Mr. Larmer to re-survey the valleys of the Lune and Kent, and to examine the ground which separates these rivers to the north of Kendal. The result is, that this gentleman has considerably modified and improved that part of Mr. Bintley's line which is to the south of Kendal; he has also made some slight alterations in that part of his own line lying between Orton and Low Borrow Bridge; and he has laid before us a plan and section for a line to be formed through the pass which intervenes between the Grayrig Fell and the Lambrig Fell, and connects the valleys of the Lune and Kent.

Mr. Larmer terms this new line, the "Grayrig Junction," and for the sake of distinction, we shall give the title of the "Grayrig Line" to the whole project on which we are now about to report, pursuant to the instructions we had the honour to receive from you, dated the 29th May last.

The two principal points which we have kept in view in this investigation, are to determine how the construction of the railway, according to this combined project, would affect the traveller between London and Carlisle; and, secondly, whether it would entail an increase of expense more than commensurate with the advantages to be derived from the line passing near the town of Kendal.

In our last Report, we stated that the locomotive power requisite to work the Lune Line, expressed in horizontal distance, would be 78 miles and one chain; and we find that by the Grayrig Line it would be 78 miles and 62 chains.

This increase of 61 chains is not sufficient to form an important objection to the Grayrig project, as regards the traveller between London and Carlisle.

In the Appendix (A.) we have given a copy of a comparative estimate, submitted to us by Mr. Larmer, of the probable cost of the Lune Line and the Grayrig Line.

As we are not in possession of cross sections of the ground where the heavy cuttings and embankments would be formed, nor of borings where the former would be necessary, and as we have also not been supplied with drawings of the bridges, viaducts, &c., it is not in our power to pledge ourselves to the *positive* accuracy of these estimates; but we think the details given are sufficiently correct to test the *relative* cost of the two projects; and there does not appear to be any reason for doubting Mr. Larmer's statement, that the Grayrig project would not require a capital of more than 126,219*l.* 7*s.* beyond what would be necessary for that of the valley of the Lune.

In our former Report on the lines between Lancaster and Carlisle, in estimating the population within 10 miles of each route, the population of Kendal was considered as belonging both to the line of the Kent and to that of the Lune; and, according to this arrangement, the former was stated to be likely to afford railway accommodation to a population one-tenth larger than would derive this advantage from the latter.

The Grayrig line would accommodate a still larger number of persons than the original line of the Kent, as it would include the greater part of the population which gave the latter, under this head of comparison, the superiority over the original Lune line, and in addition would include the inhabitants of Ravenstonedale, Kirby-Stephen, Brough and Appleby, to which the original Kendal line had no title. Thus the Grayrig line will have a decided superiority over the line of the Lune on the score of population, and therefore the traffic on the former, on this account alone, might reasonably be expected to be greater than on either of the other lines; but when it is considered that a line to Kendal would bring the like tourists to within eight miles of Windermere, it may be fairly presumed that the number of passengers on this line would be much greater than on its competitors.

Kendal, as a commercial and manufacturing town, is of great importance in the county of Westmorland, and there is no doubt that on the formation of a railway by the Grayrig line, the supply of coal for the Kendal district would be almost exclusively derived from Carlisle; indeed it has been shown to us that a revenue of 10,000*l.* a year may be expected from the carriage of coals alone.

In considering the relative merits of the three projects, we find that the Lune line has a small advantage over the other lines in regard to a saving of distance and economy of construction, but it has the defect of depriving the important town of Kendal of direct railway communication, and embraces a smaller population.

The great objection to Mr. Bintley's line was a summit tunnel of an almost impracticable character. The line now proposed possesses the principal advantages, and is free from the chief defects, of the other projects, and we therefore recommend it in preference to either.

We shall now proceed to give a general description of the line which we thus recommend for adoption.

In our Report of the 16th of May, it was stated that Mr. Bintley proposed to form a junction with the Preston and Lancaster Railway, at a point about two miles and 54 chains south of the terminus at the latter place, and to pass under the town of Lancaster by a tunnel.

Mr. Larmer, in commencing at the Lancaster terminus, very materially improves this line, as he thereby saves two miles and 54 chains of construction, and avoids the inconvenience and expense of a separate station; and by keeping to the east of the line proposed by Mr. Bintley, he is enabled to dispense with the tunnel under the town of Lancaster, which was a great defect in Mr. Bintley's project.

The following Table exhibits the gradients on the two lines up to Kendal, from which it will appear that the line as revised by Mr. Larmer is in that respect superior to the original line of Mr. Bintley.

Mr Bentley's original line.					Mr. Larmer's improvement of Mr. Bentley's line.				
Miles.	Chains.			Remarks.	Miles.	Chains.			Remarks.
1	16½	fall.....	1 in 138	Commencing at the distance of two miles and 54 chains south of the Lancaster terminus.	1	35	fall.....	1 in 200	Commencing at the Lancaster station.
1	54	,,	1 in 221		3	62	,,	1 in 660	
1	70½	rise.....	1 in 585		2	50	level		
1	35½	fall.....	1 in 203		2	7	rise	1 in 160	
1	32	rise.....	1 in 389		4	16	level.		
—	54	level.			1	76	rise.....	1 in 170	
—	75	fall.....	1 in 261		3	—	,,	1 in 160	
2	17½	rise.....	1 in 140		1	23	,,	1 in 150	
3	42	level.							
—	40½	fall.....	1 in 206						
3	75½	rise.....	1 in 181						
2	72	,,	1 in 153						
22	34				20	29			

Although the gradients are in a slight degree more favourable according to the line as altered by Mr. Larmer, yet the cost of the earthwork will be rather greater, and Mr. Larmer will require a more expensive bridge for the crossing of the Lune, for its length will be about 600 yards, and its height 60 feet; whereas the bridge proposed by Mr. Bentley would not be above one-fourth of the length and one-half of the height of Mr. Larmer's.

However, this difference will be much more than compensated by the saving of the tunnel under the town of Lancaster, and by the shortening of the line.

The deviations from Mr. Bentley's line proposed by Mr. Larmer are not of sufficient importance to require to be particularly mentioned here.

The direction of the line recommended is shown on the accompanying plan, by which it will be seen that it is intended to pass along the face of the high ground about a mile eastward of Kendal.

Mr. Larmer's junction line commences at a hamlet to the north of Kendal, called Scalthwaiterigg Stocks, whence it takes a north-easterly course, twice crossing the turnpike road to the northward of Docker Garths and Mosedale Hall; it then proceeds nearly in an easterly course to the farm of Shaw-end. This point is the summit of the junction portion of the line, and is 562 feet above the level of the sea at low water at Lancaster, or 446 feet above the point of the connexion with the Preston and Lancaster Railway; the distance being 26¾ miles. Here a cutting will be requisite of two miles in length in gravel and rock, and of the extreme depth of 52 feet, and of the mean depth of 35. This is the heaviest piece of work on the junction line.

From Shaw-end the line tends more to the northward, and, curving round the foot of some high ground, approaches the banks of the Lune near Dillicar Park, and converges towards Mr. Larmer's original line, which runs almost parallel to the river, up to Low Borrow Bridge.

Although the direction of Mr. Larmer's original and improved lines is nearly the same, yet such are the abrupt and precipitous forms of the hills that a considerable difference exists in the levels and gradients.

We subjoin a table of distances and gradients of the

Digitized by Google

entire Grayrig line, and we have only further to remark, that after an examination of the ground, we have thought it proper to suggest to Mr. Larmer the expediency of occasional breaks in his long gradients, for the purpose of easing the engine on the ascending planes, and of diminishing the earthwork in construction.

TABLE OF GRADIENTS OF GRAYRIG LINE BETWEEN LANCASTER AND CARLISLE.

Names of places.	Intermediate distance.		Total distance.		Rise.	Level.	Fall.	Feet per mile.	Ratio.
Lancaster.....	1	35	1	35	...	...	fall	26½	1 in 200

	5	54	64	17	...	...	fall	25	1 in 210
Carlisle	6	—	70	17	...	...	fall	33	1 in 160

We do not consider it necessary to give minute details of the proposed line, as in the annexed copy of Mr. Larmer's Report all the most important features of this project are fairly shown.

The heaviest work on the whole line is the Orton Tunnel, which Mr. Larmer proposes to make of the length of one mile and 22 chains; but according to the section, in the accuracy of which we have full confidence, it appears that there will be heavy cuttings at both ends of the tunnel; the greatest depth being at one end 95 and at the other 98 feet.*

Now as we doubt the expediency of making a cutting in this instance of above 70 feet in depth, we are of opinion that it would be proper to extend the length of the tunnel to a mile and a half.

Mr. Larmer acquaints us that, on a careful examination of the Orton Hill, he has every reason to believe that the tunnel would pass entirely through sandstone; and as it would only be 340 feet below the summit of the hill, we have no doubt that this work might easily be completed in three years from the time of its commencement, under the supposition that Mr. Larmer has rightly informed us as to the nature of the rock through which the tunnel is to be formed.

We have the honour to be, Sir,

Your most obedient servants,

FREDERICK SMITH, Lieut-Col. Royal Engineers.
PETER BARLOW, F.R.S.
HENRY AMSINCK, Lieut. R. N., Secretary.

ROBERT GORDON, Esq. M. P.,
&c. &c. &c.

* The line of the tunnel in Mr. Larmer's original project was very accurately surveyed by Lieut. H. D. Fanshawe, of the 12th foot, who reported that the ground was fairly delineated in Mr. Larmer's section.

APPENDIX B

MR. LARMER'S Report to the Kendal Committee of the Lancaster, Kendal and Carlisle Railway.

GENTLEMEN,—In pursuance of instructions received from you, I have surveyed the country between Kendal and Borrow Bridge, for the purpose of endeavouring to connect your important manufacturing town with the general route of communication with Scotland, and have thereby adopted the line between Lancaster and Kendal, avoiding the Lune Valley from Lancaster, as far as Dillaker, in the parish of Kirkby Lonsdale; but from thence, taking that part of what has hitherto been termed the Lune line (lately recommended and adverted to in the Report of the Committee appointed by the Lords of the Treasury), between Borrow Bridge (by Orton) and Penrith to Carlisle.

I have, also, according to your instructions, surveyed the country between Lancaster and Kendal, and Borrow Bridge to Penrith, for the purpose of endeavouring to improve such points as were thought to be objectionable, and with the view of making the distance as short as possible; but as these lines have already been reported upon by the Railway Committee, I shall, in the first instance, confine my observations to the new link, or line of Junction, and afterwards advert to my general survey, which will comprehend a report of the whole line between Lancaster and Carlisle.

I commenced my survey from (what has been hitherto termed) the Kendal line, at Scalthwaiterig Stocks, about two miles north-east of Kendal, on the road to Orton and Kirkby Stephen. Proceeding thence, the line passes 21 feet under the turnpike road to the north side, near the toll-bar, and continues in an easterly direction, parallel to the road, for about a mile and a quarter; it then again passes under, at a depth of 42 feet, to the south side and to the east of the public road leading to Docker Garths.

In approaching this point, there would be a considerable cutting of about three-quarters of a mile in length, principally, as far as I can ascertain, through soils and schistose rock, averaging 40 feet in depth, and 51 feet in extreme depth.

The line then crosses a small stream, at a height of 61 feet, which being inconsiderable, I think a culvert would be sufficient, covered with an embankment.

It then takes a direction by Bracken Hall, Beck Houses, passing on the north side of Moresdale Hall, the property of Alderman Thompson, Esq., M.P., to Shaw End. This point I reach by a gradient of 1 in 150. The cutting here for about one mile and a half will be heavy, the extreme depth being 52 feet, and averaging 32 feet; but a great portion of it will be in loose gravel and peat moss.

After passing Shaw End, and crossing the public road, the line proceeds on a level, south-east of Cowperthwaite, by Low Gill, Dry Folds, to Dillaker Low Park. Here it forms a Junction with the Lune line, making the distance from Scalthwaiterig Stocks to this point six and a quarter miles. There are no works on this part requiring particular notice. There is a short cut near to Dry Folds, of 43 feet in

Digitized by Google

extreme depth, and some deep gills are shown on the section; but as the streams are small, they can all be crossed by culverts covered with embankments.

I have gone carefully through the section, and calculated the cost. The earthworks are for the length considerable; but as there are no very extensive works of masonry, the expense of this proposed Junction, will not exceed 22,000*l.* per mile for a double line; and if it is considered expedient to increase the gradients in one place to 1 in 140, the cost of this link may be reduced to 20,600*l.* per mile.

I think, Gentlemen, from this description, and the section which I have laid before you, that you will find your expectations have been fully realised. In forming this junction, it might, at first sight, appear to make a considerable increase in the distance of the whole line over that of the Lune line. I have great pleasure in stating, however, that the difference is only 1 mile 49 chains, according to my present section, and it is quite possible, that it may be made even less than this.

Having thus given, in sufficient detail, the principal features of the line of junction, I shall proceed, according to your instructions, to give a general report of the whole line between Lancaster and Carlisle.

In commencing at Lancaster, I directed my particular attention to the passing of the town, and the crossing of the river Lune, as it appeared, from the sections put into my hands by you, surveyed by Mr. Bentley, of Kendal, and Mr. Watson, of Lancaster, that great difficulties were likely to be encountered, and which seemed to be objectionable in several points.

The line proposed by Mr. Bentley, I perceived, would not join the terminus of the Preston and Lancaster Railway, but would be connected with it about 2 miles 54 chains towards Preston, with a gradient of 1 in 133, and having a tunnel under the town of Lancaster.

The line proposed by Mr. Watson, descends from the Preston and Lancaster Railway terminus, to the valley of the Lune, by an inclination of 1 in 100, crossing the canal and several streets, with a bridge over the river of 55 feet in height, to Skerton, having heavy embankments on either side of it for a considerable distance.

The one I now offer for your consideration presents, I think, much less difficulty. It will proceed from the Preston and Lancaster Railway terminus, a short distance to the east of the factories crossing the canal, at an elevation of 15 feet, and passing the valley of the Lune by Skerton Mill.

This point involves the greatest work of bridge building on the whole line, being about 594 yards in length, and 60 feet in extreme height; but the embankments will be inconsiderable; it will not interfere with houses or expensive property, and the inclination will not be greater than 1 in 200. Under these circumstances, I have thought proper to adopt it in preference to the others.

After passing the village of Skerton, and crossing the Lancaster and Bolton turnpike road, the line proceeds in nearly a parallel line to the Lancaster and Kendal Canal, to Hest Bank, then keeps to the west of Bolton, and from thence to Camforth. Up to this point, embracing a distance of five miles, there is no work requiring particular notice, being alternate cutting and embanking of a trifling character. At Camforth a cutting is shown of the extreme depth of 38 feet and about half a mile in length.

Beyond Camforth the line passes the valley of the Keer, to the east of Wharton, upon an embankment varying from 10 to 20 feet in height, and extending for a mile and three-quarters, crossing the turnpike road to Milnthorpe, and the river Keer, to pass which a bridge of one arch, 80 feet span and 26 feet in height, will be required. After crossing the turnpike road, the line takes a direction east of Yealand and west of Burton, passing near to the Holme flax mill, and through the village of Holme. A cutting is shown near Burton about one mile in length, of the average depth of 25 feet, and the extreme depth 38 feet; there is no other work on this part of the line requiring particular notice.

From the village of Holme the line crosses the river Beetha, with a bridge of one arch, 34 feet high, and embankments of about a quarter of a mile in length, and 30 feet of extreme height.

Between this point and Nathland various lines have been taken, but the one I have now adopted I think preferable, on account of the levels, and the direction is unexceptionable.

This line will cross over the public road from Millthorpe to Crooklands, at an elevation of 22 feet, passing by Deepthwaite, and across the Lancaster and Kendal Canal, east of Hincaster, near the east end of the tunnel, keeping west of Stainton, and east of Sedgwick, near Rains and Crossrake Chapel, to Natland. On this part of the line there will be a series of alternate cutting and embanking, varying from 22 to 42 feet, generally of very short carriage, and composed of gravel and soils.

A bridge of 40 feet in height will be required for crossing the canal, and three for the public roads, being severally 24, 22, and 18 feet in height.

From Natland the line passes 26 feet under the Kendal and Burton turnpike road, and 23 feet under the Kendal and Kirkby Lonsdale road at Oxenholme; then proceeding to the east of Kendal Parks, it arrives at the Kendal and Sedberg turnpike road, one mile east of Kendal. The distance from Lancaster to this point is 21 miles. As it is proposed to fix the Kendal station between this place and the public roads by Birklands, I have distinguished the point on the map of the line of junction by colouring it red. The works are not extensive; a cut of three-quarters of a mile in length, averaging 25 feet in depth, is shewn near Natland; bt this I think can be lessened.

After passing the turnpike road at an elevation above the present level of 14 feet, the line takes a direction west of Bird's Park, east of Sleddale Hall, and west of Benson Hall, a short distance from which it is connected with the proposed line of junction. There is no work on this part requiring particular notice. I shall now, as I have already described the line of junction, pass over to the Lune line at Dillaker Low Park.

From Low Park to Borrow Bridge the levels are excellent, the line merely passing over the surface for a distance of two and a half miles, with the exception of small gills, where culverts only will be required.

From Borrow Bridge the Line passes over the Borrow water, at a height of 79 feet; it then takes a direction by Low Lane towards Tebay, passing over the river Lune at a height of 49 feet, a short distance above the present bridge.

At Tebay it will again cross the Lune 60 feet high, and will require an embankment nearly half a mile in length, averaging 45 feet in height. In crossing the Borrow water one arch would be sufficient, but the Lune will require bridges of two arches.

From Tebay the line rises at the rate of 1 in 150 to Orton Scar, the proposed summit, which is 644 feet above the Lancaster and Preston Railway terminus.

At this summit a tunnel will be requisite, 1 mile 22 chains in length, the line passing on a level; and in approaching the tunnel there will be a cutting in rock of about a mile and a half in length, and averaging 45 feet in depth; but the greatest portion would be through a soft white sandstone; and as the tunnel would also be through the same strata, I have no doubt of its being executed at a cheap rate and without any difficulty, as it is well known to practical men that sandstone is the best working strata for tunnelling. On the north side of the tunnel, another cutting through limestone would occur, of about half a mile in length, averaging 36 feet in depth, These two cuttings and the tunnel will be the greatest work on the whole line.

From Orton Scar the line is confined to the valley of Crosby Gill for nearly one mile, through which runs a small stream; and as the railway would cross it several times, I propose to make a new course by the side of the railway, for the distance of 54 chains.

After leaving Crosby Gill, the line passes to the west side of Crosby Ravensworth, Maulds Meaburn, and Newby, east of Strickland, west of Melkenthorpe, crossing to the west side of the great north road, to the north of Clifton, then crossing the rivers Lowther and Eamont near the mills, at a short distance from which it passes Penrith.

At Crosby Ravensworth a bridge of one arch, 50 feet high, will be requisite, over a public road and a small stream; from this point for two miles there is no cutting of any consequence, but there would be two embankments, making together three-quarters of a mile in length, averaging 20 feet in height, and the extreme depth 39 feet, with a culvert over a small stream.

After passing this point there would be a considerable cutting, of the extreme depth of 58 feet, averaging 30 feet, and half a mile in length.

From hence to Newby, a distance of two miles and a half, there is no work requiring particular notice. The line will cross four public roads and two small streams.

From Newby to Strickland Common there will be some cutting for the distance of a mile and a half, averaging about 18 feet in depth; and at Melkenthorpe a bridge of one arch, 50 feet span, and 74 feet high, will be required for crossing the river Leath, with an embankment six chains in length.

From Melkenthorpe to Clifton the works are trifling: there would be a short cut on the east side of Clifton of the extreme depth of 37 feet. After crossing the turnpike road, the rivers Lowther and Eamont would require bridges of 56 feet in height.

In passing Penrith I have taken the line through the upper part of Castle Gate, for the purpose of giving a convenient situation for a station as near to the town as possible, and at the same time endeavouring to avoid the destruction of houses or expensive property. I think the situation chosen excellent, and it is a point between two roads leading from the most populous part of the town, and affording easy access to the public.

I shall only briefly advert to the line between Penrith and Carlisle, as there are no works of difficulty on this part of the line. The first six miles, which extends from Penrith to Calthwaite, is very remarkable for the trifling work that would be requisite for its execution; the ground would require but little more than laying out, as there is hardly anything that deserves the name of cutting or embanking. The line would pass four public roads, and cross the river Petteril with one arch, 10 feet high.

From Calthwaite it takes a direction by Barrow Mill, Southwaite, Wreay, and Upperby, to Carlisle; and it is proposed to form a connexion with the Newcastle and Carlisle Railway, near to the spot where the line crosses the road at St. Nicholas, Carlisle.

The principal works on the part of the line last described are an embankment and cutting at Wreay; the cutting is on the average 30 feet in depth, through gravelly sand, and about one mile in length; but I have not yet finally fixed this part of the route, as I think some improvement can be made both as regards the works and levels.

In the details here given I have not adverted to the gradients, as I have thought it better to insert the whole in a table, and by distinguishing some particular points, it will answer all purposes, as I think, better, than by mixing them up with a general description. (See next page).

I have gone carefully through the section, and calculated the earthwork, and I find it will not exceed 86,000 cubic yards per mile for a double line.

I have also made a careful calculation of the probable amount of the cost of this railway, including all contingencies, and from the generally favourable nature of the materials in the cuttings, and that stone for all kinds of masonry and native wood for sleepers and fencing can be had cheap and in any quantity, contiguous to most parts of the line, and the land generally not being of a very expensive description, I am of opinion it may be safely estimated at 16,000*l.* per mile; and as the distance will not, I think, exceed 70 miles, it will require not more than 1,200,000*l.* capital. I shall take this opportunity of drawing your attention to the average cost of the Newcastle and Carlisle Railway, 20 miles of which was executed under my direction at less than 14,000*l.* per mile, including in that distance two of the most extensive works in the kingdom, viz.—the Cowran cut of 100 feet deep, and the Corby bridge 100 feet high.

I have not adverted to the traffic on the line, as this part of the subject will more properly fall under notice when a prospectus is issued; but I may briefly state a fact relating to the increase over the previously estimated traffic upon the Newcastle and Carlisle Railway. In the original prospectus it was set forth that the returns would amount to something more than 27,000*l.* per annum, whereas it is now very nearly 100,000*l.* Looking, therefore, at the success of that line (which can bear no comparison whatever to this great trunk line), there can be no doubt of its success, or of its being one of the best lines in the kingdom as regards profitable return for the money to be invested. It will not only be the connecting link between England and Scotland, but will embrace all the most populous and influential commercial towns in its route. As to its local advantages, these you can appreciate quite as well as I can describe them. One of the greatest benefits will be a constant and cheap supply of coal between Lancaster, Kendal, Penrith, and the country generally, from Carlisle, which coal will alone produce an income of 30,000*l.* per annum, besides giving an impetus to trade which is quite incalculable, as the district has hitherto been badly and expensively supplied with this element of commerce. With regard to its advantages as a general line, I think it equally important with any that has hitherto been submitted, being the best line for Glasgow and the most populous parts of Scotland, and leading, as it does, from the most populous districts in England; embracing, also, a district of country 50 miles on either side, without any probability whatever of any other line coming into competition with it. With these plain facts before the public, there will be

Digitized by Google

no occasion for bolstering up a project possessing so many decided advantages; and as the line is acknowledged to be essential to the public convenience, the sooner it is commenced the better for the district through which it will pass, for the country generally, and for those who embark their capital in the undertaking. I have the honour to be, gentlemen,

Your most obedient servant,

GEORGE LARMER.

Carlisle, 3rd July, 1840.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Edinburgh, Leith, and Newhaven Railway Company, was held at the Company's Office, South-street, Andrew-street, Edinburgh, on the 28th ult., ERSKINE DOUGLAS SANDFORD, Esq., in the Chair.

The SECRETARY laid on the table the London, Liverpool, Bristol, and Edinburgh newspapers, containing the advertisements calling the meeting, conformably to the Act of Parliament, also the form of the circular sent to the shareholders. The Minute and Report of the last half-year's general meeting was then read, after which, the Directors submitted the following:—

REPORT.

The Directors have much satisfaction in reporting that great additional progress has been made towards the completion of that part of the line from the north end of Scotland-street, to the northern terminus at Trinity, and that the whole property necessary has been acquired by the Company, with the exception of a small part south of Dr. Neill's property belonging to the town.

The following statement by the Company's Engineers, of the work done since the 30th day of June last, will afford to the meeting the best explanation the Directors can offer, viz.:—

First, Mr. Ward's contract, T No. 1.

Of soil removed, and permanent cutting	49,708 cube yards
Resoiling	7,106 "
Building, in retaining walls at Trinity.	
Ashlar work	28,582 cube feet
Second, Messrs. Wilson and Morrison's contract for bridge over water of Leith.	
Foundations laid	10,138 "
Ashlar work	13,138 "
Ruble coursing	919 sup. feet
Ruble building	358 cube yards
Thirdly, Messrs. M. Fee and Son, on contracts of Bonaholm and Canon Mills.	
Excavations for foundations	12,569 "
Soil removed, and permanent cutting	42,076 "
Ballasting	2,429 "
Boxing	790 "
Blocks and permanent rails laid	799 line yards
Of Building.	
Ashlar work	20,559 cube feet
Ruble	1,080 "
Permanent drain	95 line yards
Dwarf walls	40 "
Foundations laid	4,539 cube feet
Iron arch under the Blandfield Road in this contract complete.	
Total of work done.	
Soil removed, and permanent cutting	93,664 cube yards
Resoiling	7,166 "
Ashlar work	62,189 cube feet
Ruble coursing	919 supe. feet
Ruble building	1,438 cube yards
Foundations laid	14,677 cube feet
Blocks and permanent rails laid	799 line yards
Ballasting	2,429 cube yards
Boxing	790 "
Permanent drain	95 line yards
Dwarf walls	40 "

Although the state of the weather, from the commencement of the present month, has totally suspended the building operations, yet, in the event of its continuing open, (as at present), the Directors see no reason for any very material alteration taking place in the time at which the contractors are bound to finish that part of the line now referred to, as announced in the last Report; particularly as the cutting has been in constant progress. The Directors have advertised for tenders for executing the tunnel between Market-street and the north end of Scotland-street, the time for giving in which expires on the 1st proximo. The Directors consider the execution of this part of the line to be of vital importance to the interests of the Company, especially as they are now authorised to state that the Directors of the Edinburgh and Glasgow Railway Company have determined upon extending their line through the Princes-street gardens, and forming a junction with the Company's depot at Market-street. The necessary notices are now in the course of being given, and the extension of the line will afford to the Edinburgh and Glasgow Railway their desired *terminus* with the sea, by means of the line now in progress by this Company.

There cannot be a doubt that power will be granted to carry into effect an object so obviously necessary for the accommodation of the public, and if followed out by those improvements at the northern terminus of our line, which the public voice imperiously demands, and which the selfish interest of a few individuals will no longer be permitted to prevent, it cannot fail to be of the greatest benefit to the interests of the proprietors. The Directors would farther remark, that should the Great Eastern Line of Railway from Newcastle be extended along the coast, it is an additional inducement for this Company to execute the Tunnel, as from the plans laid down it is intended that its depot shall also terminate at Market-street.

It will be seen by the balance sheet that a large amount of arrears of calls is yet outstanding, and the Directors may offer one or two remarks on the causes which have occasioned this, and which were as unforeseen as incontrolable. These causes have been threefold: 1st, The very heavy depression in the money market at the outset of the works, which extended from one end of the kingdom to the other, and which has, with little diminution, continued ever since; 2ndly, Certain bankruptcies among the shareholders, which followed as a consequence from the above;—and lastly, The resistance of several shareholders to the payment of their calls. The Directors, in terms of the resolution passed at the general meeting in January last, have proceeded against these and other defaulters, while, for their obeying the directions repeatedly given them at the public meetings, they have been visited with much impertinent abuse. It is, however, some satisfaction to them to state, that they have been successful in obtaining judgment against all the defendants. There are still one or two actions pending, the result of which the Directors see no reason to doubt will be equally favourable for the Company. There are a few parties who have left the country, and others dead. From the former the Directors can hold out little hope of recovering anything; from the representatives of the latter, they have been partially successful in recovering the amount due, and anticipate being able to do so to a further extent. On the whole, the Directors expect that, by the exercise of diligent exertion, the amount of arrears will be greatly reduced, and the greater portion recovered. Much has been done in this way during the past year. These proceedings led necessarily to considerable expense, and may account for the comparatively large amount under the head of law expenses in the present balance sheet; but it may be explained, that the greater portion of these expenses, is for actions in which the Company has been successful, and will likely be recovered in full, excepting perhaps in one case, where the party has become bankrupt.

The Directors state, with pleasure, that a more favourable feeling is manifest in the public mind in Edinburgh, than existed some time ago. They are borne out in this statement by the fact, that of late several shares have been transferred from parties at a distance, to respectable parties in this city; and the Directors themselves have also disposed of sixty shares of the forfeited stock held by the Company, to respectable parties in this neighbourhood.

In conclusion, the Directors see nothing to prevent the completion of the whole line under the powers of the Company's Acts, provided the Shareholders will cordially support the undertaking, and promptly pay the calls made upon them.

E. D. SANDFORD, Chairman.
A. G. FIELD, Secretary.

The Report having been read, along with the abstact balance sheet, and several questions put and satisfactorily answered by the Chairman, and the Company's Engineer who was present;—The Report was unanimously approved of, and instructions given to the Directors to continue their exertions to recover the arrears of calls, and to adopt legal proceedings in all case of refusal.

The Chairman then stated that two of the Directors having become disqualified to act, the Board had appointed Alexander Hamilton, Esq., and James Lawson Hill, Esq., W. S., to fill these vacancies subject to the approval of this meeting. This being approved of, the thanks of the meeting on the motion of John Robertson, Esq., seconded by Arthur Monro, Esq., were voted to the Chairman, the Board of Directors, and the Secretary.

Remains balance due bankers				3,666	1	10½
Sum of Charge				£80,165	8	1½

DISCHARGE.

By expenditure previous to 30th June, 1840, per last balance sheet				£35,578	1	5
Ditto, for last six months, to 31st December, 1840, viz.—						
Payments to account of additional Act of Parliament	274	14	9			
Allowances to bankers, brokers, agents, &c.	13	5	6			
Advertisements, printing, plans, engraving, &c.	32	11	11			
Rent of office	16	0	0			
Valuations, witnesses at jury trials, &c.	30	19	6			
Taxes, repairs, and incidents	212	18	4			
Secretary and clerk, for salary	126	6	0			
Law expenses, and outlays for jury trials, contracts, &c. paid Company's agents	478	4	7			
Arbitrations, 4*l.* 4s., and expenses paid for prosecutions in England, 304*l.* 15s.*	308	19	0			
Directors' fees	113	6	4			
Payments in forming line and purchasing property viz—						
Engineers, 150*l.*, Assistant Engineer 50*l.*	200	0	0			
Balance due Jas. Adam, formerly assistant	135	0	0			
Work and materials, viz—						
Mr. Ward for contract at Trinity	1,291	0	0			
Michael Fox and Son, for Bangholm and Cannonmills	4,003	10	6			
Wilson and Morrison for viaduct over Water of Leith	2,095	0	0			
Materials, iron rails and chairs, stone blocks, &c.	1,528	15	0			
Work, exclusive of contracts, per Assistant Engineer	29	14	8½			
Damages and compensation for use of land, &c.	357	12	7			
Property purchased, viz.—						
Price of Simpson's property, Cannonmills	550	0	0			
Office furniture	4	13	0			
Interest paid on prices of property	470	15	0			
Sum paid since June 30, 1840				12,273	6	8½
By Calls on shares originally held by Company				840	0	0
Calls on shares forfeited, and in hands of Company	£9,866	0	0			
Less, received for shares sold	205	0	0			
				9,661	0	0
Sum of these				£10,501	0	0
By balance due bankers on other side, to be repaid				3,666	1	10½
Total				£62,018	10	0
By balance in favour of Company, including outstanding calls carried to next page				18,146	18	1½
Total				£80,165	8	1½
1840. Dec. 31						
To balance brought from above, which consists of—				£18,146	18	1½
Arrears of deposits	£50	0	0			
Arrears of calls (exclusive of forfeited shares) viz.:						
1st call	1,760	0	0			
2nd call	1,730	0	0			
3rd call	2,890	0	0			
4th call	2,960	0	0			
5th call	3,786	0	0			
6th call	4,211	0	0			
7th call	4,986	0	0			
	£21,813	0	0			
Less balance due bankers, as on 1st folio	3,666	1	10½			
Balance, as above				£18,146	18	1½

The work and engineering on the line, exclusive of expenses of Act of Parliament, and all other expenses, amount to				£24,938	19	10½
There has been purchased of property, and paid for by the Company				11,318	10	11
In all, for works and property				£36,257	9	9½
The claims against the Company consist of—						
Expenses due to Alex. Scott's trustee, for jury trial and witnesses, reduced by the auditor of the court, from 1,258*l.* 5*s.* 3*d.* to				£530	7	11
Per centage retained in security from Mr. Ward, contractor				552	0	0
Ditto, from Fox and Son, do.				473	18	11
Ditto, from Wilson and Morrison				295	15	10
Thomas Oliver, for valuations				32	0	6
Balance due bankers				3,666	1	10½
Bird and Co., for iron rails delivered, exclusive of those paid for in preceding page				962	0	0
Miller for railway pins delivered				94	4	9
Trustees of Lady Keith for stone blocks				125	0	0
John Macneil, Esq., Engineer				163	8	0
Drummond and Son, for work				31	9	2
Sundry small accounts				30	0	0
Besides current accounts to Law-Agents, &c.						
Sum of these				£6,966	6	11½
Sums due for heritable property, viz.—						
Balance of price of Trinity Villa and grounds				£2,000	0	0
Ditto of Denovan's property at Cannonmills				839	0	0
Ditto of ground at Cannonmills				2,125	0	0
Note.—It is expected that the proprietor will take back what is not required of the ground, which will reduce this item 1,200*l.* at least.						
Balance of Scott's ground at Trinity				3,995	0	0
Price of cottage at Trinity				400	0	0
Balance due Heriot's Hospital for ground at Bangholm				500	0	0
Against this there is a counter claim for interest, &c.						
Sum due for heritable property				£9,859	0	0

* A portion of the expenses under the above two heads will be recovered.

Edinburgh, 18th January.

E. D. SANDFORD, Chairman.
JOS. MACGREGOR, Director.
D. S. PEDDIE, Director.
ALLEN GEO. FIELD, Secretary.

LONDON AND BRIGHTON RAILWAY.

To the Auditors, Directors, and Secretary of the London and Brighton Railway Company.

GENTLEMEN,—In the *Railway Times* of January 30th, page 101, is reported your half-year's account of the above Company, and in the same paper of August 1st, 1840, page 594, the previous half-year's. I beg to call your attention to the receipts for each half-year. The amount received for *interest upon calls in arrear* the last half-year (which must have been considerable), you have not credited the Company for, even without doing so, you make an actual deficiency of 340*l.* 5*s.* 5*d.*

Again, in the *account with sundries*, the 21,000*l.* received in the fore part of the last year, what has that been done with?

Trusting you will give a satisfactory explanation of the above items,

I am, Gentlemen, your obedient servant,
LANGWORTH.

February 8th, 1841.

RAILWAYS.

TEN years ago, railways, as a means of general transit for passengers and goods, were almost untried. Now, they are spreading over the country like a net-work; about one hundred and fifty railways are already in use in Great Britain and Ireland; and upwards of sixty millions of money are invested in them. They are upsetting all our former notions and altering our social condition: they are pouring the country into London, and spreading London over the country. Northwards we are carried as far as Lancaster, a distance of 241 miles from London in eleven or twelve hours by the London and Birmingham, Grand Junction, North Union, and Lancaster and Preston; where, though for the present, it stops, there will, no doubt, be a continuation, by Penrith, to Carlisle and Glasgow. The same lines link with Wigan, Bolton, Manchester and Liverpool, &c. At Rugby, 83 miles from London, on the London and Birmingham line, the Midland Counties carries us to Nottingham and Derby; and at Derby we can get, by the North Midland, and its junctions, to Chesterfield, Sheffield, Leeds, and York; or instead of going on to York, we may double, like a hunted hare, turn of to Hull by Selby, or from Selby to Leeds. At York, the Great North of England Railway, now in progress, will carry us to Durham and Newcastle; and at Newcastle we can cross the island to Carlisle. Returning to London, we find the Great Western Railway opening to us the western coast; and by it and its western junctions, not only enabling London citizens to spend a day comfortably at Windsor, but joining Bristol and Bath, Gloucester and Cheltenham, either now or shortly. The south coast, again, is almost free to us, by the Southampton and Brighton Railways, along with the Greenwich and its adjuncts, to Croydon and Dover, all either made or making. Again, the north-east coast is accessible, by the Eastern Counties Railway, to Ipswich and Norwich; and all who wish to avoid the intricacies of the London portion of the Thames, called the "Pool," or who are in a hurry to reach a dinner of white bait, can be whirled from the city to Blackwall.—*Liverpool Standard.*

ACCIDENT ON THE SOUTH WESTERN RAILWAY.—A correspondent of the *Times* gives the following account of an accident which took place on Sunday on this railway. He says—"As we neared Kingston, we slackened our speed; but either from gross neglect on the part of the authorities at the station, or from wilfulness on the part of our engine driver, or from want of proper signals, we struck against a train of six or seven ballast waggons, which were actually stationary on the same line upon which we were travelling, and in front of the Kingston station. The concussion was most severe, and had the carriages been full, serious accidents must inevitably have occurrred. As it was, an old lady on my right was forcibly thrown against her *vis-a-vis*, and both were stunned and bruised. I am myself a sufferer from the concussion."

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 13, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 164. Vol. IV.—No. 8.] SATURDAY, FEBRUARY 20, 1841. [Price, 6d.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of 5 per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1845.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff; or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London; Mr. Wm. Mallard, 27, Small-street, Bristol

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

TAFF VALE RAILWAY.—Notice is hereby given, That the next Half-Yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Angel Inn, Cardiff, on Tuesday, the 23rd of February instant, at One o'clock, for the general purposes of business.

The Chair will be taken at Half-past One o'clock.

JOHN GUEST, Chairman.

The Transfer Books will be closed on the 16th inst., and will not be opened until after the said Half-Yearly General Meeting on the 23rd inst.

By order of the Board,
JOSEPH BALL, Secretary

Railway Office, Cardiff, Feb. 6, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

IRON TRADE.—WANTED, a Partner possessed of from £6,000 to £10,000, to join a concern in Scotland engaged in the Malleable Iron Trade. An equal sum has already been invested in the business. The works are newly erected; are very favourably situated for supplies of Pig Iron and Coal, and in the vicinity of a ready market for the disposal of the produce. With an outlay not exceeding £1,000, they can be made capable of turning out 5,000 tons of Bar Iron in the year.

The opportunity now offered is, from various circumstances, a decidedly favourable one for the employment of capital. A personal friend of the Advertiser, who is in possession of details relative to the present position of the business and capabilities of the works, may be communicated with by addressing a line to Mr. William Wardlaw, care of Messrs. Fletcher, Brothers, No. 5, Peel-street, Manchester.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 vol. quarto, 600 pages and 17 splendidly executed engravings of the various Classes of Locomotive Engines and Carriages, a Railway Map of the United Kingdom, &c., &c., price £1 11s. 6d.,

THE RAILWAYS OF GREAT BRITAIN and IRELAND. By FRANCIS WHISHAW, Civil Engineer, Member of the Inst. of Civil Engineers.

"Every person worthy of the title of a railway capitalist, should purchase Mr. Whishaw's book."—*Patriot.*

"Rich in the number and beauty of its illustrations but particularly valuable on account of the original and authentic information which it contains."—*Midland Counties' Herald.*

"This is, in all respects, a most valuable and useful work."—*Liverpool Mercury.*

"So rich and varied a mass of information."—*Gardener's Gazette.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"Most unique and perfect in the comprehensive view it affords."—*Mining Journal.*

"As necessary as a Johnson's Dictionary in every well appointed library."—*Polytechnic Journal.*

London: Simpkin, Marshall, and Co., Stationers Hall Court

THE RECIPROCATING SYSTEM OF RAILWAYS. No one who is thoroughly conversant with the present costly mode of contracting and working Railways, and who has attentively and with an unbiassed mind perused the detailed account of the plan proposed by Mr. Whishaw, as described and illustrated in "the Railways of Great Britain and Ireland," will dispute the important advantages to be derived from its general introduction. The following are some of its leading features:—A more perfect mode of constructing embankments, whereby slips would in a great measure be prevented; a great reduction in first cost and annual expenditure; a better adaptation of the engine to its load; an entire prevention of accidents by collision, a great reduction in the fares, and consequently a large increase of traffic, together with a much greater amount of accommodation to the public by the more frequent starting of trains. Every member of the Legislature, every Railway capitalist, every Railway Engineer, and indeed all who are interested in the further extension and improvement of the internal communication of Great Britain and Ireland, should lose no time in acquainting themselves with this entirely original and economical system of Railways.

Messrs. Simpkin, Marshall & Co., of Stationers' Hall Court, and publishers of "the Railways of Great Britain and Ireland," and the work may be obtained through any bookseller of the United Kingdom.

LAW.—WANTED, in an Office of extensive General Business in the Country, a well educated Youth as an Articled Clerk. Applications to be made by letter (pre paid) to Q., care of the Editor of this Journal.

EDINBURGH AND DALKEITH RAILWAY.—Notice is hereby given, That the Dividends of Two and a Half per cent. on the Original Stock, and Five per cent. on the Additional Stock, authorised by the General Meeting of the Company held on the 3rd Instant, will be paid at this Office, on and after Wednesday the 17th inst., between the hours of Ten and Four (Saturdays excepted). Proprietors who do not call, may send Mandates, addressed to the Manager, either to pay the amount to the bearer, or to remit it by post.

D. RANKINE, Manager.

St. Leonard's Station, Edinburgh, Feb. 6, 1841.

GREAT WESTERN RAILWAY.—Notice is hereby given, that the next HALF-YEARLY GENERAL MEETING of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's office, Princes-street, in the city of London, on Thursday, the 25th of February next, at 11 o'clock, for the election of six Directors in the place of the same number who will retire by ballot, and for other purposes of business. The chair will be taken at 12 o'clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy Chairman.

The Directors retiring by ballot are re-eligible under the provisions of the Act. The Transfer Books will be closed on Monday, the 15th of February, and will not be re-opened until after the said Half-yearly General Meeting on the said 25th of February. Clause 123 provides that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least five days before the Meeting.

By Order,
CHAS. A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Offices, 2, Princes-street, Bank, London, and Corn-street, Bristol, Jan. 5, 1841.

STOCKTON AND HARTLEPOOL RAILWAY. The Public are informed that on the 10th day of February, 1841, this line was opened for Passengers and general Merchandise, and furnishes a cheap and expeditious link of communication between Newcastle-upon-Tyne, Sunderland, Hartlepool, Stockton-upon-Tees, Darlington, and thence (when the Great North of England Railway is opened) with York, Hull, Leeds, Manchester, Birmingham, London, &c.

THE TRAINS LEAVE TRAVELLING NORTH.

STOCKTON TO HARTLEPOOL.

Morning, at 8 and ½ past 10 o'clock.
Afternoon, at 3 and 5 o'clock.

The 8, ½ past 10, and 3 o'clock trains start on the arrival of the Stockton and Darlington Railway trains which leave Darlington at ½ past 6, and ½ past 9, (morning) and 2 o'clock (afternoon).

N.B.—The trains leave Hartlepool for Sunderland at ½ before 9, and ½ past 11 o'clock (morning), and 4 o'clock, (afternoon).

TRAVELLING SOUTH.

HARTLEPOOL TO STOCKTON.

Morning, at 8, and ½ past 11 o'clock.
Afternoon, at 4, and 6 o'clock.

N.B.—The trains leave Sunderland for Hartlepool at ½ before 9, and 11 o'clock (morning) and 4 o'clock (afternoon).

The trains leave Stockton for Darlington at 20 minutes past 12, 20 minutes past 4, and 7 o'clock (afternoon).

FARES.

First Class	2s 0d.
Second Class	1s. 6d.

VALUABLE BUILDING GROUND.—To LET, on a Building Lease, for the Term of Fifty Years, a piece of Ground about Three Acres, more or less, on one of the healthiest situations in the kingdom, and about 150 yards from the Station at Weybridge, in the county of Surrey, on the South-Western Railway. Also about Three Acres, more or less, adjoining the other, which will be Let for the term of Twenty-one Years.

For Particulars apply to the Churchwardens and Overseers of the parish of Weybridge.

GARNKIRK AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

THE Annual General Meeting of the Company of proprietors of the Garnkirk and Glasgow Railway was held at Glasgow, on the 12th inst. CHARLES JAMES TENNANT, Esq., was unanimously chosen Chairman.

The SECRETARY (Mr. King), stated that copies of the Report now to be submitted to the meeting, had, as on former occasions, been previously sent to all the registered shareholders. He then read the Report as follows:—

REPORT for the Year 1840, by the Committee of Management, to the Annual General Meeting of the Company of Proprietors of the Garnkirk and Glasgow Railway.

Before giving the usual statement of the revenue and expenditure, it may be mentioned that, as authorised by previous meetings of the Company, your Committee, in June last, sold 3,350 of the new stock at par, and, in September following, they issued 16,650*l.* additional, also at par, which was all subscribed for in the course of a few weeks. The whole issue of new stock amounted to 20,000*l.*, or 800 shares of 25*l.* each. The second issue was made payable by three instalments, the last of which is due on the 20th of March next. This addition to the subscribed capital will appear in the reduction of the debt, and of the current interest, in future accounts.

Your Committee beg to congratulate the Company on the continuing prosperity of the undertaking. The anticipations in the last Report have been fully borne out, the revenue of the past year surmounting that of the former by 2,250*l.* 18s. 11¼d.

REVENUE FOR 1840.

Tonnage dues, for use of railway		£7,475	12 8
Haulage dues, locomotive engines, exclusive of working the passenger trains	2,922	4 7	
Waggon dues, use of Company's waggons	1,477	2 10	
Passengers' fares	3,712	7 3	
Rents	126	10 0	
Total ordinary revenue		£15,713	17 4

EXPENDITURE, 1840.

Advertising and printing	£86	3 8	
Coaching	1,111	9 11½	
Counting-house and stationery	53	8 4	
Depot and brick shed repairs	179	17 9	
Direction	64	7 0	
Engine-house and workshop repairs	3	3 9	
Gartsherrie Inn	5	0 6	
Insurance	13	10 0	
Keppoch road repairs	139	1 3	
Law expenses	153	10 4½	
Locomotive engines	2,132	6 0	
Miscellaneous charges	89	0 0½	
Overseers	174	5 7	
Police and gate-keepers	344	19 4½	
Railway maintenance	696	1 8	
Salary account	500	0 0	
Stable	252	16 10	
Taxes and stamps	519	0 6	
Waggon repairs	695	0 2	
Weighing account and repairs	107	15 6½	
Total ordinary expenditure		£7,260	18 3½
Revenue as before stated		£15,713	17 4
Ordinary expenditure		7,260	18 3½
Excess of revenue		£8,452	19 0½
Interest*	£3,764 17 2		
Feu duties	336 9 1½	4,101	6 3½
Divisible surplus		£4,351	12 9

STOCK ACCOUNT.

It will be seen from the balance sheet produced that there has been added to the stock, which at last year's balance was 130,062*l.* 9s. 10½d., a farther sum of 6,873*l.* 15s. 4d. The following are the items of this sum:—

Railway, for relaying, and widening banks, and sundries, deducting value of old materials	£4,770	6 1	
Gartsherrie Inn, furniture	1	7 0	
Engine-house and work-shop, additions to	3	1 6	
St. Rollox depot and sheds, for extension of ditto	982	13 0	
New houses at ditto, addition to	1	3 10	
Coatbridge Railway, for surveys	61	10 3	
Overseer's house and coach sheds	193	19 0½	
Waggons, twenty-four new ditto	331	13 0	
Locomotive engines, one new ditto and tender	768	1 6	
Coaches, one new ditto	67	14 11	
Working tools, additions to	18	11 6½	
Stable and horses, additional horse and harness	15	2 2	
Counting-house furniture, additions to	8	11 6	
	7,223	15 4	
Less by two old coaches and two luggage waggons sold	350	0 0	
Amount as above	£6,873	15 4	

* Formerly a sum was carried from the interest account to the debit of coach, engine, and waggon repairs, as interest on their respective values. The whole interest is now included in this item, which will account for its seeming extra increase.

Some more depôt accommodation, rendered indispensable by the increase of traffic, is in progress; and, along with the continuation of the relaying of the south line of rails, is expected to be completed in the current year. With the exception of the erection of a few workmen's houses along the line of railway, the probable settlement of some claims of the Inchbelly Road Trustees, and of a contribution to the North Parliamentary Road, and a few minor items, any farther expenditure applicable to the stock accounts, beyond what will naturally accompany an increase of trade, seems to be terminated.

The ordinary expenditure Accounts generally, taking into view the additional traffic, and the consequent expense of maintaining another engine, do not vary very materially from those of the preceding year. It is very satisfactory to witness and report the continued safe and efficient working of the railway. During the recent severe storm of frost and snow and frequent mists, upwards of 1,200 tons of goods were often conveyed upon the railway, making a gross weight, including the return of the empty waggons, of above 2,000 tons, daily, exclusive of twelve different passenger trains, without any accident or confusion. For many years, and indeed since the plan of working was properly organised, there has been the same result, both during the ordinary traffic and on occasions of extra trade and unfavourable weather. Unanimity of purpose, as well as regularity of conduct, throughout the whole establishment, have been found most essential to the proper performance of the work, in all respects; and it is not perhaps inappropriate to a Report of this kind, to state, that your Committee, from their own observation, and the testimony of Mr. King, your Secretary and Manager, are satisfied that, in so far as these essentials have been attained, much is owing to the experience, ability, and judicious zeal of Mr. Walter Linn, the Company's principal Overseer, and of others in charge of particular departments, whose system and example have elicited corresponding carefulness and activity, on the part of the engineemen and other workmen in the service of the Company. When on this subject, your Committee beg to mention that a scheme has been suggested to them by your Secretary, for securing some permanent allowance to servants of the Company in certain departments, who shall have conducted themselves properly during a specified period of service, and your Committee crave authority to mature such an arrangement during the current year.

The opening of the Slamannan Railway in August last, has led to an agreement between the proprietors of that railway and your Committee, for leave to the former to run, on certain terms, during five years, an engine and train of carriages twice daily upon the Garnkirk and Glasgow Railway, for conveying passengers, and such parcels as are carried by stage coaches, along it and the intervening railways between Glasgow and Causewayend, near Linlithgow. From thence passengers proceeding to Edinburgh are conveyed by the Union Canal boats, or by the stage coaches, which ply in connection with the railway trains. This new source of revenue is beginning to be accompanied by some trade in carrying grain and other articles between Glasgow and the districts intersected by the Slamannan Railway, which trade promises to increase as greater facilities come to be afforded by more complete and matured arrangements.

The subject of the tax on railway passengers occupied the particular attention of last general meeting of the Company, and your Committee followed up the suggestions then made by appointing one of their number, Mr. Thomas Sprot, and the Secretary, Mr. King, to join the deputation from the Scottish Railways in London, on this important matter. Petitions to Parliament, and memorials to the Lords of the Treasury, were presented for the general Scottish railway interest, and also by individual Companies; interviews were obtained with the Chancellor of the Exchequer, and influential members of the Government; and the result of the evidence adduced before the Select Committee of the House of Commons, was a decided opinion by that Committee, of the injustice of the tax in the mode of its exaction, and a strong recommendation to Parliament to make an immediate change, so as to proportion the tax to the rate of fares, or to the gross revenue from passengers, of the respective Railway Companies. What the final result may be, remains to be learned from the proceedings of the present session of Parliament.

With regard to the general future prospects of the Company's business, your Committee can only repeat their confidence in its continued increase and prosperity. Holding this opinion, and seeing that the surplus revenue of the past year will afford 6 per cent. on the subscribed capital of 69,000*l.*, and increase the reserved dividend fund to 3,977*l.* 12s. 8d. after deducting 167*l.* 10s. the dividends on the 3,350*l.* of new stock first sold as before-mentioned, your Committee propose that a dividend of 6 per cent. or 30s. per share of 25*l.* shall be declared; and, to follow up the suggestion made at last meeting as to an alteration of the period of payment of the dividend, that it shall be payable by two equal half-yearly instalments, the first at Whitsunday ensuing, and the second at Martinmas thereafter.

Signed by a quorum of the Committee,

ROBERT STEUART,
THOMAS SPROT,
J. JEFFRAY,
CHAS. ALEX. KING, Sec.

Glasgow, 5th February, 1841.

Comparative Table of the Garnkirk and Glasgow Railway Traffic and Revenue, for the Nine Years preceding 1st January, 1841.

Years.	No. of tons.	Increase of number of tons.	Revenue, exclusive of passengers' fares.	Increase.	No. of passengers.	Increase of number of passengers.	Revenue from passengers.	Increase	Gross Revenue.	Total Increase.

The following documents were produced to the meeting as relative to the Report:—1st. The balance sheet of the Company for the year ending 31st December last. 2d. A detailed list of the additions made to the stock accounts. 3rd. A comparative view of the annual expenditure and revenue, for the two past years, showing the increase or decrease on each item. 4th. A list of the shareholders names, as entered in the books at the 2nd inst. These documents were endorsed by the Chairman.

The following resolutions were then unanimously adopted:—

"1. That the Report be received and approved of; and a dividend of 6 per. cent. be declared accordingly, payable as proposed in the Report.

"2nd. That the meeting specially direct that the measures stated in the Report, as taken last spring, in reference to the passenger tax, be followed up by petitions to Parliament this session, and any other steps that may be deemed proper towards obtaining relief. It was mentioned in proposing the resolution, that last year the Company, as might be seen from the accounts before the meeting had paid 14*l.* of tax out of every 100*l.* of their gross revenue from passengers, while many Railway Companies, in other parts of the kingdom, paid only 4 or 5 per cent., and their rates of fare, and probable profits, were three or fourfold those of the Company.

"3. That the Committee be authorised, if they shall deem it expedient during the current year, to put in execution the proposed plan of a branch railway from the east end of the Garnkirk Railway to Coatbridge, the object and probable cost of which were explained to the meeting.

"4. That the proposal in the Report to provide an allowance or pension to servants in certain departments of the Company's service, who shall have conducted themselves properly during a specified period, be remitted to the Committee to fix upon the principle and regulations to be adopted, and to complete the arrangement.

"5. That the surviving members of last year's Committee be re-appointed, and that Mr. John Hamilton Colt, of Gartsherrie and Inveresk, be elected in room of the late Mr. Colt, his father; which Committee shall have the usual powers, and shall take all measures requisite for prosecuting the business and furthering and protecting the interests of the Company; and they shall also have authority to issue a further sum of new stock, if they shall consider it expedient to do so. The list of Committee, in terms of this resolution, is as follows:—

Mark Sprot, Esq., of Garnkirk; Dr. Jeffray, of Cardowan, Glasgow College; John Tennant, Esq., of St. Rollox; Thomas Sprot, Esq., W.S.; William Baird, Esq., Gartsherrie Iron Works; Thomas Edington, Esq., Merchant, Glasgow; Alexander Couper, Esq., Merchant, Glasgow; Robert Steuart, Esq., of Carfin; Professor William M'Turk, Glas-

gow College; John Jeffray, Esq., Writer, Glasgow; John Hamilton Colt, Esq., of Gartsherrie.

Thanks having been cordially voted to the Chairman, the meeting separated.

NORTHERN AND EASTERN RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of this Company was held on Thursday, at the London Tavern, Bishopsgate-street. William Crawshay, Esq., in the Chair.

The Secretary (William Bourne, Esq.) having read the advertisement convening the meeting,

It was unanimously resolved (on the motion of the Chairman seconded by the Deputy-Chairman, John Roskell, Esq.) that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in presence of the meeting.

The Chairman then read the Report of the Directors, printed copies of which had previously been transmitted by post to every shareholder.

REPORT.

Your Directors have the satisfaction of meeting you for the first time as Proprietors of a railway in part opened for public use, and although the season of the year at which this partial opening took place was most disadvantageous to its first prospects of traffic, and has been aggravated by a severity of weather greater than usual at a similar period, your Directors cannot but feel satisfied with the result of the determination which they made, to open the Northern and Eastern Railway in the face of a winter traffic, because that period of the year which invariably depresses the traffic upon the longest established lines to little more than one half of its fullest extent of the more favourable season of the year, has, nevertheless, produced upon your line, even in its first and very limited opening, an extent of traffic, which, under all considerations, has repaid the cost of conducting it, and consequently has furnished a proof, that at the more favourable season for travelling, either for the purpose of business or pleasure, the receipts of the railway will be such as to afford, when further opened, a lucrative and remunerative traffic. Your Directors have to call your attention to the circumstance, that up to the present period, a single line of railway only has existed, and that with the difficulty of working with perfect safety a single line, they were not anxious to seek, by any indirect means, a larger traffic than would, from the voluntary exertions of the public, accrue to the railway. But, as the two lines of rails will be immediately completed as far as Broxbourne, your Directors are taking, and will continue to take, every means in their power to give facility to the public, from all adjoining and neighbouring places, to use the railway in preference to the ordinary modes of conveyance. They have also to observe, that from the very short length of line now open, and from circumstances prejudicial to railway travelling, over which they could have no control, but in which they are happy to feel that they have not been instrumental, there has not been any portion of what is now technically called the long traffic of the eastern part of the country brought upon the Northern and Eastern Railway. But your Directors feel the strongest conviction, that the confidence of the public, in the safe and commodious working of this line of railway, has been gained, and is established, and that when the railway is further opened to a junction with the Harlow road, they may confidently expect a very considerable traffic, hitherto altogether excluded from the railway.

It must be further evident, that, whether the traffic had repaid in a pecuniary way or not, the cost of conducting it for the short and disadvantageous period of three months, there are advantages gained by the partial opening which cannot be too highly appreciated, and these consist in the consolidation of the works, in the creation of a staff of officers, clerks, engine drivers, and all other the necessary appendages of a railway, which will at once be made to branch out over the whole extent of the line when completed. And with these observations upon the experience of the past short period of traffic, your Directors repeat that they are perfectly satisfied with the result of the present partial opening of the railway, and will proceed to detail to you the prospects for its future extension, and your financial situation.

A contract was entered into on the 15th day of October last, for the formation and completion of the railway from Broxbourne to Burnt Mills, being a distance of 5 miles and 505 yards, for the sum of 19,953*l.*, with Messrs. Thorntons; and on the 21st day of January last, a contract was entered into with Messrs. Earl and Pearce, for the completion of a further length of the railway to the Harlow Road, being a distance of two miles, for 7,500*l.*, both parties being highly responsible and respectable contractors; and the necessary materials for the permanent way have been purchased upon advantageous terms.

Your Directors confidently hope, that the line of railway to the Harlow Road will be completed and opened for public use in the month of July next. The purchase of the land has been completed as far as that point, and a considerable progress has been made in that between the Harlow Road and Stortford; and your Directors are most happy to find, that in proportion as the railway is extended, the correctness of their estimate of the low cost of the line, in comparison with that of others emanating from the metropolis, is confirmed. In regard, however, to this point, the facts of the actual cost of the present part of the railway, and the contracts entered into for the further extension of it, will better speak for the probability of the final cost of the whole 28¾ miles from Stratford to Stortford, than any thing which your Directors can say; and they rely upon being enabled, ere twelve months are again passed, to redeem the assurance which they have before given you, that the Northern and Eastern Railway will have been completed, including every cost and charge for stations and workshops, engines, carriages, trucks, and stores, and all compensations for deviation from the originally projected line and terminus for, not exceeding, in the whole, the sum of 22,000*l.* per mile.

You will have experienced, that your Directors have adhered to the pledge which they gave you on the 20th February last, that they would not exact from their proprietary more than three calls during the past year, and that those calls should not amount to more than 5*l.* each; but as the early completion of the railway is now indispensably necessary to the advantage of the shareholders, your Directors will henceforth only pledge themselves to be guided by the limitation provided in the Act of Parliament, as to the remaining calls; and when they draw your attention to the great liability which they have themselves entered into for the interest and convenience of the shareholders, they feel that no appeal will be necessary on their part, to elicit your cheerful and ready concurrence in the earliest payment of the future calls upon your shares.

Application is about to be made to Parliament, with your consent, to make a branch railway to Ware and Hertford, and which branch it is confidently expected will be completed for 50,000*l.*, and cannot but conduce most materially to the revenue of the Company. Funds will be necessary to carry this project into effect, and your Directors are assured that the 720,000*l.* authorized to be raised in the whole, will be ample for the entire main line from Stratford to Stortford, and the branch from Broxbourne to Ware and Hertford. A survey has also been directed to be made from Stortford to Cambridge, in order to place the Northern and Eastern Railway Company in a position to meet the views of those parties who may be inclined to avail themselves of the Northern and Eastern Railway as a means of communicating with the metropolis, either from the North of England direct, the North-Western side of the country, or the counties of Norfolk and Suffolk; and it is with pleasure that your Directors have to inform you, that the latter of those important junctions with your line is already contemplated, and that communications have passed between your Directors, and the Committee appointed at a meeting of landholders, in the county of Norfolk, "to consider the best means of securing the advantages of a communication by railway between the county of Norfolk and the metropolis," and to forward which, no exertions shall be wanting on the part of your Directors, the first step to which is already taken—namely, the survey of the best line between Stortford and Cambridge.

Your Directors have ventured to order this survey to be made at the earliest possible period, so as to enable this Company to retake possession of that portion of the ground for which they had once obtained an Act, though the line then chosen was such that it has been thought proper to abandon it, and select another, which they know to be very much cheaper in cost, and equally direct and convenient for public use.

Your Directors will not yield the possession of this part of their line without ample assurance that the further extension will be carried into effect; but they are ready to show every disposition to meet the views of any other party who may be desirous of joining the Northern and Eastern Railway, even at Stortford, provided, as before stated, they have the most ample assurance of the power and intention of the party to effect at an early period an extension beyond Cambridge.

Your Directors will repeat their usual assurance, that not any information is withheld intentionally by them from their proprietors, which they consider worth detailing; and that they are ready to answer every inquiry which may be submitted to them; and they further repeat that their services, while meeting the approval of their shareholders, will be gratuitous. They, however, venture to state, that the calls upon their attention are such, now that the railway is in part open, that they have selected from their numbers two gentlemen, namely, Messrs John Roskell and Robert Moser, to act as a constant Committee; and these gentlemen not being so actively engaged in business of their own, have devoted, and will continue to devote, nearly the whole of their time to the interest of the Northern and Eastern Railway Company: and your Directors have the gratification to assure you that the services of these gentlemen have already conduced materially, and will continue to add, to the welfare and advantage of the Company.

Their attendance at the offices of the Company at Shoreditch is almost daily, while that of your Directors in general is weekly, or as much oftener as is required. Circumstances have arisen which prevent the continued services of your highly valued Engineer-in-chief, Mr. Stephenson; but as the road is so nearly finished, and Mr. Bidder's will be still more devoted to it, your Directors hope that his increased assiduity will compensate for the loss of the retirement of Mr. Stephenson, more especially as the good will and able advice of this experienced and talented gentleman are in no way withdrawn from us, although he has voluntarily declined any further remuneration.

Your Directors are happy to be enabled to lead you to expect a considerably reduced expenditure in the engineering department. Your late Secretary, Mr. Till, has also retired from his situation; he has been replaced by Mr. Bourne, who it is hoped will be found equally efficient, at a very reduced cost to the Company.

WILLIAM CRAWSHAY, Chairman.

Statement of Receipts and Expenditure for the Half-year ending 31st December, 1840.

The CHAIRMAN said the Directors would now be happy to hear any observations upon the Report which he had just read, and to add to or take from it previous to its being adopted. In order that the business might be proceeded with formally, he would move that the Report be now received and adopted.

Mr. ROSKELL seconded the motion.

Mr. BARCLAY inquired whether it was to be understood that Mr. Roskell and Mr. Moser, the gentlemen referred to in the Report as devoting nearly the whole of their time to the business of the railway, gave their services gratuitously, in common with the Board generally.

The CHAIRMAN said they did.

Mr. PEMBERTON was very sorry to hear it. He thought Railway Directors, as well as every other person who laboured, should be adequately remunerated. (Hear, hear.)

The CHAIRMAN said the feeling of the gentlemen referred to was, not to receive any remuneration until the undertaking were fairly through its difficulties. Probably, therefore, it would be better for the present to leave the matter as it was; and if the proprietors, at any future period, should think fit in any degree to recompense these gentlemen for the time and talent which they were devoting to the Company's business, they could do so. (Hear, hear, hear.)

Mr. BARCLAY referred to the paragraph in the Report relative to the future calls, and inquired what the limitation in the Act of Parliament was as to the amount to be called for in one year.

The CHAIRMAN said it was 35*l.* per year.

Mr. BARCLAY said, of course that amount could not be called for during the present year, as after the call which was due in a few days, only 10*l.* would remain.

The CHAIRMAN said, the honourable proprietor was proceeding upon the assumption that the shares were 60*l.* shares.

Mr. BARCLAY understood that, they were so. He was aware that originally they were 100*l.* shares, but when they gave up the portion of the line between Bishop's Stortford, and Cambridge, he had always understood that the liability per share was reduced to 60*l.*

The CHAIRMAN said, there was nothing in the Act, to warrant such a supposition.

Mr. MASTERMAN, jun. (a Director) said, the best proof that the amount per share was not reduced was to be found in the fact that the Directors and some of the principal proprietors had signed an undertaking not to dispose of any of their shares, until the line were fully opened, without paying up 100*l.* on each.

Mr. BARCLAY said, there might be nothing in the Act to reduce the amount per share, but was there not a resolution in the Company's books to that effect?

The CHAIRMAN believed not. There certainly had been no resolution of the kind during his presidency.

Captain PROBYN inquired whether there was any intention on the part of the Directors to issue any of the shares now in the coffers of the Company.

The CHAIRMAN said, the Directors were under a pledge, and to that and every other pledge they were determined to adhere, not to issue any one of the shares referred to without the express sanction of the proprietors.

Captain PROBYN thought it very desirable that some of these shares should be issued, especially after what had been said about the amount per share. This would materially relieve the proprietors in regard to future calls.

Mr. MANGLES said, he too had understood that the Act of Parliament which authorised the Company to abandon the portion of the line north of Bishop's Stortford, had reduced the shares from 100*l.* to 60*l.*

The CHAIRMAN said, the Act in question enabled them to reduce the amount of their capital, but not the amount per share.

Mr. MANGLES had certainly had a contrary impression, and under that impression he had, at the request of one of the Directors, signed the undertaking already referred to not to dispose of his shares.

Mr. MASTERMAN, jun. said, the document bore upon the face of it an undertaking to pay up 100*l.* per share if the subscribers disposed of any of their stock previous to the general opening.

Mr. BARCLAY said, the shares were stated in the printed official lists to be 60*l.* shares, and surely the Committee of the Stock Exchange would not have allowed this to be done if they had not understood, as he and others did, that their amount was limited to that sum.

The CHAIRMAN could only repeat that there was nothing in the Company's Act to warrant such a conclusion.

Captain PROBYN hoped that under these circumstances a special meeting of the proprietors would speedily be called to determine upon the issue of the shares now in the hands of the Company.

In answer to a question it was stated that the number of registered shares on the Company's books was 4,500.

In answer to further questions, it was stated that the arrears on calls amounted to 8,000*l.*, and that the total available funds from calls was (including the call just due) 60 per cent. on 4,500 shares, that is, 275,000*l.*

After some very desultory conversation,

Mr. BARCLAY reverted to the amount of the shares, and asked whether it rested with the proprietors to convert the 100*l.* shares into 60*l.* shares, and in that case to issue the shares now on hand—or to keep back these shares, and pay up 100*l.* per share.

The CHAIRMAN said, it undoubtedly was at the option of a majority of the proprietors to do anything they pleased. If the majority of them instructed the Directors to go to Parliament for power to reduce the shares to 60*l.*, the Directors, who were merely the agents of the proprietors, would be bound to do so.

Mr. BARCLAY had understood that such power had already been taken. It certainly was better to have an extended share register than a small one.

Mr. ROSKELL enquired whether the honourable proprietor could suggest any plan for issuing further shares in the present condition of the undertaking.

Mr. BARCLAY thought they might be brought into the market in the usual way.

Mr. BAGSHAW (a Director) said, it was a desideratum not to issue any more shares until the road were so far completed, and the traffic so far developed that they could be issued without a sacrifice. (Hear, hear.)

The CHAIRMAN said, he entertained a very strong feeling as to the impolicy of issuing shares at a discount. The sum thus sacrificed could never be recovered to the undertaking, and they would always be burdened with the payment of dividend upon money of which they had never had the benefit. It was to obviate the necessity of issuing the shares at a discount, that he and his colleagues had made themselves personally responsible to the amount of 175,000*l.* for the undertaking.

Mr. BARCLAY inquired at what discount the shares now in the Company's possession stood.

The CHAIRMAN said 3*l.* had been paid upon some of them; 5*l.*, and even 15*l.* upon others. The total amount received on these shares previous to forfeiture was, in round numbers, 26,000*l.*

Mr. JOHN WILLIAMS strongly urged the propriety of postponing any farther issue until the results of the summer's working of the line and of its extension were ascertained, for he was satisfied that it would not then be necessary to make any sacrifice. The London and Birmingham Company had exerted themselves in every way to raise money without issuing farther shares until the line had been fully in operation, and he had little doubt that the step they had now taken of capitalizing their mortgage debt would, if it had been taken a few years ago, have proved their ruin. (Hear, hear.)

Mr. MANGLES was disposed to give every credit to the Directors for the exercise of a sound discretion, but he doubted whether a rapid succession of calls was not likely to outweigh the advantage to be anticipated from an early completion of the undertaking.

The CHAIRMAN said the Directors had made only three calls during the last year, in conformity with their pledge: but it was quite clear that the railway would not be productive till it was carried forward, and this could not be done without making further calls. The more rapidly these calls were made and responded to, the more rapidly would the works be completed, and consequently the sooner would the proprietors reap a return from their capital. (Hear, hear.)

Mr. NASH spoke in favour of the completion of the line at the earliest possible period, as the staff required to be kept up upon the part at present opened would then be spread over a larger surface, and therefore be less expensive as compared with the gross receipts.

Mr. SMALE inquired whether a further sum of 35*l.* per share would carry them to Bishop's Stortford.

The CHAIRMAN did not think it would; but by the assistance of their bankers, and by getting some portion of the materials, &c., upon credit, the Directors hoped that no further call than to the extent of 35*l.* per share would be required previous to the opening of the line throughout.

Mr. KENNARD (a Director) observed that when that amount was paid up, the Directors would have the power of borrowing money on mortgage.

A PROPRIETOR inquired whether the whole of the 35*l.* would be called for during the present year.

The CHAIRMAN said it must be called for, or the line could not be opened at the time expected.

The discussion as to the issue of further shares was here renewed, and carried on to some length.

Mr. BARCLAY said, the Company would be in no worse position than other Companies, if they issued the shares at a discount. It might be very well to reserve the shares if the present proprietary could complete the undertaking, but he very much doubted whether they could.

The CHAIRMAN said, the Directors were anxious that this Company should in some respects form an exception to Companies generally. Did the honourable proprietor suppose that even 1,000 shares could be issued at the present time at 20 per cent. discount?

Mr. BARCLAY thought they might.

The CHAIRMAN much doubted the possibility of doing so.

Mr. BARCLAY equally doubted whether they could get the whole 100*l.* per share from the present proprietary.

Digitized by Google

The CHAIRMAN did not think the whole of it would be wanted, as they would be enabled to borrow a portion of the capital on mortgage.

Mr. ROSKELL.—And in anticipation of calls.

Mr. SMALE was glad to find that at present the traffic paid its expenses.

The CHAIRMAN said, it did so, as nearly as possible.

Mr. SMALE was satisfied they had not yet secured half the traffic that would ultimately come upon the line. The omnibuses and stage-coaches were as crowded as ever.

The CHAIRMAN said, there could be no doubt that the unfortunate position in which a neighbouring road was placed had operated greatly to their prejudice. (Hear, hear, hear.)

Mr. JOHN WILLIAMS was convinced that when the traffic was fully developed, 1,200*l.* a week would be taken on the line from Stratford to Broxbourne.

Mr. VIZARD (late solicitor to the Company) thought it was useless to argue about the issue of farther shares, for when it went forth to the public that 35*l.* per share would be called for during the present year, the stock would be utterly unsaleable. (Hear, hear.)

Mr. BAGSHAW thought it proper to add that this 35*l.* included the call of 10*l.* payable in the course of a few days.

Mr. VIZARD was sorry that the calls would be so heavy, as he himself would have to pay 3000*l.* or 4000*l.* during the year.

The CHAIRMAN said, *he* would have to pay 12,000*l.* or 15,000*l.* (Hear, hear.)

Mr. VIZARD begged to dissent most strongly from that part of the Report which intimated that this Company would be concerned in branch lines or in the extension of the present line. He protested against being dragged into any railway to Ware or Cambridge, or any where else, except as laid down in the Company's Act. (Hear, hear.) This was not the proper time for discussing the matter, but he mentioned it now lest he should be considered as sanctioning in any way any other scheme than that in which they were now embarked.

The CHAIRMAN reminded the hon. proprietor that it was expressly stated in the Report, that application was to be made to Parliament "with your consent."

Mr. VIZARD said, they never should have *his* consent.

The CHAIRMAN said, it was absurd to suppose that the Directors could go to Parliament without the sanction of the proprietors.

Mr. MASTERMAN, jun., said there was reason to believe, that out of certain judicious savings made by the Directors—of which he could speak with greater confidence, seeing that he had no part in them himself—the main line and the branch to Ware could be completed within the sum originally considered necessary for the main line alone. (Hear, hear.)

Mr. VIZARD said, that was not the point. If any saving could be effected, he should be glad to have the benefit of it.

Mr. SMALE thought the construction of a branch to Ware was of the utmost importance to the Company. (Hear, hear.) The honourable proprietor then suggested that a station should be established at Marsh-lane, Tottenham, as the stations in that quarter were very inconvenient. He spoke from an intimate acquaintance with the locality.

Another gentleman spoke to the same effect, and it was understood that the suggestion would be taken into consideration, the Directors inviting the practical suggestions of gentlemen acquainted with the district.

The CHAIRMAN said, nothing could have been more injudicious than the original laying out of the line at so great a distance from the several seats of population. There was the utmost difficulty in getting to the line.

Mr. BARCLAY enquired whether any beneficial arrangement had been made with the Eastern Counties' Company for a reduction of the amount paid to that Company.

The CHAIRMAN said they were now paying 5,000*l.*. instead of 7,000*l.*, a year, as originally agreed upon, for the accommodation at the terminus at Shoreditch. They hoped, however, to be able to secure a reduction of the tollage on the short traffic, if the Eastern Counties' Company did not stand in their own light.

Mr. NASH inquired whether the amount which the payment to the Eastern Counties' Company represented, was less than would have been required to secure an independent entrance into London.

The CHAIRMAN said there could be no doubt it was much less.

Mr. NASH doubted whether the advantage thus secured compensated for the stigma attached to them from their connection with the Eastern Counties' Company.

The CHAIRMAN said he could not pronounce any opinion upon that point; but be it as it might, the present state of affairs could not have been contemplated when the arrangement between the two Companies was entered into.

A PROPRIETOR said the public confounded the two Companies together, and he was sure that the Northern and Eastern line suffered greatly from this cause. (Hear, hear.)

The CHAIRMAN said there could be no doubt whatever of it. (Hear, hear.)

Mr. KENNARD said they knew of many instances of the kind. (Hear, hear, hear.)

Mr. PEMBERTON then adverted to the survey of the line between Bishop's Stortford and Cambridge, and found fault with the direction in which it was intended to be taken near to Cambridge. He stated that it interfered with his own property, and should have his strenuous opposition. It would also be opposed by the authorities of the University, as interfering with a piece of land intended for a botanic garden.

Mr. BIDDER (the Company's Engineer), replied, and stated his reasons for selecting the particular route which Mr. Pemberton condemned. The main point was the convenience of the town of Cambridge.

Mr. WEDGWOOD referred to a statement made by the Chairman at a meeting held last year to the effect that he was ready to take upon himself the shares of any proprietor at *par*, to be paid for at the end of two years. The honourable proprietor inquired whether the Chairman's opinion of the line was still as favourable as at the time alluded to.

The CHAIRMAN said, his opinion remained unchanged.

Mr. WEDGWOOD wished to know, then, if he were disposed to take a few shares on the terms referred to. (A laugh.)

The CHAIRMAN said, he already held a sufficient number of shares, and had incurred a sufficient amount of responsibility, to prove that he took a deep interest in the undertaking. (Hear, hear, hear.) He had never diminished his holding, but it was not likely that he would give 40*l.* for that which he could purchase in the market for 20*l.* (Hear, hear, hear,)

After some farther conversation, the Report was agreed to *nem. con.*, Mr. Vizard protesting against sanctioning any of the items in the accounts which had reference to any other lines than their own.

The CHAIRMAN then brought forward a resolution confirming the forfeiture previously declared by the Directors, of 52 shares, upon which certain calls were in arrear.

It was explained that 25*l.* had been paid up on every one of these shares, and that there were 25 other shares in the same position up to that morning, but the arrears had since been paid.

Mr. MANGLES and other gentlemen, hoped that time would be allowed to any of the defaulters who might request it, as they had paid up so much upon their shares. He should be sorry that the Company should benefit by the distress of individuals.

The CHAIRMAN expressed his concurrence in this view of the case; but explained that 45 of the shares were in the hands of the executors of a deceased proprietor, who probably could not dispose of them satisfactorily in any other way.

Mr. RHODES seconded the motion, and it was carried unanimously.

A resolution was then passed empowering the Directors to dispose of these shares in any manner they might deem best. A short discussion took place as to the policy of selling them by auction or by tender, but ultimately it was unanimously agreed that the matter should be left wholly to the Directors.

Mr. JOHN WILLIAMS then referred to the position in which he is placed with respect to the holding of certain shares. It will probably be in the recollection of our readers that some time back Mr. Williams held a very large number of shares in this Company, the greater part of which he had purchased at the request of certain gentlemen then connected with the Management, with a view, as they thought, to benefit the undertaking, and not for individual purposes. Circumstances rendered Mr. Williams unable to meet the calls upon these shares, and no fewer of them than 1,335 (upon which, as Mr. Williams stated, the greater portion of the 26,000*l.* above mentioned had been paid) were absolutely forfeited. In consideration, however, of services rendered to the Company by Mr. Williams, it was unanimously resolved at a general meeting of proprietors held in April last* that Mr. Williams should be permitted to take up at *par* 562 shares, which also were liable to forfeiture, and that the amount previously paid in respect of these 562 shares should be allowed for. Mr. Williams was to be at liberty to take up these shares at any time within three months after the opening of the line to Broxbourne, by which date it was expected that the Company's stock would not be at a discount. Mr. Williams now came forward and begged that under the circumstances of a disadvantageous opening of the line, and taking into account other temporary impediments to its success, he might be allowed six months longer to take up the 562 shares upon the terms already specified, expressing himself very sanguine as to the ultimate success of the undertaking.

The Directors had determined to leave the matter wholly with the meeting, giving no opinion or recommendation either way.

Mr. VIZARD moved that the indulgence requested by Mr. Williams be granted.

The feeling of the meeting was manifestly in favour of this course, for the motion was seconded by several gentlemen simultaneously, and on being put was carried unanimously.

Mr. WILLIAMS made a suitable acknowledgement, expressing a hope that he should hereafter be enabled to evince his gratitude by deeds, as well as in words.

Mr. PEMBERTON then brought forward a resolution to the effect, that the half-yearly meetings be held on certain fixed days. He thought this course would prevent inconvenience to proprietors at a distance, who sometimes did not receive the usual notices nor see the advertisements in time.

The Directors offered no objection to the motion, which indeed was seconded by one of them (Mr. Masterman, jun.,) and, although we believe it was not formally put to the meeting, it was understood, after some conversation, that the meetings shall hereafter be held on the *second Thursday* in February and August of each year.

Mr. WEDGWOOD then moved a vote of thanks to the Chairman and Directors for their able and gratuitous services.

Mr. SMALE seconded the motion.

Mr. VIZARD said, there could be but one opinion as to the conduct of the Directors. (Hear, hear.)

Mr. MANGLES was anxious that Messrs. Roskell and Moser should be remunerated for their valuable services. (Hear, hear, hear.)

The CHAIRMAN said, he himself had intended to bring forward a motion to this effect, but had de-

* See *Railway Times* of April 4, 1840.

Digitized by Google

ferred it at the request of these gentlemen themselves. (Hear, hear.)

The motion for a vote of thanks was then passed unanimously.

The CHAIRMAN in acknowledging it, assured the meeting that the Directors would continue to carry out the undertaking without any sinister or secret objects, or any interests separate from those of the proprietors at large. (Applause.)

The meeting, which was not numerously attended, then broke up.

STOCKTON AND HARTLEPOOL RAILWAY—OPENING.

(Abridged from the *Northern Times*, February 13).

ON Tuesday last, the line of railway from Stockton to Hartlepool was formally opened by the Directors of the Company. About 12 o'clock, the Directors and a number of other gentlemen residing in the neighbourhood, assembled at the railway station, at Stockton, which is situated at the east side of the road leading from Stockton to Norton, adjoining the Clarence Railway. A number of persons were in attendance, who, during the preparations, manifested their feeling to the concern by repeated cheers.

About half-past twelve, the gentlemen took their seats in two trains, each consisting of a very beautiful new locomotive of 24-horse power, built by Mr. Peter Rothwell & Co., engine-builders, Bolton-le-Moors, Lancashire, together with one elegant first-class, and two neat second-class carriages, built by Mr. C. Burnop, coach-maker, Newcastle.

On starting, they were much cheered. They proceeded along the Clarence line, and by the Norton Junction, until they arrived at the Billingham Junction, where the new line leading from Hartlepool commences, and which is about three miles distance from Stockton, and about nine miles from Hartlepool, the distance, between the two towns, by the railway, being about twelve miles.

On various parts of the line the train stopped, and the gentlemen inspected the works, particularly the viaduct, which is thrown across a piece of marshy ground called Greatham Bottoms. The viaduct is about half a mile in length, and contains 92 arches; they also inspected the several bridges and other erections, with which they appeared to be very well satisfied. At Greatham, the party were received with immense cheers. A band of music and a flying colour was in attendance, which was taken into one of the carriages, and accompanied the party the remainder of their journey, playing enlivening airs. On various other parts of the line as the trains passed, they were saluted with cheers, and various colours were hoisted on various eminences. A little before two o'clock, the trains arrived at the Middleton station, at the south side of Hartlepool, which is the present terminus. They were received by a number of friends belonging to Hartlepool, who saluted them with cheers. The party proceeded to the head inn, kept by Mr. Sotheran, in Hartlepool, where they partook of a substantial repast. About an hour afterwards they met at the Middleton station, where an immense number of the inhabitants of Hartlepool and its vicinity were assembled. The band continued playing enlivening tunes; and the people generally, joined at intervals in loud cheers.

Soon after three o'clock the party again took their seats, and the trains proceeded amidst loud cheers, and the music of the band. At Greatham the trains stopped and the band alighted, and struck up the air of "God Save the Queen," after which three hearty cheers were given in which all present seemed to join. The trains again proceeded, and in passing were loudly cheered on various parts of the line. About four o'clock, they arrived safe at the Stockton station from where they started, and where they were again saluted with the cheers of a numerous assembly.

The party having alighted, several gentlemen congratulated them on their safe return, no accident whatever having occurred. Soon afterwards the company dispersed. The day was favourable for the season, being fair but very cold. The ride on this railway is one of the most pleasant as regards scenery and prospect that we know of in this part of the country. On leaving Stockton, after passing the junctions, a beautiful view is presented of the villages of Billingham, Cowpen, Wolsingham, Middlesbro', and Seaton Carew, and a distant view of the Cleveland Hills, and of a great part of the river Tees, and the towns of Redcar and Coatham. The country is particularly open, there being scarcely an intervening hill for many miles to obstruct the prospect. On proceeding north, a fine view of the villages of old and new Stranton on the west, and of the mouth of the river Tees and of the open sea on the east, is presented. There are very few embankments on the line, so that no danger of the carriages falling over can be apprehended; and being a complete level, having neither ascent nor descent, its claims as a passenger line, both on account of safety and pleasure, are very superior. The undertaking altogether reflects the highest degree of credit on the public-spirited Company who are engaged therein, and also on the talented engineer and the skilful architects and their assistants who have been employed in executing the work. As a speculative project, we cannot doubt of its success, and whilst it is conducted on fair and honourable terms, it shall receive our utmost support.

We rejoice on the broad principle of general improvement at the prospect which this undertaking offers of conferring incalculable benefits on the rapidly flourishing towns and ports of Stockton and Hartlepool, and the surrounding neighbourhood—the great facilities which it affords to the transit of goods and passengers, and also to the quantities of superior coal which that immense coal-field is capable of producing, which cannot fail to contribute much to the trade and commerce, and general prosperity of those towns. If their inhabitants, who appear to be awake to their own interests, only act in conjunction, their success is certain.

In the evening the party and many of their friends, amounting to 76 in number, dined at the Vane Arms Inn, the room was elegantly decorated for the occasion.

H. VANSITTART, Esq., of Kirkleatham, presided with great ability. He was supported on the right by B. Salvin, Esq., and on the left by G. H. Wilkinson, Esq. The vice-chair was very ably filled by R. Ranson, Esq. Amongst the gentlemen present we observed T. S. Stokes, John Moyle, John Stagg, —— Thompson, Thomas Ayres, Jonathan Langley, Robert Craggs, Joshua Byres, Esqrs.

Among other toasts which were duly honoured,

G. H. WILKINSON, Esq., rose to propose the health of the President of the Railway Company, and observed that, whenever he saw a gentleman withdrawing himself from the pleasures of life, and devoting his time and talents to the promotion of works of public good; such as a railway undertaking, which was calculated to confer great benefits on the neighbourhood of its locality, and afford much employment to the working classes, it was a sign that such a person took a great interest in the happiness and prosperity of his countrymen. Perhaps there was only one instance that he could mention in which their worthy president had been equalled in this respect, viz., that of Lord Wharncliffe, who was president of a Railway Company in the neighbourhood of Sheffield, and who had devoted much of his attention to the interests of the Company. Their Chairman, however, was not excelled by any in the zealous attention he had paid to the office which he so ably filled. He had not only brought the work nearly to completion; but on that day he had accompanied them to open the line, and had brought them back with whole skins. He considered the president (the present chairman) deserving their most ardent respect and admiration, and he hoped the Company would join with him in drinking his health in a bumper.

The CHAIRMAN briefly acknowledged the distinguished compliment which had been paid to him, but for which he feared he was unworthy. He was glad to see that his endeavours to promote the undertaking were approved of by such a number of discerning friends, and he hoped that the railway would prove a source of much good to the towns of Stockton and Hartlepool, and the neighbourhood.

— STAG, Esq., requested that the Company would join him in a bumper to the Clarence Railway. He was concerned to say that that undertaking had lately been under a cloud of discouragement; but he hoped for an improvement, for which there was good grounds. That railway had contributed much towards opening out one of the largest coal-fields in the north of England, and in connection with other railways in the neighbourhood, he had no doubt but it would yet prove highly beneficial to all concerned.

Drunk with cheers.

F. STOKES, Esq., regretted that the duty of returning thanks for the last toast had not fallen into more able hands than his. He believed that the Chairman had had so much to do that day that he was becoming fatigued, or he (the Chairman) could have done more justice to the toast than he (Mr. S.), as he was better acquainted with all the particulars of its history. He (Mr. S.) was aware that the Clarence Railway had opened out one of the largest coal fields in the county; for, according to the judgment of some gentlemen who knew more of the geology of the neighbourhood than he, it was considered that not less than ten or twelve thousand acres might be opened out in fields of coal; and if such was the capabilities of their avenues of trade, the port of Tees would not be able to supply the demand for want of sufficient accommodation for the shipping. He did not therefore consider that the ports of Stockton and Hartlepool were rivals to each other in trade. Their interests required that they should be united, the same as the ports of Newcastle and Sunderland, and this he hoped was now effected by the completion of the undertaking which they were then met to celebrate. He concluded by returning thanks for the last toast, on behalf of the Clarence Railway Directors.

The CHAIRMAN proposed the Hartlepool Dock Company, and success to their undertaking.

G. WILKINSON, Esq., returned thanks.

During the remainder of the evening several other toasts were drunk, amongst which were the healths of the Engineer, the Solicitor, and several other gentlemen connected with the Company's business, which were severally acknowledged by the gentlemen respectively concerned, in neat and appropriate speeches.

A number of the workmen were entertained with a substantial dinner on the same evening.

SWANSEA AND LOUGHOR RAILWAY AND DOCK.

A MEETING of the Provisional Committee, and other parties feeling an interest in this undertaking, was held at the Town Hall, Swansea, on Monday, the 8th inst. The Mayor having taken the Chair, Mr. Vivian stated, that the time having now arrived when the Parliamentary standing orders must at once be complied with, in respect of subscribing to the extent of two-thirds of the estimates, signing the subscription contract, &c., or the project abandoned for the present session, the meeting had been called for the purpose of explaining to the public at large the course which the Provisional Committee, had taken since their appointment at the public meeting on the 25th of January, and the present position of affairs with regard to this undertaking. The Committee, in compliance with the resolutions adopted at the public meeting, had met and prepared a prospectus, which had been printed and extensively circulated; but he regretted to have to state, that very few subscriptions had been entered into. He believed that influential parties were hanging back, each waiting to see what the other did; but until the leading parties had put down their names, it would be unless to expect minor subscribers to come forward. There was still time, however, for a full compliance with the standing orders, provided the necessary amount of subscriptions could be raised. In accordance with his pledge, the professional part was fully prepared, and the subscriptions could be raised. In accordance with his pledge, the professional part was fully prepared, and the subscription contract engrossed, and ready for signature. He should much regret if, after having been carried to so advanced a stage, the project fell to the ground;

Digitized by Google

but if it was to be so, he could not help it—he had done his part. A lengthened discussion then ensued in which Colonel Cameron, Sir John Morris, Bart., Mr. Dillwyn, Mr. Stroud, Mr. Michael Williams, Mr. W. H. Smith, and others, took part, and various propositions were made with the view of carrying the whole or part of the projected measure this session! and there was also a conversation with respect to a better line through the Dunvant, which Sir John Morris said had been suggested to him, but which was clearly proved to be considerably longer. Finally, a resolution to the effect that the dock and branches of the main line of railway should be abandoned for the present session, and that a subscription list for the main line of a railway only should be opened, was proposed and seconded, and having been put to the meeting was carried; but we believe that this resolution led to no result. Thanks were then voted to the Mayor, and the meeting separated. We presume, therefore, that this project may be considered as at an end for the present, which is much to be regretted, as it could not have failed to have been of considerable advantage to the town and neighbourhood of Swansea.—*Cambrian*, Feb. 12.

RAILWAY ADJUDICATION.

CURTIS v. THE LONDON AND BLACKWALL RAILWAY COMPANY.

Vice-Chancellor's Court, Feb. 16.—Mr. Knight Bruce said in this case he was instructed to move on behalf of the plaintiff, William Joseph Curtis, that the defendants, the London and Blackwall Railway Company, be restrained from making use of plaintiff's invention. This case had been pending since August last, the delay not being attributable to the plaintiff, but arising from circumstances which it was not necessary to detail. The Company being, he believed, respectable and solvent, the only point which it was now requisite to consider was, as to what was best to be done between the present time and the date of trying the right—a proceeding to which he supposed the defendants would have recourse. If so, he hoped that arrangements would be made for deciding the matter speedily, and in that case very little difficulty as to arrangements in the interval would arise. The patent upon which plaintiff's claim rested was dated the 31st August, 1838, and had reference to several contrivances, all more or less applicable to railways. The particular invention, however, which was now the subject of dispute, was for facilitating the working of railways where rope traction was used—not where the rope was endless, as on the upper portion of the London and Birmingham line, but where, as on the Blackwall, a tail rope was applied. The object of the invention was to attach a train of carriages to the rope, or to detach them from it, by means of machinery explained in the plaintiff's specification. The principal utility of the plaintiff's invention was its power of acting while the rope was in motion. The London and Blackwall Company, the defendants, stated that they had not applied any contrivance to the rope while in motion, and their witnesses said that such power could not be so applied without creating danger. That, however, was not material; for if the Company applied the plaintiff's invention to the rope while *not* in motion, they were to all intents and purposes chargeable with having infringed upon his right. An invention like this was, of necessity, applicable to only a few railways, as not many of them were in any way worked by rope; he believed the Blackwall Railway was the principal line at present so worked. As soon as the plaintiff ascertained that the Company had availed themselves of his invention, he gave them notice of his intention to proceed against them, unless some arrangement were entered into—although, as already explained, the matter has been deferred to the present time. As he had stated, the patent under which the right was claimed had reference to various kinds of improved machinery, for travelling and transmission by railways, some of the contrivances being, moreover, applicable to other purposes, but that part under which alone the plaintiff claimed in the present instance was marked No. 12. in the specification of the patent. The learned gentleman here read a description of Mr. Curtis's apparatus, drawings of which were placed in the hands of His Honour the Vice Chancellor.*

Models of the plaintiff's apparatus as well as of that used upon the Blackwall Railway, and of various parts of each, were likewise exhibited in Court, and Mr. Curtis, both at this and a subsequent stage of the proceedings, explained to his Honour their mode of action.

Mr. Knight Bruce resumed, and read from an affidavit made by plaintiff to the effect that the difference between his invention and that which had been in use on the Blackwall Railway since its opening in July last was only colourable. He then alluded to a correspondence which had passed between the parties from which it appeared that upon plaintiff's solicitors making a formal claim upon the Company, the solicitors of the latter had written to say that Mr. Bidder, the assistant Engineer, of the Company, did not consider the contrivance in use upon the Blackwall Railway to be an infringement upon plaintiff's patent, but that upon the return of Mr. Stephenson, the Engineer-in-Chief, who was then absent from town, an inquiry should be set on foot, and if it were found to be really an infringement, the Company would take out a license, as was desired, for the use of plaintiff's invention. The affidavit further stated that previous to the completion of the Blackwall Railway, plaintiff had shown to Mr. Stephenson a drawing of his invention, and that Mr. Stephenson had then expressed an opinion that it would not answer, and that other and better means of attaching and detaching the rope could be rendered available. The affidavit then went on to describe the points of similarity and difference between the two contrivances, the plaintiff maintaining that they were substantially the same, and expressing a belief that the apparatus in use on the Blackwall Railway had been constructed from the drawings in his specification, or from copies of them covertly obtained, inasmuch as the difference was only colourable.

Models of different portions of the apparatus were here handed to his Honour, who examined them and had them explained by Mr. Curtis.

His Honour inquired whether plaintiff's contrivance was at present in use upon any railway.

Mr. Knight Bruce said it was not, except, as contended by plaintiff, upon the Blackwall line. Its application was of necessity very limited; in fact, he believed that the Blackwall was the only railway in the kingdom to which it was applicable, as these undertakings were now worked. The learned gentleman then referred to, and read extracts from, affidavits made by Mr. Brunton, Mr. Hawkins, and Mr. Jones, Civil Engineers, in which these gentlemen severally gave it as their opinion, that the two inventions were substantially the same. Mr. Jones added, that in August last he had seen upon defendants' railway, machines with certain variations and additions, which rendered them a still more palpable infringement of plaintiff's patent. Another affidavit by plaintiff himself, confirmatory of this assertion, was subsequently referred to. An affidavit from Mr. Gill, another engineer, to the same effect as the others, was also noticed. The learned gentleman proceeded to state that the defendants rested their answer upon affidavits, stating that the idea of using such an apparatus had occurred to their engineers *anterior* to the date of plaintiff's patent, but it was not, he said, pretended that any apparatus of the kind had been in use prior to the patent, nor that the idea was not original on the part of plaintiff. If two persons hit upon the same idea at the same time, and one of them succeeded in securing a patent to carry it out before the other, such patent was valid, notwithstanding the simultaneous discovery of the principle by the other party.

His Honour said, he supposed no claim was made to originality for catching up a rope by a hook. The machinery by which this was effected could alone be the subject of a patent. Now it seemed to him, that in the two contrivances which he had examined the machinery was totally dissimilar. The plaintiff fixed the rope by a windlass and detached it by means of a lever, whereas the defendants fixed it by a lever and detached it by a ratchet, which in his opinion constituted an essential difference.

Mr. Knight Bruce said, it was immaterial in what mode power was obtained; the mode of applying that power constituted the basis of the claim. The plaintiff claimed the taking up and jamming in of the rope, and whether this was done by a windlass or a lever was not of any consequence, just as it would be no answer to a charge of infringing upon an ingenious invention, worked by air or water, to prove that the pirated contrivance was worked by steam.

His Honour could not see that there was any originality or invention in taking up a rope by a hook, which he supposed had been done ever since hooks and ropes had existence; and as to identity of inventions, unless it could be proved that a windlass was a lever and a lever a ratchet, he thought the case could not be made out.

Mr. Knight Bruce still contended that the mode by which power was gained was immaterial. There was nothing original either in a windlass or lever.

His Honour said it seemed to him that the same end was attained in the two cases by different machines.

Mr. Jacobs (for the defendants) said, it was not the same end, for the plaintiff professed to attach the rope while in a state of motion, whereas defendants maintained that this could not be done without incurring great risk and danger.

Mr. Knight Bruce said, if his Honour were of that opinion, the better way would be to allow the plaintiff to bring his action. Here were engineers of eminence who might be considered as better able to judge of the merits of the case than the Court itself, swearing that the inventions were in substance the same. His Honour, therefore, would probably order the issue to be tried.

His Honour thought this would be the most satisfactory course.

Mr. Jacobs contended that the two contrivances were essentially different, inasmuch as the one contemplated the securing of the rope in a state of motion, the other in a state of rest, and consequently the machinery in the one case was so contrived as to reach close to the ground and to catch up the rope, whereas in the other, the rope was put upon the hook by hand.

It was then arranged that the matter should go before a jury with the least possible delay, Mr. Knight Bruce stating that his client was quite willing it should be thus disposed of.

Destructive Accident on the Croydon Railway.—On Thursday night (week) as the last train to London, heavily laden with passengers, was returning from the county election, held at Croydon, when near the Dartmouth Arms Station, Sydenham, it came in violent collision with a number of waggons which had been left by an engine that was proceeding to the London station. The concussion was so great that it knocked the waggons all to pieces, and most seriously shattered the engine and tender. The engineer and stoker miraculously escaped with their lives, and the damage done to the carriages was to a most extensive amount. Happily no lives were lost. The loss sustained by this deplorable event is confidently stated to exceed 500*l*.—*Times*.

[We find on inquiry that the above account is greatly exaggerated. No damage was done to the engine, tender, or carriages, with the exception of the pump which was broken by the engine being thrown off the rails. No personal injury was sustained. Some of the waggons were much shattered.—Ed. R. T.]

Railway to Brecon from Merthyr.—We understand that it is in contemplation to take measures for forming a railway from hence to Brecon.—*Merthyr Guardian*.

* In the *Railway Times* of July 11, 1840, a similar description and drawing will be found.

COMMUNICATING APPARATUS FOR RAILWAY TRAINS.

In our notice last week of the London and Birmingham railway meeting, reference was incidentally made to an apparatus for enabling the guard of a railway train to communicate with the driver by blowing a whistle connected with the engine, and on that occasion it was stated that the contrivance had been seen by the writer in successful operation upon the Birmingham Railway. We have since had an opportunity of more closely inspecting the apparatus, and have no hesitation in saying, that it seems well calculated to effect the important object which has hitherto been a desideratum.

The inventor and patentee is Mr. William Pettitt, of the London Works, near Birmingham, and for some years, we believe, an officer of the London and Birmingham Railway Company. The contrivance consists of a wrought iron or copper tube fixed under the centre of each carriage, and passing under the tender to the engine. In each of these tubes is inserted a metallic rope, every separate division being connected by ropes of less strength, with catch-hooks at both ends, so contrived that they may be attached or detached in a very few seconds. The one end of the rope is connected with a whistle upon the engine, and the other, by means of certain simple machinery which it is not necessary to describe, passes up to the seat of the principal guard on the top of any particular carriage, and is so arranged that by the turning of a winch the steam is let in upon the whistle already referred to, the sound of which can only be stopped by an act of the driver. The sound of the whistle differs, of course, from that in ordinary use.

The advantages to be expected from the efficient working of an apparatus of this kind are too obvious to require enumeration. Hitherto there have been no certain means of communication between the guards and the persons upon the engine. A passenger might be taken suddenly and dangerously ill —an accident might happen to a wheel or an axle, or other part of the machinery—a fire might break out in a luggage waggon—even a portion of a train (as has happened in more instances than one) might be altogether left behind, and although the guard were fully aware of what had transpired, he has no means of conveying information to the driver, or of signalling the stoppage of the train. All this will be remedied by the ingenious contrivance of Mr. Pettitt. Nor is this all. The elevated position of the guard will enable him to descry obstructions upon the line, or any signal of danger, that might escape the notice of the driver, and the apparatus will put it in his power to give timely warning, thus providing against a defect which has induced many persons to recommend the appointment of a "Captain" to each train. The code of instructions proposed by Mr. Pettitt is, like the apparatus itself, exceedingly simple. The driver upon hearing what we may call the "*guard's whistle*," is to reverse the position of his engine—that is, if he be then moving he is to stop; if stopping, he is to go forward. A variety of other signals may, of course, be easily adapted to he use of the apparatus at the discretion of the several Managements.

It is no slight recommendation of Mr. Pettitt's apparatus that it is scarcely at all liable to accidental derangement, and is moreover easily repaired, and that its first cost is exceedingly small. We understand that an engine, tender and carriage can be completely fitted with the apparatus at a cost of 20*l*. The only additional expense, therefore, in a train consisting of twenty carriages, (for the apparatus acts equally well from the top of the twentieth or fortieth carriage as of the first,) would be the small cost of the tube, &c., under each carriage of the train beyond the first.

The apparatus as now in frequent use upon one of the London and Birmingham trains has secured the approbation of the Directors of that Company, who are at present, we believe, engaged in negociations with Mr. Pettitt for its general introduction upon the line.

CARRIERS ON RAILWAYS—THE GRAND JUNCTION COMPANY.

To the Editor of the Railway Times.

Sir,—I had my attention called to that part of your paper of Saturday last, which is headed "The Carriers case considered in reference to Railways, from a correspondent."

As none but Messrs. Pickford and their legal advisers have had access to some of the documents which are referred to in this paper, I cannot but conclude that it comes from them. In fairness I think they should have published the whole of my affidavit instead of a detached part of it. I say this, because in that affidavit are stated the reasons which caused the change of opinion on my part which I am charged with in the paper I am now noticing.

The whole of my affidavit accompanies this letter, and I appeal to your impartiality for its insertion in your next Saturday's paper; it will be for your readers then to judge whether I had sufficient reasons for my admitted change of opinion.

The evidence I gave before Parliament was given partly before and partly after I had changed my opinion on the merits of the carriers' question, and the whole some months before Messrs. Chaplin and Horne had finally concluded with our Executive. My idea was that they should be the carriers at least over the London and Birmingham railway, but further consideration led, in the actual conclusion of the arrangement, to their being only our agents.

Desirous to confine myself to that part of the carriers' case as published by you which bears upon myself individually, I abstain from any notice of the rest of the paper, which is made up of general charges against the Directors of the Grand Junction Railway. As far as we have gone, it does not appear that the Directors are decidedly in the wrong, or that the carriers are clearly right; for upon their own showing (as the fact is) various tribunals have decided against them.

First, the Commons on the Grand Junction Amalgamation Bill with the Chester and Crewe.

Next, the Lords on the same Bill.

Next, the General Committee of the Commons on Railways.

Since then Messrs. Pickford and Co. have brought us before the Court of Queen's Bench, by applying for a mandamus against us, wherein again they failed; and lastly, they brought an action against us, which they have discontinued, paying us our costs.

Personally I regret the dispute with the carriers, of which Messrs. Pickford are fully aware; but I feel that we have the interests both of the public and of railways with us in our endeavour to preserve a *direct* communication between the public and the railway Companies, who from the nature of things as they now exist, must be the real carriers.

I am, Sir, your very obedient servant,

JOHN MOSS.

Liverpool, 17th February, 1841.

P.S.—If Messrs. Pickford have no objection, the Grand Junction Board will publish in your paper the whole of the affidavits, *on both sides*, in the late mandamus affair at their own expense.*

The following is the affidavit above referred to:—

IN THE QUEEN'S BENCH.

John Moss, of Otterspool, near Liverpool, in the county of Lancaster, banker, maketh oath and saith—

That he hath read the respective affidavits of Joseph Baxendale and John Rubens Bulmer upon which (together with other affidavits) the rule *nisi* hereunto annexed, appears to have been granted.

That he this deponent is, and ever since the incorporation of the said Company has been, the Chairman of the Directors thereof, and hath taken a very active part in the general conduct and controul of the undertaking, and especially as regards the arrangements for the transmission of goods and merchandise along the railway.

That the opening of the said railway for the carriage of goods took place in or about the month of January, 1838, and mainly in consequence of communications which this deponent had with the said Joseph Baxendale and others, of the then common carriers along the canals and turnpike roads, this deponent had then a very strong impression and opinion that the most advisable mode with reference as well to the interests of the Railway Company as of the public for using the Railway for the conveyance of goods would be, to offer inducements to the said Joseph Baxendale and his co-partners, and other known common carriers, to use the said railway as such carriers; and that accordingly this deponent strongly recommended his co-Directors to adopt that plan, and the same was accordingly soon after adopted with the said Joseph Baxendale and his co-partners, with Messrs. Morris, Herbert and Company, with Messrs. Robins and Company, and Messrs. Kenworthy and Company, all of whom then used and carried on business as common carriers, and with all of whom contracts and agreements

* On receiving this letter from Mr. Moss, we immediately communicated with Messrs. Pickford on this subject, and received from them the following reply.

To the Editor of the Railway Times.

Sir,—In answer to your letter just received, in which you state from Mr. Moss that, "If Messrs. Pickford, have no objection, the Grand Junction Board will publish in your paper the whole of the affidavits on both sides in the late *Mandamus* affair at their own expense," we have only to reply, that we have no possible objection, and will give you and the Grand Junction Company every facility in our power for that purpose.

We believe that the affidavits on both sides having been filed, copies of them may be obtained by any person who chooses to apply at the proper office. But if it will be any convenience to you, we will obtain them from our solicitors, who have copies of those sworn on our side, and we believe office-copies of the others also.

We have one observation to make on the word "*late*." The Grand Junction Company were successful last Term in throwing us over upon our application for the mandamus on a *preliminary* and *formal* objection; which, as time is of great importance to private individuals who are compelled to maintain a contest with a powerful public body, was doubtless a great advantage to them. They have since been so fortunate as to disappoint our expectation of bringing to trial at the present sittings in London an action we had commenced against them on a different ground, and which we have in consequence been advised to discontinue. We do not wish that they should encourage in themselves, or create in others, the impression that we have either withdrawn from, or been defeated in, our assertion of what we conceive to be our legal rights; or that we shall be remiss in bringing them as quickly as possible to issue.

We have only to add, that, although we should not have been the parties to *commence* an appeal to the public through the press, while matters were still pending in the courts of law,—we are both willing and desirous that the utmost publicity should be given to the matters in dispute between us, and the public mind fully informed upon the real bearing, and thoroughly awakened to the national importance of the subject.

We are, Sir, &c.

PICKFORD AND CO.

City Basin, 19th Feb. 1841.

Digitized by Google

were made and entered into by the said Company, securing to the said respective parties allowances and advantages, in consideration of their performing services and assuming risks, and upon the faith of representations made by them to the said Grand Junction Railway Company.

That these several contracts and agreements were made and entered into prior to the Act of Parliament (in the affidavit of the said Joseph Baxendale mentioned), of the third year of her present Majesty's reign.

That the object of this deponent, and as he believes, of his co-Directors, in entering into these several contracts and agreements (which occasioned present pecuniary sacrifices on the part of the said Company for considerations given or agreed to be given in exchange by the other parties thereto) was to secure to the public the greatest attainable amount of convenience and advantage from the railway as a new additional cheap and expeditious means for the conveyance of goods, and so ultimately to benefit the said Company by obtaining through such carriers an increase of traffic along the railway.

That for securing this object, and in order at the same time to prevent the common carriers, who were thus assisted and encouraged by the Company to use the railway, from combining or working together so as to keep up prices on the railway, and thereby to keep the goods upon the canals and roads, and so to injure the Company and the public by means of the assistance, facilities and encouragement so afforded to them, the said Grand Junction Railway Company continued the business of carriers of goods between Birmingham and Liverpool and Manchester respectively, which they had commenced before the said agreements were made as aforesaid.

That the Grand Junction Railway extends from Birmingham to Newton, a point upon the Liverpool and Manchester Railway, and not further or otherwise, and the said Grand Junction Railway Company have no control whatever over the Liverpool and Manchester Railway, or the railway from Birmingham to London called the London and Birmingham Railway, or the stations belonging thereto respectively, save under or by virtue of agreements made with the Companies of Proprietors of those respective railways, and which agreements the said Grand Junction Railway Company have made with them solely as common carriers using their respective railways as such, and which agreements the said respective Railway Companies might make, as this deponent understands and believes, with any other carriers over or parties using their respective railways, under or by virtue of the Acts of Parliament relating thereto respectively.

That the said Grand Junction Railway Company made an arrangement with the Liverpool and Manchester Railway Company for the use of their line between Newton, the terminus of the Grand Junction line, and Liverpool and Manchester respectively, and of their stations at those places, and were thereby enabled to carry on the business of common carriers of goods between Liverpool and Manchester and Birmingham; and the said deponent (Joseph Baxendale, and his co-partner, the said firm of Pickford and Company), as well as other common carriers, likewise and at the same time carried on business as common carriers between the same points, as well as between those points and London.

That goods between Lancashire and London, entrusted to the said Grand Junction Railway Company, were in the first instance (the said Grand Junction Railway Company not being themselves, and not being desirous to be, carriers over the London and Birmingham Railway) handed over at Birmingham to parties who were carriers by the railway from thence to London.

That the said firm of Pickford and Company were and are very largely interested in the carriage of goods on canals between Lancashire and London, and the intermediate places, and have very large establishments connected with such business on the said canals; whilst from the nature and mode of carrying on their business on the railways between the said points respectively, they only have occasion to employ a very small capital in that department.

That pending such agreements with them as aforesaid, the said Grand Junction Railway Company discovered that the said firm of Pickford and Company received goods consigned and delivered to them for carriage *by railway*, and notwithstanding express written orders that such goods should be transmitted by them *by railway*, they did nevertheless, on several occasions, carry such goods by canal instead of the Grand Junction Railway, and thereby cause great delay and inconvenience to the owners of the goods, besides exposing them to pilferage supposed to be incident to canal conveyance generally, and damaging the Railway Company in the opinion of the public. And as an instance thereof this deponent says—

That on or about the 22nd day of December, 1839, John Rutter Chorley, the Treasurer, General Manager, and Secretary of the said Grand Junction Railway Company, received (as this deponent was informed by him, and believes,) a letter, whereof the following is a copy:—

Lodge-lane, December 21, 1839.

My dear Sir,—I have recently had to complain that two packages, containing wine, were conveyed by Messrs. Pickford from London to Liverpool by canal, notwithstanding the most distinct directions were given on the cards of address that railway conveyance was preferred. As the Grand Junction Directors and proprietors are affected by this misconduct of the carriers, I communicate the particulars of this case to you, and you are at liberty to make any use of it you may think proper, and that you may confide in the accuracy of my statement, I enclose one of the Direction cards, as I received it. The packages were erroneously directed to me at Knowsley instead of Liverpool, and I consequently received a notice from Messrs. Pickford's agents at Stockton Quay, Warrington, that they were lying there to my order. The place of address may be alleged by them as a reason and justification for the non-compliance with the directions they received; but such an excuse ought not to avail, as their office in Liverpool is very much nearer to Knowsley than Stockton Quay is, while the facilities of conveyance from the former are infinitely greater, and I was obliged to request them to forward the wine to Liverpool. My principal reason for selecting the railway in preference to the canal was that the wine might not be plundered, the event has proved that my reason was a good one, as two bottles were purloined out of each of the casks, and three bottles broken in consequence of the former being abstracted.

Yours, very truly,
(Signed) RICHARD FARLE.

J. R Chorley, Esq.

Copy of the Direction Card:—

RICHARD FARLE, Esq.,
Knowsley,
Prescot,
to Liverpool.

Pickford and Co.'s *Railway* Waggon.
20th Nov., 1839.

That this deponent was informed by the agents of the said Company, and believes it to be true, that the charges made by the said firm of Pickford and Company, and by the other common carriers (using the said railway, with the advantage of similar contracts and agreements between them and the said Company as aforesaid), were not uniform to all persons alike under equal circumstances, but that one class or description of persons was charged one price and another class and description a different price, and that these several and different prices, moreover varied from time to time, whereby was introduced upon the railway a system which the public had notoriously found very objectionable on the canals.

That this deponent was informed by the agents of the said Company, and verily believes it to be true, that they had discovered that the said firm of Pickford and company, and others of the common carriers, using the said Grand Junction Railway, were in the habit of making insufficient, and in some cases, untrue declarations of the description or quantity of the goods delivered by them to the said Company for carriage along the said railway, and thereby deprived the said Company of their known, just, and usual charges for the carriage thereof.

That the said Grand Junction Railway Company carried without charge packages returning empty, and this deponent has been informed by the agents of the said Company, and believes it to be true, that the said firm of Pickford and Company have declared as empty packages certain packages, which, after, and notwithstanding such declaration, were actually discovered not to be empty, but on the contrary, to contain goods well known to the said firm of Pickford and Company, to be liable to charge like all other goods.

That it was moreover ascertained that the comparative prices charged for the conveyance of goods by the said original common carriers, over the London and Birmingham line of one hundred and twelve miles, on which the said carriers were then the only carriers without any competition on the part of the Railway Company, and the price at the same period charged upon the Grand Junction Line of ninety-eight miles on which the Railway Company did compete with the original common carriers were as forty five shillings to twenty-five shillings per ton, although so far as this deponent knows or believes, there was not, and is not, any reason whatever why the charge over the London and Birmingham line should not be, at least, proportionably as low per mile as over the Grand Junction Line.

That with a view to obviate these or some of these various injuries to the public, and consequently, though indirectly, to the Railway Company, and believing that they could carry such goods at much less charges to the public than they had ascertained were then made by the said original common carriers, and which latter charges they believed occasioned great loss and damage, as well to the public as to the said Grand Junction Railway Company, by preventing a fair competition between the railways and canals in the carriage of such goods, the said Grand Junction Railway Company determined, in the early part of the year 1840, themselves to carry goods entrusted to them along the London and Birmingham Railway.

That the said Company did also soon afterwards determine to, and did accordingly put an end to, the special contracts and agreements subsisting as aforesaid between them and the said firm of Pickford and Company, and others of the original common carriers, and then and thereupon the said Company ceased as to all of them to make the allowances aforesaid, or to give them the said advantages or preferences, and then and thenceforward they on the other hand ceased to perform any part of their said contracts and agreements, and some of the said original common carriers continued, and others then discontinued, to carry on business upon the Grand Junction Railway.

That the said Company employed Messieurs Chaplin and Horne, of London, to undertake their agency in London, and to unload and deliver at London all goods from the Grand Junction line carried by the Grand Junction Railway Company, as also the collecting, loading, invoicing, and porterage on as many goods as they could collect in London for the Grand Junction line, and the performance of certain other services as agents of the said Company.

That Messrs. Chaplin and Horne have for some time past acted for the said Grand Junction Railway Company as their forwarding and delivering agents in London in pursuance of such employment, and the said Grand Junction Railway Company not having themselves a carrying establishment in Liverpool or Manchester, have from the first commencement of their business as carriers of goods as aforesaid employed, and do still employ, the Liverpool and Manchester Railway Company as their forwarding and delivering agents in Liverpool and Manchester respectively, and of the fact of such employment the said firm of Pickford and Company and particularly the said Joseph Baxendale, have and hath always been fully cognizant, and such fact has been quite notorious, and that the Grand Junction Railway Company have had no dealings with the said firm of Chaplin and Horne, as common carriers over or along the said Grand Junction Railway, or any part thereof, or as partners of the said Company, and no connection or conjunction with the said firm, save in the way of agency; and that the said firm of Chaplin and Horne have not used the said Grand Junction Railway, or any part thereof, as common carriers.

Digitized by Google

That the result of this determination on the part of the Grand Junction Railway Company, and of their having themselves undertaken the carriage throughout of London and Lancashire goods, without the intervention or employment of the said firm of Pickford and Company, or other of the original common carriers, has already been a very great reduction in the price of carriage of such goods, in many instances to the amount of nearly one-half.

And this deponent further saith, that he believes that the principal object of the said firm of Pickford and Company, in their present application, is not to compel the said Company "to charge equally at all times the charges authorised to be made by them for the carriage of goods, or other matters or things, conveyed by the said Company, or for the use of steam power or carriages supplied by the said Company, and after the same rate per mile, or per ton per mile, in respect of all goods or carriages of a like description conveyed or propelled by a like carriage or engine passing on the same portion of the line of the said railway and under the same circumstances, and not directly or indirectly to advance or reduce the same in favour of or against any particular Company or person travelling upon or using the same portion of the said railway under the same circumstances"—but to prevent or deter the said Company from continuing to employ their own agents in London for the delivering and forwarding of Lancashire goods, or to induce the said Company again to make to the said Pickford and Company allowances and advantages, and so to enable them, the said firm of Pickford and Company, to make profits at the expense of the public, above what are charged by the said Company; and in support of this his belief, this deponent saith, that the said Messrs. Chaplin and Horne are not and never have been (and so far as he knows and believes, do not intend to be) carriers over the Grand Junction Railway, or any part thereof, or used the same or any part thereof as carriers, in any manner whatsoever; and that the said Messrs. Chaplin and Horne are not, and never have been, connected or concerned in any way whatever with the conveyance of goods, either over the Grand Junction Railway, or the London and Birmingham Railway, or any part thereof respectively, in connection with the said Grand Junction Railway Company, otherwise than in the way of agency.

And this deponent further saith, and he verily believes that the said Joseph Baxendale knew and was well aware at the time he made his said affidavit, of the fact last aforesaid, and of the further fact that the said Messrs. Chaplin and Horne are not, and never were, carriers over the Grand Junction Railway or any part thereof, either under the same circumstances as the said firm of Pickford and Company, or under any other circumstances whatever, and that all the statements in the said affidavits of the said Joseph Baxendale and John Rubens Bulmer, with reference to charges alleged to be made, or preferences or advantages alleged to be given by the said Grand Junction Railway Company to Messrs. Chaplin and Horne as competitors (either alone or in conjunction with the said Grand Junction Railway Company), with the said firm of Pickford and Company, in the carriage of goods over the Grand Junction Railway are wholly and entirely unfounded.

And this deponent further saith, that the price at which the said Company offered to allow to the said firm of Pickford and Company the use of the waggons of the said Company over and along the London and Birmingham Railway, was fixed by the Directors of the said Grand Junction Railway Company not more with a view to obtain for their constituents a fair remuneration for the loan of such waggons than by the determination not to subject themselves or the said Company to any reasonable complaint as to the amount thereof on the part of the said firm of Pickford and Company, and was not fixed with the object imputed to the said Company in the said affidavit of the said Joseph Baxendale, and that, in fact, such amount is not at all unreasonable, but the contrary.

And this deponent further saith, in reference to the said affidavit of the said John Rubens Bulmer filed in this case, that although he hath no recollection whatever of having ever seen William Watts, in the said affidavit mentioned, he cannot state of his own knowledge whether Hardman Earle, Esq., in the said affidavit mentioned, did or did not make in this deponent's presence the statement alleged in the said affidavit in that behalf.

That the said Hardman Earle, who is not now a Director of the said Company, but went out of office on the 10th of August last, did from the first entertain and always express in common with some others of the Directors of the said Company, a strong opinion that both the public and the said Company would be great losers by the encouragement and advantages given and held out by the said Company to the said firm of Pickford and Company, and the other original common carriers.

And this deponent further saith, that according to the best of his belief he must have known if it had been the fact, and that he doth not know or believe that it is true (as represented by the said John Rubens Bulmer in his said affidavit), that the said Grand Junction Railway Company ever refused to carry the goods or any of the goods of the said firm of Crowley and Company, or of any other Company or person or persons whomsoever.

And this deponent further saith, that according to the best of his belief he must have known if it had been the fact, and that he doth not know or believe that since the passing of the said Act of the third year of the reign of Her present Majesty, any contract or agreement, or arrangement whatsoever hath been made or entered into by the said Grand Junction Railway Company, with the said Messrs. Chaplin and Horne, or with any Company or Companies, person or persons, whomsoever, whereby and with the object that the said Grand Junction Railway Company charged or received, or agreed to charge or receive, or might charge or receive, or attempt to charge or receive, nor does he know or believe that the said Company have since the period aforesaid charged, or agreed, or attempted, or intended to charge, or received or agreed to receive, or that they intend to charge or receive, or to agree to charge or receive, otherwise than equally at all times the charges authorised to be made by them for the carriage of any passengers, goods, animals, or other matters or things, conveyed by the said Company, or for the use of any steam power or carriage supplied by the said Company, or otherwise, than after the same rate per mile, or per ton per mile, in respect of all passengers, and of all goods, animals, or carriages of a like description, conveyed or propelled by a like engine, or carriage, passing on the same portion of the line of the said railway only, and under the same circumstances.

That according to the best of his belief he must have known if it had been the fact, and that he doth not know or believe that since the passing of the said last mentioned Act of Parliament, any contract or agreement or arrangement whatsoever hath been made or entered into by the said Grand Junction Railway Company with the said Messrs. Chaplin and Horne, or with any Company or Companies, person or persons whomsoever, whereby the said Company have directly or indirectly advanced or reduced, or agreed to advance or reduce, nor that the said Company have since the period aforesaid directly or indirectly advanced or reduced, or agreed to advance or reduce, or that they intend directly or indirectly to advance or reduce the same charges, or any of them, or the charges for conveyance by the said Company, or for the use of locomotive or steam power to be supplied by them in favour of or against any particular Company, or person travelling upon or using the same portion of the said railway under the same circumstances as aforesaid.

And this deponent lastly saith, that to the best of his belief he must have known if it had been the fact, and that he doth not know or believe that the said Grand Junction Railway Company, or the Directors thereof, even at any time or upon any occasion, to the said firm of Pickford and Company, or to any Company or Companies, person or persons, whomsoever, refused or declined, or expressed any disinclination, or that in fact they ever were or are disinclined to comply with, or abide by, and obey the provisions of the said last mentioned Act of Parliament, or any of them in any manner howsoever, or acted from the motives and with the objects imputed to them in the affidavits filed in support of this motion.

JOHN MOSS.

Sworn at Liverpool aforesaid, this ninth day of January, 1841, before me, WM. MYERS, jun., Commissioner, &c.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

Feb. 11.—Petition for Bill; referred to the Select Committee on petitions for Private Bills.

BRISTOL AND EXETER RAILWAY.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

Feb. 11.—Petition for Bill reported, and Bill ordered to be brought in by Mr. John Henry Lowthes and Mr. John Dundas.

Feb. 12.—Bill "to enable the York and North Midland Railway Company to raise a further sum of money to make certain approaches to the said railway, to amend the Acts relating thereto, and for other purposes," presented, and read a first time.

Feb. 15.—Printed Breviate of Bill laid on the table.

"MARCH NOTICES" FOR NEXT SESSION.

THE following notices of applications for Railway Acts intended to be made to Parliament next session, appear in the *Gazette* of last night. In all of them it is stated that the necessary plans, sections, books of reference, &c., will be deposited on or before March 1st with the clerks of the peace for the several counties through which the proposed lines would pass:—

For a line to be called the "Northern Union Railway," running from the Great North of England to the Durham Junction lines.

For a branch from the North Midland Railway to Doncaster.

For a line commencing near Neckinger-road on the Greenwich Railway, and terminating near Westminster Bridge.

For a branch line from the London and Brighton, to be called the "London, Lewes, Saint Leonards, and Hastings Railway."

For an extension to Worthing of the Shoreham branch of the Brighton Railway.

For a branch line from the Brighton Railway, commencing at Horley and terminating at Horsham, both in Surrey.

For a line to Scarborough from the York and North Midland Railway, with a branch to the Whitby and Pickering line.

For a line to be called the "Westminster Bridge and Greenwich, Croydon, Brighton, and South-Eastern Junction Railway, by way of, and including Kennington, Camberwell, and Peckham." This line is to commence at Westminster Bridge and terminate at Deptford, on the Greenwich Railway, with a branch from the Old Kent Road to New Cross, on the Croydon line.

For a line from Norwich to Yarmouth.*

For an extension of the Northern and Eastern Railway to Cambridge.

For a railway from Falmouth to join the Bristol and Exeter, near Cowley Bridge, Devon.

For a line from Deptford on the Greenwich Railway to Chatham.

For an extension of the Saundersfoot Railway (Wales).

For the "Central Kentish Railway," from Deptford to Deal, with branches.

For the "West London Railway Extension," (late Thames Junction) as already fully explained in this journal.

For a branch line to Evesham from the Birmingham and Gloucester Railway, with a secondary branch.

For a line from Leeds to Bradford—a branch of the North Midland.

For branches from the South-Eastern Railway to Canterbury and Ramsgate, and Margate.

For a branch from the same main line to Maidstone.

For a branch to Hastings.

For an alteration of the Blackwall Railway depot in Fenchurch-street.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your publication of Saturday last there appeared the last Report of the Edinburgh, Leith and Newhaven Railway Company, and I rely upon the sense of justice and impartiality so characteristic of your journal, for permission to offer some observations, the more particularly as few persons in England are aware of the *real and admitted* facts of the case, to which I will confine myself.

1st. There is not, and there never has been, any such railway in the course of construction as the title imports, but a totally different project is carried on *under a false designation.*

2ndly. The railway now in the course of construction has *no connection whatever* either with Leith or Newhaven, nor does it afford *any means of communication* between those places and Edinburgh.

3rdly. *No portion whatever of the traffic* between Leith or Newhaven and Edinburgh is intended to pass on the present line, and for the obvious reason above mentioned, viz., that there are no means of communication afforded.

Thus much with respect to what the railway is NOT; and now as to what it IS.

1st. The railway commences at a point on the Sea shore, called Trinity, where it was once proposed to construct a harbour, but that speculation having failed, the harbour scheme is at an end; it thence proceeds *towards the environs* of Edinburgh.

2dly. Its total length, when fully completed, is *less than two miles*, and of which about one-third is tunnelling. One tunnel upwards of 3,000 feet in length remains untouched, and is understood to be quite impracticable.

3rdly. The harbour speculation having failed, there now remains no traffic for the railway, and thus the whole capital has been lost.

The above may appear inexplicable, but such is the real state of the case.*

One observation as to the expenditure.—In the last Report it is admitted, that a sum of no less than 47,851*l.* 8s. 1½d. has been received by the Managers of this concern, and from the mode in which they appear to have expended it, some idea may be formed of their honourable and *disinterested* motives.

The following is the account—

By expenditure to 30th June, 1840	£35,678	1	5
By ditto to 31st December, 1840	12,273	6	8½
Total	£47,851	8	1½
This expenditure is thus accounted for—			
For working and engineering	£24,938	18	10½
For property purchased.....	11,318	10	11
For expenses of management, such as Directors, and those employed under them	11,593	18	4
Total	£47,851	8	1½

Thus, not only has the whole money received been spent, but it further appears that the concern is in debt two sums of 6,956*l.* 6s. 11½d. and 9,850*l.*, making a total of 16,806*l.* 6s. 11½d., to which is to be added liabilities on contracts, at least 35,000*l.*, making altogether 51,806*l.* 6s. 11½d.!

To meet this (independently of the arrears on calls, *which are worth little or nothing,*) there remains only a sum of 25,000*l.* to be received, consisting of the remaining 5*l.* per share on 5,000 shares. The expense of the tunnel is not included in the above sum of 51,806*l.* 6s. 11½d., consequently if that is to be proceeded with, a further outlay of at least 30,000*l.* more will be necessary.

Under these circumstances, the only plan to be adopted by such as would avoid being subjected to further imposition, is *at once to transfer the shares*: for nothing is more certain than that when the full capital shall have been squeezed out of the shareholders, it will be utterly unproductive *except to those who at head quarters are fattening upon it*, and of which the last Report discloses a fair specimen.

VERAX.

February 15th, 1841.

EASTERN COUNTIES' COMPANY DIRECTION—MR. HOYES.

To the Editor of the Railway Times.

SIR,—Observing in several of your late numbers some remarks having reference to the Eastern Counties' Railway Direction and myself, allow me to remark, that on being chosen to a vacant seat at the Board, I declined accepting the appointment solely because I had altered my previous intentions of residing in London, and without the slightest reference to any differences which may have existed at the Board, or in respect to their proceedings.

I am, Sir, your very obedient servant,

ALEXANDER HOYES.

Edinburgh, Feb. 16, 1841.

* Notices have appeared in previous *Gazettes* for the other lines referred to in a leading article which will be found elsewhere.

TO CORRESPONDENTS.

Mr. W. T. Rathbone, Mr. Edward Cropper, Mr. David Hodgson, and Mr. Richard Harrison, *are the four Directors of the Eastern Counties' Railway who stand* PUBLICLY CHARGED *with drawing from that Company six guineas for the travelling expenses of every journey they make from Liverpool to London and back,* ALTHOUGH THEY TRAVEL THE WHOLE OR GREATER PART OF THE WAY FREE. *A handsome reward will be given to any person producing an authentic denial of the charge from any one of the persons above named. Apply to the Steward of the Reform Club.*

D. J. *had better communicate his plan to the Board of Trade.*

"A Pore hingin driver" *has put himself to much unnecessary trouble to render his letter unintelligible. If he will render it back into plain English we shall willingly insert it.*

R. J. J. *has been anticipated in his suggestion.*

G. H., Mr. Macman, Mr. W. H. Smith, Truncheon—*received.*

A Director *puts a question to us, the answering of which, under any other than existing circumstances might induce us in rather invidious comparisons; but as it is, we are pleased to think that we need go no further than the first and oldest of the railway carriage builders—the Worsdells—to recommend to our correspondent gentlemen who will execute anything in their line of business on the most approved principles of construction, with the best materials, at moderate prices, and with all possible dispatch and promptitude.*

Psi.—*We are anxious to assure our valuable and esteemed correspondent that nothing could be further from our thoughts or wishes than the sort of remedy hinted at in one of his late letters, for the mismanagement of a certain notorious concern.*

Erratum.—*In the letter on the London and Brighton Railway, signed* Longworth, *published in our last) 340l. 5s. 3d. was erroneously printed for* 140l. 5s. 0d.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 20, 1841.

We alluded in our last number to certain petitions which had been presented to the House of Commons in the course of the week, praying for a modification of the tax now imposed upon railway passengers. Among others, the Newcastle and North Shields Company have addressed the House in the following terms:—

"The humble petition of the Newcastle-upon-Tyne and North Shields Railway Company, under their Common Seal,

"Respectfully showeth,

"That the said railway is about seven miles in length, and hath been made at very heavy expense, amounting to above two hundred and sixty thousand pounds.

"That to afford accommodation to a very numerous population, chiefly of the operative class, and to maintain a competition with an extensive system of steam conveyance by water, your petitioners have been induced to establish a very low rate of fare for passengers, averaging about one penny per mile.

"That the railway has since the opening in June, one thousand eight hundred and thirty-nine, proved a very great accommodation to the inhabitants of the neighbourhood, upwards of one million and a quarter persons having, since that time, travelled upon it.

"That your petitioners have found that the low fares charged would be moderately remunerative, but that the present mode of charging the duty upon passengers, amounting to one-seventh of the receipts, have proved most oppressive; and your petitioners humbly represent, is too great a reduction from their reasonable profits.

"And they also beg further to represent, that the complicated accounts which the present mode renders necessary, are a source of very considerable labour and expense, and a premium for fraud.

"Your petitioners therefore humbly pray that to enable them to continue the accommodation to the public, your honourable House will be pleased to pass an Act altering the duty now charged of one-eighth of a penny per mile on each passenger to a per centage upon the receipt of the railway.

"And, as in duty bound, &c."

The petitioners in this instance content themselves with pointing out the obstructive effects of the impost, in diminishing the amount of their own "reasonable profits," without instituting any comparisons as to its relative lightness upon other lines; and certainly any tax which takes away "one-seventh [query, one-eighth] of the receipts," is a fair subject for remonstrance and complaint. The oppressive character of the tax appears, however, in a much stronger light when a comparison is made between its operation upon lines like the one which is the subject of the foregoing petition, and lines situated in more favoured localities, where a higher rate of charge can be made upon the public. The Garnkirk and Glasgow Company, whose very satisfactory Report we give in another part of this day's number, state that the Government duty has absorbed about 14 per cent. of their gross receipts from passenger traffic, while upon other lines the proportion does not exceed 4 or 5 per cent. The Newcastle and North Shields Company would appear to be subjected to about the same heavy per-centage as the Garnkirk and Glasgow, while one or two other Companies in Scotland are taxed still more disproportionately. In fact, it is self-evident that, as the charge made upon the public by the Companies diminishes, the charge made upon the Companies by Government increases,—an arrangement which has clearly a direct tendency not merely to shut out, to a great extent, from railway facilities, one class of individuals—those, namely, to whom *very* low fares are indispensible—but also to augment the cost to parties who are better able to afford it. A fixed invariable duty, payable alike upon maximum and minimum fares—upon the 2½d. and 3d. per mile of some of our great English Companies, and the less than 1d. per mile of many of the Scotch lines—must inevitably discourage further reductions, if it do not even lead to increased charges. The experience of the Croydon Company during the last few months well illustrates the effect of the passenger tax. While that Company carried the public at low fares (lower, we mean, than the present charges, which are still low comparatively,) the duty accruing to Government was very considerably greater with a less net income to the Company than it is now that the number of passengers has been diminished, through the late addition to the fare, and that the Company's revenue has improved. Had a certain per-centage upon the gross receipts of the Company been levied in both cases, Government would not have suffered, and the Directors need not have altered their scale of charges—at least, the *other* reason which they assign for the charge (the fixed poll-tax payable to the Greenwich Company on a principle precisely similar to that of the State tax) would in that case probably not have had sufficient weight to lead to so undesirable a step as a raising of fares.

The modification suggested by the petitioners is the substitution of a per-centage upon the railway receipts (the *passenger* receipts, of course), for the present duty of one-eighth of a penny per passenger per mile. This, it will be remembered, was the basis of the recommendation put forth by the Select Committee of last session, the per-centage being graduated according to the scale of fares charged upon the several lines. We have on former occasions expressed an opinion decidedly unfavourable to the particular scale recommended by the Committee, as in the first place rising too high, and moreover being very carelessly graduated; but to the *principle* of such a scale there cannot, we imagine, be urged any sound objection. The great error to be avoided—and it is an error into which the Parliamentary Committee, and still more the original propounder of the graduated scheme, fell—is the attempted relief of one class of individuals at the expense of another—the reduction of the tax so far as the poorer Companies are concerned, by throwing an additional burden upon the more wealthy. Putting aside the injustice of materially interfering with the tolls secured to the Companies by their several Acts of Incorporation — and certainly no interference could be more direct than to subject them to increased deductions from their gross receipts —it is extremely impolitic to arouse the opposition of parties so circumstanced. Many of the most powerful Companies occupy precisely the same position in this matter as the London and Birmingham, as described by Mr. GLYN at the meeting last week. They themselves do not complain of the present mode of levying the duty, but they do not object to an alteration for the benefit of others, provided no heavier tax be imposed upon themselves. To attempt, therefore, to substitute for the existing system a plan which would very considerably add to the burdens of such Companies, is not only to lose the valuable assistance of these parties, but to call forth their determined opposition. Nor is there any necessity for such a course; for we are satisfied that a scale might easily be so graduated that while no Company would have to pay *more* than they at present pay, the poorer Companies, or those who find it necessary or deem it prudent to establish a low scale of charges, would be materially relieved, at the same time that the public revenue would not suffer from the change. This latter consideration must, we fear, be at present looked upon as all-important. While old imposts are becoming unproductive, and new ones are of necessity brought forward, it is too much to expect that any portion of the receipts from railway taxation will be given up, and hence it becomes more than ever desirable that, if possible, an improved mode of levy should compensate for the removal of those practically unequal burdens of which the Companies now make complaint.

While the internal operation (if we may so term it) of the railway tax is exciting attention from one portion of the public, another is busily engaged in discussing its bearing externally, that is, as it has a tendency to affect other modes of locomotion. In this latter class may be placed our able contemporary of the *Times*, who has long laboured zealously on behalf of the postmasters and stage-coach proprietors, not, we are ready to believe, from any

Digitized by Google

dislike to the railway system, although some of the arguments and assertions which have been used seem to favour such a supposition, but, we would fain hope, solely from a feeling of sympathy towards a very deserving body of men whose fate it has been to suffer by the onward progress of improvement. In our paper of last week we reprinted one of our contemporary's appeals, and with the sentiments therein expressed we are disposed almost entirely to concur. We have never denied that the postmasters and stage-coach proprietors are very heavily, and, as compared with railways, very unequally, taxed, and we would join most cordially in any scheme that would afford them relief, provided always that such scheme steered clear of the error to which we have already alluded of merely shifting the burden from the shoulders of one party to those of another. If, as is sometimes more than insinuated, it be sought to relieve the postmasters and stage-coach owners at the expense of railway proprietors, we must strenuously oppose the proposition as at once unjust and ineffective, but if any means can be devised of dispensing altogether with the common road imposts that will not further burden the railways, we shall rejoice in seeing it carried into effect. We have no fears whatever for the results of a competition between taxed railway travelling and untaxed road locomotion. Our contemporary to whom reference has already been made, appears to think that the old system would present a formidable rivalry to the new, if the Government tax upon the former were entirely abolished. This is quite a mistake. In the first place it would be impossible for the coaching system to contend successfully with railways, even as regards economy, supposing the former to be wholly untaxed. Take the case of a railway where the fares are as high probably as any in the kingdom—the London and Birmingham. The charge from London to Birmingham by the second class carriages is 20s.; previous to the construction of the railway, the outside coach fares varied from 30s. to 35s. Would the total abolition of the stage-coach duty have enabled the coach proprietors to reduce their charges at least one-third? Certainly not. Such was the competition then existing upon that line of road, that it may safely be taken for granted that every other item of expense was kept at a minimum, and if with the *whole* traffic of the district the coach proprietors could not afford to carry passengers between the two places at less than 30s. per head, is it to be supposed that with only a very small portion of them, the mere abolition of the coach tax would enable them to compete with another mode of conveyance which can afford to carry the public for 20s.? But it is not price alone which will at all times secure a preference for railways. The superior accommodation, the remarkable increase of speed, and notwithstanding all that has recently transpired, the great additional certainty and safety, will ever, in a country like this, determine the choice of the public for railways. The attempt, therefore, to raise stage-coaches into successful rivals of railways is under any circumstances wholly hopeless. No doubt the abolition of the tax would do something to revive, if but for a time, a portion of their pristine vigour; and railways, above everything else, would be benefitted by the change. Horse coaches will act as useful feeders to a line of railway, and if the tax were removed or reduced, would prove more useful still, but anything in the way of injurious competition is, we repeat, wholly out of the question.

It seems to be taken for granted by some, that if the post-masters and coach proprietors are to be relieved at all, it must be by the imposition of an additional tax upon railways, since every one admits that the aggregate amount of taxation from these sources cannot at present be materially diminished. But, why should it be so? Why should not steam power by water be taxed as well as steam power by land? We would, if we could, have the means of internal communication of every description wholly unfettered by any impost whatever, but as this may not be, why should not all be served alike? Why should stage coaches and railway carriages be liable to a tax, and steam-boats go entirely free? If the stage coach duties are to be lightened—as they certainly ought to be—let a moderate capitation tax be placed upon steam boat travellers, and the revenue will in no way suffer, while an act of justice will be done to one class of interest in removing their burdens, and an act of injustice averted from another, in leaving railways as they are.

Elsewhere we give particulars of a melancholy accident upon the Grand Junction Railway from the running of one luggage train into another at the Whitmore station. The result was the mortal injury of a poor man, a pig dealer from Ireland, who was riding in one of the waggons along with the pigs a great many of which were killed. The Coroner's jury have acquitted the Company's servants of all blame by levying a mere nominal deodand on the engine, and everything considered, we think their decision is a perfectly just one. The state of the weather appears to have so affected the rails that the greatest care was requisite to get the trains forward in any way, and it is too much to expect that under such circumstances everything should be done on the instant which after-consideration may suggest as desirable. At the same time it is to be hoped that this melancholy occurrence will lead to an improvement in one or two points connected with the working of this and of other railways. In the first place it ought to be strictly forbidden that any engine-driver should, *under any circumstances* whatever, quit his engine for a single moment, while standing upon the main line. The driver of the engine of the first train states, that he had gone into the office to get a cup of coffee, when the concussion took place. Had he been on the engine, it is probable he might have seen the second train coming up, and have had time to get out of the way. A second point worthy of notice in connection with this occurrence, is the danger of using two engines to one train. This has been repeatedly shown in other cases of accident, and it is to be hoped that in future the practice will be given up.

The second reading of the new Bill "for the better regulation of railways" took place on the evening of Friday, the 12th inst., and the measure will go into Committee on Friday next. In the meantime several deputations from the different Companies have had interviews with Mr. Labouchere and Lord Seymour, and hopes are entertained that some of the clauses will be considerably modified. In the course of the brief conversation which preceded the second reading, Sir Robert Peel pointed out how very desirable it was that the cordial co-operation of the Companies should be secured, and there is reason to believe that every concession consistent with the safety of the public, and the practical efficiency of the measure, will be made to the representatives of the railway interest.

On the same occasion Sir Robert Peel paid a high compliment to the excellent arrangements in use on the London and Birmingham and Grand Junction Railways—the lines with which he said he was best acquainted—and took an opportunity of repeating what he had stated on a previous evening as to the superior safety of railway locomotion over every other mode of inland transit.

The regular Parliamentary Notices have been given for all the three lines which were lately competing for the favour of the people of Norfolk. First for Mr. Rastrick's, the East Anglian Line from Yarmouth to Bishop's Stortford, by Thetford, Newmarket, and Cambridge, joining at Bishop's Stortford the Northern and Eastern; second, Mr. Stephenson's line, which embraces only the distance between Yarmouth and Norwich, and which, though of very questionable expediency, considered in relation to the general interests of the Counties of Norfolk and Suffolk, and of the public, must doubtless be a most paying concern to the proprietary; and third, the Kelveden and Bury St. Edmund's absurdity of the Eastern Counties', done by Mr. Braithwaite to order, for purposes of sheer mystification and humbug.

It would appear as if the opposition raised to the projected Chester and Holyhead Railway, by the promoters of the Portdynllaen scheme, would, after all their boastings, end in nothing. In the House of Commons on Tuesday, Mr. W. O. Stanley, who has been very active in promoting the success of the Holyhead line, inquired of Mr. Ormsby Gore, one of the leaders of the opposing party, whether it was his intention to bring forward during the present session any motion tending to impugn the Report of the Commissioners with respect to the best harbour and railway route for the two countries. Mr. Gore disclaimed all present intention, but would not pledge himself as to the future. We have little doubt, however, that so far as any competing project is concerned, the Holyhead line is quite safe; we wish it had no greater obstacle to encounter.

Mr. Stanley has moved for certain Returns, which will throw some light upon the present mode of conveying the mails to Dublin. The Returns obtained last year by the honourable member, placed the benefits of a railway to Holyhead in a very strong light. The Returns now ordered are as follows:—

"Of the hour at which the Government steam packets have left the river Mersey, and the number of hours occupied in the passages between Liverpool and Kingstown and Kingstown and Liverpool each day, since the 1st day of March last, with the name of each packet; also the number of times, specifying the days, that the mail and passengers have been conveyed by tender to and from the steamer outside the bar of the Mersey, and of the days on which no mail has left Liverpool."

"Similar return from Holyhead, stating the number hours occupied in the passage to and from Kingstown, and days on which no mail has left Holyhead."

"Also, return of the hour at which the London mail has been received at the Dublin Post-office, each day, since the 1st day of January, 1840, and the number of days, specifying them, on which the evening mail coaches have left Dublin without the London mail."

"Return, showing the number of mail steam packets on the Liverpool and Kingstown, Holyhead and Kingstown, Milford and Waterford stations, the expenses incurred in building and outfit and re-

Digitized by Google

pairs of the vessels, and the expenses of the establishments, and the total disbursements, and the receipts, passages, &c. and the totals of such charge, from the 1st day of January, 1840, to the 1st day of January, 1841. Also, the amount paid by the Government for the contract for conveying the day mail from Liverpool to Kingstown (in continuation of Return 18th June, 1840."

THE case of HINDLEY, the man implicated in a recent Eastern Counties' accident, was set down for trial before the magistrates at the Middlesex adjourned Sessions yesterday. He was indicted for "having on the 18th of November, 1840, in the parish of St. Leonard, while he was engine-driver and servant to, and in the employ of, the Northern and Eastern Railway Company, wilfully and maliciously by furiously and wantonly driving and impelling on and along the Eastern Counties' Railway a certain steam-engine in his charge, endangered the lives of divers persons then and there passing along the same." When the case, however, was called on, it was stated that it had been removed into the Court of Queen's Bench.

MR. WALLACE has given notice that he will move for a return "showing, in columns, the whole cost of conveying the mails in Great Britain and Ireland in the years 1838, 1839, and 1840, respectively: Second, the difference of charge to the public, as nearly as it can be conveniently computed, in each of the above years, for the conveyance of the mails by railway, since that mode has been partially adopted: Third, the amount of all other charges incurred in each of the above years, respectively, for the management of the Post-office Department, so that a contrast may appear of the whole charges in each of the above years, including those for railways: Fourth, the amount paid to each Railroad Company in the year 1840, for the conveying of mails, with the rate per mile on each line, and the average rate per mile on the whole lines used by mails, with the sum total for the said year." We wish the honourable member would act upon the hint which we threw out some weeks ago, and ascertain how it happened that (as alleged) the Postmaster-General has taken upon himself to dispense with the carrying of the mails by the Ayrshire railways on Sundays.

—o—

A CORRESPONDENT of the *Stirling Journal*, in illustrating the value conferred upon landed property by the vicinity of a railway, states that a gentleman in Stirlingshire, in the year 1811, purchased a property in parish of New Monkland, Lanarkshire, for which he paid 460*l*., and that in consequence of a railway passing in its immediate vicinity, he has now, in 1841, got an offer for the ironstone alone in it at the rate of 100*l*. per acre, which, as it contains 16 acres, makes it worth 1,600*l*., exclusive of the value of the coal which the property contains, and the land itself.

—o—

THE London correspondent of the *Dublin Monitor* states that the 6th of April next is the day appointed for the acceleration of the London and Liverpool trains. On that day also the mails will be conveyed from Crewe, *via* the Chester and Birkenhead lines, by which a further saving of twenty-five minutes, as compared with the present route of the Grand Junction Railway will be effected.

—o—

WE learn from the *Leeds Journal* that the recent accident in the Summit Tunnel of the Manchester and Leeds Railway, having been now well nigh repaired, it is intended to commence the conveyance of goods throughout the whole line on Monday next, the 22nd inst., and to run the passenger trains on and from the Monday following, the 1st of March.

RAILWAY OFFENCES AND OFFENDERS.

OUR list this week is fortunately very light.

On Monday, a man named Farrington, in the service of the South-Western Company, was brought before Mr. Maltby at Union Hall Police Office, charged with having come to his work in a state of intoxication, and refusing to quit the railway when ordered. It appeared that the prisoner's duty was to superintend the cleaning of the engines, and to see that they were started in a proper condition, and Mr. Maltby reasoning very justly, that such a person ought to be a steady sober man, lectured him on his conduct, and fined him 30s., or in default of payment sentenced him to be imprisoned for 14 days.

The *Glasgow Chronicle* gives the following case, as having recently been decided at the "Justice of Peace Court," in that city:

"On Tuesday evening a third-class passenger entered the station-house in Tradeston at nine o'clock, and behaved with much insolence to the railway clerks. On being told to move on, and take his place in the train, he refused, and became very violent and abusive, whereby he interrupted the business of the office, and delayed the departure of the train a few minutes. For this offence he was given in custody to the police, and on Wednesday morning was brought before the justices, under Lord Seymour's Act for regulating railways. The justices considered the offence a very serious one, as any irregularity in the departure of trains has frequently led to the most disastrous consequences. The penalty imposed by Lord Seymour's Act is a fine not exceeding 5*l*., and in default of payment, imprisonment for any period not exceeding two months. The passenger admitted the charge against him, and expressed great regret for what had happened; in consequence of which the justices modified the fine to twenty shillings, which was paid, and the defendant admonished and discharged."

GLASGOW PAISLEY AND AYR RAILWAY.

THE half-yearly meeting of the Glasgow, Paisley, and Ayr Railway Company was held in Glasgow on Wednesday last. We have received a notice of the proceedings, but at too late an hour to be available this week. They were, however, of a very favourable description. A dividend of 12s. per share was declared, which, considering that the line was only opened throughout in August last, is perhaps as much as could have been expected

The Directors state in their Report (which we shall publish next week) that since the opening on the 12th of August, not a single accident has happened to any passenger, though the numbers from that period to the 31st December, amounted to 165,689 on the Ayr line, and 247,848 from 12th July, on the Joint line, respectively. "During the month of January (they add) 28,000 persons travelled on the Ayr line, and 43,457 on the joint line. These, with 10,450 on the Ayr Railway, and 14,878 on the joint line, up to Saturday the 13th instant, inclusive, made an aggregate of 510,332 persons who have been conveyed by locomotive power, on distances varying from 7 to 40 miles, without the slightest personal injury having been sustained by any one of them."

PARIS AND ROUEN RAILWAY.—We hear that Mr. Brassey, the great railway contractor, has taken the contract for the whole of the line at 1,000,000*l*. sterling, and that he has given the planting and lining of the hedges and slopes to our townsman, Mr. Rogers.—*Hampshire Independent* (Southampton).

THE EASTERN COUNTIES' RAILWAY COMPANY.

To the Editor of the Railway Times.

From my Corner, High-street, Shoreditch,
16th February, 1841.

DEAR MR. EDITOR,—All is "toil and trouble" here preparing for the grand show next week—and there is mystery too—not a little. The six Select and Supreme move about from room to room like a set of mutes with corks in their mouths. The studied reserve which they practise respecting all Company matters towards all their colleagues of the outer circle is giving, as you may readily suppose, high offence. From the airs they put on it is evident that they look upon themselves as pretty nearly comprehending all the wisdom and integrity of the entire Directory—as if they alone were worthy of being entrusted with its secrets—as if, in a word, it were a perfectly ascertained fact that "the TRAITOR" is one of the outer circle—and *not* one of themselves (on which *quæstio vexata*, Mr. Editor, you shall have bye and bye some queer revelations.) And such a *select* lot, too! The Essex Directors complain loudly that there is not one of their number on the Committee, though from residing near the line, and passing frequently along it, they might have been supposed capable of rendering some good service. Surgeon Cornelius is especially sore at being excluded—refers often to what he did for them when smashing of heads and breaking of bones was their daily pastime—and hints that such times may come again, and that then they may, perhaps, see what it is to be without a good Bone-setter and Phlebotomist on their *working* staff! The Town-Directors again complain that the only principle which seems to have been followed in the selection of the four of their number included in the supreme Executive, is their inferiority in point of useful talent to all the rest, and their abject subserviency to the Liverpool Dictators. "Pooh! Pooh!" is what his Grub-street trash attests, a creature without either rhyme or reason in him—a poor mindless driveller, fit only to enact "the pea on the drum;" Mr. Sam. A******* swears by "Pooh! Pooh!" which is sufficient to settle *his* grade on the scale of worth and intelligence; Mr. H——— is the dreaming "Professor of Animal Magnetism," who affects to take under his special charge the "Engineering and Works," and has evinced his peculiar fitness for the task by being precisely the person who of all the Directors has gone seldomest on the line, and knows least about it from personal observation; and Mr. G*****, whom your printer, by a stupid misreading of the manuscript of my last communication to you, dubbed a "Change-alley Attorney," is "the man whot" does the London business of the Jobbers' Hole clique, and "whot" says in answer to all inquiries about "Eastern Counties," "Don't ask me! don't ask me!"—looking all the while so solemn and lugubrious that his visage on the market has been known to knock down Eastern Counties' a full quarter. Of the town Directors excluded from the Commitee, Mr. G——n seems to take the affair most to heart. After having been for a long time the obsequious servant of the Liverpool Directors—the hero of the scratching plot, and all that—he says, it is "d—h hard to be cast off at last," inerely because of some hasty words, he made use of lately, about the scizing by his Liverpool friends of the lion's share of the loaves and fishes. The only two men of talent on the executive committee of six are the two Liverpoolers, Mr. Rathbone and Mr. Hodgson; but as long as the six-guinea spoliation job with which these persons stand "publicly charged," remains undenied and unrefuted, it is impossible that they can ever preside with due efficiency over the affairs of this or any other Company. It is not that being themselves tainted with jobbery, they might not be very well able to detect jobbery in others, (for there is a proverb on that head, the truth of which I have no inclination to dispute,) but that their meanness and mercenariness must cause them to be scorned and despised by all over whom they are set in authority. There is not an officer or servant on the Eastern Counties' Rail-

Digitized by Google

way who does not know, through the *Railway Times*, all about that vile six guinea job of his masters, and whose zeal and attachment to the Company's service is not, by that knowledge, more or less weakened and impaired.

The concocting of the REPORT to be made to the general meeting is of course the grand affair of the week. I have heard the draft of it read, and beg to present you with the following sketch of it from memory:—

The Report

Commences with expressing the regret of the Directors that in consequence of the want of funds till a very advanced period of the past year, and the unprecedented severity of the winter, no great progress has been made in the extension of the railway since the last general meeting, but congratulates the proprietary on the fact, that the line, so far as executed, stands admirably—having borne uninjured greater floods than any which have devastated the flat lands over which it passes for a long series of years—attesting at once the excellence and stability of the works, and the eminent skill of the engineer.

The proprietors are reminded of the desire expressed by some of the Lancashire shareholders to have the opinion of Mr. Locke in addition to that of Mr. Robert Stephenson on the sufficiency of Mr. Braithwaite's estimates of the cost of the line up to Colchester, and informed that Mr. Locke has concurred generally in Mr. Stephenson's approval of these estimates.

The Directors considering nevertheless that Mr. Braithwaite's estimate rather exceeds the sum of 2,100,000*l*., which is the utmost capital the Company are now empowered to raise by shares and by loan, and that that sum must be subject to very considerable deductions for defaults of payment, law expenses, stamps, &c., and considering also the possibility that unforeseen circumstances may arise to cause an increase of expenditure beyond the estimates, they have thought it prudent that application should be made to Parliament in the present session for powers to raise 300,000*l*. additional, by the issue of new shares, and 100,000*l*. further by way of mortgage, and have accordingly brought in a Bill for the purpose, which has been read a first time, and for which they hope to receive the approbation of the shareholders.

The plan which was adopted of raising the 533,333*l*., which the Company are empowered by their existing Acts to borrow, by means of an issue of 8*l*. 6s. 8d. debentures, convertible at the pleasure of the holder into 25*l*. shares, any time before February, 1843, has the Directors are happy to state been eminently successful. Of these debentures ——— were subscribed for by the shareholders to whom they were originally allotted, and only ——— remained to be disposed of agreeably to the resolutions of the special general meeting of the 29th September last, according to the discretion of the Board of Directors (The Accountant to fill in these numbers.)

[Opportunity is proposed to be taken of the Company's having a Bill in Parliament to obtain an extension of the period for making the railway for three years longer; but the Directors at the same time entertain a confident expectation that the line to Colchester will be completed and opened before the expiration of the original period of seven years—namely, in the summer of 1843.

The Directors submit whether it would not be also advisable to introduce a clause for the limitation of the number of Directors; but on this point they desire to leave themselves entirely in the hands of the shareholders.

The Directors think it proper, however, to state that they have unanimously agreed under the existing circumstances of the Company, to decline receiving payment of the 2,400*l*. a year which was so liberally voted to them by the shareholders, and that such services as they can render will be cheerfully rendered by them, free of all charge to the Company until its finances are in a more prosperous condition.

The Directors deem it due also to the Manager of the Company, Richard Hall, Esq., to state that, induced by similar considerations, he has handsomely proffered a very considerable reduction in his salary, to which the Board have, not without reluctance, assented.

The traffic returns have fallen short of the expectations entertained by the Board; but this they attribute to the alarm caused by the unfortunate accidents of the last summer—grossly exaggerated as they have been through the inveterate and persevering malignity of a portion of the public press—and to the extreme severity of the succeeding winter months. The confidence of the Directors in the correctness of the estimates of traffic made from actual inspection by a Committee of their body in the winter of 1838-39, and on the amplitude of the resources of the line when fully developed, continues, however, unabated; and no exertion shall be wanting on their part to develope these resources at the earliest possible period.

The Directors are happy to find that the people of Norfolk, too long indifferent to the benefits of railway communication, are beginning at length to awaken to a sense of its importance, and though they have lately seemed to countenance a projected line from Yarmouth and Norwich to Cambridge by Thetford, which would divert their traffic from coming upon the Eastern Counties' Railway, the Directors feel assured that on further and maturer consideration of the subject, they will find that their true interests consist in a close alliance with the Eastern Counties' Company. The course which the Eastern Counties' line originally took beyond Colchester, by the way of Ipswich and Eye, appearing to the Directors to be attended with insurmountable engineering difficulties, they have lately caused a new line to be surveyed from Kelvedon to Bury St. Edmunds, and have reason to believe that a separate Company will be formed for its execution. In the mean time, they recommend to the shareholders to authorise the expenditure necessary for preparing the requisite Parliamentary plans and sections of this new line; the same to be repaid to this Company by the new Company as soon as formed.

The Directors of the different Railway Companies throughout the kingdom, having been invited to send representatives to a Conference to be held at Birmingham, to consider of the best means to be adopted for the future prevention of accidents, it was attended by a deputation from this Board; and the Board entirely concur in the resolutions passed by the Conference, deprecating any further interference with the right of the Railway Companies to the administration of their own affairs. The Directors have seen with regret the Bill since introduced on the subject by Government, and will deem it their duty to co-operate, to the utmost of their power, with other railway bodies, to cause it

gether abandoned.

The Directors have at length brought to a conclusion their long and laborious examination into the accounts of the late Secretary of the Company, and find that there is a balance owing by him, for various sums had and received by him on the Company's account, for monies lost through his negligence, and for calls due on shares, amounting to 2,500*l*., for the recovery of which they have caused legal proceedings to be instituted against him.

The Directors have to announce the resignations of Alexander Hoyes, Esq., Duncan Dunbar, Esq., &c. &c.

&c. &c. &c. &c.

Such is the draft of the Report as it now stands; but it may very possibly undergo considerable alterations and emendations (for which, God knows, there is room enough), before the day of the meeting. H——d hesitates about the fling at the government; G—— would rather say nothing of the press; "Pooh Pooh!" wants something introduced about the Executive Committee and his and their vast personal exertions of late to prevent any recurrence of accidents; and H——n presses to have the paragragh about the Manager altogether expunged.

One thing only they seem to be all definitively agreed upon (I mean the Select and Supreme six), and that is, to let the paragraph about the late Secretary stand as it is, and to omit all mention of a few facts *per contra*, very necessary to a correct understanding of the true state of the case, and which are on that account precisely kept out of sight. For example, they forget to state—that the late Secretary denies, and has again and again defied them to the teeth to prove, that he is indebted to them in a single shilling—that though they have brought their action they have not yet been able, though served with an order for the purpose more than three weeks ago, to furnish any particulars of their demand — that though often required they have as often refused to allow the late Secretary inspection of the Report of Mr. Johnson, the accountant appointed two years and a half back to investigate the accounts, and on which Report partly they pretend that their present claim is founded—that after offering an inspection of any particular books or documents which the late Secretary might specify as requiring examination, they withdrew from that offer, and refused all inspection whatever of either books or documents—that every share which the late Secretary held in the Company was long ago sold and transferred by him to others, by whom alone any calls in arrear (if there are any) must be due—that "the negligence" alluded to in the Report has reference to the monies lost through the absconded clerks, for which Mr. (now Baron) Maule advised the Company at the time, neither the Company nor Secretary were at all liable, but which the Directors *in contempt of that advice*, chose to pay out of the Company's coffers, —that the Secretary has claims against the Company for arrears of salary, and monies expended by them in their behalf, for branch lines and otherwise, which, on a fair adjustment of accounts, must leave a large balance in his favour—and above all they forget to state, that despairing of obtaining justice by any other means, and not till there was no other alternative left, the late Secretary has filed

A BILL IN CHANCERY
AGAINST
THE COMPANY—

which Bill, besides praying for the discovery requisite to a right adjustment of the accounts, seeks for relief *in another matter*, which will be found to disclose something more extraordinary than any thing that has yet transpired, respecting this most extraordinary Company, and to threaten results which it can but be considered the height of madness to have provoked.

Great uneasiness is entertained about the manner in which the Chairman is likely to deport himself at

Digitized by Google

the meeting. He has been preparing a speech for the occasion, and has dropped hints that he is sure he will be able to deliver himself of something quite as good as any of "Glyn of the Birmingham's" periodical orations. He has been spoken too kindly by his Liverpool masters on the subject, and told not to make a fool of himself and the Company; but he evades giving any pledge of silence, and is caught every now and then in bye corners in the act of rehearsing to himself a something that is to astonish the natives! I send you a new effusion of his rhyming genius, which he has had printed, and calls "An Address to the Inhabitants of the Eastern Counties' of England," and leaving it to your critical judgment,

I remain, dear Mr. Editor,
Your faithful servant,
Q.

P. S. — *Latest news.* Mr. Worthington has been arranged with, and they now reckon on walking over the course. I should not be surprised! What is there now-a-days which shareholders won't swallow?

PREVENTION OF RAILWAY ACCIDENTS

To the Editor of the Railway Times.

SIR,—In the last number of your widely circulated journal I saw a paper purporting to be a communication from Sir George Cayley, Bart., proposing that to render railway travelling safer than it is at present, "the engine should be placed 50 yards in advance of the train, so that the engine being stopped by any accident there would be sufficient space for the train to be stopped by the drags before it came up with the engine." Further, "that the rope from the engine should be so placed in connection with the drags on the train, that as soon as the engine ceased to pull the drags should instantly work and stop the train."

Although I do not wish to dispute the possibility of the originality of Sir G. Cayley's invention, I must stand forth and claim the *priority* as it is embodied in a patent obtained by me on the 6th of January last; and I consider it the more necessary to make this communication, lest parties unacquainted with the circumstance should unwarily be induced to take steps infringing on the right secured to me by my patent.

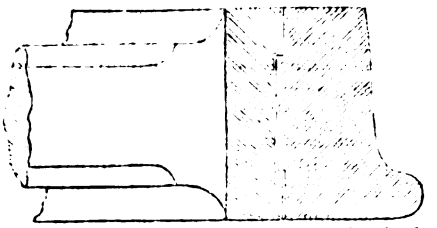
I feel confident, Mr. Editor, that in justice to me you will be induced to give insertion to these few lines. I subscribe myself

Your obliged servant,
H. BESSEMER.

10, Percival-street, St. John's-street,
London, 17th February.

To the Editor of the Railway Times.

SIR,—In the latter portion of my essay on the means of promoting safety in railway conveyance, which you have obligingly reprinted in the *Railway Times* from the *Mechanics' Magazine*, I find that in suggesting the use of a long rope I have, without being aware of it, obtruded upon the patented invention of Mr. H. Bessemer, who has in a polite note informed me of the circumstance, and stated that his patent was taken out in January last, and shown to Mr. Rotch in November. I therefore think it my duty to state this, with your leave, in the *Railway Times*, that it may circulate in the same channels as the essay. I am very glad that the plan of having a considerable distance intervene between the engine and the train is thus corroborated, and that it has been already sufficiently matured to become the subject of a patent.



The other portion of the case, that of a break being applied to the trains the moment the engine ceased to pull, was part of a plan drawn by Mr. Frederick Worsley and myself two years ago, in which the engine was to be attached to the train by means of a lever of a peculiar construction, and so arranged that if the engine were thrown off the rail it became disengaged from the train, which the breaks then immediately stopped.

I am, Sir, your obedient servant,
GEORGE CAYLEY.

20, Hertford-street, Feb. 18, 1841.

IMPROVEMENT IN RAILWAY WHEELS.

To the Editor of the Railway Times.

SIR,—Annexed I hand you a small sketch of a section of the tire of a railway wheel, showing a new mode of fixing the outer tire.

Many accidents, particularly to the machinery of locomotive engines, have occurred from the bolts (which are used in general, but in my improvement are not *necessary*) breaking, and allowing the tire to work off laterally, and to come in contact with the working gear. The improvement consists in having a groove turned out of the wheel, and a corresponding tongue on the inside of the tire, as shown in the sketch, which prevents the possibility of the tire coming off, but by its breaking, a contingency which but seldom happens.

Sir, if you consider the above worth a place in your valuable journal, I shall feel obliged.

I am, Sir, your obedient servant, H. W.

Manchester, Feb. 4th, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Some years ago I held 100 shares in the Manchester and Birmingham line, but in the spring of 1838 I sold out, in disgust at the endless vacillations of the Directors, and in despair of receiving any dividend for many years to come.

I have read with some interest the letters you have inserted signed "Candidus," and have been rather *amused* at his estimate of the traffic receipts, as will most of your readers who understand the merits of the question. To use a vulgar but expressive phrase, they will be inclined to join me in saying, "I wish he may get it!"

Leaving to "Sap." the task of replying more fully to "Candidus" (*lucus a non lucendo!*), I would just inquire of him what there is to prevent the Grand Junction Company from competing for the Manchester traffic, by running trains on the Manchester and Birmingham line, paying toll? The highest rate the Manchester Company could charge is 5s. per passenger, or 2d per mile for 30 miles from Manchester to Crewe, which would leave the Grand Junction 16s. per passenger. I know nothing of the intentions of the Grand Junction Directors, nor am I a shareholder in that line, but in my opinion the probability is that they will run trains regularly direct from Manchester to Birmingham, and *vice versa*: aye, and carry more of the Manchester passengers than the *soi disant* Manchester line will.

Old Hudibras, (a favourite author, apparently, with "Candidus,") says, "the worth of a thing is just as much as it will bring." If it be so, what does "Candidus" say to the present price of the shares which are selling at 25*l*., 40*l*. paid (which is 15*l*. discount)? I grant that the market value of the shares in any undertaking is no infallible test of their real value; but the public, somehow or another, have in general pretty good grounds for forming an opinion, be it favourable or otherwise. "Candidus," who, I presume, is an inhabitant of Manchester, would do well to inquire what reasons could possibly have induced the ex-Chairman of the Manchester and Birmingham line to resign, and if I am not misinformed, *to sell out entirely* some time ago. That gentleman is not deficient in talent nor enterprise, but he is also prudent *and cautious* like most of his countrymen, and when such men sell out, I for one should be loath to buy in. I remain, Sir, yours, respectfully,

A MANCHESTER MAN.

February 13th, 1841.

FATAL ACCIDENT ON THE GRAND JUNCTION RAILWAY.

AN accident occurred on the Grand Junction Railway on Thursday, the 11th instant, at the Whitmore Station, which unfortunately terminated in the death of a man named Neester, a pig-dealer from Ireland. The particulars of the occurrence will be gathered from the following account (extracted from the *Liverpool Times*) of the proceedings at the inquest:

On Friday morning a highly respectable jury, consisting of yeomen, summoned from the three adjoining townships, met at the Sheet Anchor Inn, before Wm. Harding, Esq., one of the Coroners for Staffordshire, to inquire touching the death of James Neester.

Captain Cleather, the Company's Inspector, and Mr. Switt, the Company's solicitor, attended on behalf of the Grand Junction Railway, and appeared very desirous that the most searching inquiry should be made, so that if any blame could be attached to any of the Company's servants, it might be brought home to the parties.

Thomas Hurst, being sworn, said—I am an engine-driver, and reside at Manchester. I left Manchester on Wednesday night with a goods train for Birmingham, at five minutes to ten o'clock. I drove the "Wildfire" engine. I had twenty-two loaded and one empty waggon. The line was very slippy. I scarcely remember such a night during the time I have been on the line, now nearly four years. I left part of the luggage about Basford, and, after bringing the other to the top of the Madeley incline, returned for them. At Madeley, I joined both trains together and came on to Whitmore. I arrived here between four and five o'clock yesterday morning. I got some coke and water, and stepped into the office to get a cup of coffee. I had been there but a very short time, when I heard the noise of another train running into mine. I ran out of the office, and found my train going along; it had been forced along by the other train. The other train had two engines. I am not aware that they moved after I came out of the office, I overtook my train at Mossfield Bridge, about 200 yards along the line. I catched the waggons first and put the breaks on, and stopped the engine. When I got to it I found it out of gear, just as I had left it. I am quite satisfied it could not have moved on had it not been for the concussion with the other train. It is my practice to put the engine out of gear, and to go into the office to get a cup of coffee while the waterman runs the water into the tender. The breaksmen were getting their coffee along with me. I put ten breaks down before I stopped the engine. I got my train out of the way of the mail train, and then returned to the office, and there found three people hurt. I saw the deceased, but did not think he had been so badly hurt. My train was late when it arrived at Whitmore, owing to the slippery state of the lines. There were two signal lights at the back of my train. The night was foggy and very dark. The breaks and engine of my train were in proper order. The rails were frozen before we left Manchester. I noticed it at Chat Moss, at the curve at Newton Junction, and at Warrington. I tried to go up the Madeley incline with the whole train before I separated the waggons. We often put waggons before the engine when the rails have ice upon them: we could not get on without that. I had two waggons before my engine. The wheels of the waggon break the ice, and the besoms attached to the life preserver of the engine sweep the ice away. I know the height of pig waggons, and can see over them when before the engine, in case any object is a short distance before the train. It is a practice adopted on other railways as well as this.

Samuel Judd, sworn.—I live at Camp-hill, in the parish of Mere. I am a waterman in the employ of the Grand Junction Company, at the Whitmore station. I was on duty at the time of the accident on Thursday morning. The *Wildfire* engine arrived some time after 4 o'clock, with a goods train. All the trains were out of time on that night, to the extent of three or four hours each, owing to the slippery state of the line. I supplied the *Wildfire* with water—there was but little water in the tender, owing to the engineer having had the incline to come up. While I was filling the tender the engineer went into the office to get a cup of coffee. It took me from five to six minutes to fill the tender. After I had done so, I went with Enock Davies, my assistant, to the office to get some oil in my burner. I had just come to the door again when Davies said he heard another train coming. We thought it had been the mail from Birmingham at first, but I said it was the other goods train. We each took a light and signalled the engineers to stop in the

Digitized by Google

usual way. We had one red and one white light. We heard the beating of the wheels and the humming of the engines, so that I knew the steam was off. It was a foggy night, and rain and sleet had been falling. I saw the Liverpool train some 200 or 300 yards before it arrived at Whitmore. The train had passed me 20 or 30 yards when I heard the crash—it was coming down hill on the incline. I have frequently stopped trains in a less distance than that in which I gave notice to those engineers. The Liverpool train consisted of, I believe, two or three waggons in front of the engines. I am sure there was one waggon with pigs. There were other waggons behind the engines. I went up to the engines and found the enginemen safe. I saw the pigs and things lying about the road, and, as I expected the mail train up every minute, I went to give them the signal to stop. I saw one man whom I believed to be the Irishman, with a cut face, get up from amongst the pigs. I stopped until it came in, about half an hour. The road was, by that time, all clear. I gave them information of the accident, and when I returned to the office I found the deceased there. He was not then dead. Hurst had not been staying an unreasonable time; on the contrary, he stayed rather less time than usual. There was some waggons for him to take from Whitmore, but, owing to the state of the rails, he left them behind to be forwarded by another engine. I have no doubt but that in case the rails had been in their usual state the accident would not have happened. I cannot say whether the engineers saw my signal or not. Engines have frequently stopped in a less distance.

Robert Wilson, of Liverpool, sworn.—I am an engineman. On Thursday morning I had charge of the *Charon* engine assisting Elijah Ireland, the engineman of the *Briareus* engine, with the Liverpool goods' train. The engines went together, and the *Briareus* engine was the leading engine. We came separately from Liverpool. Jones took him on the Liverpool and Manchester line, and at Warrington we joined the trains and came on to Whitmore. We were aware that the Manchester train was before us. Ireland knew that it was when he got to Crewe. One of the Madeley bankers told us that the Manchester train was before us. We never heard or saw the Manchester train, but Ireland cautioned me to proceed carefully and keep a good look out, as he did not think the Manchester goods would be far before us. I knocked my steam off full a quarter of a mile from this station, and had slacked the speed of the engine before that. The steam I had on would not pull two waggons, I had taken nearly all the steam off. Ireland took his steam off near the quarter of a mile post. Had the rails been in their usual condition, we should have had to put the steam on again before reaching the station. We took our steam off on account of the slippy state of the rails from the effects of the frost. My engine was in good order, and Ireland's was also. It was a foggy and misty night. I never saw the rails in so bad a state before. I examined them several times. Ireland started before me, and I overtook him at the Rainhill level. It was there so slippy that he could not get along. He had detached his engine from the train, and was breaking the ice with a waggon. I shoved him along to the top of the bank, and I then slackened until I thought he had got to the bottom of the Sutton incline. I followed to Warrington, and there we joined the trains as before stated. The rails from Warrington were in better order. At Warrington a loaded luggage waggon and two pig waggons were put before Ireland's engine. I could not see anything before me. If I had been on Ireland's engine I believe I could have seen over the three waggons. I could not see because Ireland's engine and tender was before me. We did not slip much between Warrington and Whitmore. We were coming up to Whitmore station at the rate of five or six miles an hour. I saw the shade of an engine about 200 yards before the crash came. I thought it was the Manchester engine; but I afterwards found it was the Birmingham goods engine down, which had been put in the sidings for the down mail to pass. Ireland did not give any alarm or tell me to stop. In case the rails had been in proper order he could have slackened his speed to less than four miles an hour, before he came to the station, and if he had reversed the gear, he could have stopped sooner. There was not, as far as I saw, any inattention on the part of Ireland. He has been an engineman three years on the Grand Junction, and before that on the Liverpool and Manchester line. We had to leave a part of our goods at Warrington, on account of the rails being in such bad order. I believe we had 39 waggons with us at Whitmore, but I did not count them. Ireland did not give me any signal of danger, and when he said I must keep a good look out, as I could not see before me, I thought he meant that some one must look out. When I saw the light of the engine I reversed my engine, because I thought we were going too fast. Our breaks did not hold at all. I saw no signal light. My reversing of the engine was of no use, owing to the slippery state of the rails. A collision took place. The Liverpool train ran right into the Manchester train. I felt but very little of the shock, and none of us were thrown from the engine. My tender buffer had got raised about the buffer of the waggon behind it. It was got right in about half an hour. By that time the deceased had been taken into the office. I saw nothing of the injury he had received. The whole train from Liverpool consisted of pigs, except the one loaded waggon before the engines. I did not know there were any men amongst the pigs on the front waggon.

William Miles, of Liverpool, sworn.—I am fireman to Irelandthe engine-driver. I have been upwards of twelve months at work with him. On Wednesday night his engine and breaks were in good order. We had a six-wheel tender, so that the breaks would apply to six wheels instead of four. The rails were very slippy; there was ice upon them. Ireland is a middling steady man, he was perfectly sober on the night in question. Ireland threw off his steam between the quarter of a mile post and the curve. When we got by the coke waggon I saw a white light, and saying, "Look here, Elijah!" I went directly to the break and turned it quite hard. It was about 200 yards from the station-house, and on the same side as the offices. It seemed to me to be a fixed light, as it stood quite still. I think it was the light over the office door. I thought it was a gas light. When we got about five or 10 yards before we struck I saw the red light. It was standing still, and the man had just took it in his hand. I had hold of the break, and it was quite tight on. The motion of the engine was reversed, and the back gear was on, and the steam applied. It quite made the engine "dither" (shake) again. She would have stopped at the watering-place if it had not been so slippy. I saw two men in the pig waggons before the engines, and the deceased was one of them. The deceased was in the front pig waggon. After the collision the waggons were smashed all to pieces, and the pigs were lying upon the deceased. One of the waggon axles ran through the cylinder cover, and I bruised myself in getting it out. After that was done I went into the office and saw some persons applying some water to him. I have seen him since he was dead, and knew him to be the man I saw amongst the pigs. I was quite sober. We had a cup of coffee at Whitmore, and no drink besides. Ireland might have had something to drink at Warrington without my knowing. We stopped at Warrington more than an hour. He was away from me twenty minutes, or half an hour. I saw him speaking to Reeveley, the manager of the station there.

James Reeveley, of Warrington, saw Ireland on Wednesday night. 'He was quite sober. He was on his engine or with me the whole time he stopped at Warrington, which was more than an hour. The waggons were put in front of the engines to break the ice, as the rails were slippy. The deceased was on the pig waggon, in order to take care of his own pigs. He was allowed to ride free.

Charles Beech, the policeman at the station, sworn. —I was in the office when the collision took place, and came out the instant Judd gave the alarm. Mr. Walsh, two of Mr. Allcard's men, three men belonging to the down goods train. Hurst the engineman, and his fireman and breaksman, Thomas Blackburn the engineman, from Crewe, and his fireman, and two mail men, who were waiting to convey the mails to Drayton and Newcastle, were in the office at the time. The *Wildfire* had been in 12 or 13 minutes when the collision took place. I keep an account of the time of the arrival and departure of the luggage trains. When I went out I saw Judd's lamp (a white light) waving, giving the signal to the enginemen. I had scarce got to the door-place before the collision happened. The first thing I saw was what I took for the mutilated bodies of men, but found it was pigs. Before that I had gone into the office, looked at the clock, and put down the exact time of the collision. A great number of pigs were killed or badly wounded. I afterwards found the deceased amongst the pigs, and took him into the office. He spoke strong and rational to his countrymen around him. He had some coffee and some cold water. A medical man was sent for immediately from Newcastle. Mr. Tait arrived in about two hours and a half after the accident. The deceased had just expired when he arrived. I did not hear the train coming up, nor had I the slightest idea of the cause of the alarm. There is a lamp over the office door, but I think it was not lighted. It is a white light, and put there for the purpose of lighting the steps. It is much larger than the signal lamp.

Samuel Judd was recalled.—He said the lamp over the office door was lighted, and burning at the time of the accident.

Henry Bugley sworn.—I collect goods for the luggage train, and was at the station at Whitmore at the time of the accident. I was in the engine-house at the time the collision took place. It was about half-past four o'clock, or 20 minutes to five o'clock. I was lying down in the engine-house when I heard Judd call out. It was about a minute and a half before the concussion. I ran out, and saw Judd with the signal lamp in his hand. The pigs were all about the road, and the engineers asked us to assist. I had not heard the train coming, but I had not been asleep. Judd called out, "Hold on, hold on." I asked him what was the matter. He said, "There is enough the matter, look at this poor man and the pigs." They were all crushed to atoms. I helped to get the pigs out of the way; and while I went to call Mr. Davies, the head clerk at the station, the deceased was got out. I afterwards saw him in the office, and was present when he died. He died in about two hours after the accident. It might be more. The light Judd had in his hand was a red light.

Michael Caen, of Telsh, county Roscommon, sworn. —I left Liverpool on Wednesday. The deceased was with me, and we had come from Dublin together. We lived next door to each other. His sister married my brother. We had come from Ireland for 20 years with pigs. On Wednesday we were taking pigs from Liverpool to Birmingham. He had nineteen pigs and I had eighteen. I gave about 32*l.* for my pigs. We travelled in two boxes. The deceased took care of my pigs and his own, and I had the care of Mr. Taylor's. He rode in the first box and I rode in the second. We had no talk on the road. I know nothing about the accident. All that I know was, that I was lifted from under the carriages. I cannot tell whether the train was going fast or slow; I was knocked out of my mind altogether. The deceased was a married man. He had four daughters; the eldest eight years old, and his wife is in the family way. I was sitting down in the box when the accident occurred.

The Coroner, in summing up, addressed the jury on the importance of the duty which awaited them, and called their attention to several of the leading features of the evidence which had been adduced before them. He said he should leave the decision in their hands, unfettered by any opinion of his own. The jury, after retiring for a short time returned a verdict of "Accidental death, with a deodand of one shilling on the engine."

The business occupied the time of the jury from ten until half-past four o'clock.

SERIOUS ACCIDENT UPON THE ARBROATH AND FORFAR RAILWAY.—An accident which might have been attended with fatal consequences, happened upon this railway, on Friday last. The up-train, which leaves Arbroath at half-past eight o'clock a.m., had just passed Clocksbriggs Station, near to Forfar, when it came in collision with a ballast train coming downwards. There was a dense fog at the time, and the trains were not aware of their proximity until it was too late to avoid a collision. The engineers of both trains were seriously hurt, and one of the labourers had his collar-bone broken. None of the passengers suffered any injury except Mr. Campbell, Governor of the Dundee Prisons, who sustained a fracture of the knee pan, and was severely bruised about the head. Both the engines are damaged considerably. A judicial investigation into the matter is now going on before the proper authorities. The Chairman and Directors of the Company were all on the spot a very short time after the accident occurred, and did every thing in their power, by providing medical assistance and otherwise, for the relief and comfort of the sufferers. We are happy to learn that, according to the surgeon's report received to-day, the cases of the two men most hurt are going on favourably. At a late hour last night we ascertained that Mr. Campbell was doing well.—*Dundee Courier*, Feb. 6.

YESTERDAY evening week, about seven o'clock, the *Sun*, Bakewell coach, was overturned near Tolley, by running upon a heap of gannister which was concealed by the drifting of the snow. Mr. Joseph Binns, of Sheffield Moor, the driver and one of the proprietors of the coach, unfortunately fell under the vehicle, and several of his ribs and collar bone were broken, and he was otherwise much bruised; and he died yesterday from the injuries he received. There were two passengers at the time, neither of whom were injured.—*Sheffield Mercury*.

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

The half-yearly meeting of the Company took place at the Clarendon Rooms, South John-street, Liverpool, on Thursday last, THEODORE W. RATHBONE, Esq., in the chair.

The CHAIRMAN opened the proceedings, by suggesting, that if one meeting only was held every year, it would, perhaps, be more convenient to the shareholders, and save expense.

Some observations having been made on the subject, the Secretary then read the Report as follows :—

REPORT.

In compliance with the wishes of the Proprietors, expressed at the last General Meeting, to have the Report of the Directors, and the half-yearly accounts of income and expenditure, prepared and circulated previously to their being called together, these statements are now submitted; and the Proprietors are requested to take notice, that the next Special General Meeting will be held on the 18th instant, at the Clarendon Rooms, Liverpool, at one o'clock in the afternoon.

Referring to the annexed accounts, the Directors have great pleasure in calling attention to the steady and rapidly progressive increase of the receipts, in all the different branches of the undertaking; the receipts from the passenger and parcel traffic having increased over those of the corresponding period of the former year, 3,339*l.* 2*s.* 5*d.*; those from the goods and merchandize tolls, 688*l.* 9*s.*; and those from tolls on coal, (a business still quite in its infancy on the North Union Railway) 587*l.* 10*s.*; making a total increase of income of 4,614*l.* 12*s.* 3*d.* this last six months. That this increase of income will be continued, the increasing intercourse with the rising town of Fleetwood, and probable amount of business on the Lancaster line, when the next season for travelling arrives, together with the large coal trade coming on the railway, seem to render quite certain.

The expenses also afford a favourable and gratifying comparison with those of former periods: at the same time that there are four items in which a considerable increase will be noticed. These are,—1st., the Maintenance of Way, since October last falling altogether on the Company instead of the contractors for the execution of the works, and not yet permanently placed in the hands of a contractor for maintenance; 2nd., the Interest on the Loans; 3rdly., the Local Rates and Taxes, which exceed in amount, 770*l.*, those of the same period of last year, in addition to the government duty, increased 244*l.*; and lastly, the Reserved Fund, to meet the depreciation of stock, which requires a little explanation, as differing in principle from that hitherto adopted by other Companies. The contract with the Lancaster Company for the supply of power on their line, has required a most careful and accurate re-valuation of all the locomotive machinery by one of the most experienced and intelligent engine manufacturers in the kingdom, and the present value of the stock of carriages, trucks, and horse-boxes, has been ascertained in a similar way by a coachmaker. Every effort has been made fully to maintain the stock of all kinds in its original state of efficiency, and to keep up its value as far as possible out of the expenditure for current disbursements; but it will be obvious, that, between the prime cost of stock of this description, and its value at any subsequent period, a difference must appear, and that a gradual wearing out will have commenced in parts of the stock, which do not yet require nor admit of being restored. Hence the above-mentioned valuations show a decrease in value of 1,280*l.* in the locomotive for the last six months, and of 2342*l.* in the coaching stock from the opening of the line; and the total amount, 3,631*l.*, is the sum which the Directors have deemed it prudent to carry to a reserved fund, to meet any possible increase of outlays hereafter in maintaining and keeping up the stock. Had the Directors set apart for dividend the whole difference between their receipts and their current disbursements, which has been the common practice, they might of course have announced a considerable increase of dividend this half-year; but keeping in view that the dividend ought to be strictly out of nett profits, and that until the stock can be reported to be fully equal in value to its original cost, the difference in amount is a species of debt to the account which must be expended upon it sooner or later, they conceive the prudent and right course to be, to keep in reserve, as all times, whatever amount a careful valuation may show to be needful for the accomplishment of this object, without such an increase of current disbursements at any time as seriously to affect future dividends. The only evil that can possibly arise to the Proprietors from this course, is the delay for a short time of a portion of the dividend they might otherwise have now received.

The North Union Act, authorizing the Board of Directors to declare and make dividends amongst the Proprietors out of the clear profits of the undertaking, the Directors think they shall consult the convenience and the wishes of their Proprietors, by at once declaring a dividend of 2*l.* 10*s.* on each of their 6,329 75/. shares, payable on the 25th inst., by warrants, which the secretary will forward immediately after the general meeting on the 18th instant. This dividend will amount to 15,822*l.* 10*s.*, and will leave a balance of 1,390*l.* 12*s.* 11*d.*, to be carried to the next half-yearly account, out of 17,213*l.* 2*s.* 11*d.*, the nett income of the last six months after deducting from the receipts all the different disbursements, inclusive both of interest and the reserved fund of 3,631*l.*

The Directors have only further to notice the highly gratifying circumstance, that, from the opening of the North Union Railway, in November, 1838, to the present time, (during which period 419,632 persons have travelled over it, and a speed has been required by the post-office arrangements fully equal to that of the trains of any other line in the kingdom,) no accident of any importance has occurred to any one passenger. The further trial of the late unusually severe winter enables the Directors to express themselves in terms of continued and increased confidence with respect to the works, stations, buildings, and stock of all sorts belonging to this line.

THEODORE W. RATHBONE, Chairman.

Preston, 4th Feb., 1841.

Statement of North Union Traffic for Half-year ending 31st Dec. 1840.

RECEIPTS.			
Coaching department	£27,580	17	0
Merchandise ditto	2,862	0	9
Coal ditto	884	12	0
Rentals ditto	1,250	3	6
Interest ditto	261	5	10
Balance to Cr. of profit and loss, 30th June, 1840	557	0	6

Audited, 2nd February, 1841, by
CHARLES SWAINSON, } Directors,
REECE BEVAN
JAMES CHAPMAN, Secretary.

Preston, 1st February, 1841.

It was then moved by Mr. Mather, and seconded by Mr. Taylor, that the report be received. A conversation then ensued respecting the surplus fund; Mr. Garnett suggesting that a dividend of 3*l.* instead of 2*l.* 10*s.*, should be declared.

The CHAIRMAN said that the dividend having been declared, the suggestion could not be entertained. He could assure the meeting that the Directors would be very glad to make the dividend as large as possible.

On the subject of abolishing one of the meetings, a further conversation ensued, when it appearing to be the wish of the shareholders, that the half-yearly meeting should take place, the Chairman said the Directors would not fail to attend to the wish expressed.

It was then suggested that the half-yearly meetings should be held at Preston and Liverpool alternately.

Thanks having been voted to the chairman, the meeting separated.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly Meeting of the Shareholders in this important undertaking was held at the Albion Hotel, Manchester, and was very numerously attended. John PARKER, Esq., M. P. for Sheffield, the Chairman of the Board of Directors, presided.

The CHAIRMAN in opening the proceedings, said he had seen nothing at all which entitled the proprietary to participate in any feeling of despondency as to the eventual result of this undertaking. There had, no doubt, been a very peculiar state of the money market, which had hitherto been exceedingly against the proceedings of the Company. It had been formed just after the great majority of companies; and therefore others, not at all more deserving of the public confidence, had got the start in the money market. This Company had come a little too late for the ease and comfort of the proprietary; but that made no difference in the eventual prosperity of the plan; it made no difference in the propriety of making a railway between Manchester and Sheffield, or in the result of the calculations on which this Company had been originally formed. He believed those calculations remained to that day unassailed. They were precisely in the same state in regard to the eventual result as when they were first submitted to Parliament, with a difference that was very much in favour of the Company. The result of railway expenditure had universally proved, that not only the amount of traffic, but also of expenditure, very far exceeded the estimate; and it had been found, that where the traffic had very much increased, the expenditure had very much increased also. In regard to this railway, it would probably be found, that though the traffic would be much greater than was originally estimated, the expenditure, so far as they had hitherto gone would not be greater; for in almost every instance, the expenditure had been under the estimate, and the general aggregate of expense would be within the estimate. He believed that hardly any company could state a similar result, with the exception of the Grand Junction, which had the advantage of having the same engineer as this line. He felt, therefore, that it was most unfair and unjust to speak of this railway in the way in which it had been spoken of. The Company had certainly been involved in litigation, but though no fault of their own; it had been brought on by circumstances over which the Directors had no control — in circumstances nearly common to all railways, particularly to those which came, as they did, late into the market. It was very satisfactory to find, that the result of that litigation had been successful. They might reasonably hope, therefore, that the cloud which had hitherto hung over the affairs of this company would be cleared away, and that they would have greater ease in collecting their resources, and should make much greater progress in their works than they had hitherto done. In order to satisfy the proprietary, and remove all uneasiness in respect of the eventual success of the undertaking, the Directors, not resting satisfied with the original estimate, on which application had been made to Parliament, were employing gentlemen conversant with the business, to calculate the probable amount of traffic; and the result would be found highly satisfactory. They had also strong expectation of being able to open seven or eight miles of the line in the autumn of the present year, and as this would give a settled and established character to the undertaking, it might fairly be expected, that the public confidence would be increased.

CHARLES THOMPSON, Esq., the Secretary, then read the Report from the Board of Directors, which stated that the Directors had been actively engaged during the last six months in forwarding the execution of the works then contracted for, which, with the Etherow viaduct now under contract, completed the letting to Glossop. Though extending only 11 miles on the rails these works contained more than half the earthwork of the whole line, and were proceeding rapidly; so that eight miles of the line, which would accommodate the traffic of Mottram, Godley, Hyde, Newton, Dukinfield, Sta-

Digitized by Google

ley-bridge and Ashton, would be opened in September next, and the remainder of the line to Glossop in 1842. The tunnel works were steadily and satisfactorily progressing. An account had been taken by competent persons of the present traffic between Manchester and Glossop and the intermediate places from which all traffic of a doubtful nature was excluded; and after careful revision the Directors had great pleasure in laying an abstract of it before the meeting:—

Present passenger traffic.....	21,122	8	0	
Prospective addition.....	21,122	8	0	
				42,244 16 0
Present traffic in general merchandise and coal.....				10,932 1 1
				53,176 17 1
Deduct 40 per cent. expense of working				21,270 14 9
Estimated annual profit				£31,906 2 4

On the 31st December last, the outlay amounted to 168,077*l.* 13*s.* 6½*d.* For the completion of the contracts to Glossop, tunnel works, Management, payment for the purchase of land, the Manchester station, and all incidental expenses, a further sum of 318,020*l.* was estimated to be required, making the total outlay on the 1st May, 1842, 486,047*l.* 13*s.* 6½*d.* From that part of the line between Manchester and Glossop then ready for opening, a net annual income of 31,914*l.* 2*s.* 4*d.* might be safely calculated on, which would yield a profit of 6½ per cent. per annum upon the whole expenditure then incurred; and in that sum was included nearly 180,000*l.* paid on account, and forming a part of, the estimated cost of the whole line. The Directors had frequently discussed the question of commencing the eastern division of the line, convinced that a very large traffic would be commanded by completing the works on both sides of the tunnel, and until it was opened running coaches over the summit ridge, but the contracts already entered into had absorbed and required even more than the whole of the available fund. The Directory congratulated the shareholders on the decision of the Court of Exchequer in their favour, on all the points raised on all the trials at Liverpool. No doubt many wealthy shareholders, not parties to these actions, had held back the amount due from them, awaiting their decision. This, combined with the large amount owing by the defendants, and the commercial depression of the country, had caused frequent and heavy calls: but prompt and vigorous measures would now be adopted for obtaining payment of all recoverable arrears. The Directors had carefully examined the share-list, and recommended the forfeiture of 219 shares, on which an average of 9*l.* 14*s.* 1½*d.* had been paid. The requisite notices had been given to the holders. The investigation of the share list was a work of considerable time and labour, but the Directors felt confident that when it was effectually weeded, there would remain a sound and responsible proprietary, fully equal to carry so large a portion of the line into profitable operation, as would enable the Company to avail itself of the clause in its act, which empowered it to obtain money on loan, and thus afford relief to the shareholders, in the payment of future calls; and that eventually the doubtful shares would get into such hands as would insure the completion of this great national undertaking.

An abstract of the accounts was then read, from which it appeared that the receipts up to December 31, 1840, from deposits and calls, had been 168,239*l.* 7*s.* The expenditure had been as follows: law charges, including parliamentary expenses, 14,041*l.* 2*s.* 7*d.*; engineering, 16,891*l.*; land and compensation, 56,830*l.*; works, 63,575*l.*; juries, 2,240*l.*; salaries, 2,691*l.*; direction, 1,506*l.*; advertising, printing, &c., 2,260*l.*; calls on shares held for landowners, 5,445*l.*; office expenses, 994*l.*; bank commission, 313*l.*; other expenses, 738*l.*; total, 173,522*l.* 13*s.* 6½*d.*; leaving a balance due to the bankers, 4,283*l.* 5*s.* 8*d.*

The Report of the Engineer (Mr. Locke), entered into a detailed statement of the progress of the works on each of the contracts between Manchester and Dinting Vale. The works at the summit tunnel were in a more favourable position than they had been. All the works were going on satisfactorily, and much activity was displayed on all the contracts.

These Reports and abstracts of the accounts were received and ordered to be printed for circulation.

Mr. Thos. Smith of Sheffield, moved that the declaration of forfeiture made on the proprietors of the 219 shares mentioned in the Report (whose names were given) should be confirmed. This was seconded by Mr. Butcher, of Sheffield, and carried.

A short discussion ensued, in the course of which it was stated by the Chairman and other Directors in answer to questions from Mr. Bradshaw, that a number of other shares would be recommended for forfeiture, but that they could not be forfeited at that meeting on account of the three months' notice to the holders required by the Act not having yet expired. Forfeitures would also be recommended in many cases where the holders had not been able to obtain a sufficient title, and they would therefore re-purchase those shares. This remark applied to some of the forfeitures then made.

On the motion of Mr. Jas. Sidebottom, seconded by Mr. Benjamin Beddome, a resolution was passed empowering the Directors to dispose of the shares then forfeited.

The Chairman stated, that in pursuance of their Act of Parliament four Directors had, according to annual custom, been balloted out. They were Mr. Sykes, Mr. Smith, Mr. Bennet, and himself. Each of these gentlemen were re-elected, with the exception of Mr. Bennet, who had intimated his wish to retire, and in his place Mr. John Chapman was chosen a Director.

Mr. D. Waddington, one of the Directors, said, that the Directors were extremely anxious to carry out the works, but at the same time they had been compelled to resort to frequent and heavy calls. They were busily engaged in purging the share list of those parties who rendered them no service by remaining in, and he hoped that in a short time they should have a healthy and efficient proprietary, who would readily pay the calls made upon them, but the Directors were extremely anxious not to make calls if they could avoid it, and had determined to ask that meeting for authority to borrow money as soon as they could legally do so. He therefore moved that the sum of 233,000*l.* in the whole should be borrowed and taken up at interest, on the credit of the railway undertaking.

Mr. John Chapman seconded the motion which was passed unanimously; as was a further resolution authorizing the Directors to contract for loans.

Mr. John Sykes of Sheffield, one of the Directors, said that at a meeting held on the 29th Aug., 1838, an annual grant or allowance of 1,600*l.* had been voted to the Directors. As that was a very slender meeting, he wished to take the opinion of the present meeting, whether the grant should be continued. He, therefore, moved that the matter should now be reconsidered.

Mr. Sidebottom seconded the motion.

After a short discussion, in the course of which, the Chairman observed that if this motion were negatived, it would be tantamount to a confirmation of the grant, the motion was unanimously negatived.

Mr. B. Beddome, in moving the thanks of the Meeting to the Directors, said that the Report which had been brought forward, the clear and satisfactory statement of the Chairman must have been highly gratifying to all present. It was especially gratifying to hear that the first eight miles of the line, embracing the traffic with Ashton, Haley Bridge, Denton, Hyde and Mottram was about to be opened. The traffic between those places and Manchester, was so great, that they might look for a very large remunerating profit.

Mr. John Lindsay seconded the motion, which was unanimously carried, and acknowledged on behalf of the Directors by Mr. D. Waddington, who alluded to the reports industriously circulated against their line by parties connected with other railways, to the effect that this was an impracticable line. The Directors felt that this was a calumny, and were determined to prove it so, by carrying out the works with the utmost dispatch. They felt that their's was an undertaking which would prove not only tangible, but second to none in the kingdom.

Mr. J. Turner moved a vote of thanks to the Chairman, and paid a suitable compliment to the abilities of that gentleman.

The Chairman, in acknowledgement, alluded to the prospect which this line held out of furnishing a cheap supply of coal to the manufacturers of this district. He was sure that not only would the town and district of Manchester be benefited, but also the great town at the eastern end of the line with which he was more particularly connected, by the outlet opened for the transit of their commodity. The tunnel was especially important, as it regarded the supply of coal to Manchester, for though passengers might be brought over the hills, the coal could not. He considered that they had the best of all guarantees for the success of this undertaking in the name and character of Mr. Locke. He therefore hoped the proprietary would not allow themselves to be carried away by reports which rested on no foundation whatever. It was their duty to endeavour to act cordially together for the success of the undertaking.

Thanks were then voted to Mr. Locke, and the meeting separated.

EASTERN COUNTIES RAILWAY.

In reference to certain remarks in the *Railway Times* on a former article touching the Eastern Counties Company, and a new line proposed into Norfolk and Suffolk, we may observe that the original course adopted in that Company was to destroy the undertaking, and with it the prospects of the shareholders; and if the worst foe had sat at the helm of its affairs with a brand of destruction in his hand, he could not have been more successful. Our object, therefore, has been to draw the attention of the counties to what it ought to have been and what it might have been—one of the most profitable lines for its length of any in England. Without stopping to discuss the number of shares originally offered and reserved for the counties of Norfolk and Suffolk, it is very evident they are not now held there; if too few or less than the number that would have been taken were reserved for the country through which the line was projected to pass, the fault was one of the office; and if done purposely to prevent too great a local influence, it was extremely wrong, and has recoiled severely on the heads of the offenders.—*Courier, Thursday.*

The engineer to the Brandling Junction Railway Company, Mr. Coulthard, has been presented with a valuable and highly-finished silver snuff box, bearing the following inscription:—"Presented by the workmen of the Brandling Junction Railway Company to Mr. Robert Coulthard, engineer, as a token of respect, 1841."—*Newcastle Journal.*

GREAT NORTH OF ENGLAND RAILWAY.—Notice is hereby given, that the Tenth Half-yearly General Meeting of the Company of Proprietors of the GREAT NORTH OF ENGLAND RAILWAY, will be held at the Railway Office, at Darlington, in the County of Durham, on FRIDAY, the 5th day of March, 1841, at Eleven o'Clock in the forenoon, at which time and place the Proprietors of the said Company, or their Proxies, lawfully constituted, are requested to attend.

Dated this Ninth Day of February, 1841.

FRA. MEWBURN,
Clerk to the Company.

Great North of England Railway-office, Darlington.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

EAST ANGLIAN RAILWAY.—NOTICE IS HEREBY GIVEN, That application is intended to be made to Parliament in the ensuing Session, for an Act to make and maintain a Railway or Railways, with all necessary and proper works and conveniences connected therewith, to commence at the proposed Terminus of the Northern and Eastern Railway, on the south side of a certain road or street, situate in Hockerell, in the parish of Bishops Stortford, in the county of Hertford, numbered 22 and 24 on the original Parliamentary Map or Plan of the said Northern and Eastern Railway, deposited with the Clerk of the Peace for the county of Hertford, being the road leading from Hockerell aforesaid to Dunmow, in the county of Essex, thence to pass from, in, through, or into the several Parishes, Townships, Hamlets, and extra-parochial and other places of Birchanger, Stansted, Mount Fitchet, Farnham, Manuden otherwise Manewden, Elsenham, Henham-on-the Hill, Great Hesham, Little Henham, Urley, Quendon, Widdington, Newport, Debden, Rickling, Clavering, Wickenborhall, Arkesden, Wenden, Wenden Lofts, Wendens Ambo, Saffron Walden, Littlebury, Strethall, Great Chesterford and Little Chesterford, or some of them, all in the county of Essex; Hinxton, Ickleton, Duxford, Saint John, Duxford Saint Peter, Pampisford, Whittlesford, Sawston, Stapleford, Great Shelford, Little Shelford, Grantchester, Trumpington, Saint Mary the Less, otherwise Little Saint Mary, Cambridge, Barnwell, Saint Andrew the Less Cambridge, Saint Giles Cambridge, Saint Benedicts Cambridge, The Holy Trinity Cambridge, Cherry Hinton, Teversham, Horningsea, Fenbourn, Stow cum Quy, Great Wilbraham, Little Wilbraham, Landwade, Burrough Green, Swaffham Bulbeck, Swaffham Prior, Swaffham Saint Cyriac, Swaffham Saint Mary, Burwell Saint Andrew, Burwell Saint Mary, Snailwell, Wicken, Fordham, Isleham, Soham, Reach, Fenditton, Chippenham, Badlingham, Upware, Kennett, Newmarket, All Saints, and Wood Ditton, or some of them, all in the county of Cambridge; Saint Mary the less, otherwise Little Saint Mary, Saint Giles, Barnwell, Saint Andrew the Less, Saint Benedict and the Holy Trinity, or some of them, in the borough of Cambridge, in the said county of Cambridge; Exning, Newmarket Saint Mary, Kentford Freckenham, Worlington, Badlingham Barton Parva, Barton Mills, Mildenhall, Eriswell, Wangford, Brandon, Santon, Downham, Icklingham, Saint James, Icklingham, All Saints, Elvedon, otherwise Elden, or so meof them, all in the county of Suffolk Thetford Saint Mary, and Thetford Saint Cuthbert, or one of them, in the borough of Thetford, in the said county of Suffolk Thetford Saint Mary, Thetford Saint Peter, and Thetford Saint Cuthbert, or some of them, in the said borough of Thetford, in the county of Norfolk; Coxton, Kilverstone, Brettenham, Bridgham, Roudham, Eccleston, Larling Snetterton, Feeles, Hockham Magna, Hockham Parva, East Wretham, West Wretham, Stropham, Hargham, Wilby, East Harling, West Harling, Quidenham, Great Ellingham, Little Ellingham, Banham, Old Buckenham, New Buckenham, Deopham, Attleburgh otherwise Attleborough, Besthorpe, Morley Saint Botolph, Morley Saint Peter, Wymondham, Wicklewood, Stanfield, Attlebridge, Hethersett, Hethel, Bracon Ash, Muibarton, Carlton Saint Mary, Carlton St. Peter's, Intwood, Swardestone, Great Melton, Little Melton, Keswick, Cringleford, Colney, Caister next Norwich, Arminghall, Marketshall, and Bixley, or some of them, all in the said county of Norfolk, Earlham, Eaton, Heigham, Lakenham, Trowse otherwise Trowse Milgate, Carrow and Bracondale, Thorpe and Pockthorpe, or some of them, in the county of the city of Norwich; Saint Peter's Southgate, Saint George of Julians, Saint Peter's per Mountergate, Saint Michael's at Tombland, Saint John's Timberhill, Saint Michael's at Thorn, Saint John Sepulchre, and All Saints, or some of them, all in the city of Norwich, and county of the same city, or one of them; Trowse Newton, Witlingham otherwise Whitlingham, Thorpe next Norwich, Thorpe Saint Andrew, Great Plumstead, Little Plumstead, Postwick, Brandall, Witton, Blofield, Bradeston otherwise Braydestone, Strumpshaw, Lingwood, South Walsham Saint Mary, South Walsham Saint Lawrence, Hemblington, Beighton Tunstall, North Burlingham, South Burlingham, Burningham Saint Edmund, Burlingham Saint Andrew, Burlingham Saint Peter, extra-parochial lands, Acle Wickhampton, Upton with Fishley Reedham, Moulton, Halvergate, Southwood, Limpenhoe, Hasingham, Freethorpe Cantley, Caister next Yarmouth, Acle, Runham extra-parochial lands, Acle extra-parochial lands, extra-parochial lands lying between or near the said parishes of Runham and Acle or one of them, extra-parochial lands and Runham, or some of them, all in the said county of Norfolk, and to terminate on the North Denes, in the parish of Saint Nicholas, in the borough of Great Yarmouth, in the said county of Norfolk, near to a certain range of buildings there called East Hill, or otherwise to terminate in the said parish of Runham, at or near a certain Bridge over the River Bure, called the Suspension Bridge.

And it is also intended by the said intended Act so to be applied for, to take powers to make and maintain a branch Railway or Railways from and out of such first-mentioned Railway, with all necessary and proper works and conveniences connected therewith, to commence in the said parish of Trumpington, on the south side of Cherry Hinton Road, near to Cherry farm, and extending therefrom to, and terminating on the south side of the River Cam, near a certain farm-house, called Fiddestone farm, in the said parish of Trumpington; and which said branch railway is intended to communicate with the said first mentioned railway by another branch, diverging from the said first mentioned branch, in a field on the south-east side of the turnpike road from London to Cambridge, extending thereto, and terminating by a junction with the said first mentioned railway, in a field on the north side of the Cherry Hinton Road aforesaid; and which said first mentioned branch railway is to communicate with the town of Cambridge by a branch road to join the London and Cambridge turnpike road at or near Leys and Cow Common, in the said parish of Saint Mary the Less, otherwise Little St. Mary, Cambridge.

And it is also intended by the said int-nded Act so to be applied for, to take powers to make and maintain a branch railway or railways, from and out of such first-mentioned intended railway, with all necessary and proper works and conveniences connected therewith, to commence in the said hamlet or hamlets of Trowse, otherwise Trowse Millgate Carrow, and Bracondale, or one of them, near to a certain street there called Trowse Millgate, at a certain point on the eastern side of the said street marked or delineated on the map or plan of the said intended railway hereinafter mentioned, thence to proceed through the said hamlet or hamlets of Trowse, otherwise Trowse Millgate Carrow, and Bracondale, crossing the river Wensum, near to the Staithe below Carrow Bridge, in the said hamlet or hamlets of Trowse, otherwise Trowse Millgate, Carrow, and Bracondale, or one of them, and thence to proceed in, through, or into the several parishes, hamlets, townships extra parochial, and other places of Thorpe, Pockthorpe, Saint Julian, Saint Peter's per Mountergate, and Saint George, of Tombland aforesaid, or some of them, to the south side of Rose Lane, in the said parish of Saint Peter's per Mountergate, at or near Watt's Foundry, in the same parish, where the said Branch is intended to terminate, and which said Branch Railway is intended to communicate with the said first mentioned Railway, by another Branch, diverging from the said first-mentioned Branch near to the said Staithe, and an occupation road leading past Carrow Abbey, in the said hamlet or hamlets of Trowse otherwise Trowse Millgate, Carrow and Bracondale, or one of them, and thence to proceed through the said last-mentioned hamlet or hamlets, or one of them, and the said parish of Trowse Newton, terminating by a junction with the said first-mentioned Railway, at or near Trowse Eye, in the said last mentioned hamlet or hamlets and parish respectively, or one of them.

And it is also intended by the said Act so to be applied for as aforesaid, to take a power of deviating in the construction of the said intended Railway on either side of the line thereof, as the same will be laid down on the plans of such intended Railway, to be deposited as hereinafter mentioned, to an extent not exceeding 10 yards on either side of such line, where the same is intended to pass through lands covered with houses, and to an extent not exceeding 100 yards on either side of such line on all other parts thereof, save and except where the property so situated within the respective distances of 10 yards and 100 yards, or either of them, shall not be delineated upon the said plans, or if delineated upon the said plans, shall not be contained and described in the books of reference thereto, or where it shall be denoted upon the said plans, that the power of deviation in respect thereof is not intended to be applied for.

And in the said Bill powers will be inserted to divert or alter all such turnpike roads, parish roads, occupation roads, and other highways, rivers, canals, navigations, sewers, drains, and watercourses, within the said several parishes, townships, and extra-parochial and other places as may be required to be diverted or altered for the purposes of such Railway or Railways; and more especially to alter, divert, and turn so much of the turnpike road leading from Acle aforesaid, to Great Yarmouth aforesaid, as lies between the toll bar, in the parish of Runham aforesaid, and the said suspension bridge over the said River Bure, in the same parish. And also so much of a certain other road as lies between or near Henham Broom Farm and Old Mead Farm, in the said parish or parishes of Henham on the Hill, and Great Henham, and Little Henham, or some or one them, to the extent respectively delineated on the plans so deposited, or to be deposited, as hereinafter mentioned.

And it is proposed by the said Act so to be applied for, to incorporate a Company for the purpose of making and maintaining the said intended Railway or Railways to be thereby authorised, and the works to be connected therewith, and to empower the said Company so to be incorporated to levy and raise tolls, rates, and duties for and in respect of all persons, animals, carriages, goods, articles, matters, and things carried and conveyed upon and along, or using the said intended Railway or Railways, and works respectively.

And Notice is hereby further given, That duplicate plans and sections describing the line and levels of the said intended railway or railways and works, and the lands proposed to be taken for the purposes thereof, together with books of reference to such plans, containing the names of the owners or reputed owners, lessees or reputed lessees, and occupiers of such lands, respectively, will be deposited on or before the 1st day of March, in this present year, with the Clerk of the Peace for the county of Hertford, at his office, at St. Albans, in the same county; with the Clerk of the Peace for the county of Essex, at his office at Chelmsford, in the same county; with the Clerk of the Peace for the county of Suffolk, in the said county of the borough or town of Saffron Walden, in the said county of Essex, at his office in the same borough or town; with the Clerk of the Peace for the county of Cambridge, at his office, at Cambridge, in the said county of Cambridge; with the Clerk of the Peace for the borough of Cambridge, at his office, in the same borough; with the Clerk of the Peace for the county of Suffolk, at his office, at Bury St. Edmunds, in the same county; with the Clerk of the Peace for the said borough of Thetford, in the several counties of Norfolk and Suffolk, at his office, in the same borough; with the Clerk of the Peace for the said county of Norfolk, at his office, at Aylsham, in the same county; with the Clerk of the Peace for the said city of Norwich and county of the same city, at his office, in the said city; and with the Clerk of the Peace for the said borough of Great Yarmouth, in the said county of Norfolk, at his office, at Great Yarmouth aforesaid. And that on or before the first day of April in this present year, a copy of so much of the said plans and sections respectively as relates to the several parishes in or through which the said Railway or Railways and Works respectively is and are intended to be made, with books of reference thereto, will be deposited with the Parish Clerk of each such parish, at the place of abode of such Parish Clerk.

Dated the 15th day of February, 1841.

LONDON GRAND JUNCTION RAILWAY COMPANY.—NOTICE is hereby given, That the Ninth Half yearly Meeting of the Proprietors of this Company will be held pursuant to the Act of Incorporation, at the Company's Office, 68, Cheapside, on Monday, the 22nd day of February inst. The chair will be taken at one o'clock precisely.

W. CASH, Chairman.

Offices, 68, Cheapside, February 1st, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS—THE Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

BIRMINGHAM AND GLOUCESTER RAILWAY.—NOTICE is hereby given, That pursuant to the provisions contained in a certain Act of Parliament made and passed in the sixth year of the reign of his late Majesty King William the Fourth, entitled "An Act for making a Railway from Birmingham to Gloucester, with a Branch therefrom," the Ninth Half-yearly General Meeting of the said Company will be holden at the Bell Hotel, Gloucester, on Tuesday, the 23d day of February inst., at One o'Clock precisely.

Notice is also hereby given, that the Books kept by the Birmingham and Gloucester Railway Company, for entering the memorials of the Transfer of Shares in that Company, will, in pursuance of the provisions of the Act of Incorporation, be closed from Monday, the 15th, to Tuesday, the 23rd of February inst., both days inclusive.

Signed C. R. MOORSOM, Chairman.
SAMUEL BOWLY,
Deputy-Chairman of the Board of Directors.

By Order,
WILLIAM BURGESS,
Superintendent and Secretary.

Waterloo-street, Birmingham,
February 1st, 1841.

LONDON and BLACKWALL RAILWAY.—Notice is hereby given, that the next HALF-YEARLY GENERAL MEETING of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, at the London Tavern, Bishopsgate-street, on Friday, the 26th of February instant, at 11 for 12 o'clock.

WILLIAM ROTH, Chairman.
JOHN WARMINGTON, Secretary.

Office, 10, America square, Feb. 3, 1841.

TO CONTRACTORS and PLATELAYERS.—The DIRECTORS of the NORTHERN and EASTERN RAILWAY COMPANY, will meet at their Offices, in Shoreditch, on Thursday the 25th of February instant, to receive TENDERS for MAINTAINING the PERMANENT ROAD between Stratford and Broxbourne, for Twelve Months, commencing 1st March, 1841.

Specifications and particulars to be seen at the above Offices on Friday the 19th inst.

Tenders sealed up, addressed to the Board of Directors, to be delivered before One o'Clock, on or before Thursday the 25th inst.

The Directors do not pledge themselves to take the lowest Tender.

WILLIAM BOURNE, Secretary.

Shoreditch, London, 16th Feb., 1841.

TO RAILWAY COMPANIES.— Public Security, Efficiency, and Economy in FENCE for RAILWAYS. J. PORTER begs to state, that he has within the last month introduced a New Description of Iron Fence for Railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public institutions, and exportation.

82, Upper Thames street, and the Grove Iron and Wire Fence Manufactory, Southwark.

BRITISH IRON COMPANY.—Case in part for the Special General Meeting, relative to the Frauds practised by some of the Agents, will be ready for delivery at the Committee Room, No. 1, Castle-court, Budge row, Wallbrook, on Tuesday next; and the Appendix, with proofs in part, on Thursday next, price 1s. each. The Model of all the Mineral defects at Congreaves may be seen from 12 to 3 o'clock on Wednesday next at the same place.

EIGHTH CALL.—EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.—The Directors of this Company having resolved to make a Call, under the provisions of the Act of Parliament, for an instalment of Two Pounds per share—NOTICE is hereby given, That the several proprietors in the capital stock of the said Company are required to pay the said call of £2 on each of their said respective shares, on or before Wednesday, the 10th day of March proximo, to one of the undermentioned Bankers—

London—Messrs. Williams, Deacon, and Co., Birchin-lane.
Liverpool—Messrs. Barned and Co.
Bristol—West of England and South Wales District Bank.
Edinburgh—Eastern Bank of Scotland, Hanover-street.

Interest at the rate of 5 per cent. per annum will be charged by the Bankers on all such sums as shall remain unpaid after the said 10th day of March, until payment thereof.

By Order of the Directors,
ALLEN GEO. FIELD, Secretary.

15th February, 1841.

HALF-YEARLY GENERAL MEETING—SHEFFIELD AND ROTHERHAM RAILWAY. NOTICE is hereby given, That the Half-yearly General Meeting of the Sheffield and Rotherham Railway Company will be held at the Sheffield Station, on Thursday the 11th day of March next, at 12 o'clock at noon, pursuant to the Company's Act of Parliament, and that the books for the registry of Transfers of Shares will be closed from the 6th to the 12th of March inclusive.

Dated this 17th day of February, 1841.

By order of the Directors.

THOS. BADGER, Rotherham,
HENRY VICKERS, Sheffield,
} Law Clerks.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

The names of the Directors will be published on Saturday next. The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two-horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

TO RAILWAY CONTRACTORS.—RAILWAY WAGGONS. Wanted to Purchase Fifty two-yard Waggons with 2½ feet wheels, 4.8½ gauge, in good working repair, to be delivered in London, or near to the South Eastern Railway, on the Godstone district.

Cash will be paid on delivery.

Address to Mr. HUBBERSTY, at Blechingly, near Godstone, Surrey.

February 18th, 1841.

NOTICE IS HEREBY GIVEN, That application is intended to be made to Parliament in the next session, for leave to bring in a Bill for making and maintaining a Railway with all suitable and proper Stations, Wharfs, Warehouses, Landing-places, Bridges, Culverts, Communications, Approaches, Conveniences and other works connected therewith, commencing at or near the Foundry Bridge Road in the hamlet of Thorpe in the county of the city of Norwich, near the Foundry Bridge, and terminating (after crossing Breydon Water or part thereof) near the confluence of the rivers Yare and Bure in the hamlet of South Town, otherwise Little Yarmouth, and the parish of Gorleston, both in the county of Suffolk, or in the parish of Runham and the Borough of Great Yarmouth or the liberties thereof, in the county of Norfolk or some or one of them, which said intended Railway and works will be situated in or pass or be made from, in through, or into the several parishes, townships, hamlets, and extra parochial, or other places next hereinafter mentioned, or some of them, (that is to say) Thorpe, otherwise Thorpe hamlet, aforesaid, Saint Peter per Mountergate, in the city of Norwich, and county of the same city, the liberties of the city and county of the said city of Norwich, Thorpe Saint Andrew, otherwise Thorpe next Norwich, Trowse Newton, Postwick, Great Plumstead, Witton, Brundall, Bradeston, Strumpshaw, Buckenham, Hassingham, Cantley, Southwood, Limpenhoe, Reedham, Wickhampton, Moulton, Belghton, Halvergate, Freethorpe, Acle, Runham and Breydon, in the county of Norfolk, South Town, otherwise Little Yarmouth, and Gorleston in the county of Suffolk and the borough of Great Yarmouth in the said county of Norfolk, and the liberties of the said borough.

And it is proposed by the said intended Bill to take power to alter the channel of the river Yare, otherwise the channel of the river Wensum and Yare, and to make a new channel for the said river, in the said parish of Trowse Newton, at or near the places where the said railway is intended to cross the same river, and to the extent which will be shown on the plans to be deposited as hereinafter mentioned; and to alter, vary, and divert, such highways, roads, paths, passages, rivers, brooks, streams, sewers, waters and water-courses, within the aforesaid city and borough, and the respective liberties thereof, and the said hamlets, parishes, townships, extra-parochial and other places aforesaid, or some of them, as it may be necessary to divert for the purpose of constructing the said intended railway, and the works connected therewith.

And it is also intended by the Bill so to be applied for, to take power to make a road or communication between the terminus of the said Railway and the Borough of Great Yarmouth, as the same will be shown on the said plans, and for such purpose do make a bridge over the said river Bure and Yare, or one of them, at or near the confluence of the said rivers, which said communication and bridge respectively will be situate in the said Hamlet of South Town, otherwise Little Yarmouth, in the parish of Gorlestown, both in the county of Suffolk; or in the parish of Runham, and borough of Great Yarmouth, or the liberties thereof, in the county of Norfolk, or some or one of them.

And it is also intended by the said Bill, to apply for power to deviate in the construction of the said Railway and other works from the line or situation thereof, as the same will be defined on the plans to be deposited as aforesaid, to such extent as will be shown in the said plans.

And it is proposed by the said Bill to incorporate a Company for the purpose of making and maintaining the said intended Railway, and works, with powers to levy and raise tolls, rates, and duties for or in respect of the use thereof.

And Notice is hereby further given, that duplicate plans and sections, describing the line or situation of the said intended Railway and works, and the lands in or through which the same is or are intended to be made, together with books of reference thereto containing the names of the owners or reputed owners, lessees or reputed lessees and occupiers of such lands, will, on or before the 1st day of March, 1841, be, or will have been, deposited for public inspection with the Clerk of the Peace for the county of Norfolk at his office at Aylsham; with the Clerk of the Peace for the county of Suffolk, at his Office in Bury Saint Edmunds, with the Clerk of the Peace for the city and county of the City of Norwich, at his Office in Norwich, and with the Clerk of the Peace for the Borough of Great Yarmouth, at his Office in Great Yarmouth; and a copy of so much of the said Plans and Sections as shall relate to each of the aforesaid parishes respectively, together with a book of reference thereto, will be deposited on or before the 1st day of April, 1841, with the parish clerk of each such parish respectively. Dated this 17th day of February, 1841.

RACKHAM and COOKE,
J. O. TAYLOR,
} Norwich.
REYNOLDS and PALMER, Great Yarmouth,
WHITE and BORRETT, 35, Lincoln's Inn Fields,

Solicitors to the Bill.

TO RAILWAY COMPANIES, CONTRACTORS, FOUNDERS, &c.—For Sale by Auction, Secondhand Locomotive Engines and spare materials, on Tuesday the 2nd March, 1841, at Two o'clock, by Thomas Bowman, at New Sheldon, near Darlington.

One six-wheeled coupled Locomotive Engine, with 14½in. cylinders and 16in. stroke; cylinders vertical.

One six-wheeled ditto ditto, with 10½ in. cylinders and 20 in. stroke; cylinders inclined.

Four small Lathes, adapted to whitesmiths' shops.

About Sixty tons of cast metal, consisting of Railway Chairs, &c.

About Sixty tons of malleable iron, Railway plates, and other scraps.

The iron will be put up in lots to suit purchasers, and approved bills taken in payment.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £5 5s. per Annum. Postage, 30s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

SALE OF ENGINEER'S STOCK early in March, (if not previously disposed of in whole by private bargain), the Tools, Patterns, and other Stock, belonging to Messrs. Stark and Fulton, Engineers, North-street, Glasgow—consisting of Steam-engine and mill gearing patterns, turning lathes, planing, screwing, and drilling machines; smiths' and boiler makers' tools; boring mill and steam-engines, &c.; the particulars of which will be fully specified in catalogues to be issued on and after the 1st of March.

And, to be Sold or Let on Lease, the Engineer and Millwright Work now occupied by Messrs. Stark and Fulton, in North-street, in which an extensive business has been carried on by them for some years past.

The Works and Stock will be open for inspection daily, between ten and four o'clock, and application for further particulars may be made either at the Works, or to A. and D. J. Bannatyne, writers, No. 16, Gordon-street.

Glasgow, 12th February, 1841.

TO CONTRACTORS AND OTHERS.—CENTERING FOR TUNNELS FOR SALE.—20 Ribs of Tunnel Centering, for Tunnel 24 feet wide, of approved construction, with strong iron-bound ships, trollies, and other apparatus for tunnelling.

Also, 200 tons of excellent parallel Rails and Chairs; Rails, 32lbs. to the yard.

Apply to Mr. Betts, Leicester.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire drawers, Birmingham.
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Duan, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every exectation. It has been used in Shipping Five Years.

VAN BUTCHELL ON FISTULA, &c.

Fourth edition, just published, in 8vo., cloth boards, price 7s. 6d., enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No. 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

Above and below each of the Train Columns are given the places on other lines, to and from which Passengers may proceed by Railway.

FARES.

First-class passengers, 3d. per mile; second-class, 2d. per mile. Children, under seven years of age, in first-class carriage, charged second-class fare; and in second class, waggon fare; and in waggon, without any deduction. Infants in arms not charged.

Gentleman's carriage, with four wheels, 6d. per mile; and parties riding in their own carriage, 2d. per mile each; servants riding outside, and children, waggon fare.

A single horse, two-wheel carriage, or pony phaeton, 4½d. per mile. Any larger number of horses, if one property, 3d. per mile each. One ox, cow, or other neat cattle, mule, or ass, going in an open waggon, 3d. per mile each; any larger number, being the same property, 2d. per mile each. Sheep, 4d. per score per mile, or 8d. per single waggon, and 1s. 4d. per double waggon, per mile. Pigs, according to size, *from* ½d. to 1d. per mile each. Any distance, under six miles, charged as six miles in all cases. The Manchester 6.30. morning train is the only one by which passengers can go through to London in waggons; but they may proceed to Rugby by every London train.

Every train will have first and second class carriages, and most of them, for the convenience of the working classes, open waggons, without seats, at fares proportionably low.

Luggage, to the following extent, may be taken free of charge:—First-class passengers, 112 lb.; second-class, 60 lb.; waggon, 40 lb.—Any excess charged for any distance under 30 miles, ½d. per pound; and over 30 miles, ¼d. per pound, extra.

The Company's servants are not allowed to porter for waggon passengers.

Waggon passengers must be at the booking-office ten minutes before the time of departure, or they cannot be booked for that description of vehicle. Gentlemen's carriages and horses must be at the Station a quarter of an hour before the departure of the train; and if horses are to be sent from the intermediate Stations, it is advisable to give previous notice.

The Company do not hold themselves responsible for any luggage, matters, or thing, unless booked, and paid for accordingly.

Passengers are particularly requested to see their luggage in and out of the carriages.

Parcels can be forwarded to all parts of the kingdom, from 9, Brown-street, Manchester; Albion Hotel, Oldham; Rose Hotel, Rochdale; Swan Inn, Halifax; Railway Office, Bradford; Sweet Railway Office, Huddersfield; Royal Hotel, Dewsbury; Bennett's Office, Wakefield; and from the respective Stations of the Manchester and Leeds Railway Company.

Gratuities are not allowed to be taken by any of the Company's servants. Smoking is strictly prohibited on any of the Company's premises.

Passengers, &c. may be booked through at the Manchester Station to the following places:—

	First-class.	Second-class.	Third-class.		First-class.	Second-class.	Third-class.
Rugby	£1 8 0	£0 18 0	£0 11 0	London	£2 10 0	£1 12 0	£1 1 0
Derby	1 2 0	0 16 0	0 9 0	Nottingham	1 2 0	0 16 0	0 9 0
York	1 0 0	0 13 0	0 9 6	Sheffield	0 12 0	0 7 6	0 6 0
Selby	0 18 0	0 12 0	0 8 6	Hull	1 3 0	0 15 6	0 11 0

Passengers may also be booked through from every Station.

Gentlemen's carriages to London, by 6.30, morning train, £5 5s.

Passengers wishing to come from London by way of Derby to Manchester, or to any Station on the Manchester and Leeds Railway, must book for Rugby.

***** In addition to the above trains, there will be an extra one from Rochdale to Manchester at nine o'clock morning; and one from Manchester to Rochdale at three o'clock in the afternoon, stopping at all the intermediate Stations, on week days only.**

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, that the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the WHITE LION HOTEL, in the City of Bristol, on THURSDAY, the 4th of March, at Eleven o'Clock, for the Election of four Directors in the room of those who retire by rotation, and for other affairs.

The Chair will be taken at Twelve o'Clock precisely.

FREDERICK RICKETTS, Chairman.

The retiring Directors may be re-elected.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Saturday, the 20th of February, and not re-opened until after the said General Meeting on the 4th of March.

By Order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol,
5th February, 1841.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—NOTICE is hereby given, that the Directors will receive, at their Office in Broad-street, Bristol, on or before Friday, March the 19th, at Twelve o'Clock, TENDERS for the execution of the several works comprised in Seven Contracts, extending from the station at Bridgewater, to the proposed station at Taunton, a distance of eleven miles 35 chains. These Contracts comprehend the entire completion of the Works, including the Ballasting, but exclusive of the laying the permanent rails.

Drawings and Specifications will be exhibited on and after Monday, February 15th, at the Resident Engineer's Office, Coronation-road, Bristol.

Printed Forms of Tender may be had at the same place, and at the Company's Offices, Broad-street, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office in Broad-street, Bristol, at Twelve o'Clock on the said 19th day of March.

J. B. BADHAM, Secretary.

Bristol and Exeter Railway-office, 30, Broad-street, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

Post Horses to any part of London, including the driver 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

AT a MEETING of the Owners of Land and Hereditaments on the line of the proposed COVENTRY, LEAMINGTON and WARWICK RAILWAY, held at the King's Head Inn, in Coventry, on Monday, the 21st December, 1840,—

LORD LEIGH in the Chair:

It was resolved—

That the proposed Railway is unnecessary and uncalled for, and being a vexatious interference with the property of landowners, without affording a corresponding benefit to the public, this meeting is determined to oppose it by every means in their power.

It was resolved—

That Mr. Heath be instructed to take immediate steps to carry the above resolution into effect.

It was resolved—

That a Committee, consisting of the Earl of Aylesford, Lord Leigh, the Hon. Charles Bertie Percy, the Hon. and Rev. C. M. Villiers, Sir J. R. Cave Brown Cave, Bart., A. F. Gregory, Esq., Mr. Greaves, Mr. Butler, and Mr. Handley, be appointed to protect the interests of the owners and occupiers of property on the proposed line, and to adopt such steps as they may deem expedient to oppose the measure.

LEIGH.

Lord Leigh having left the chair, and the Earl of Aylesford being called to it,

It was resolved—

That the cordial thanks of the meeting be given to Lord Leigh, for his kindness in taking the chair, and the able manner in which he has conducted the business of the day.

AYLESFORD.

Of the whole distance between Coventry and Leamington, viz., nine miles and one eighth, upwards of eight miles is the property of dissentients.

The following is a list of dissentients—

Stamford and Warrington	John Salmon
Aylesford	John Sparrow
Clarendon	Samuel Barker
Leigh	James Weston
Charles Bertie Percy	William Kendall
C. M. Villiers	Bazil Southam
J. R. Cave Brown Cave	Thomas Jones
Arthur Francis Gregory	Elizabeth Whitmore
John Greaves	Joseph Dormer
Thomas Cotton	John Campbell
William Henry Butler	James Roby Harbourne
John Tomes	Thomas Tidmarsh
Charles Twisleton	John Boddington
Thomas Hope	Thomas Randall

John Smart	Henry Catterns
William Barrett	

By order of the Committee,

THOMAS HEATH.

Warwick, Feb. 2, 1841.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, an manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Rouke and Varty, 81, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City; in Edinburgh, by Sanderson and Son, 32, St. Andrew-square; in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street; in Birmingham, by Osborn and Sons, Bennett's-hill; in Liverpool, by T. Dismore, Bold-street; in Manchester, by Allen and Raphael, 28, Nightingale-street; and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
ditto, ditto, with reserve of leads	1	14	0

December, 1840.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of soft and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

MITCHELL'S BATH and BRISTOL WAGGONS.—To be Sold by AUCTION, by Mr. DIXON, at the City Repository, Barbican, on Friday, February 26, 1841, commencing at Twelve o'clock, precisely, about Sixty fine shaped, active, powerful, seasoned Cart Horses, 6 Broad Wheel Waggons (with tilts and covers, complete); several Carts, Drays, Ladders, Jacks, and other implements; Sixty Sets of Harness, &c. &c., being the entire genuine known superior stock that have been employed on the above old established well conducted Bath and Bristol Waggon business, and are now, by order of the proprietor, for sale without the least reserve.

Colours.—Blacks, Browns, Greys, Roans, and Chesnuts.

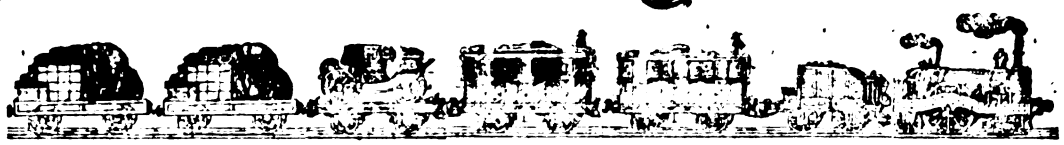
The above valuable well-selected stock of fine seasoned Cart Horses are worthy the immediate attention of Brewers, Distillers, Corn and Coal Merchants, Wharfingers, Innkeepers, Contractors, &c., being in excellent condition, mostly young and sound, just from constant work, and positively without exchange or addition.

On view and catalogues had two days previous to the Sale.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 915, (double number) price 6d., published this day, contains Abstracts of the following Recently-enrolled Specifications:—Holme's, for certain improvements in Steam Engines, and in generating and applying Steam as a Motive Power; Richards', for certain improvements in Cutting and Sawing Wood; Berry's, for certain improvements in the arrangement, construction, and mode of applying certain apparatus for Propelling Ships and other Vessels; Hebert's, for certain improvements in the manufacture of Needles, Fontainemoreau's, for certain improvements in covering and coating Metals and alloys of Metals.

Also, Mr. Baddeley's Eleventh Report, of the Number, Causes, Character and Consequences of the Fires in London during the Year 1840, particularizing all the Serious and Fatal Fires, with full and explicit notices of the occupancy of the several premises as to trades; the causes so far as ascertained, the daily and hourly distribution of Fires throughout the year. Proceedings of the City Authorities relative to Fire-escape, with description and engraving of the Fire-escape Ladders made for the City Police by Mr. Merryweather, Long Acre. Also description, with three engravings of the new and powerful Floating Engine recently built for the London Fire Establishment. Praiseworthy conduct of the Firemen, &c.

Professor McGauley's plan for preventing railway accidents. On rotary and reciprocating steam engines, and on the supposed loss of power from the use of the crank. Symington's system of Condensation, &c. &c. &c.



The MECHANICS' MAGAZINE, Vol. 33, price Ten Shillings boards, illustrated with upwards of Two Hundred Engravings, was published January 1st, containing Abstracts of all the most important Specifications of Recent English Patents, as well as all the new inventions, and complete lists of English, Irish, and Scotch Patents for the last six months.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-st., Middlesex.—Saturday, Feb. 19, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hull.

No. 165. Vol. IV.—No. 9.—Part I.] SATURDAY, FEBRUARY 27, 1841. [Price, with Part II., 1s.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of 5 per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1841, or 1842.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff; or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London; Mr. Wm. Mullard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 16, 1841.

TO TIMBER MERCHANTS, RAILWAY CONTRACTORS, SHIPBUILDERS, and OTHERS.—Valuable and Extensive Woods for Sale.—The valuable and extensive Woods of Aboyne and Glentanner, belonging to the sequestrated estate of the Marquis of Huntly, are now for sale.

The Woods of Aboyne, now for sale, comprehend about 900 acres, and consist of some of the most valuable Scots Firs and Larches that are to be found in the north of Scotland, all ripe and fit for immediate use; and the Forest of Glentanner contains a considerable extent of Scots Fir, of natural growth, and of very superior quality.

The Woods are situated in the parishes of Aboyne and Birse and county of Aberdeen, and are distant from the city and sea port of Aberdeen about thirty miles, having an excellent floating river the Dee, intersecting them.

The quality of the Timber is admirably adapted for railway Sleepers, street paving, shipbuilding, and for country purposes.

Taking into view their proximity to a large river, their extent, age, and quality, these woods are particularly deserving of the attention of men of capital.

Offers for the whole, or for such lots as may suit intending purchasers, will be received by Donald Lindsay, accountant, No. 56, George street, Edinburgh, trustee on the sequestrated estate of the Marquis of Huntly, until the 7th day of April next.

Lithographed plans, showing the relative situation of the respective plantations to the river, with particulars of the age, quantity, and quality of the wood, and other requisite information, are in course of preparation, and may be had on application to the said Donald Lindsay, to Walter Duthie, W. S., Edinburgh; Messrs. Spottiswoode and Robertson, solicitors, 27, Great George street, Westminster; David Walker, land-surveyor in Aberdeen; or Thomas and Newell Burnett, advocates in Aberdeen. William Smith, overseer at Aboyne Castle, will show the woods upon the ground.

Edinburgh, 19th February, 1841.

WATERPROOF LUGGAGE COVERS.—Manufactured by John Evans, (late Milton and Co.), Cut Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roofs, Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Coverings, Rick Cloths, Poles, Blocks, Cordage, &c.

TO RAILWAY CONTRACTORS.—RAILWAY WAGGONS. Wanted to Purchase Fifty two-yard Waggons with 2½ feet wheels, 4.8½ gauge, in good working repair, to be delivered in London, or near to the South Eastern Railway, on the Godstone district.

Cash will be paid on delivery.

Address to Mr. Husbbarty, at Blechingly, near Godstone, Surrey.

February 16th, 1841.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 45 Piccadilly; or at the office of Slater and Heelis, Princess street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
45, Piccadilly.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of those undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, apt to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

THE RECIPROCATING SYSTEM OF RAILWAYS. No one who is thoroughly conversant with the present costly mode of constructing and working Railways, and who has attentively and with an unbiassed mind perused the detailed account of the plan proposed by Mr. Whishaw, as described and illustrated in "the Railways of Great Britain and Ireland," will dispute the important advantages to be derived from its general introduction. The following are some of its leading features:—A more perfect mode of constructing embankments, whereby slips would in a great measure be prevented; a great reduction in first cost and annual expenditure; a better adaptation of the engine to its load: an entire prevention of accidents by collision; a great reduction in the fares, and consequently a large increase of traffic, together with a much greater amount of accommodation to the public by the more frequent starting of trains. Every member of the Legislature, every Railway capitalist, every Railway Engineer, and indeed all who are interested in the further extension and improvement of the internal communication of Great Britain and Ireland, should lose no time in acquainting themselves with this entirely original and economical system of Railways.

Messrs. Simpkin, Marshall & Co., of Stationers' Hall Court, are publishers of "the Railways of Great Britain and Ireland," and the work may be obtained through any bookseller of the United Kingdom.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, that the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the WHITE LION HOTEL, in the City of Bristol, on THURSDAY, the 4th of March, at Eleven o'Clock, for the Election of four Directors in the room of those who retire by rotation, and for other affairs.

The Chair will be taken at Twelve o'Clock precisely.

FREDERICK RICKETTS, Chairman.

The retiring Directors may be re elected.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Saturday, the 20th of February, and not re-opened until after the said General Meeting on the 4th of March.

By Order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol,
5th February, 1841.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—Notice is hereby given, that the Directors will receive, at their Office in Broad-street, Bristol, on or before Friday, March the 19th, at Twelve o'Clock, TENDERS for the execution of the several works comprised in Seven Contracts, extending from the station at Bridgewater, to the proposed station at Taunton, a distance of eleven miles 55 chains. These Contracts comprehend the entire completion of the Works, including the Ballasting, but exclusive of the laying the permanent rails.

Drawings and Specifications will be exhibited on and after Monday, February 15th, at the Resident Engineer's Office, Coronation-road, Bristol.

Printed Forms of Tender may be had at the same place, and at the Company's Offices, Broad street, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office in Broad street, Bristol, at Twelve o'Clock on the said 19th day of March.

J. B. BADHAM, Secretary.

Bristol and Exeter Railway office, 30, Broad-street, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

LONDON AND BIRMINGHAM RAILWAY. On and after Monday, the 8th of March, the following ALTERATIONS will take place in the times of DEPARTURE of the Trains:—

9 A.M. Down Train will be 8¾ A.M. (arriving in Birmingham about 2 P.M.)

9½ A.M. Down Train will be 9¼ A.M.

6¾ A.M. Up Train (from Wolverton) will be 7¼ A.M. (arriving in London about 9¼ A.M.)

2 P.M. Up Train (3rd class) will be 2h. 20m. P.M., and corresponding alterations will be made in the times of departure of the same trains from the several intermediate stations.

(By Order,) R. CREED, Secretary.

Euston Station, Feb. 20, 1841.

TO CONTRACTORS AND OTHERS.—CENTERING FOR TUNNELS FOR SALE.—20 Ribs of Tunnel Centering, for Tunnel 24 feet wide, of approved construction, with strong iron-bound ships, trollies, and other apparatus for tunnelling.

Also, 200 tons of excellent parallel Rails and Chairs, Rails, 32lbs. to the yard.

Apply to Mr. Betts, Leicester.

LONDON AND SOUTH-WESTERN RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of this Company was held on Saturday last, the 20th inst., at the Company's offices, Nine Elms Station, Vauxhall; ROBERT GARNETT, Esq., in the chair.

The attendance was very numerous.

The advertisement calling the meeting having been read, the minutes of the previous meeting were read and confirmed.

The SECRETARY (ALFRED MORGAN, Esq.) then read the Report of the Directors as follows, printed copies having previously been circulated in the room:—

REPORT.

The Directors of this undertaking, at the Thirteenth Half-Yearly General Meeting of its proprietors, report the following statement of the finances of the Company to the 31st December, 1840:—

CAPITAL ACCOUNT, 31st December, 1840.

RECEIPTS.

On calls	£1,406,067	8	0
Ditto Gosport branch	214,455	0	0
Loan on debenture bonds	630,100	0	0
Interest	3,951	3	7
Balance	29,264	6	9
Total	£2,283,837	18	4

PAYMENTS.

Expenditure on raising the capital, procuring Acts of Parliament, &c.			41,467	2 0
Land and compensation, law charges for conveyancing, surveying, and valuing			295,717	2 10
Works, comprising cuttings and embankments, bridges, culverts, stations, temporary buildings, fencing, draining, &c.			1,136,171	13 6
Iron rails, chairs, and sleepers			336,019	16 8
Waggons, implements, tools, and stores			64,918	7 2
Engines and carriages			145,804	10 10
Surveying and engineering			32,967	6 4
Salaries and wages, rent and taxes, printing and stationery, postage, travelling, and other incidental expenses			24,228	14 9
Directors' expenses from the commencement			5,350	0 0
Debenture bond stamps and brokerage			3,769	13 5
GOSPORT BRANCH—				
Parliamentary and law expenses	£7,297	15 7		
Land and compensation, Surveying and valuing	51,623	8 8		
Surveying and engineering	5,224	2 6		
Interest	4,707	11 10		
Works in progress and materials	128,570	12 3		
			197,423	10 10
Total			£2,283,837	18

REVENUE ACCOUNT from 1st July to 31st December, 1840.

RECEIPTS.

Balance of last account		£30	16 2
Traffic from 1st July to 31st December		144,166	2 0
Pier dues		296	11 9
Total		£144,493	9 11

PAYMENTS.

Maintenance of way and works			£13,736	16 2
Locomotive power, viz., coke, oil, cotton waste, repairs of engines and tenders, men's wages, repairing, engine drivers, and coke fillers; also salaries of superintendents, &c.			25,254	3 9
Carriage expenses and general traffic, viz., Repairs of carriages, trucks and horse boxes, cleaning and oiling of carriages, clerks' salaries, guards and porters' wages, printing and stationery, advertisements, insurance, and other incidental expenses			18,506	17 8
Police			1,276	16 7
			58,776	14 2
Mileage duty	£7,309	19 3		
Rates and taxes	1,388	8 7		
			8,698	7 10
			£67,475	2 0

Receipts	144,493	9	11
Payments	67,475	2	0
	77,018	7	11
Ded. interest on debenture bonds	14,596	0	5
Balance	£62,422	7	6

The statement which is this day placed in the hands of the proprietors, shows that the total amount received for traffic during the half year ending the 31st of Dec. last, was 144,166*l.* 2s., and that of this sum 16,1[illegible]*l.* 19s. 6d. was received for the conveyance of goods and live stock, while 128,041*l.* 2s. 6d. was derived from carrying passengers, parcels, and those smaller items generally included under the head of passenger traffic. That during the first half year of the opening of the entire line from London to Southampton, the receipts from this most important branch of traffic should at once so nearly approximate to that sum which it was stated would be receivable when, owing to the appreciation of the increased facilities afforded by the railway, the existing traffic on this line of road should become doubled, is a matter for solid congratulation.

The amount received for carrying goods is comparatively small, but this will doubtless be increased when the facilities for mercantile transactions at Southampton, which are now in progress, shall be completed. Already some of the establishments connected with steam navigation have felt the importance of Southampton in a sufficient degree to make it their point of arrival and departure, and these will doubtless be followed by others.

The Directors have in a former Report noticed the advantages of Southampton as a passenger steam-packet port for all the south-western coast of England, and subsequent information leads them to place great reliance on that circumstance as a means of increased revenue.

On referring to the traffic accounts for the two preceding half years, it will be found that, excluding the duty paid to Government, local rates and taxes, and the interest on borrowed money, the expenses on the half year, from June to December 1839, were 47½ per cent. on the receipts; in the following half year the expenses were 44 per cent. on the receipts, while in the last half year up to the 31st of December last, the expenses were reduced to 40¼ per cent.; and the Directors believe that when further experience and practice in the various departments are obtained, the cost of management and working may be still further reduced. As one security for a further reduction of current expenditure, the Directors have the pleasure to announce that they have contracted for the future maintenance of the way for a term of years. Mr. Brassey, whose spirited exertions the Directors have had previous occasion to notice, has entered into a contract for this purpose, and the Directors feel themselves justified therefore in relying upon the utmost efficiency and economy in this large branch of current expenditure. The bringing so important an item within a definite limit cannot fail to be satisfactory to the proprietors. In the other branches of expenditure the aim of the Directors will be the same, viz. to reduce them as far as is consistent with the efficient working of the line, and the comfort and safety of the public.

The accounts how that a net profit of 62,095*l.* 19s. 7d. has been made by the traffic of the last half-year, after the payment of the interest on the Debenture Bond debt of the Company, and all other current outgoings, which added to a former balance of 30*l.* 16s. 2d. and 296*l.* 11s. 9d. received for pier dues, makes 62,422*l.* 7s. 6d.: out of this sum the Directors propose to pay a dividend of 1*l.* 10s. per share. This will leave a reserve fund of 8,422*l.* 7s. 6d. available for future dividends or depreciation of stock.

The Directors, on the present occasion, have to submit for the approbation of the proprietors, the plan by which they propose to raise the additional capital which may be necessary for completing and furnishing the whole line both to Southampton and to Gosport. It is proposed to issue 42,000 Scrip Shares of 5*l.* each, to be called tenths; this will make as many tenths as there are at present shares in the Company, and it is intended to give to every shareholder the option of taking at par, one of those tenths for every share of which he was on the 18th instant the registered proprietor, and it is further intended, after the passing of the Act now sought to be obtained, to convert these tenths into 50*l.* shares. The more minute particulars of the plan are described in a paper which will be read to the meeting, and afterwards sent to every shareholder. The proprietors will perceive that these 42,000 tenth shares will produce a sum of 210,000*l.*, an amount exceeding that which it was announced would be wanted for the completion and furnishing the line. The Directors have on further experience been convinced that the contingent expenses of completing in a short time works of such magnitude as those on this line of railway, and the increased stock necessary for carrying on the traffic, will occasion a larger expenditure than they previously contemplated, and they are desirous of avoiding the necessity of again applying to Parliament for objects of a pecuniary character. They therefore propose this larger sum.

Since the last meeting of the proprietors Mr. Easthope, the late Chairman of the Court of Directors has resigned the chair, and Mr. Robert Garnett, the Deputy-Chairman, has been unanimously elected thereto; and Mr. Chaplin has succeeded Mr. Garnett as Deputy-Chairman.

The Directors who go out by rotation on the present occasion, are Mr. William Chaplin, Mr. Ambrose Humphrys, and Mr. J. W. Drew. These gentlemen are eligible for re-election, and the remaining Directors propose their re-election accordingly.

The Directors also propose that the vacancies in the direction, occasioned by the regretted death of their late colleague, Mr. Simon M'Gillivray, and the retirement of Mr. Henry Waymouth, Mr. John Wright, and Mr. Edmund Jerningham be supplied by electing as Directors, Lieut.-Colonel Henderson, of Southampton; Mr. James Brownell Boothby, of Twyford Abbey, Acton, Middlesex; Mr. Thomas Smith, of Liverpool; and Mr. James Aikin, of Liverpool.

In conclusion, the Directors have only to assure the proprietors of their continued confidence in the prosperity of the concern, and that they look forward to a still further increased dividend.

By Order of the Court of Directors,
ALFRED MORGAN, Secretary.

The Report was exceedingly well received.

The SECRETARY then read the following resolutions for the issue of new shares, the Chairman having first explained that a printed copy of these resolutions would have been placed in the hands of the proprietors along with the Report had it not been for the severe indisposition of Mr. Bircham, the Company's Solicitor, whose services were requisite for the formal wording of the plan:—

"That there shall be issued 42,000 scrip of 5*l.* a share, to be called tenths, and every proprietor in the Company shall have the option, on or before the 6th day of March next, of taking one such tenth in respect of every original, New, or Gosport Branch Share, of which he is this day the registered proprietor.

"That a copy of these Resolutions shall forthwith be sent by the Secretary to each proprietor by post, addressed to him according to his description in the register book of proprietors; and in the event of any proprietor, except such as may be now absent from the United Kingdom, not declaring his option in writing, received at the Secretary's office, Nine Elms, on or before the 6th day of March next, to take his proportion of the said Tenths, he shall be held to waive the same; and all such Tenths not so taken, shall be sold by the Board of Directors as and when they see fit, for the benefit of the Company at large; and any proprietor who may be now absent from the United Kingdom, shall be held in like manner to have waived his option, unless he shall declare it in writing, received as aforesaid, on or before the 26th day of March next ensuing.

"That 1*l.* 5s. shall be paid upon each such tenth at the time of subscribing for the same, and a scrip receipt for the same shall be given to the subscriber, and any proprietor who shall not have paid such deposit within 10 days after the allotment of his tenths, shall forfeit by such omission all right to the same.

"That each subscriber for any such tenth, shall oblige himself to pay the remainder of the sum of 5*l.* upon each tenth he may subscribe for, at such time as he shall be called on by the Board of Directors, so that no one call shall exceed 1*l.* 5s. per tenth, nor be made sooner than three calendar months after the then preceding call.

"That no subscriber for, or holder of, any such tenths, shall be registered a Shareholder in the books of the Company, or be entitled to any dividend or other privilege in respect of any less number than 10 such tenths.

"That the proprietors of such tenths, shall be entitled to be registered in the books of the Company, as proprietors of one integral share in the said Company, in respect of every entire number of 10 such tenths they may respectively subscribe for or procure; and shall receive a certificate of such integral share, in exchange for the receipts for the first instalment, paid on every entire number of 10 such tenths, and shall be entitled to all such rights and privileges, in respect of every

such integral share, as the proprietors of the original shares in the Company, in respect of such original shares. Provided always that such new shares shall only entitle the holders thereof, to a dividend proportioned to the amount which shall at the time have been paid thereupon.

"That the Directors be authorised and requested to prepare and obtain the execution of such subscription contract; and to apply for, and obtain from Parliament, such additional powers as they may deem expedient or proper for carrying these resolutions into effect."

Mr. KEET suggested that the statement of accounts should be transmitted to the proprietors a few days before the half-yearly meetings, as it was impossible on so short a notice to give the items that full consideration which they deserved.

The CHAIRMAN said, the course proposed would be a very convenient one, but was not always practicable. He was now ready to answer any questions or to give any farther information or explanation that might be required in reference to the Report. He would first, however, take that opportunity of adverting to a point in connection with the recommendation of the Directors, for the re-election of the out-going members of the Board and the selection of the four candidates now for the first time proposed—a recommendation by which the Directors considered that they were consulting the best interests of the undertaking. Yesterday they had been reminded that a minute was placed upon the Company's books in 1839, to the effect, that the names of retiring Directors should be notified to the shareholders in the circulars convening the half-yearly meeting. They regretted extremely that in this instance the existence of the minute in question had been forgotten, but for the future it should be attended to, and with that view it was proposed to insert in the Company's Bill now before Parliament a clause rendering it imperative on the Directors to publish in full time, probably at the same time as the notices convening the meeting, the names of all candidates for a seat at the Board who might be proposed by the Directors, so as to afford due space for an investigation of their merits. He could only repeat that the Directors were extremely sorry that on this occasion the minute referred to should have been overlooked. There was only one other point upon which he wished to say a few words. It would be seen that in the second paragraph of the Report, the Directors stated that "already some of the establishments connected with steam navigation have felt the importance of Southampton in a sufficient degree to make it their point of arrival and departure," and he had much gratification in bringing before the meeting an official communication on this subject, from Mr. Sainsbury, the Secretary of the Southampton Dock Company.

The SECRETARY, at the request of the Chairman, accordingly read the letter referred to, which stated that the Royal Mail Steam Packet Company for the conveyance of the West Indian and South American mails had selected the port of Southampton as the station for their vessels, so that if Government should fix upon Dartmouth, the result would be that the passengers would reach London before the letters.

The concluding sentence of the letter excited some laughter and much applause.

The CHAIRMAN then requested the Secretary to read a list of the Steam-Packet Companies who already used the port of Southampton; from which it would, he said, be seen that they were neither few nor unimportant.

The list was read accordingly. It embraced the Commercial Steam-Packet Company, the South of England Packet Company, the Peninsular and Oriental Steam Navigation Company, and the West India Steam-Packet Company; in addition to which it was stated that the Dublin Steam-Packet Company had advertised that their vessels would touch at Southampton.

The CHAIRMAN thought these facts fully justified the statement made in the Report as to the capabilities and success of the port of Southampton. (Hear, hear, hear.)

Mr. NATHAN inquired what loss would fall upon the Company through the failure of Messrs. Wright's bank.

The CHAIRMAN said the debt amounted to 3,538*l.*, but what portion of that sum they might hereafter recover he could not say.

Mr. NATHAN wished to know whether the Company had not a lien on the shares held by Mr. John Wright, so as to make good the loss without any trouble or expense. He believed that such a course was pursued in joint-stock banks.

Mr. BIRCHAM (the Company's Solicitor, to whom the Chairman referred the question) thought no lien could be established. Besides, he believed the shares of Mr. Wright were very few at the time of the bankruptcy.

Mr. AMBROSE HUMPHRYS (a Director) said, Mr. Wright held no shares at all at the period of the bankruptcy.

Mr. NATHAN expressed his surprise that Mr. Wright should have been a Director and yet have held no shares.

Mr. HUMPHRYS said, the shares were all sold out a week prior to the bankruptcy, but the transfers did not come in to be registered till after that event.

Mr. NATHAN contended, that in that case the Directors ought to have refused to sanction the transfer until the Company's claims were satisfied. They must have known better than other persons that such an event was about to occur.

Mr. BIRCHAM had no doubt that the loss would have been increased instead of diminished, had the Directors attempted to claim a lien on the shares.

The meeting appeared to think that this was a legal point not necessary to be discussed, and the matter here dropped.

Mr. NATHAN said, he saw no item in the accounts for a reserved fund for the depreciation of stock, which sooner or later must take place. It was true that the Report referred to a sum of 8,422*l.* as being "available for future dividends or depreciation of stock," but he was strongly of opinion that no portion of it should be applied to the purpose of swelling a dividend, as it might hereafter lead to the creation of new shares, or to other burdensome calls upon the proprietors.

A PROPRIETOR thought the discussion of this matter was at present premature.

Mr. NATHAN contended that it was not premature, and referred to the example of other Companies.

The CHAIRMAN said, the present was the first opportunity which the Directors had had of putting aside any sum for any purpose, but the proprietors might rest assured that they would not lose sight of so desirable an object as having a sufficient fund for depreciation. (Hear, hear, hear.)

Mr. NATHAN would trouble the Chairman upon only one other subject. He complained at some length that the Directors by recommending candidates for vacant seats at the Board virtually elected them. He thought it ought to be left entirely to the proprietors.

The CHAIRMAN had hoped the explanation already given as to the accidental neglect of the minute of 1839, would have been satisfactory. (Hear, hear, hear.) The Directors regretted the circumstance and they could do no more. (Hear, hear, hear.) It was not a general practice, although he cheerfully admitted that it was a very salutary one, to publish the names of intending candidates. The Directors of this Company who themselves held one-tenth of the entire shares, in addition to those held by relations and friends, considered it their duty to look round for men to whom they might entrust a portion of the management of the Company's affairs, and their sole object in bringing forward the names now before the proprietors was the good of the undertaking. (Hear, hear, hear.) In recommending—in strongly recommending—these gentlemen, the Directors, he would repeat, considered that they were only discharging a duty which they owed to their constituents. (Hear, hear.) Most of them, he believed he might say all of them, were gentlemen thoroughly conversant with the details of Railway Management. With two of them he had had the pleasure of being associated in the Direction of one of the most important undertakings in the kingdom, and he knew of no men from whose talent, experience and energy he should anticipate more benefit to a Company—he alluded to Mr. Boothby and Mr. Thomas Smith, who were co-Directors with himself on the London and Birmingham Railway. (Hear, hear, hear.) Instead of regretting that the Directors had offered such a recommendation, he doubted not that the proprietors would find reason to rejoice at the circumstance, and for himself he could only say that by the accession of such men he considered his property was still more firmly established. (Hear, hear, hear.)

Mr. NATHAN disclaimed every intention of referring offensively to the gentlemen in question.

The CHAIRMAN again repeated that for the future the new Bill would effectually prevent the Directors from bringing forward any names without notice.

Capt. WARD thought the intended regulation would prove highly salutary, but at the same time he considered that the Directors would be unworthy of the situation which they filled if they did not take care to have associated with them men in whom they could place the utmost reliance. (Hear, hear, hear.)

After some desultory conversation upon this point,

Mr. KAY said, he observed that the Directors' expenses from the commencement were charged to the capital account. He wished to know when they would be charged to the revenue account?

The CHAIRMAN said, they were charged to revenue in the present account.

Mr. KAY inquired, under what head?

The SECRETARY said, under the head of general expenses.

Mr. KAY inquired what the Directors' expenses had been during the last half year?

The CHAIRMAN said, 500*l.*—half the amount voted by the proprietors.

Mr. KAY said, it was stated in the Report that the Directors did not contemplate any future application to Parliament "for objects of a pecuniary character." Did they propose to take power to convert their debenture debt into stock?

The CHAIRMAN said, the subject had been under the consideration of the Board, but it had been deemed better to postpone any proposal of the kind, until the dividends were larger, for the undertaking was still only in its infancy, although very promising. He believed that under their existing Acts they had power to convert the debt into stock, but in order to make assurance doubly sure it was proposed to insert in the new Bill a clause empowering the proprietors to effect such conversion whenever they should see fit. (Hear, hear, hear.)

Mr. KAY inquired if the Directors had any plan in contemplation for rendering the large balances in hand productive in the intervals before the declaration of the dividend.

The CHAIRMAN was sorry to say that they had never as yet had any very large sums in hand. When they had, the proprietors might rest assured the amount would be invested in Exchequer Bills—a most unquestionable security—or laid out in some way equally beneficial.

Mr. KAY said, the proprietors had had an opportunity during the Secretaryship of Mr. Reed, of inspecting the register of shares, but having since that time made application at the office, an inspection of the register had been refused as being contrary to rule. Nothing could be more important than a knowledge of who were one's co-partners in an undertaking of this kind, and although he was aware that such a regulation existed on the London and Birmingham Railway, he thought that if it had been laid down in this Company, it ought to be rescinded.

The CHAIRMAN said, the subject should have the best consideration of the Board.

Mr. PEYTON inquired whether there would be

Digitized by Google

any objection to state the terms upon which Mr. Brassey had contracted for the maintenance of way, as alluded to in the Report?

The CHAIRMAN (after consulting with Mr. Locke, the Company's Engineer-in-Chief,) said, he had no objection. Some of the proprietors, however, thought it was scarcely fair to the contractor; but ultimately the Chairman said, Mr. Brassey had undertaken to keep the 77 miles of road, from London to Southampton, in repair for ten years at the sum of 24,000*l.* a-year, which was about 311*l.* per mile. For that sum Mr. Brassey had undertaken to keep the whole of the embankments, cuttings, tunnels, rails, sidings, &c., in efficient repair, and to the satisfaction of the Engineer-in-chief. The only thing for which the Company were to be held responsible was the providing of new sleepers when the present ones should become decayed, Mr. Brassey finding the labour, and that in the event of further sidings being required, they should provide the rails, Mr. Brassey in that case receiving such remuneration for keeping these new works in repair as might be agreed upon between him and the Engineer. Mr. Brassey's connection with the Company had been most satisfactory to the Directors (Hear, hear.) He had faithfully, honestly, and fairly fulfilled his obligations, (hear, hear, hear,) and should any necessity arise, the Directors would have no difficulty in holding him responsible. During the past year the Company had had the maintenance of 59 miles of railway in their own hands (18 miles between Winchester and Southampton having been maintained by Mr. Brassey according to his contract for construction), and reckoning the whole 77 miles at the same rate, the charge would have been 36,000*l.* a-year, instead of which 24,000*l.* was the sum now agreed upon. (Hear, hear, hear.) The maintenance of way was a most important item in railway expenditure, and he was glad therefore that an arrangement so favourable to the Company had been concluded. (Hear, hear, hear.)

Mr. PEYTON said, he had been given to understand that the expenditure under the head of locomotive power was at the rate of about 1*s.* 8*d.* per mile. This he thought was very moderate, as was also the general expenditure of the Company, but he should be glad to know if there was any prospect of a still further reduction in this department?

Mr. LOCKE entertained a very confident belief that the expenditure under this head would shortly be diminished very considerably.

The CHAIRMAN said, considerable improvements had recently been made in regard to the supply of locomotive power, and he had the satisfaction of informing the meeting that Mr. Locke had undertaken personally to superintend this department. (Hear, hear, hear.) The object of the Directors was to secure efficiency first, and economy afterwards. (Hear, hear, hear.)

Mr. PEYTON inquired what the state of the locomotive power was at present?

Mr. LOCKE said, no exact account had been taken, but viewing it as a whole the stock certainly was not depreciated, and there could be no doubt it would soon be greatly improved. Several engines which had been repaired by the Company under his own would soon come out as new engines.

A PROPRIETOR, reverting to Mr. Brassey's contract, inquired whether it could not have been determinable at the end of three, seven, or ten years?

The CHAIRMAN could assure the honourable proprietor that they had driven a hard bargain with Mr. Brassey, and if they had proposed to shorten the term, a larger annual payment would have been required. He would take that occasion of mentioning, that as Mr. Brassey would at first probably have to incur a large expenditure for the subsidence of embankments and other repairs incidental to a new work, it might be necessary that the Board should advance a larger sum than 24,000*l.* during the first year, but the surplus would be deducted hereafter, so as to bring the average of the 10 years to 24,000*l.* He mentioned this to prevent misunderstanding should a sum of 25,000*l.* or 26,000*l.* appear under this head in the next half-year's accounts. He did not know that it would be so, but it might be. In addition to the guarantee of Mr. Brassey's high character and standing, the Directors had good security that he would fulfil his contract, so that there need be no apprehension on that score. (Hear, hear, hear.)

Mr. J. B. BOOTHBY thought it would be satisfactory to know that on the Liverpool and Manchester Railway which had been in operation for upwards of ten years, the amount of expenditure for maintenance of way had never been so small in any one year as it would be under this contract of Mr. Brassey's. (Hear, hear, hear.)

A PROPRIETOR inquired when the Gosport branch would be opened?

The CHAIRMAN said, in June next.

A PROPRIETOR inquired why the profit upon the reserved shares recently sold, did not appear in the present accounts?

The CHAIRMAN said, the transaction had not been concluded till the 15th of Janusry last, and the accounts were made up to December 31st. The amount would appear in the next statement.

Mr. KAY inquired whether the sale of the shares referred to included the Gosport shares originally appropriated to them?

The CHAIRMAN answered in the affirmative.

Mr. SNOW called attention to a paragraph which had recently appeared in a Southampton newspaper complaining in strong terms of certain alleged delays in the delivery of goods forwarded by the Railway, and stating that the people of Portsmouth were having their goods forwarded by the Portsmouth waggon "for the sake of expedition!"

The reading of the paragraph caused much mirth, and many persons exclaimed that it was meant as a joke or a hoax.

In answer to questions, Mr. SNOW said, the paper was the *Hampshire Independent*, a journal by no means unfavourable to the railway.

Mr. HUMPHRYS said, no attention ought to be paid to any newspaper report whatsoever. Any thing could be put into a newspaper.

The CHAIRMAN stated, that during the prevalence of the late frost, when the canals, &c., were not navigable, a very large and unexpected influx of goods, for which they were not prepared, had poured in upon them, and probably some delay had then been occasioned. The matter, however, should be fully inquired into, and means taken to prevent the recurrence of any inconvenience to the public. (Hear, hear, hear.)

Mr. CASH thought it was expecting too much to suppose that arrangements upon so extensive a scale as were required for an important railway could be perfected all at once. (Hear, hear.) He had no doubt that as railway facilities became more diffused, the superiority of this mode of communication would be better appreciated. He himself had received into his warehouse that morning a very large quantity of goods that had been put upon a railway in Yorkshire the night before last. (Hear, hear, hear.)

On the motion of a proprietor, seconded by Mr. Gilbert, the Report of the Directors was then unanimously adopted.

The three retiring Directors were unanimously re elected.

In answer to a question by Mr. Cash, the Chairman stated that the number of Directors was 15.

It was suggested that the names of all the Directors for the time being should be appended to every Half-yearly Report; and the Chairman said the same plan had been in the contemplation of the Board, and should be carried into effect.

Mr. MADDEN expressed a hope that if the candidates now to be proposed were chosen, no additional expenditure would be incurred for travelling expences, as he perceived, that two at least of them resided at a distance from the line. This expenditure had been much objected to, in other Companies.

Mr. HUMPHRYS was understood to say that no charge had ever been made by the Directors of this Company for travelling expences.

The CHAIRMAN said that during the four years that he had been on the Direction, the total allowance which he had received, had not covered his expences.

Mr. H. G. WARD proposed the election of the four new candidates named in the Report, (Lieut. Col. Henderson, Mr. Boothby, Mr. Smith and Mr. Aikin) and expressed the obligation which the proprietors were under to the Board, who themselves held so large a stake in the undertaking, for having selected gentlemen so well qualified in every way to become their colleagues.

Capt. WARD seconded the motion, and passed a high eulogium upon the merits of Col. Henderson, whose services in behalf of the undertaking he described as having been most important. The meeting warmly applauded the gallant proprietor's remarks.

Mr. CASH suggested that as there had been apparently some little informality in the non-publication of the names of the retiring Directors, it might be desirable to elect only two new members at present, leaving the other two vacancies to be filled up hereafter. He said this without intending to detract in the smallest degree from the importance of the services of Col. Henderson or any other of the gentlemen proposed.

The CHAIRMAN said, that although the main line was completed, the duties of the Board had increased rather than diminished. He thought that under present circumstances any reduction of numbers would impair the efficiency of the Board.

Mr. CASH said, such being the opinion of the Chairman, he had not another word to say.

Some conversation took place as to the wording of the intended clause for the publication of the names of candidates, but ultimately this was left to the judgment of the Directors, it being understood that they would be required to publish the names of those candidates only whom they themselves recommended. Reference was made by Mr. Easthope (late Chairman of the Board) to another Company with which he is connected, where it is necessary that the names of all candidates by whomsoever to be proposed shall be forwarded to the Secretary a certain number of days prior to the meeting with a view to publication. The honourable gentleman described this plan as working well.

The motion for the election of the new Directors was then carried unanimously.

Mr. CASH then proposed a resolution for the creation of new *tenth* shares as before explained.

The motion having been seconded,

A PROPRIETOR inquired in what position those parties would be placed who held, say, for example, only 9 shares.

The CHAIRMAN was understood to say, that it would be requisite to purchase another share in order to entitle them to a new *tenth* share. No difficulty had arisen in a similar case in the Grand Junction Company, and he apprehended none in this instance.

Mr. KAY urged the propriety of granting a longer interval than to March 6th, for making election as to the taking up of new shares. He himself held shares in the capacity of an executor, and unavoidable delay might take place before he could come to a satisfactory determination.

The CHAIRMAN said, the matter had been maturely considered, and the Directors found that the granting of a longer period would materially interfere with other arrangements.

Mr. KAY still persisted, and moved as an amendment that the time be extended to March 30th.

The amendment, however, was not seconded, and the original motion being put was carried unanimously.

A resolution for the payment of a dividend of 1*l.* 10*s.* per share, on the 25th of March, was then unanimously agreed to, after an attempt on the part of one or two proprietors to have it paid sooner. It was stated that this would be exceedingly inconvenient, and the feeling of the meeting clearly was that details of this kind should be left with the Directors.

Mr. KERT suggested that every sum expended above 500*l.* should form a distinct and separate item in the accounts. Such a plan would give very

Digitized by Google

little additional trouble, and be very satisfactory to many proprietors. (Hear, hear.) At present the immense amount of 58,776*l.* was lumped together in four items, one of which comprised disbursements so incongruous as "cleaning and oiling of carriages," "salaries," "advertisements," and "insurance."

The CHAIRMAN said the subject should receive the attention of the Board.

After some further conversation,

The CHAIRMAN said the ordinary business of the day was at an end.

Mr. NATHAN thought they ought not to separate without paying a tribute of respect, and tendering their warmest thanks, to the late Chairman of the Company, Mr. Easthope, whom he was happy to see at the Board, but whose absence from the chair that day he deeply regretted, notwithstanding that his successor filled it so ably. Without entering into any private or personal matters that might have led to the honourable gentleman's retirement—for really he (Mr. Nathan) was not fully acquainted with them—he would with confidence assert, that Mr. Easthope's exertions on behalf of the Company had been most arduous and unremitting, and that without him the completion of the line, and the success which they had already attained, would have been problematical. (Great applause.) He begged to propose that the cordial thanks of the proprietors be given to John Easthope, Esq., M.P., late Chairman of the Board, for his unceasing zeal in promoting the best interests of the Company. (Renewed applause).

The motion was seconded by several gentlemen simultaneously, and the Chairman having expressed the great satisfaction he had in putting it to the meeting, it was carried by acclamation.

Mr. EASTHOPE who, on rising and at the conclusion of his address, was received with loud and long continued applause, briefly returned thanks. He said he was happy in receiving this unanimous expression of approbation for the services which he had been able to render to the Company. He might, perhaps, be permitted so far to speak of these services as to say that they had been performed without any regard to personal toil, and with a most undivided anxiety for the success of the undertaking. He most cordially hoped that the undertaking would continue to prosper, and nothing should be done on his part to retard its success. If circumstances to which he did not wish more particularly to allude, had rendered it impossible for him to continue to hold the office which he formerly held, his retirement could not diminish the interest which he took in the undertaking, nor abate his deep anxiety for its success.

Mr. BARFORD briefly complained that the railway was closed from 10 to 4 o'clock on Sundays, thus shutting out the poorer classes from the means of healthful recreation on the only day which was at all their own, while the carriages of the privileged classes were allowed to roll about the streets and parks without obstruction.

A vote of thanks to the Chairman and Directors was then carried unanimously.

The CHAIRMAN made an appropriate acknowledgment, expressing his gratification at having been so kindly supported on this the first occasion of his taking the chair in that or any other Company. He should at all times heartily co-operate with his colleagues and constituents in promoting the success of the railway. The line had always been a favourite with him; he had been connected with it for the last four years, and held a large property in it; and he hoped and believed that signal success would crown their efforts, and that year after year they would enjoy the satisfaction of realizing a still increasing dividend. (Much applause.)

The meeting then broke up.

We rejoice to state that the works of the South Eastern Railway (interrupted by the frost) have been resumed with vigour. Several workmen have been set on this week, and others will be put on next. *Dover Chronicle.*

SOUTH-WESTERN RAILWAY.

To the Proprietor of the South Western Railway, who complained at the meeting that he had been refused inspection of the Share-list.

SIR,—The impression on my mind that your application was legal, was strong, but the confidence with which the Chairman repeated the refusal to you, shook my belief in the correctness of my memory; *I could not* imagine that fifteen persons could have conned over a short Act for six years and yet be ignorant of its provisions; *I cannot* believe that, being conversant with its clauses, they would boldly violate them. The point is interesting—I may say important—and I immediately refered to the Act: I call your attention to clause 124, where it is enacted, that not only have you the right to inspect the list of names of proprietors, but *that* likewise of the number of shares held by each, under a penalty, for the benefit of the Company, upon the Secretary of 2*l.* for each refusal. You will perceive that if you require a copy of such lists, you must pay for them, at the rate of sixpence for every hundred words.

A RAILWAY SHAREHOLDER.

LONDON GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the proprietors of this Company was held on Monday at the Company's offices, Cheapside.

WILLIAM CASH, Esq., in the Chair.

The position in which this Company are placed, has repeatedly been described in the *Railway Times*. It will be recollected that the compulsory powers of the Act have long since expired, and that a subsequent application to Parliament for a renewal of them was rejected. The Company is therefore virtually defunct.

The advertisement calling the meeting, having been read, the common seal of the Company, was affixed to the register of proprietors.

The CHAIRMAN then explained that the present meeting was called merely in compliance with the Act of Parliament. The Directors had little or nothing to lay before the proprietors, and therefore the Report which the Secretary would now read, was very short—the shortest document of the kind, perhaps, that had ever been submitted to a public meeting.

The SECRETARY (E. Ayres, Esq.) then read the Report as follows:—

REPORT.

"The Directors have merely called the proprietors together upon this occasion in order to comply with the terms of the Act of Incorporation, and to lay before them a statement of their accounts during the last half year, of which the following is a copy.

DEBTOR.

To balance as per last statement	£4,267	4	6
July 1, cash received for interest deposit account and monthly balances to June 30	44	10	6
November 2, ditto to this date	41	19	0
Total	£4,353	14	0

CREDITOR.

To cash paid for rent to Midsummer, 1840	7	10	0
Ditto to Michaelmas	7	10	0
Secretary's salary to Christmas	35	0	0
On account of petty cash	5	0	0
For Directors attendances	16	16	0
Interest to Brewers' Company	137	10	0
	209	6	0
Balance	4,144	8	0
Total	£4,353	14	0

"As this account is only made up to the 31st of December last, it does not show the amounts received from Mr. Freeman, Dr. Graham, and Mr. Gunston, under the judgments against them, the Courts of Exchequer Chamber and the Queen's Bench having decided against the defence raised by those gentlemen in the actions brought against them. In conclusion, the Directors regret that they see no present prospect of resuscitating the undertaking, but should anything occur tending to that object, they will immediately consult the proprietors thereupon.

(Signed) W. CASH, Chairman."

The CHAIRMAN said the proprietors were probably aware to what the paragraph in the Report relative to the results of certain trials at law had reference. An action had been brought against a country proprietor for the amount of certain calls, which was tried before Mr. Justice Coltman, and although the verdict was for the defendant, a point of law was reserved for the consideration of the Court of Queen's Bench. In the other three cases, the verdicts were for the Company, but nevertheless a similar point as in the other case was raised, and these points were all decided in favour of the Company.

In answer to a question, the Chairman stated that the case of the *Company v. Gunston* had been finally disposed of in January last, and had decided the other cases.

Mr. M'RAE enquired what the intention of the Directors was as to future proceedings, as the concern seemed wholly hopeless.

The CHAIRMAN said, they would take advantage of anything that might transpire for the resuscitation of the Company, but should nothing of a favourable character take place, they would be under the necessity of meeting twice a year, and waiting till the Act died a natural death in July, 1843. They had certainly heard of rumours relative to the formation of a direct line northwards, which would, if carried out, terminate in their line, but these rumours were so vague, and there appeared so little hope of carrying the undertaking in question forward, that the Directors did not think it necessary to allude to it. There were so many railways already in difficulties that he doubted whether this new scheme would meet with much support. (Hear, hear.)

In answer to a question it was stated that the number of registered shares was 7,900, and that a sum of about 15,000*l.* had been received in respect of the last call.

In answer to further questions it was explained that the property which the Company had purchased of Lord Southampton and paid a deposit upon, had become forfeited, but that his Lordship had no further claim upon the Company.

The Report was then unanimously adopted.

In answer to a question, the Chairman stated, that the Directors had no present intention of making another application to Parliament for a renewal of the compulsory powers of the Act, and they certainly should not do so without the formal sanction of the proprietors.

On the motion of Mr. HARMAN (a Director) the three Directors retiring by rotation, (Messrs. Browne O. Gore, Saunders, and Schodefield,) were unanimously re-elected, and a vote of thanks having been passed to the Chairman, the meeting broke up.

MR. GEORGE STEPHENSON, THE ENGINEER.—"But if you still want any additional proof that the heights of science are not closed to the humblest among you, look around, I say, at this neighbourhood. If you go to Lichfield, you see the statue of Dr. Johnson. If you go to Handsworth, you see the statue of Mr. Watt. Look in this very town, and who is the man that is now engaged in extensive works, for the purpose of bringing coal and lime under your immediate command? Mr. Stephenson the engineer. Mr. Stephenson, I am assured, worked three years as a boy in the meanest capacity in a colliery at Newcastle. He saved 100*l.* by mending the watches of his fellow-workmen for half-a-crown a-piece; and he devoted that 100*l.* to provisions for his indigent parents, and set out with a light heart and conscience for the purpose of accumulating more. The result has been that he presents a daily example of encouragement to our eyes, and brought within our immediate contemplation in this town."—*Extract from Sir Robert Peel's address on the formation of a Library and Reading-room at Tamworth.*

MECHANICAL ARRANGEMENTS OF RAILWAYS. BY MR. ADAMS.

NO. III.—RAILWAY BREAKS.

To the Editor of the Railway Times.

SIR,—My excuse for departing from the regular order in the classification of railway machinery must be the great interest at present existing on the subject of safety to passengers, and especially in regard to breaks. The wisdom of suiting the subject to the season, the matter to the opportunity, will readily be admitted.

The object of a break is to retard a moving body by expending the *vis viva*, or momentum on friction.

To be efficient, therefore, the amount of friction which the break is capable of producing must be in excess of the maximum of momentum.

The momentum of a railway train will, *cæteris paribus*, be at the maximum on the steepest declivity of the road on which it runs.

Therefore, this will form the measure of the friction power of the break. If it be impracticable to construct a single break to develope sufficient friction it will be necessary to duplicate it.

Or, supposing sufficient friction to be developed in the single break, the strain may chance to be too great on the carriage to which it is attached, if the train be heavy. In this case also it will be necessary to duplicate the breaks.

But in all cases the best position for the break will be the hindmost carriage of the train. In case of duplicates the next carriage to the hindmost, and so on.

The reason for this is, that if the break be applied to the engine or the foremost carriage of the train the momentum of the remaining carriages will only be retarded through the process of propelling one against the other, which is as objectionable as the process of propelling a train by an engine behind—the tendency to throw the wheels off the rails being considerable. And in the case of momentum suddenly checked, the risk is increased. The carriages would have a tendency to double up, on one another.

But although the breaks to retard the momentum of the train should be placed on the hindmost carriages, the engine also should have its own breaks, because the weight and momentum of the engine being so much greater than that of the carriages, any attempt to retard it by means of the carriage breaks would result in tearing away the traction rods and couplings; as, although the traction rods may be sufficiently powerful to draw the train behind the engine, they may not be sufficiently powerful to draw the engine behind the train.

The position of the breaks being settled, the next question is how the friction may best be produced, so as not to involve any of the following evils.

1. Sudden concussion by too sudden an application of the friction power.

2. Destructive wear of the carriages or rails by the friction.

3. Unpleasant jarring to the passengers from the friction.

If these evils cannot be altogether avoided, it is desirable to ascertain how far they may be modified.

It will be necessary for this purpose to analyse the different breaks that have been used, or have been proposed to be used, to ascertain how far they comply with the desirable conditions.

The only kind of break in common use is, the friction of segments of timber forcibly pressed against the peripheries of the wheels or rollers. There are various modes of effecting this application; sometimes singly with a simple lever, as used in earth waggons; sometimes double, the timber segments being forced against the wheels in opposite directions by the pressure of a screw or a jointed bar, which thus increases its length, which is the kind of break used on the Great Western Railway. Where the resistance to the pressure of this break is produced by the axle guards, there is a mischievous tendency to strain the axles from their proper position. To counteract this, an iron bar is occasionally bolted to the axle boxes, from wheel to wheel on each side. This removes the strain on the guards, but there is still a severe strain on the axle boxes—the tendency of the thrust being to force the axles out of the brasses, which are merely recumbent on them and do not clip them round.

This difficulty is in a great measure obviated by the ingeniously-contrived break of Mr. Davies, represented in your number for Feb. 6, which by a multiplication of the levers and a modification of the arrangements applies a wood segment to each side of each wheel, which is thus held as it were in a wooden vice, or between a pair of nippers. Thus, while the friction surface is doubled, the unequal strain is removed from the axles. The whole of the levers are put in motion at once by turning a single screw, acted on by a geared wheel. This seems the most perfect arrangement of any breaks hitherto produced on the principle of applying friction to the peripheries of the wheels or rollers. The defect seems to be, that there is no provision for forcing back the breaks from the wheels when not required to be in use.

The objections which present themselves to this principle are, first, that the force to be applied depends entirely on the skill of the breaksman. There is power enough wholly to stop the revolution of the wheels in any variety of these breaks, and if this power be exerted it is evident that the carriage will become a sledge running on bearers formed by a line's breadth of the periphery of each wheel. This must rapidly wear the wheels to flat planes, and be disadvantageous to the rails. The second objection is, that as there is no elastic yielding in the mechanism of the breaks, the whole of the jarring will be conveyed undiminished to the passengers. The third objection is, that the whole efficiency of these breaks depends on the weight of the vehicle they are attached to. If the vehicle be very light, the breaks will be of little service; and in proportion as they are rendered efficient by weight, the mischievous action on the wheels and rails will increase. On the Great Western the breaks are usually applied to second class carriages; on other lines they are applied to first class carriages, which are usually of the heaviest construction. Whenever these breaks are used for a sudden emergency, the whole power must be exerted, and consequently the wheels will slide, and in most cases the same thing will occur, from the difficulty of accurately adjusting the power through the agency of rigid machinery.

The next principle of break is that of applying sledges or shoes, of wood or metal, to the surface of the rails, either passing beneath the wheels, in the ordinary mode of highway carriages, or placed between the wheels. In either case, the friction will be in proportion to the weight of the carriage, and the surface contact between the break and the rail. Both of these plans originated with the Earl of Dundonald; but I have never seen any specific mechanical arrangement of the principles, either in drawings or otherwise. Perhaps his lordship will favour you with them. The plan of putting shoes under the wheels is objectionable; first—because it involves risk of throwing the wheels off the rails; and secondly—because of the trouble of backing the train, to remove the shoes after use. The plan of placing a long sledge break between the wheels is better, for a very long friction surface may be obtained. In this case, by the action of screws, the weight is taken off the wheels and rests wholly on the sledges. Very complicated and expensive machinery would be required to put this plan in use, for if the elevating screws were connected directly with the body without the intervention of springs, the jarring would be so intolerable in a passenger carriage, that it could not be used, and weight being essential to its own full action, it would if applied to a truck require a heavy load, which would be a serious objection, unless for goods' trains. The objection of danger as to the carriage getting off the rails by the pressure being taken off the wheels, is by this plan increased in force. One advantage there is: if the bearing surface be sufficiently extensive, the breaks will have little effect in damaging the rails on the surface. They will merely smooth them, and not wear them irregularly, as must be the case when the wheels are converted into sledges.

The only other principle of break is that of Adams and Buchanan, which neither acts by friction on the peripheries of the wheels, nor by the gravity of the carriage on the bearing surface of the rails, but by a mechanical force applied to produce friction against the edges of the rails, either by slides on their outer edges forcing inwards, or by slides on the inner edges forcing outwards, both of which modes are objectionable, as tending either to widen the gauge or to narrow it; or by a third method, not involving these defects, consisting in a pair of slides or breaks *gripping the rail between them like a vice*, the force being applied through levers acted on by the agency of springs, in order the better to regulate the force and prevent shocks and concussion, but which levers are capable of communicating any amount of force that may be required. It may be applied to the ordinary passenger carriages or to a truck behind the train, as may be deemed most advantageous, the latter being preferable for the various reasons formerly stated. The diagrams on the opposite page will show the application of the principle.

Fig 1, shows a plan of the carriage frame, broken out to show the breaks in their position upon the rails A. The iron slides intended to clip the edges of the rails are denoted by B. Their end section is shown at Fig. 2, of larger proportion for the sake of clearness. C, are braces jointing the slides together, in the same mode as the parallel ruler of the draughtsman. D, are vertical shafts firmly connected with or welded to the two central braces. E, are levers squared on to the vertical shafts. F, are powerful extending springs connecting the levers with the shackle G, and enabling the rope or chain H to act on them; or instead of the rope, the usual screw or geared wheels may be used. The only objection to the rope is its liability to decay, but this may be effectually prevented in various ways, and it has the advantage of lightness. I, Fig. 3, shows a frame attached below the carriage frame, for the purpose of sustaining the vertical axles with the breaks. When out of use, the breaks are drawn up and suspended above the rails a sufficient height to allow for the rise and fall of the springs. The mode of suspension is not shown, as various methods may be used, such as a spring or balance weight.

When it is required to put the break in operation, the breaksman releases the spring or balance weight, so that the gravity of the breaks causes them to descend till the ends of the vertical shafts rest on the tops of the rails, and the clipping edges are in the position shown in Fig. 2. The winch or gear tackle being then worked, the rope will pull the levers E till they and the braces assume a position more nearly approaching the parallel of the rail, and the slides will then bite upon the rail with a force proportioned to the power used, without any tendency to slip their hold, as the round edges of the rails fit the channels. Notwithstanding the powerful friction this break is capable of producing, it cannot be suddenly developed, because the springs will give and take till they are drawn to a straight line, until which they cannot be rigid. The ends of the slides must of course be rounded, to pass freely over the bad joints of the rails. It will be admitted that more retarding friction can be developed with this principle of break than with any other existing principle—enough probably to break the coupling chains if strained to its full power; and the principal thing to ascertain is, whether the friction be economical—*i. e.* whether the wearing surfaces be of the least valuable kind. In answer to this, it is clear that all injurious break action is removed from the wheels and axles—the axles will not strain by torsion, and the wheels will not be worn irregularly by friction, nor will the bearing surfaces of the rails be rubbed away. The wear will be confined to the slides, which can easily be re-

Digitized by Google

newed, and to the edges of the rails, which will be a very slow process, while the gradual wear will not involve irregularity, but the contrary. The action of the slides will smooth the joints; and the free play of the springs will be only partially impeded.

There is one solitary objection which may be raised against this break—the occasional recurrence of "points," or intersecting lines of rails in positions where it may require to be used. The lips of the slide which clip the rails denoted by K, Fig. 2, are of about the same proportional section as the ordinary wheel flanges. Provision is, of course, always made at the "points" for the flanges to pass, by a proper intersecting channel, but there is no similar channel at the opposite side of the rail. But there would be no great difficulty or expense involved in providing a second groove at the points, as though they were intended for wheels with a flange on each side. Nothing more would be required to make this break available on every line of road except the Great Western, where the peculiar form of the rail—slightly cuneiform—would cause the slides to slip upwards and lose their hold. On the ordinary rails they would have the effect of producing safety on steep inclines, holding the carriages to the rails. The best test would be the Leckey incline, on the Birmingham and Gloucester.

There is one more point to consider with regard to railway breaks generally. Ought they to be self-acting? That is to say—should they be brought into action by the impinging of the buffers in cases of collision, or by the action of gravity in the case of descending inclines?

As regards collision, the question must be answered in the negative. Collision analysed into its elements, means simply a sudden change from violent motion to a state of rest, a rapid parting with accumulated energy. The object of a break is to expend this accumulated energy gradually, or as quickly as may be consistent with safety. If the energy is to be expended instantaneously, it signifies little whether a train be stopped by sudden collision with another train or by a sudden application of breaks; in either case destruction must ensue. If, for example, while a train were running at thirty miles per hour, the wheels could suddenly become welded to the rails, the result would be that the passengers would be dashed against each other, and the bodies and frames would all be projected forwards and torn away from the springs and axles. Breaks acting on the peripheries of the wheels by the impinging power of buffers would not produce this sudden effect, because the wheels would slide after they had ceased to roll, and moreover the breaks could not come into action till the collision had taken place, *i. e.* after the buffers had expended their twelve inches of elastic resilience, and then the breaks would be useless as the train would be stopped without their agency. The chief use of breaks is to moderate speed in case of extraordinary risk *foreseen*, or for the purpose of stopping at a station where no incline is provided as a retarder. It is therefore, a question of human skill and judgment in which the best moving agent is the human hand, and there does not seem any necessity for the breaks to be self-acting, even supposing that no other difficulty existed.

As regards the descent of inclines, it seems at first sight a very desirable thing to make the force of gravity act against itself as a regulator of speed. But it involves a fallacy, unless under human guidance. A carriage might easily be so arranged as to slide forwards on its wheels when descending an incline, and thereby bring breaks in contact with the peripheries. But inasmuch as the pressure would increase with the increase of gravity, it might become inconvenient in amount, and in such case would require hand regulation. Moreover irregular impulses of the engine might continually bring the breaks into action when not required. To regulate the speed of trains by means of breaks would seem a problem of difficult solution, by any other modes than those commonly resorted to in machinery, such as the governor of a steam-engine, or vanes acting against the atmosphere.'

There would be no difficulty in enabling one man to act upon the before-described breaks of three or more carriages at once, supposing them to be all one behind the other. It would be simply connecting the three ropes together, so that one winch might work the whole, allowance being made for the play of the buffer springs.

I remain, Sir, yours obediently,
WILLIAM B. ADAMS.

February 22, 1841.

LONDON AND BIRMINGHAM RAILWAY MEETING.

To the Editor of the Railway Times.

Sir,—Although the Birmingham accounts are better stated than heretofore, it is still impossible that shareholders can know from them whether the payments are prudently made, and until they have share-list auditors they never will know. Wages and salaries, under different heads, are put down at astounding sums, but as they are mixed up with charges for oil, tallow and other disbursements, the precise amount cannot be ascertained.

That an expenditure of 4,000*l.* per annum should be required for clothing seems incredible, and the charge proves what I have long thought, that the Directors have given way to useless finery and decoration—the more unnecessary as embroidered silver upon coats in no way contributes to the comfort of the wearer.

Travelling expenses are charged under different heads, and united with other payments. The sums seem large, and with reference to them I would, upon *all lines*, make an alteration. I think Directors and all other persons travelling upon a line (except the Engineers and the subordinate people actually employed in labour or inspection) should, in the first instance, pay their fares and take tickets, and be re-imbursed monthly or quarterly, upon presenting accounts at the office, stating the duty they performed when so travelling. If one half of the stories we hear is true, railways suffer from non-paying passengers to an enormous amount. The abuse of orders for playhouses at one time was so great, as to prevent the numbers present from affording any criterion, for judging of the amount of money received into the treasury. The same thing will happen with railway trains if a check be not put to this abuse.

The sum of 2,200*l.* for advertising appears excessive in a concern where the business does not depend on drawing daily attention to quality and cheapness. It forms a large item in the accounts of a patent medicine; very little of it is necessary for a railway.

The Chairman, upon inquiry being made, stated that a certain balance was left in the banker's hands "for their trouble;" it would have been satisfactory if he had mentioned the average amount of such balance. The Company's money must ultimately be held by Companies' officers, and not entrusted to bankers. We have proof that the present method endangers our receipts, and I trust proprietors will resolve upon the appointment of cashiers, and the entire management of their business by their own officers; 3,500*l.* has been lost to one line already.

I do not object to 18 Directors retaining the entire sum voted of 2,400*l.*, but I do object to the *continuance* of 18 Directors; 8 is an all-sufficient number to whom 1,200*l.* should be paid, and no more. As the Board are carrying on the reduction of numbers, so I expect they will reduce the charge from the time that number reaches 16, until the amount is finally stationary at 1,200*l.* per annum for the services of 8 persons, such 8 being taken in rotation from the share list.

In the matter of schools and churches, the Board are quite wild; and shareholders, "contented creatures," though they see that they have nothing to do with such crotchets, permit them to be passed. Mr. Southall and his friends took the rational view of the matter. The railway is a mercantile speculation; *we* are coach masters, and not political and religious governors of men and districts. Upon this subject the Chairman, in particular, has *a twist*. Delighting in the subject, the moment it comes upon the *tapis* he mounts his "ambling pad poney," and makes sundry passages and caracoles; but, mistaking his way, at last canters along a road as opposite to his rail-road as is "Indus to the Pole."

I touched lightly once before upon the incongruity of agents of a lot of common carriers assuming the office of Home secretary or minister of public instruction; and I had hoped the Chairman, having carried the school, would have got off his hobby, and have been satisfied with that one excursion; but as I perceive he continues these airings —*we* having to pay the gates—I hereby give him notice, that the next time he proceeds to saddle I shall report Dim to Lord Normanby, for usurping his office. It is necessary, *on all accounts*, to stop these extravagancies, lest from symptoms they degenerate into confirmed disease. Monomania, though sometimes a source of merriment to a thoughtless spectator, is to the patient so frightful a calamity, that any one having a pre-disposition to it, should exert himself, in time, to reason down delusion.

A RAILWAY SHAREHOLDER.

LONDON AND GREENWICH RAILWAY MEETING.

To the Editor of the Railway Times.

Sir,—In the management of the Greenwich Railway, though there are some indications of amendment, there is still, as in all others, much to amend.

Though the animadversions made upon this railway by every one, native and foreigner, who casts his eye upon the old brick arches, must have put Directors upon their guard, it yet may benefit the new erection, to caution them to have more care in producing a decent work. Of all buildings in and about London, the Greenwich Railway is of the commonest character, and the worst put out of hand. Is proof wanted of this assertion? Then look for it in the Report of the 9th February, 1841, where it is stated that asphalting the arches is strongly recommended by the "*consulting*" engineer. What! did not the engineer of the line know that water would drip through arches turned in common mortar? At first, the operation of asphalting would have been of trifling expense, while now, the whole ballasting has to be moved to get at the brick-work. Had the arches—by the omission of this covering, of drainage in any shape, and of secure foundation—been built cheaply, we might have supposed that anxiety to save proprietors' money had overstepped the limits of real economy; but when we know that the shabby thing has cost a double estimate, how can we account for the repetition of Mr. Money's habitual thanks to the engineer?

It is satisfactory to see that the Directors have terminated the unmercantile agreement they entered into to pay 500*l.* a year to bankers, but that should, and must ultimately, be followed by the discontinuance of bankers altogether. The receipts should be kept at the main station, and there must be a cashier to reside on the premises, and have the charge of the chest. Under the orders of a committee he and the Secretary must lay out balances in Exchequer Bills (not lend them to country bankers), and make the necessary payments, and the Directors could not easier gain the favour of their constituents, than by immediately giving effect to this important alteration. Shareholders have already lost, upon another line, 3,500*l.* by bankers' failure, and they will not long endure the heavy risk they are subject to without reason, to say nothing of loss of interest for "bankers' trouble," from their receipts being deposited in private hands. The shock from without will compel this change, if it be not voluntarily made, and Directors will shew wisdom in not staving it off, before it reaches them with overwhelming force.

It is creditable to the Directors' sagacity, that thus early they have given way to that which is irresistible in the end,—public opinion,—by proposing *Share-list* Directors as vacancies occur. This instalment is well received by proprietors, but the full amount must be paid, and they will best con-

Digitized by Google

sult their tranquillity, by discharging the debt off hand. First, it must not depend on the caprice or judgment of Directors to determine whether the largest shareholder is a proper person. If upon trial he is found incompetent, turn him out, but *prima facie* his holding, and his willingness to act, are sufficient reasons for his appointment. What, if he should not have the advantage to be known to the nine Directors of the Greenwich Railway, is that to make him disreputable or ineligible? Then secondly, we must have the second vacancy filled by the shareholder living nearest to the line; the third by the person who stands alphabetically first on the list, beginning at any given letter, be he whom he may. To such selection, and to share-list auditors taken in rotation alphabetically, I look with confidence for great retrieval of our disasters.

Looking to the general result of the last half year's business, and keeping still in view a *wise* economy, by which I mean, that efficiency which ensures the utmost safety to the public, and is in the end pecuniarily advantageous, I yet am of opinion that good management alone is wanted to lower greatly the present charge upon receipts of 45 per cent. for working. Upon a line practically level—upon brick arches, where there are neither slips nor subsidence—there can be no good reason for the working expenses reaching nearly or quite to the maximum. With care and intelligence in purchasing, active and constant supervision, and diligence in preventing and detecting fraud, the 45 will speedily sink to some 33½ per cent.

A RAILWAY SHAREHOLDER.

[We have omitted, in the preceding communication of our esteemed and valuable correspondent, a passage which proceeded upon the supposition that there are *three* engineers, which is not the case. The present "consulting engineer" is Col. Landmann, formerly the resident officer.—ED. R. T.]

LONDON AND BRIGHTON RAILWAY MEETING.

To the Editor of the Railway Times.

SIR,—I was induced some short time back to purchase Brighton Railway Shares, considering the whole amount of calls had been made, and therefore, that I could have nothing further to disburse; but on reading the last Report, I got rather alarmed. As, however, I do not understand these matters very well, I wrote to a friend on the subject, who I knew was somewhat interested, and requested his opinion, and his reply is so unsatisfactory that I know not what to be at. I will, therefore, send you a copy of it. It is as follows:—

"My reply to your letter on our unfortunate *speculation* (for I dare not call it *an investment*) must be but brief and imperfect, for I have hardly a moment to look into the Report. What reliance can be placed in Directors who give mystified accounts, and make flourishing promises to the proprietors, which all end in smoke—I beg pardon, we should be too happy if they did! but on the contrary, in emptying our pockets and bringing ruin upon what was considered one of the most promising undertakings in the country.

"1st. This time last year when 35*l.* per share had been paid, we were ASSURED, by the Chairman, that no further call would be made.

"2nd. In July last, he however, told us that he was afraid *one* more call would be necessary—and what was really done? Why 5*l.* per share was called immediately, and 10*l.* per share more within two or three months (I have not time to look for dates) and yet not a word was said by Chairman or proprietors at the last meeting!!!

"3rd. That a portion of the line would be opened last Autumn, and yet at the present time the Chairman is well aware that not even five miles of that small portion are really ready. Now, look to the last Report, and you will there find that it is stated that they have in hand and due upon calls 181,652*l.* 14*s.* 1*d.*; but they most *wisely, in their own estimation*, omit to draw attention to the note at the foot of the amount, stating that there were liabilities (and which are charged in the amount as due the 31st December last, but remain unpaid) to the amount of 125,217*l.* 9*s.* 5*d.*—so that in fact if all those calls had ever been paid up, they would only have had 56,435*l.* 4*s.* 8*d.*, instead of 181,652*l.* 14*s.* 1*d.* in hand to carry on this great concern. What then must be the state of affairs at the present moment? Why that they have not a farthing to go on with—that they are getting over head and ears in debt—that they have only been able to borrow 160,000*l.* in twelve months, and in the present state of the money market not likely to get more. What I ask you, my friend, must be the result of all this deception and mismanagement? Why that they will make a *second* "LAST CALL"—which will astonish most of the proprietors as it has you, who considered that all had been paid; but they will find to their cost that another 5*l.* per share must still come out of their pockets, and that the 50*l.* per share is not yet paid (and here is another deception on the part of the Directors) for although they may not have stated it, yet they have permitted the public to believe, and all the papers and public lists of shares to publish, that such was the case. Pray do not expect to get through even with that call. New shares, take my word, must be created!!"

Your remarks on the meeting, Mr. Editor, do not go to those points, pray look into my friend's statement, and let us have your opinion.

Your obedient servant, S.

11 Feb., 1841.

COMMUNICATION BETWEEN GUARDS AND ENGINE DRIVERS OF RAILWAY TRAINS.

To the Editor of the Railway Times.

SIR,—In perusing the pages of the last number of the *Railway Times*, my attention was particularly drawn to Mr. Pettitt's plan of effecting a system of signals between the guard and the driver. By reference to page 500 of the "Railways of Great Britain and Ireland," you will find the following, which was written in December:—

"We have only to add our strong conviction of the absolute necessity of having a ready mode of communication between the guard or captain of the train and the engine-driver, in case of fire or other accident . . . . The signals would be easily given by fixing a small alarum (two or more with distinct sounds would be better) in a box attached to the tender; and by means of a string or wire to the guard's seat on each conveyance, and by the intervention of spring cranks the sounds would be readily effected."

Now you will perceive that the same end is proposed by my plan as by that of Mr. Pettitt, although by different means. I am inclined to believe that an alarum, as affording a very different sound to that of the whistle, would be more advantageous in practice. The whole apparatus, according to my notion, could be executed for about 6*l.* or 7*l.*; and as it is very essential that every precaution for the public safety should be effected by Railway Companies with the least possible delay, I trust you will give insertion to the above in your next number.

I am, Sir, your obedient servant,

FRANCIS WHISHAW.

P.S.—I never heard directly or indirectly of Mr. P.'s plan until reading the account of the London and Birmingham half-yearly meeting, as recorded in the *Railway Times* of the 13th instant.

Hampstead, 22nd Feb. 1841.

THE SUBSTITUTE FOR TURNTABLES.

To the Editor of the Railway Times.

SIR,—The kind endeavours of your correspondent, W. B., to enlighten me respecting the *invention* of the substitute for the turntable, cannot fail to be duly appreciated, especially when I inform him, or of which, by a second or third reading of my communication, he may possibly inform himself, that nothing whatever was said respecting the *invention* of it. The plan has been made use of by me for many years. Well acquainted, therefore, with its utility, and knowing several instances where it might have been introduced with very great advantage, I naturally supposed it was not so well known as it deserved to be. It may be the contrivance is already familiar to every one connected with railways, but to me it appears extraordinary that a "thing so exceedingly simple," and I may add, in certain situations, so much superior to the turntable, should not be in more general use.

I am, Sir, yours respectfully,

A RAILWAY ENGINEER.

February 11, 1841.

RAILWAY TRIP EXTRAORDINARY.—A few days ago, the workmen employed at the engine-manufactory belonging to the Birmingham and Gloucester Railway Company, at the Bromsgrove Station, perceived a waggon laden with quarry-stones coming down the incline at such a frightful rate that they had hardly time to consider what they had better do under the circumstances, before it dashed past them at the rate of nearly 100 miles per hour. They would probably have had time enough to overturn the vehicle, but they wisely determined to let it pursue its wild career, for fear that they should not have time to clear the line before the Birmingham train (which was nearly due) arrived, and which might have led to the most dreadful consequences. Fortunately the waggon was seen by some parties on the line about three miles beyond Bromsgrove, and they hastily procured a number of scotches (thick pieces of wood) and laid them, at short distances, upon the rails. The last scotch had scarcely been laid before the vehicle was upon the first, and so little was its speed checked by the obstruction that it seemed as if it would pass them all. However, after running over several, it at length stopped without overturning and without causing the slightest accident. It seems that the waggon was standing just above the top of the incline, and that either a carriage or engine slightly touched it, when, having passed the level, it dashed off at the rate we have described. We trust that this occurrence will act as a caution to contractors not to leave waggons in such situations in future, for had this occurrence happened in the night it is impossible to say what damage might have ensued.—*Worcester Chronicle*,

RAILWAY ACCIDENT.—The following passage occurs in a letter received the other day from the Hon. J. E. Elliott, M.P.:—"You were very near having an election in this county the other day. Coming down from town, about two miles on the other side of Wigan, the carriage in which I was on the railway, owing to some fault in the rail itself, got off the rails, going at the time at the rate of about 30 miles an hour. The wheels, axles, springs, steps, &c., in fact, everything below the body of the carriage, was smashed to pieces; and when at length the engine was stopped, we were lying in the wreck about two feet from the edge of the embankment, over which we were passing at the time; yet most fortunately nobody was hurt."—*Kelso Chronicle*.

RAILWAY FROM MERTHYR TO BRECON.—Application is to be made for an Act of Parliament, for the purpose of making a railway from Brecon to Merthyr. The projected line has been surveyed on a former occasion, and the estimates are much lower than usual in railway undertakings; the line running for a great part of the way over a dead level, through the Vale of Usk, and one tunnel wholly obviating the apparently great engineering obstacles. The purchase of land, generally so heavy an item, will come very low, as the greatest portion required will be mere hill pasture or common land. The traffic, it is obvious, must be considerable; the dense population of Merthyr and its neighbourhood ensuring a ready market for the agricultural produce of Breconshire, Herefordshire, and Radnorshire, the conveyance from the latter counties being cheap and convenient by the Hay Railway, which traverses 35 miles of fertile country extending from Kington, in Herefordshire, to the terminus of the projected railway at Brecon. On the other hand, the supply of so large a tract of county with coal and lime in return, will, of itself, form no mean object of traffic.—*Silurian*.

ILLEGAL APPROPRIATION OF RAILWAY FUNDS FOR EXTRANEOUS PURPOSES.

(From the Sheffield and Rotherham Independent.)

THE half-yearly meeting of the proprietors of the London and Birmingham Railway was held in Birmingham on the 12th inst., and was of unusual interest. In fact, one part of its proceedings cannot be viewed with indifference by any railway proprietary in this country.

* * * *

We now come to one of the most important questions that have ever engaged any railway meeting in our recollection; being no less than whether any majority at such general meetings shall be at liberty to apply the shareholders' funds to other purposes than those contemplated by the acts of incorporation. The circumstances of the case, so far as we could learn, were these. The London and Birmingham Railway Company have collected together, at their station at Wolverton, a very large body of workmen, for the purpose of conducting the goods department of the Company's traffic, and for the repair of their engines. Being at an inconvenient distance from a place of worship the trustees of land adjoining offered to give the site for a church, if the Company would give 1000*l.* to build one, for the use of their own workmen. This liberal offer induced a shareholder, without any previous notice, to move, at the general meeting in August last, that 1000*l.* of the Company's money be applied to this purpose. Not a few of the shareholders were taken by surprise, and the resolution was almost unanimously carried. It was not long, however, before the true bearing of the resolution became apparent. If a meeting had power to do this, they might also, if the parties could obtain a majority, make another grant for a Wesleyan chapel, or Independents', or Friends' meeting-house, or Jews' synagogue. They might build a hospital for any of their men who had been injured in their service, to say nothing of mechanics' institutes and newsrooms, to keep their men from the public-houses.

But even those who would not agree to all this, might consider a chapel at every station, proportioned to the wants of their workmen, as quite reasonable. And after so good an example from that railway, which, we admit, does take the lead in the extent of its traffic, and the excellence of its arrangements, few of the smaller concerns would be long without so desirable an addition to their establishments. We understand that a number of the shareholders, who are members of the Society of Friends, first took up the matter, and presented a pretty strong memorial to the Directors, protesting against this application of their money as illegal, unwarranted by the Company's acts, and foreign to the purpose for which it was established. They also objected to the grant, that it was highly inexpedient to introduce questions involving religious opinions, amongst a body of shareholders of various Christian denominations, as likely to create dissension, and interfere with the proper management of the concern. And they urged that it was an infringement upon their Christian privileges, to be compelled to contribute towards the erection of a building to be applied to a form of worship from which they conscientiously dissented. The justice of these views was admitted even by many who were most anxious for the religious instruction of the workmen.

The illegality of this appropriation of the common property of the Company was supported by the opinion of the Attorney-General, who declared that "however laudable the object of the resolution in question may be, and however desirable that it should be carried into effect," he was "bound to say, that in his opinion, such an appropriation of the funds of the Company is not authorised by the Company's acts."

It was accordingly moved at the meeting that the grant be rescinded. It was suggested that the sum be raised at once by voluntary contribution, to which several proprietors were ready to contribute liberally. The chairman of the meeting took an active share in supporting this ill-advised grant. Without adducing any opinion of counsel to support his view of the case, "he would maintain that power existed in the proprietors to make such a grant." Whether this was quite a reasonable deference to the opinion of Sir John Campbell, we must take the liberty of doubting. One shareholder, a clergyman of the Church of England, very naturally remarked, "On the old-fashioned principle, that those who build houses should provide the means of religious instruction for the occupants, he thought the Company who had assembled so large a body of men at Wolverton, should do the same." The discussion, although very animated, was conducted without asperity on either side. Many felt that they had rather inconsiderately committed themselves at the former meeting. The movers of the resolution for rescinding the grant, expressed the greatest anxiety for the moral and religious instruction of the Company's servants, but thought that this ought to be carried out without the injustice of making individuals of every religious belief contribute to the propagation of tenets to which they might be conscientiously opposed. They urged, too, that it was with them purely a question of principle. The whole pecuniary question at issue would only amount to about sixpence upon every 100*l.* share.

At length, an amendment was moved, *and carried by a majority of eight*, that, instead of rescinding the grant, a rateable proportion of it should be retained, and paid back to every one who should object, and apply for his quota within a month; the deficiency to be made up by voluntary subscription; thus, as a proprietor remarked, "making the whole vote voluntary."

So terminated a discussion of very great importance to public Companies generally. The right of a majority to be liberal at the cost of others, and even against their consent, was, we hope, practically set at rest. The decision had been waited for with no ordinary anxiety, and we confess, that, as Dissenters, we hail, with no little satisfaction, a conclusion, which, we hope will close the door to one means of very great abuse.

We can conceive that, in hands less considerate and less honourable than the gentlemen who met that day, not only might such assumed power be made one of the most powerful engines of Church Extension, but applied to objects which would prove the theme of endless dissension and rancour amongst those who had, in perfect good faith and simplicity, embarked their capital in such undertakings.

For the sake of the principle involved, we trust the shareholders generally will apply for their quotas, whether large or small, of the 1000*l.*, whatever they may conclude to contribute *voluntarily* towards the church at Wolverton.

Mr. George Stephenson, the celebrated engineer, has concluded a contract with the owners of lands in the townships of Tapton and Brimington and Newbold, adjoining the Locksford estate in Derbyshire, for the purchase of the whole of the coal thereunder, and we understand that collieries and lime-works on an extensive scale will soon be in operation.—*Leeds Intelligencer.*

PARIS RAILWAYS.—The new grand station for the Paris, St. Germain, and Versailles Railroads, in the Rue St. Lazare, is approaching to its completion. The Rue de Stockholm, in the rear of the building, which during the progress of the works has been closed, will soon be opened again to the public, the bridge which there crosses the railroad being finished. This bridge, which is 100 yards in length, is a masterpiece of construction, so far as it provides for the safety of those who have to pass it on foot; the path on each side admitting four persons to walk abreast, being protected by a balustrade on each side, so that no accident can possibly happen. The entire bridge, though formed of timber, is as solid and strong as if made of stone or iron, and has undergone the trial of having left upon it for forty-eight hours 500,000 kilogrammes in weight of paving stones, without experiencing the slightest crack or deviation.—*Morning Post.*

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—We are unwilling to comment at all upon the letter and affidavit of Mr. Moss, published in your last week's paper, and more especially after the proposal on the part of the Grand Junction Railway Company to print all the affidavits filed on either side during the proceedings we lately instituted against them in the Queen's Bench. But there are one or two points in the document already before the public, upon which we cannot refrain from making a few brief observations.

And first, Mr. Moss charges us with receiving goods for conveyance by railway, and forwarding them by canal, and he supports his charge by a letter from Mr. Richard Earle, who complains that two packages of wine ordered by railway to Knowsley, near Prescot, were, notwithstanding, sent by canal: and Mr. Moss leaves it very plainly to be inferred, that similar complaints were of frequent occurrence, and that they could not be accounted for by accident or mistake.

The correctness of this inference we must be allowed most unequivocally to deny: and we cannot but remark, moreover, that the example cited by Mr. Moss has been as it appears to us, very unfortunately selected for more than one reason. In the first place, we observe that Mr. Richard Earle is the brother of Mr. Hardman Earle, the Director, who as Mr. Moss's affidavit informs us, "did from the first entertain, and always express a strong opinion that both the public and the said Company would be great losers by the encouragement and advantages given and held out by the said Company to the said firm of Pickford and Company, and the other original common carriers."

But secondly, if it were not contrary to common sense to suppose that any carrier would wilfully incur the very heavy liabilities which he must undertake if he send goods by one conveyance which were ordered by another, we might allege a very plausible excuse for our having so acted in the present case; for goods consigned to Knowsley are always forwarded to Warrington. Now Warrington is one of the road stations on the Grand Junction line, and the business of the road stations the Company have always reserved to themselves, so that we could not send Mr. Earle's wine there by railway; the Company would not let us; and the clerk by whom the packages were received, might, under these circumstances, easily suppose that in forwarding them by canal from Birmingham, he was obeying his instructions as nearly as the case would admit.

We cannot, however, be surprised that Mr. Moss should be ready to impute a wilful disregard of consignments to us, seeing that the Grand Junction Company do themselves avowedly act upon a system not very different. For, after many and urgent complaints from several London houses, that their goods from Liverpool, though ordered and legibly directed by "Pickford and Co.," did nevertheless fall into the hands of the Grand Junction Railway Company and Chaplin and Horne. And after frequent remonstrances on our part to Mr. Comber, (the agent of the Liverpool and Manchester Company at Liverpool, whom the Grand Junction Company employ to manage their carrying business, and whom they compel us to employ to manage ours) against a negligence (as we supposed it) so unjust and so ruinous to our trade; we received on the 14th of this month a Report from our own agent, of an interview with Mr. Comber on this subject, with reference principally to Scotch and Irish goods sent by steam to Liverpool, in which he states that "Mr. Comber considers the Company have a right to all such goods as are delivered at the railway, ordered in the carriage note by the Grand Junction Company, (the carriage note is made out by the *agent of the steamer in Liverpool,)* though fully directed by Pickford and Co."

But we will introduce a particular instance; and will take it, not as Mr. Moss does his, from the year 1839, but from the 7th day of January 1841.

On that day Mr. Pooley, of Liverpool, delivered at the railway station several packages of timber and castings, consigned to the South-Eastern Railway Company, especially ordered "By Pickford and Co." The railway clerk took upon himself to sign the receipt "For Pickford and Co., J. Bostock," sent the goods not by us but by the Grand Junction Company—they were delivered in London by Horne and Chaplin, and were charged 69s. 8d. per ton instead of 61s. 8d., being upwards of 12 per cent. more than the then advertised rates of the Company; or than we should have charged, if this '*fraud*' (to borrow Mr. Moss's expression), upon us had not been practised. This fact, while it affords a fair test of the value of the professions of public spirit, so copiously put forth by the Grand Junction Railway Company, proves also that they are very sharp men of business, and do not despise high prices when they can get them.

The public must judge whether, under these circumstances, Mr. Moss's attack upon us would have been quite fair, or quite consistent, even if it had been well founded.

It would not be difficult to refute the assumptions and hypotheses of which the greater part of the affidavit we are considering is composed. This is not our object. One word more and we have done. Mr. Moss swears that he verily believes that Pickford and Co. had been making untrue declarations, and thereby defrauding the Company. And that they had further been instructed to defraud them by passing packages as empty and free which were not empty, but liable to charge.

Occasional errors and omissions we plead guilty to; quite as numerously made against ourselves as in our own favour. For the rest we will not waste words in denial, but we will place our character for fair dealing in the scales against Mr. Moss's *belief*, and we are content to leave the decision in the hands of the public.

At least we may have the satisfaction afforded by a confident belief that a case which requires to be bolstered up by assertions of this kind is not likely to have much truth or merit of its own to fall back upon. We are, Sir, your obedient servants,

PICKFORD & CO.

City Basin, Feb. 23, 1841.

P.S. Since writing the above we have received from our house at Manchester the following:—

"Leaf, Coles, and Co.'s buyer is now here, and complains that their Scotch goods come by Chaplin and Horne, from Liverpool: the last lot, upwards of 120 cases, *notwithstanding* EACH OF THEM BORE A RED PRINTED LABEL, 'Care of Pickford and Co.'

"Manchester, Feb. 24."

THE CARRIERS' CASE CONSIDERED IN REFERENCE TO RAILWAYS.

LETTER II.

"A corporation cannot be excommunicated, FOR—IT *has no conscience!*"—*Comyn's Digest of the Law.*

To the Editor of the Railway Times.

SIR,—I am not surprised to find that my broadside has *told* upon the Grand Junction Railway Board. I claim no credit for the use of my weapons, for I fight beneath the impregnable bulwark of common sense, and am covered by an irresistible artillery of facts. But I regret to find that the Chairman has thought it necessary to come forward with a reply, in which he says he is "desirous to confine himself to that part of the case which bears upon himself individually." Sir, no part of my observations do or shall bear upon him, or any body individually. I fight with keen, but not with *poisoned*, weapons; I wage war against *monopoly* and against the Grand Junction Railway Board, because they have assumed a monopoly. I refer to the evidence given by individuals because it was given in behalf of monopoly, and because in the official Report of the Company great weight is attributed to that evidence. I have no pleasure in putting any individual upon the hook, and when in the prosecution of my attack upon this *monopoly*, I am compelled to do so, I will treat him as Izaak Walton treated his frog, *as though I loved him.*

My very quarrel with these public Companies, when they assume to act as private traders, is, that in dealing with their vague and indeterminate existences, one has no hold upon individuals, and loses all the guarantee which identity of character affords in common life. The Board which meets this week consists of A. B. C., whose decisions are reversed on Wednesday next by X. Y. Z. One is as completely puzzled as Lord Salisbury was with the letter which said, "you shall not see who hurts you," or Bombastes, when,

"Turning round the corner of the street,
A man that squinted horribly he met;
A second, and a third—a fourth, and he
Squinted more vilely than the other three."

I will draw from the Chairman's letter a striking illustration of this truth. He says, the evidence given by him before the Committee of the House of Commons, which, for the sake of contrast, I set out in parallel columns with certain extracts from his affidavit, subsequently filed in the Queen's Bench, was given "some months before Messrs. Chaplin and Horne had finally concluded with *our Executive*. *My* idea was, that they should be the carriers, at least over the London and Birmingham Railway, but further consideration led, in the actual conclusion of the arrangements, to their being only our agents." Now, it is very difficult to suppose that the words "our Executive" are intended to be synonymous with "my" in the following portion of the sentence; on the contrary, an opposition plainly seems to be intended between them, in order to bear out the argument. And besides, the words "our Executive" would seem to be a very pompous periphrasis indeed, if they merely signified "we," or "us". And yet, one should be naturally inclined to suppose that this is, after all, what these words do mean—since, otherwise, who, in the name of all that is mysterious, who is "our Executive?" Not the Superintendent, Captain Cleather *before* a meeting of the Board, nor Captain Cleather and the Treasurer Mr. Chorley, *after* that meeting; because in his affidavit Mr. Chorley tells us that Hayward's questions to these two gentlemen were not official requirements of the Company, but "questions casually asked." And we learn besides, from Mr. Moss, that "this deponent hath taken a very active part in the general conduct and controul of the undertaking, *and especially as regards the arrangement for the transmission of goods and merchandise along the railway.*"—Affidavit, *Railway Times*, 20th Feb., p. 208. Now, when I speak of Pickford and Co., I know that I mean two compounds of common flesh and blood, viz.—Thomas Pickford and Joseph Baxendale; but what is meant by "our Executive," I have just as much idea as I have who was the Iron Mask, or what the word "people" means when I meet it in a political discourse.

I regret too that the Chairman should have thought—

"In fairness I think they should have published the whole of my affidavit instead of a detached part of it. I say this because in that affidavit are stated the reasons which caused the *change of opinion* on my part *which I am charged* with in the paper I am now noticing,"

because I think if he will turn at greater leisure to my former paper, he will observe, that while I showed plainly, by parallel extracts, from the *Evidence* (*Railway Times*, 13th Feb.), that that could not be rightly attributed to a change resulting from experience, which in the next preceding questions and answers it appeared had been contemplated when the Acts were obtained, the extract I gave from the *affidavit* had no reference whatever to this subject, but simply to the footing on which Messrs. Chaplin and Horne do actually stand with the Grand Junction Company. And lest it should appear that I shirked setting out that well-drawn document, because I had extracted all that would have served my purpose, I beg to subjoin (now the whole is printed in your paper, and before the public) another example of my favourite method of dealing with evidence when it is tendered by public Companies.

"That the said Hardman Earle, who is not now a Director of the said Company, but went out of office on the 10th of August last, *did* FROM THE FIRST *entertain and* ALWAYS EXPRESS IN COMMON WITH SOME OTHERS OF THE DIRECTORS *of the said Company, a strong opinion that both the public and the said Company would be great losers by the encouragement and advantages given and held out by the said Company to the said firm of Pickford and Company, and the other original common carriers.*"—Affidavit. See *Railway Times*, 20th Feb. p. 210.

"511. Chairman—Then you make your profit as toll-owners, not as carriers? Just so.

"571. Is the Committee to understand that the desire of the Grand Junction Directors is to be relieved as much as they can be from the details of management? Certainly.

"575. And that you would be very desirous to find persons to become carriers? To find us the power and every thing. *It is the* UNANIMOUS *feeling of the Board* to endeavour to get persons to do that."—*Evidence*, 12th Dec. 1837.

I now arrive at what (to borrow the popular language of the day) may be called the FIVE POINTS, on which the Grand Junction Company claim to have achieved five separate triumphs. Mr. Moss says:—

"As far as we have gone, it does not appear that the Directors are decidedly in the wrong, or that the carriers are clearly right; for upon their own showing (as the fact is) various tribunals have decided against them.

"First, the Commons on the Grand Junction Amalgamation Bill with the Chester and Crewe.

"Next, the Lords on the same Bill.

"Next, the General Committee of the Commons on Railways.

"Since then Messrs. Pickford and Co. have brought us before the Court of Queen's Bench, by applying for a mandamus against us, wherein again they failed; and lastly, they brought an action against us, which they have discontinued, paying us our costs."—Letter *Railway Times*, Feb. 20, p. 308.

These I will handle in detail—

1st. Commons' Committee on Crewe Bill:—Case not gone into, but resolved after hearing counsel, "that it was better to leave legislation on this subject to some general Act, to be recommended by the Select Committee on Railways, and adopted by the legislature."

2ndly, Lords' ditto, ditto.

3rdly. The mandamus defeated for the present on a point of form which bears a very whimsical correspondence to the boasted reductions effected by the Company, since it amounted to precisely this, viz., that whereas Messrs. Pickford had demanded that the rates should be reduced to them as well as to Horne and Chaplin, they should have demanded that the rates should be reduced to them OR *advanced* to Horne and Chaplin.

4thly, The action, which it appears from a letter of Messrs. Pickford on the same page with the letter in question, has gone off for the present on the score of time. And so we come

5thly, To the Select Committee on Railways, whose report, after dwelling at much length upon the difficulties of the question, concludes as follows:—

"Having thus stated the difficulties in which this question is involved, your Committee may here further observe, that different systems are in operation, not only upon the three lines of railway above mentioned, but also upon many other lines in various parts of the country; whence it must be inferred that those persons who are best informed upon the subject, and most interested in arriving at a correct conclusion, have not yet determined which system will be attended with the greatest permanent advantage. The Railway Directors have not usually kept their accounts in such a form as to enable them readily to distinguish the profits which they derive as carriers from the profits which they receive as toll proprietors, and consequently any accurate comparison of the practical working of these systems appears to be at present impossible. With every desire, therefore, to offer a definite opinion to the House, and to point out, in regard to this important question, which system is best calculated to promote the interests of the public, your Committee yet feel that at the present time any legis-

Digitized by Google

lative interference, for the purpose of preventing Railway Companies obtaining a monopoly of conveyance, or for the purpose of obliging them to undertake the carriage of goods, would be equally objectionable; and they believe that by suggesting the *appointment of an authority to watch* the different systems practised upon the different lines of railway, they are recommending the course best calculated to insure the protection of the public interests, without occasioning any ground of alarm to those persons who have invested their property in these vast undertakings, which promise to become one of the greatest improvements of modern times and to open new sources of wealth and prosperity to the nation."

Now, this recommendation of the Committee is so far only a victory for the monopolist, that it stops one step short of the remedy I suggested in my former paper. It recommends the appointment of an authority to *watch*—after nearly a year's additional experience I venture to add, 'to watch *and control*'—in that single department in which the considerations of public safety require there should be *some* absolute control.

But it is further to be observed, that according to the official report of the Grand Junction Company, "an attempt was made by parties engaged in the carrying trade to create an impression unfavourable to the system on which the merchandise business of this railway is conducted. The attempt, however, the Directors believe, has been *entirely defeated by* THE EVIDENCE OFFERED ON BEHALF OF THE COMPANY;" and that (according to their present affidavits, and the letter in your last paper) this *evidence is in a very important matter erroneous!* I say the evidence is *erroneous*, because the committee who agreed to this Report are told "the system on which the merchandise business is conducted" was that Chaplin and Horne were to be common carriers, a point on which it will be seen in the printed evidence, or in my former paper, many and searching questions were asked. The Chairman answered all these questions in one way, and the Report was agreed to. "Our Executive" subsequently found that the system which the Committee had approved would open them to the fire of a mandamus, if they charged Chaplin one price and Pickford another, and so "further consideration led in the actual conclusion of the arrangement, to their being only our agents!"

Is it not very supposable that all these questions were put in order to ascertain whether the Company *would or would not be able* to exercise their arbitrary power; and the Report was influenced as much by this, as by other portions of that evidence which "entirely defeated the carriers' attempt"!

And further I say it is *important*, because this distinction between the Chairman's evidence and "our Executive's" subsequent arrangement is the whole gist of their affidavits, and the substance of Mr. Chorley's published answer to the carriers' demands.

In conclusion, I beg to tender to the Company one short and simple sentence of advice:—

> "There was a man in Thessaly,
> And he was *wond'rous wise*,
> He jumped into a quick-set hedge,
> And scratched out both his eyes:
> And then when he was frantic quite,
> With anger and with pain,
> He jumped into another hedge
> To scratch them in again."

The Chairman jumped into the Queen's Bench when he arranged to favour Chaplin and Horne *as carriers*; I venture to suggest that "our Executive" will jump into the Board of Trade if they carry on, by *their agents* (i.e. by themselves), a carrying trade with "Ireland, Scotland, and foreign ports." I throw out, for the consideration of the curious, whether the Grand Junction Board (though I know they have obtained from Parliament greater powers than have been conceded to any other Railway Company) can find in the compass of their Acts any authority by which they may do this.

I think it will not be considered disrespectful, if I suggest that the last sentence of the Chairman's letter exhibits the fallacy which is known to the logicians as an *Ignoratio Elenchi*, and by ordinary men is called shooting at a pigeon and bringing down a crow.

That "preserving a direct communication between the public and the Railway Companies," may if it be fairly done, secure the interest of the public, I have never yet disputed. The carriers did dispute it, and I think they did themselves harm in doing so, because they laid themselves open to a colourable imputation of seeking to set bounds, for their own purposes, to that free and fair competition, which is always for the public interest, (see Messrs. Pickford's letter *Railway Times.*)

What I do and will deny is this, that the public will be benefitted, if the Company can reserve to themselves the only direct communication. I have disproved this before out of their own mouths, and I now give them the same truth, in the eloquent and startling language of one of Her Majesty's present Cabinet:—

"When his hon. and learned friend spoke of the theory that monopoly made articles dear, it was a proposition that was to be taken as a theory only, in the same sense as it was a theory that the sun rose every morning, or that lead was heavier than water. It was a theory which was the result of all the experience of men of all nations and ages since the beginning of time. If his hon. and learned friend could prove to his satisfaction that the tendency of monopoly was to make articles cheaper, he would go further than the bill proposed, and most cordially vote for a permanent monopoly. But then could his hon. and learned friend give any reason why we should not also re-establish the monopoly of tea, and all the monopolies of the reign of Elizabeth, against which that House rose up, even under that powerful and haughty princess, and driven by a sense of intolerable wrong, compelled her, who never bent on any other occasion, to bend before the roused spirit of the English people? (Cheers.)"—*Mr. Macaulay, 5th Feb.*, 1841.

I shall keep my eye upon this subject, and I hope I shall sufficiently shew that I have no intention or desire whatever to wage war, except with *monopoly*, and with that evidence, and those arguments which go to support *monopoly*.

I am Sir, &c.

YOUR FORMER CORRESPONDENT.

THE CARRYING QUESTION.

We extract the following view of this question from a railway pamphlet, published this week, by Mr. Henry Booth, the well-known and much-respected Treasurer of the Liverpool and Manchester Railway. Mr. Booth, it will be seen, espouses the cause of the new Railway (or rather, the Grand Junction Company) Company Carriers, *v.* the Pickford and others of the old school, and with his usual shrewdness and ability, though, to our thinking, not quite with his usual impartiality.

To what conclusion do we come, after reading the eleven thousand one hundred and four questions and answers (of the Parliamentary Evidence) which comprise this dull but still important subject! Simply, that the complaining parties, Messrs. Pickford, Robins, Bache, and other well-known carriers, have found themselves unexpectedly in a novel and embarrassing position. Their difficulties were pressing and immediate; their very existence as carriers by railway being altogether on sufferance. Unfeignedly surprised, no doubt, they were, at the predicament in which they were placed on their new element; and they appeared personally before Parliament, earnest and eloquent in complaint, against the arbitrary proceedings of Railway Companies; confident that the Select Committee of Parliament would view the matters at issue precisely as they (the carriers) did, and of necessity would come to the same conclusion—that something must be done to reconcile and accommodate the ancient established carriers to the new condition of things.

A brief consideration of the circumstances in which the carrying trade between London and the north has till recently, subsisted, will make it apparent that the distorted view which, as we conceive, the water carriers have taken of the "Carrying Question" arises altogether from their extraordinary but inevitable position—from the peculiar but unavoidable difficulties of their situation.

For many years, the carrying business by canal, by heavy waggon, or by the lighter van, attracted little of public attention, and still less of the notice of Parliament. The carriers, in their respective departments, pursued their calling with just sufficient competition amongst their own body to induce civility to their customers, and attention to the business entrusted to their charge, and just enough of combination between canal carriers and canal proprietors to give the proprietors handsome dividends and the carriers probably something above the average profits of trade. But this unobtrusive and agreeable state of things was not destined to last for ever. The Liverpool and Manchester railway was the first great competitor with the carriers by canal. The proprietors or Directors of this railway were themselves carriers on their own line—and, like any other trading Company, competed with the existing carrying establishments between the *same termini*. The benefits of this competition between railway and canal were soon evident in reduced charges for the conveyance of goods, and in increased facilities and dispatch by *canal* as well as by *railway*.*

But our present attention is principally required to the great lines of railway between Liverpool, Manchester, and London—the Grand Junction and the London and Birmingham. Violently the Acts of Parliament for the establishment of these concerns were opposed in the first instance; but, opposition being fruitless, they were soon regarded with an apathy more unaccountable than the previous hostility. Steadily the construction of the great works proceeded, without apparently creating any serious alarm in the breasts of canal proprietors, and still less anxiety on the part of the *water carriers*. Arrived at completion, the power and efficiency of railways as a means of conveyance, both for passengers and goods, were speedily developed; and the water carriers, being suddenly awakened to a consciousness of this power, imagined in their alarm that, unless they connected themselves with the improved system of transport, their "occupation would be gone."

We cannot be surprised that the carriers by canal and waggon determined to be carriers also by railway; more especially as the London and Birmingham Company announced their determination not to receive or deliver goods without the intervention of the existing carriers, whom accordingly they invited on their line; this movement on the part of the Birmingham Company, proceeding evidently from the idea that there was a parity of circumstances between the working of a railway and of a canal, and that because numerous and unconnected individuals pursued the business of *carriers* on the canal, they might on the same principle become carriers on the railway. The *practice* of the London and Birmingham Company may perhaps be appealed to in support of this idea; but herein, we apprehend, is the fallacy; a palpable misnomer is familiarly adopted in the outset; the very terms of the proposition are mis-stated, and thus the character and complexion of the system pursued, and the general merits of the case are viewed through a distorted and delusive medium. Pickford and Bache and others are *denominated* carriers on the London and Birmingham Railway: but are they so in fact! Let us examine the circumstances involved in this question.

A connected line of railway is constructed between London, Liverpool, and Manchester, at an expenditure of nearly nine millions of money, the interest or *return* upon which must depend very much on the proper management of so large a concern. In addition to this foundation capital, there is the costly outfit for engines, waggons, and carriages, requisite for the purposes of the line, amounting to about 650,000*l.* The annual charge for working these engines and carriages may be stated in round numbers at 350,000*l.*, and for maintenance of way and police 100,000*l.* Besides these heavy charges, there are large sums to be paid on every mile of road for parish assessments; and as upon the whole length of line passengers as well as merchandise are carried, and indeed constitute the chief source of remuneration or return for the large first outlay and subsequent annual expenditure which we have mentioned, a heavy responsibility consequently falls on the Directors of each Company to provide for the comfort and accommodation, and especially for the safety, of the many thousands, and tens of thousands of her Majesty's subjects, committed to their care. This latter consideration renders it necessary that the Directors of each Company should be,

* Why does Mr. Booth forget to notice the pernicious influence notoriously exerted by a certain *canal* proprietor in the case of the Liverpool and Manchester Railway, to render the competition here alluded to almost nugatory.—ED. R. T.

Digitized by Google

not nominally, but substantially, the controllers of their respective lines, with undisputed power over the moving machinery of the road—over that locomotive engine, at once so fearful and so efficient an instrument of conveyance—destined, ere long, to be almost the sole moving power, for travellers at least, from one end of the kingdom to the other.

Connected with the passenger traffic (but subservient to it), under separate but consistent regulations, and subject to the same control, must be worked the merchandise department of each railway; one system—one executive—one Direction.

The fifteen carriers on the Birmingham line, who at Camden Town have lately found a local habitation and a name, are interested in this latter branch of the general business, namely, the merchandise department. Let us, then, consider the requirements, or outfit, for the proper management of this department, and examine by what party the costly requisites are provided.

First, the railway itself between London and Liverpool, with its enormous outlay of eight or nine millions sterling!

Provided by the Companies.

Second, the cost of labour and superintendence constantly necessary to maintain the way in a condition fit for the traffic!

Provided by the Companies.

Third, the police and gatekeepers on the line necessary for the good order of the concern, and for the safety both of the traffic and of the public?

Provided by the Companies.

Fourth, the rates and taxes, demanded by the several townships through which the line of way passes from the *occupiers* of the road!

Paid by the Companies.

Fifth, the waggons and trucks necessary for the traffic, and required to be built on one uniform plan to suit the various railways over which they are to pass?

Provided by the Companies.

Sixth, the locomotive engines, requiring an immense array of merchanics, engine-drivers, labourers, superintendents, and engineers, with suitable workshops, sheds, and machinery, to be furnished at a cost almost beyond the extent of any private capital, but requisite for the purposes of this department?

Provided by the Companies.

And last, but not least, the superintending power and management, the systematic arrangement, the single control and responsibility essential to the good working of so extensive and complex an undertaking?

Provided by the Companies.

Thus we see that all these costly, but indispensable elements of conveyance and management—these essential requisites for the carrying business—are supplied by the Railway Companies; and it will naturally be asked, what is left for the *carriers* to provide? Literally nothing, but the cords with which the goods are fastened to the waggons, and the oiled cloths with which they are covered! If I send my servant and cart to the goods' station, Camden Town, with a chest of tea or a package of fancy goods for Liverpool or Manchester, my man would assist Messrs. Pickford's or Bache's men in transferring my package from my own cart to the Company's waggon, where it would remain undisturbed till it arrived in Manchester or Liverpool aforesaid. It is the Railway Company, then, who are the CARRIERS, and Pickford and Bache, &c. &c., who are the receivers and distributors at the termini, by permission and on sufferance of the Company.

It is declared in the evidence before the Parliamentary Committee that the London and Birmingham Company are *carriers* of passengers and parcels, but not of goods. Let us examine whether there be any substantial difference between the two. As to passengers, the omnibus or cab drivers bring them and their luggage to Euston station, where they are taken in charge by the Company, and conveyed by means of their engines and carriages to Birmingham, and thence to Liverpool or Manchester, where the omnibus and cab establishments again take up their small but useful modicum of the whole performance, and convey both passengers and luggage to their respective destinations. But we do not call the omnibus keepers at each end of the line the *Carriers by the Railway!* And wherein consists any substantial difference between the course of proceeding adopted with my package of fancy goods, and the routine of operations just described as applicable to passengers and their luggage? In both cases agents and vehicles are employed at the termini for the multifarious but necessary details of the business; but whether employed directly by the Company, or intermediately with permission of the Company by parties calling themselves *carriers* or *cabmen*, makes no material difference in the general character and main features of *The Railway Conveyance*, but solely in the minute details and petty arrangements at the termini.

Or let us consider the case of the parcels which the Birmingham Company *profess* to carry. Like my package of goods they find their way to the station, either separately, or in masses by means of the *Parcel Delivery Companies*, and being conveyed to Birmingham or Manchester, they are again taken away by various processes to their respective destinations. Now, wherein is the difference between the Railway Company's *share* of the transaction, in *respect of parcels*, and their share of the transaction in respect of my package of goods? And what, in fact, are the agents at each end, in both cases, but *parcel delivery people*, in the one case receiving the goods by coach, in the other case by waggon? The whole question at issue, then, resolves itself into one of arrangement for the collecting, receiving, and delivering of parcels or packages, by omnibus or cart, at London or Liverpool, prior to, or subsequent to, *their being carried by the Railway Company*.

It may possibly be objected, that in the case supposed, of my own servant and cart taking a package of goods to Camden-town station, I have not described the average quantity of service performed by the terminus agents, who have their carts moving up and down the metropolis in all directions, their warehouses or receiving houses in the city, and their porters and clerks wherever their services are required; who thus remove a vast responsibility from the servants of the Company by undertaking all the details of the business, by collecting the freights in small sums, and paying the dues to the Company in round and large amounts.

All this is very true; we must admit that in concerns where this arrangement is adopted, the managers and officers are saved some trouble, and a multiplicity of details; but it is at the expense either of the public or of the Company. The fifteen carriers on the Birmingham line constitute a most costly machinery for the collection and distribution of goods; each of the fifteen parties having his establishment of porters, clerks, horses, carts, and warehouses. Take a single illustration. On the arrival of a goods' train in London, there are fifteen packages for Pimlico. The ironmonger expects his package. The draper and the druggist, the cheesemonger and the grocer, and many other tradesmen or shopkeepers; each is looking for his cask or his trues from the country. But these fifteen packages come by fifteen different carriers. There is Pickford, and Robins, and Bache, and Jackson, and Thompson, and many whose designations I cannot recollect. Each of these parties calls in requisition his cart, with gallant team, and away the glorious cavalcade proceeds from Camden-town to Pimlico, to deliver their respective treasures in Ranelagh-street or Chelsea-road. Then comes the charge for cartage and delivery; and seven shillings for traversing so many miles can hardly be considered an unreasonable charge for each of the fifteen carts, and consequently for *each package* having the benefit of delivery by a separate and independent carrier!

We have shown that on railways almost all the requirements for the carrying business are provided and maintained by the Railway Companies, therefore that the Companies are substantially the carriers; we come therefore to the remaining question. Is the employment of fifteen parties at Camden Town, each with his establishment of porters and clerks, and warehouses, and carts and horses, and runners, the most economical or expedient way of receiving and delivering the goods conveyed by the Company? That it is a most costly way we think cannot be doubted, but is it not the most convenient way for the Railway Company? What a multiplicity of details are thereby avoided, of petty transactions and minute accounts! Granted,—and if convenience be considered a sufficient justification of an extravagant system, irrespective of the public good or the Company's profit, we shall give up the argument. But is not this to take too microscopic a view of a great question; to be terrified by a multiplicity of small difficulties, when one great one would not alarm us? If the details of the carrying business are multifarious, *we do not lessen their number by employing fifteen superintendents.* The question still returns, whether fifteen managements be better than one? If precedents be wanted to justify a great concern attending to minute details, contemplate the Bank of England, with her hundred clerks; her cashiers, her auditors, her secretaries, her branches, managements, and agencies throughout the kingdom; all under one control, and whose multiplied operations all converge to one centre. But do the Directors of the Bank of England embarrass themselves with the superintendence of a hundred clerks? or is it necessary that the Directors of Railways should involve themselves in the multiplied operations and details of a carrying department? It is their province, we apprehend, to view the question in the abstract—to decide upon the *system*. The details will be accomplished by subordinate agents.

But we can refer to the practice of other Joint Stock and Trading Companies. Take any of the Gas or Waterworks Companies. Like Railways, these have superseded inferior modes of accomplishing the same objects. But do these Companies, disdaining all petty details, confine themselves to laying down the *great mains?* and do they leave to the old lamplighters and watermen to provide the *service pipes* to convey the light and water into each individual house, paying the Companies a round sum for the *use of their mains*, and charging the inhabitants at large more or less, at their discretion, without any fixed rule, but as moved thereto by competition, or otherwise, amongst themselves, as the case may be! We apprehend the Water and Gas Companies consider themselves entitled to all the profit which is to be derived from the supply of their commodity to the public, and that they cannot afford to divide the remuneration with third parties, or to leave at the discretion of such parties the charge to be made to the public for the accommodation provided.

It may have been remarked, and perhaps may be made a ground of objection, that in the course of this argument we have omitted the most important element—the great point of competition. What shall prevent the Railway Company becoming an intolerable monopoly, if the check of the fifteen carriers be removed?

In the present day, the very term *competition* is a charm of great potency; to dispense with which, in the material of our argument, would be a vain endeavour. We shall make no such attempt. But let us be sure that, with all the *appearance* of competition, we do not lose the substance. It has not been imagined, in reference to the Gas and Water Companies, that the benefits of competition would be accomplished by employing a multiplicity of middle men—paying a round sum to the Companies, and being left to themselves to compete or combine, as might best suit their purpose—having no standard or uniform scale, but charging to the householder or shopkeeper rates high or low, at their own discretion. And what are the circumstances as to railways? Competition as to what! We apprehend as to the rate of charge for conveyance between London and Manchester. But who fixes the real charge for *conveyance* at present? Undoubtedly the Directors of the railway. They fix the remuneration which they are to receive in return for the vast capital they have expended, the risks they have run, the responsibility they have assumed, the anxiety which they have long undergone and must continue to undergo. These are the grounds of charge to the public—for these the Companies are entitled to ample remuneration, but in respect of this remuneration *there is no competition so far as the fifteen carriers are concerned.* The Directors fix the rate per ton of goods, which they conceive will afford them the desired return. For this amount they hold the carrier responsible; and they leave him at liberty to extract *as much more as he can* from his individual customers, that is, from the public. Herein the Company exercises no superintendence or control; every thing is left to the discretion of the *carrier*. Not only is there no guarantee that the rate charged to the public shall be in proportion to the charge made to the carriers but no uniformity of rate is provided for in respect of the same description of goods, which, it is notorious, are charged one rate to one man, and another rate to another man. It may be imagined that *competition* among the fifteen carriers will bring the *delivery* charge to a moderate and uniform rate. But does experience justify any such expectation? Would *competition* bring hackney-coach fares to a moderate and uniform rate, if the uniformity and moderation were not enforced by the law! What says the evidence before the Committee of Parliament! In substance it is this, (4950); that the charge by the *carriers* to the public was fifteen shillings a ton more than was warranted by the rate charged by the Railway Companies, after making all fair allowance for the expense of delivery. It was this fact which induced the Grand Junction Company, very lately, to establish an agency for the delivery in London of goods sent by railway from Manchester and Liverpool. And what was the speedy result of this step? It is described in the correspondence which has recently appeared in the *Railway Times*, between Pickford and Company, and the Grand Junction Company. The following is an

Digitized by Google

extract from Mr. Chorley's letter, dated 22d December, 1840, and addressed to the editor of the *Railway Times* of the 26th December last :—

"While the *carriers* were the only parties on the London and Birmingham Railway, the charges on through goods *delivered in London*, averaged nearly 100s. (per ton), although on the instant that the Grand Junction Company established an agency on that line, to conduct the business on the principles established on the Grand Junction line, these same carriers reduced their charges for *the same goods* to an average of 70s. per ton !"

Did *competition* amongst the fifteen carriers reduce the price from 100s. to 70s.? Not a shilling of it. It was the pressure from without that accomplished this boon for the public. As regarded the old carriers, having most of them establishments on the *Canals*, as well as on the railway, it was no interest of theirs to lower the rates. Probably, from the opening of the railway to the present time, their interest has been just the reverse. Having their capital already embarked on the canals, the higher they could sustain the rates by railway, and the more goods they could in consequence divert to the canals, the more profitable to them. The Birmingham Company, I believe, were aware that this might be the policy of the carriers, and had taken steps to counteract its effects; but the Grand Junction Company, by the measures they adopted, appear first to have brought down their rates as above stated.

Can we be surprised, then, that the established carriers should deprecate all pressure from without? that they should declaim against the notion of a great Company, and especially a Railway Company, becoming carriers on their own line? that they should ring the changes on competition and monopoly! and with an eloquent and stirring indignation, excite the public sympathy in their favour, as the oppressed and injured party?

We would not be misunderstood. We dispute not that the carriers by canal and by waggon, will severely feel the establishment of railways. Great changes, even in the way of improvement, are frequently accompanied with individual hardship. But this remark will apply to the old *Coach Proprietors*, more forcibly than to *Canal Carriers*, for the coaches on the main line of road are altogether superseded, while the canals still carry on an *effectual, useful, and legitimate competition* with their new rivals. But we have heard no clamorous sympathy in favour of the coach proprietors! They have not claimed to exercise their calling on the railway; nor, seeing that such a result was practically impossible *so far as the journey was concerned*, have they insisted on providing the omnibuses, and booking of the passengers at the *termini*, paying to the Railway Company a *toll*, and styling themselves as formerly by the turnpike, so now by the railway, the great coachmasters between London and the north! Had they made such pretensions we are quite sure their claims, enforced by all argument from "competition and monopoly," would not have been allowed, but we are not equally sure that the coachmasters have not as sound a title to such favour and accommodation, *as matter of right*, as the common carriers.

It is hardly necessary to pursue the subject further. We quarrel not with the London and Birmingham, the Manchester and Leeds, or any other Company, making such arrangements with the established carriers, as they may consider mutually advantageous or convenient, but we protest unequivocally against the doctrine, that Railway Companies are not to be at liberty to be carriers on their own lines if they shall see fit, and generally to work their own concerns in such way as shall best accomplish the great purposes for which they were originally planned and established.

APOLOGY FOR RAILWAY ENGINE DRIVERS AND GUARDS.

OVER-DRIVING is a fruitful source of danger, and no effectual attempts whatever, that we are aware of, have been made to correct this evil; but the stand-still system is recklessly adhered to. Provided the trains arrive in the various stations at the proper time, all earthly good is thereby supposed to be accomplished, and during all the intermediate distances the engine-driver is just comfortably left to go to the devil in his own particular way; the passengers, of course, have no means of expressing an opinion on the subject, and even the guard has in many cases no control—his name is a misnomer. Not so much as an indicator—a most simple instrument—is put upon the locomotives, to let the driver know himself the exact rate at which he is going; and thus no one, when an accident occurs, can determine at what speed the train was proceeding at the time; this has been made manifest by the contradictory evidence in several cases. In the "Treatise on Railways," p. 177, is given a short table, which will assist any one to do this with five feet and a half wheels; but this is not sufficient, it should be done by machinery, and registered, as shown in the same work, at p. 380; by this means the speed, at every moment of time the train is in motion, would be registered on paper, and could be examined by the proper authorities on its arrival at each station; this is the only method to detect furious driving. In the fifth Report on Railways, Mr. Bury's evidence is as follows;—respecting goods trains he says, *q.* 2314—"If they come with a light road, they are apt to be too quick;" *q.* 2314,—"That is the fault of your servants, is it not?"—"It is, but it is one which we cannot control at present." The public will not be satisfied with this. In the first report, *q.* 585, the Chairman of the Grand Junction says, "I think the class of men we have as engineers (engine drivers) on our railroad, is not equal to what it ought to be;" q. 586, "A man who is a good fireman and active, is generally advanced to an engineer, and there are not sufficient pains taken to see what his qualifications are;" q. 591, "At present the Company appoint a person, the best they can get, and if he disobeys their orders, in the case of accident, the public call upon the Company;" q. 599. "Are you willing to give a larger sum for remuneration, so as to secure a better class of persons?" "Yes." In the second Report, Mr. Bury's evidence is, q. 5194, "How have they been bred,—as blacksmiths?" "No, they are principally labourers." On the Great Western, the Secretary states, q. 5815, "We want a better class of men." There is, however, one part of Mr. Bury's evidence which appears to us most decidedly erroneous in principle. In q. 5196. "How do you give them sufficient practical knowledge?" "We do not want them to have much, I would rather the men should not touch the engine themselves;" q. 5197, "If any accident should arise on the road?" "Then they must get out of the difficulty." We can only say, that among all with whom we have conversed on this subject, and they are not a few, both engineers and mechanical men, not a single one could we find who did not disagree with this monstrous opinion.

If a due degree of punishment for furious driving, invariably followed the offence, and a certain discharge in aggravated or renewed cases, it would very soon be put an end to. Acts of this kind should not be forgiven, or slightly fined, except under very peculiar circumstances indeed. It is only by the certainty of a proper degree of punishment following the offence, that such highly dangerous conduct can be controlled, but a clear and definite responsibility is in many cases lamentably deficient. * * * *

The system is wrong, and under it there cannot be a proper look-out for danger. The guards have to attend to the well-being of the passengers, their luggage, &c., which is an arduous duty; the one on the foremost carriage sits with his back to the engine, to look after the vehicles when the train is in motion—the one on the last carriage cannot be of any use in looking out for obstacles of many kinds which would inevitably throw a train off the line, for, from his position, he is unable to see them. We have long maintained that the driver and stoker should be confined to attending, the one solely to the engine, and the other to the fire; and that a conductor, furnished with a telescope, should be on the engine, in front, if possible, to have the entire charge of the train while in motion; specially looking out for signals and obstacles on the railway. A similar plan was proposed in the Treatise on Railways, p. 197. It has lately been called for in a voice of thunder by a Coroner's jury; perhaps that will bring it to pass. Another reason for its adoption, is, that the present police force is quite inadequate on any line to prevent the diabolical attempts which have several times been made, and, we fear, in some instances, with success, to purposely throw off the carriages. Until a conductor goes with each train, we must not expect safety on railways. * *

Another striking instance of neglect is that the under guard, who is generally next the engine, has no means of communication with the engine-driver, except by calling out to him, which, in windy weather, and from the noise of the train and engine, is often a totally insufficient one. There are so many simple ways of obviating this source of danger, that they hardly require mentioning. In the Treatise on Railways, p. 172, a hollow flexible tube is recommended, through which the guard and driver could easily converse: even a check-string to the driver's arm would be better than nothing; and we hope sufficient lives have been lost to enable some contrivance to be made for obviating such a serious inconvenience. What says the witness Callan, on the *Eastern Counties* accident, q. 22;—he sees the coming danger—does all he can, ineffectually, to gain the attention of the driver, and, finding himself totally powerless to prevent the expected calamity, does the next best thing which he could, namely, gets under the seat, and takes all the care he can of his own life. What says James on the *Great Western* accident, p. 52, he shouts to the engine-man—puts on his break—gets no answer—and is totally helpless—he can do nothing else. Look again at the *Great Western* accident, p. 6, where a mail-coach is nearly consumed, and no shouting or blowing horns from the guards could succeed in drawing the attention of the engine-man. It is really lamentable to look back on the late awful disasters, and, at the same time, to reflect how many of them may, in all probability, have happened for want of a few simple trifles like the above, the cost of which would be perfectly contemptible, and which have been described in print upwards of a year and a half.

The qualifications of engine-drivers, we trust, will now be submitted by the Legislature to the test of a proper examination. The public, however, have a right to more than this, and so have the Proprietors of Railways; the question at the present time is forcibly brought into view—what are the qualifications of out-door managers or superintendants? and we have to investigate before a sufficient answer can be given, the following point.—Have the Directors of these costly establishments, with almost unlimited means at their command, and with every possible facility to do so, carried their money, or more properly speaking, the money of the Proprietors, into the vast market of English mechanical skill, and paid it down for the best talent it would command? We unhesitatingly say they have not done so in several instances. We happen to know that men have been taken from the most incongruous occupations, men possessed of not a particle of mechanical skill or knowledge, even clerks from behind desks, and put forth to become by inspiration, we presume, managers of railways, under that or some other designation, by the sheer influence of interest alone, while numbers of young men practically acquainted with the subject, and possessed of known ability as mechanics and engineers, have been passed by. We have even been told, and from quarters which admit no doubt as to the fact, that the farce of advertising for a proper person has been gone through, when the party to be selected was already pre-determined on; under these circumstances the public and the shareholders of railways ought to loudly claim from these unwieldy boards of Directors that this system should be amended. With some very few exceptions, the class of persons to select from is that of civil engineers, for they have the particular kind of skill which is required; there are no species of public works where a thorough knowledge of mechanics is so absolutely necessary as on railways; the human hand will be less and less allowed as their governing power, and inanimate unerring matter be more and more called into play. Under these circumstances, to place in the situation of managers men who have merely figured behind a desk, appears so absurd, that we should hesitate to believe it possible, did we not know it to be true.

The market here has an ample stock; every railway as it is furnished, liberates several young men who ought to be well fitted for managers of lines, and as not a great many more of these works can be constructed in England, the supply of engineers will soon far exceed the demand, and we do not see in most cases how their time and talents can be more profitably occupied either to themselves or to the shareholders, than by placing them in those situations where they might exert their energies in further perfecting these noble monuments of genius. We are quite certain that if this plan is adopted, the pockets of the shareholders will feel its good effects, and the safety of the travelling public be materially increased; while, by an interchange of ideas and a comparison of observations between the managing engineer and the engineer who has charge of the road, an opening will be made for mutual information and instruction, which will strongly re-act for the benefit of the various lines.

MANCHESTER AND LEEDS RAILWAY, OPENED THROUGHOUT.—The Public is respectfully informed, that on and after Monday, the 1st of March, 1841, Trains will leave the Station, Oldham Road, Manchester, and Intermediate Stations, in connection with the London and Birmingham, Midland Counties', North Midland, York and North Midland, Great North of England, and Hull and Selby Railways, as hereafter stated, for Passengers and Merchandize,

On and after Monday, the 1st of March, 1841, the Trains will depart from the respective Stations as shown in this Table.

Distances from Manchester.	Stations.	Arrivals in Leeds	Week Days. Brighouse to Leeds, meeting Trains for Sheffield, Chesterfield, Derby, Birmingham, London, York, and Hull.	Manchester to Leeds, meeting Trains for Sheffield, Chesterfield, Derby, Birmingham, Nottingham, Leicester, & London.	Manchester to Leeds, meeting Trains for York, and Hull.	Manchester to Leeds, meeting Trains for Sheffield, Derby, Birmingham, Nottingham, Leicester, York, Hull, and London.	Manchester to Leeds.	Manchester to Leeds, meeting Trains for Sheffield, Chesterfield, Derby, York, and Hull.	Manchester to Leeds, meeting Trains for Sheffield, Chesterfield, Derby, Nottingham, and Leicester.	Manchester to Leeds, meeting Trains for Sheffield, Birmingham, London, York, and Hull.	Manchester to Leeds.	Manchester to Brighouse.	Sundays. Manchester to Leeds.	Manchester to Leeds, meeting Trains for Sheffield, Chesterfield, and Derby.	Manchester to Leeds.

Leeds to Manchester, meeting Trains for Liverpool and Bolton.	Leeds to Manchester, meeting Trains from Birmingham, Nottingham, Derby, Sheffield, York, and Hull; and also for Liverpool, Bolton, Preston, and Lancaster.	Leeds to Manchester, meeting Trains for Liverpool, Bolton, and Preston.	Leeds to Manchester, meeting Trains from London, Nottingham, Birmingham, Derby, Chesterfield, Sheffield, York, and Hull; also for Liverpool.	Leeds to Manchester, meeting Trains from London, Nottingham, Birmingham, Derby, Chesterfield, Sheffield, York, and Hull.	Leeds to Brighouse, meeting Trains from Derby, Chesterfield, and Sheffield.	Leeds to Manchester.	Leeds to Manchester, in time for the Liverpool and Bolton Trains.	Leeds to Manchester, meeting Trains from London, Leicester, Derby, Chesterfield, and Sheffield.

Above and below each of the Train Columns are given the places on other lines, to and from which Passengers may proceed by Railway.

FARES.

First-class passengers, 3d. per mile; second-class, 2d. per mile. Children, under seven years of age, in first-class carriage, charged second-class fare; and in second-class, waggon fare; and in waggon, without any deduction. Infants in arms not charged.

Gentleman's carriage, with four wheels, 6d. per mile; and parties riding in their own carriage, 2d. per mile each; servants riding outside, and children, waggon fare.

A single horse, two-wheel carriage, or pony phæton, 4½d. per mile. Any larger number of horses, if one property, 3d. per mile each. One ox, cow, or other neat cattle, mule, or ass, going in an open waggon, 3d. per mile each; any larger number, being the same property, 2d. per mile each. Sheep, 4d. per score per mile, or 8d. per single waggon, and 1s. 4d. per double waggon, per mile. Pigs, according to size, from ½d. to 1d. per mile each. Any distance, under six miles, charged as six miles in all cases. The Manchester 6.30. morning train is the only one by which passengers can go through to London in waggons; but they may proceed to Rugby by every London train.

Every train will have first and second class carriages, and most of them, for the convenience of the working classes, open waggons, without seats, at fares proportionably low.

Luggage, to the following extent, may be taken free of charge:—First-class passengers, 112 lb.; second-class, 56 lb.; waggon, 40 lb.—Any excess charged for any distance under 30 miles, ½d. per pound; and over 30 miles, ¼d. per pound, extra.

The Company's servants are not allowed to porter for waggon passengers.

Waggon passengers must be at the booking-office ten minutes before the time of departure, or they cannot be booked for that description of vehicle. Gentlemen's carriages and horses must be at the Station a quarter of an hour before the departure of the train; and if horses are to be sent from the intermediate Stations, it is advisable to give previous notice.

The Company do not hold themselves responsible for any luggage, matters, or thing, unless booked, and paid for accordingly.

Passengers are particularly requested to see their luggage in and out of the carriages.

Parcels can be forwarded to all parts of the kingdom, from 9, Brown-street, Manchester; Albion Hotel, Oldham; Reed Hotel, Rochdale; Swan Inn, Halifax; Railway Bradford; Swan Railway Office, Huddersfield; Royal Hotel, Dewsbury; Bennett's Office, Wakefield; and from the respective Stations of the Manchester and Leeds Railway Company.

Gratuities are not allowed to be taken by any of the Company's servants. Smoking is strictly prohibited on any of the Company's premises.

Passengers, &c. may be booked through at the Manchester Station to the following places:—

	First-class.	Second-class.	Third-class.
Rugby	£1 3 0	£0 16 0	£0 11 0
Derby	1 2 0	0 16 0	0 9 0
York	1 0 0	0 15 0	0 9 6
Selby	0 18 0	0 12 0	0 8 6

	First-class.	Second-class.	Third-class.
London	£2 10 0	£1 12 0	£1 1 0
Nottingham	1 2 0	0 16 0	0 9 0
Sheffield	0 12 0	0 7 6	0 6 0
Hull	1 3 0	0 15 6	0 11 0

Passengers may also be booked through from every Station.

Gentlemen's carriages to London, by 6.30, morning train, £5 5s.

Passengers wishing to come from London by way of Derby to Manchester, or to any Station on the Manchester and Leeds Railway, must book for Rugby.

*** In addition to the above trains, there will be an extra one from Rochdale to Manchester at nine o'clock morning and one from Manchester to Rochdale at three o'clock in the afternoon, stopping at all the intermediate Stations, on week days only.

EDINBURGH AND GLASGOW RAILWAY.

—At the SIXTH HALF-YEARLY GENERAL MEETING of the Shareholders of this Company, held pursuant to the Act of Incorporation, in the Company's Head Office, North Queen-street, Glasgow, on Monday, the 22d of February, 1841, at one o'clock,

JOHN LEADBETTER, Esq., in the Chair.

After the advertisement calling the meeting had been read, the minutes of the last General Meeting of Shareholders confirmed, and the seal of the Company affixed to the Register of Proprietors, the Report of the Directors and Balance Sheet, were read. The following Resolutions were then proposed, seconded, and passed:—

1. Moved by John George Hamilton, Esq., and seconded by A. Mackenzie Kirkland, Esq.—

"That the Report and Statement of Accounts now read be received, approved of, and circulated among the shareholders."

2. Moved by James Lumsden, Esq., of Yoker Lodge, and seconded by Robert Dykes, Esq.—

"That the meeting feel gratified at the progress of the undertaking, and at the prospect of the line being opened next autumn, and that a vote of thanks be given to the Directors for their services."

3. Moved by the Lord Provost, and seconded by John Learmonth, Esq. of Dean—

"That the following gentlemen, who have gone out of office in terms of the Act, be now re-elected Directors, viz., James A. Cheyne, Esq.; James Richardson, Esq.; Eagle Henderson, Esq.; James Campbell, Esq.; William White, Esq.; John Leadbetter, Esq."

4. Moved by Peter Brough, Esq., and seconded by Hugh Miller, Esq.—

"That the Resolutions of the Board of Directors, declaring the forfeiture of 621 shares, as per signed list, be now confirmed; and that the Directors be authorised to dispose of the said shares at such times and in such portions as they may think best."

5. Moved by John Leadbetter, Esq., and seconded by A. D. Monteath, Esq.—

Resolved,—That the present divided management of the Company's business, by Committees sitting in Edinburgh and Glasgow, having co-ordinate powers, although it may have been attended with some advantages during the execution of the railway, would be inexpedient if continued after its opening, and that therefore the superintendence of the whole line, and the regulation of all the affairs of the Company be henceforth, in pursuance of clause 166 of the Act of Incorporation, exercised directly, and without the intervention of Committees, by the General Board of Directors meeting in Glasgow; and that neither the Edinburgh Committee nor (unless in the event after mentioned) the Glasgow Committee interfere in the business of the Company, except upon questions of a purely local character, or regarding the completion of the works yet remaining to be executed, and in these cases only if specially remitted to them by the Board.

Resolved,—That the Board of Directors be authorized and recommended to appoint Committees out of their whole numbers on each of the subjects of finance, plans and works, engines and carriages, passengers and goods—to meet from time to time in Glasgow, with power to adjourn from thence to any other place on the line, or within five miles thereof at pleasure; but, if these appointments shall appear not to be sanctioned by the present Act, then that the Board be instructed to apply to Parliament for an amendment of the Act, altering the constitution of the Company; and in the meantime that they be authorized and requested to remit to the Glasgow Committee such of the details of the management of the line as shall appear expedient.

Resolved—That it be recommended to the consideration of the Board, whether the affairs of the Company might not with equal or greater efficiency be conducted by fewer Directors, and if so, to introduce a provision to that effect in the proposed amendment Act.

Resolved,—That it is expedient that the principal workshops of the Company, both for locomotive engines, and for carriages, be erected at Glasgow, at the head-quarters of the Company.

Resolved,—That the executive of the line be, as far as possible, confided to paid officers appointed by the Board.

Resolved,—That the above Resolutions be now passed, in terms of clause 174 of the Act of Incorporation, as bye-laws of the Company, and be sealed with the common seal, and printed and published.

6. Moved by John Learmonth, Esq., and seconded by Eagle Henderson, Esq.,

"That the thanks of the meeting be given to the Chairman for his conduct in the Chair."

(Signed) JOHN LEADBETTER, Chairman.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of salt and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

AT a MEETING of the Owners of Land and Hereditaments on the line of the proposed COVENTRY, LEAMINGTON and WARWICK RAILWAY, held at the King's Head Inn, in Coventry, on Monday, the 21st December, 1840,—

LORD LEIGH in the Chair;

It was resolved—

That the proposed Railway is unnecessary and uncalled for, and being a vexatious interference with the property of landowners, without affording a corresponding benefit to the public, this meeting is determined to oppose it by every means in their power.

It was resolved—

That Mr. Heath be instructed to take immediate steps to carry the above resolution into effect.

It was resolved—

That a Committee, consisting of the Earl of Aylesford, Lord Leigh, the Hon. Charles Bertie Percy, the Hon. and Rev. C. M. Villiers, Sir J. R. Cave Brown Cave, Bart., A. F. Gregory, Esq., Mr. Greaves, Mr. Butler, and Mr. Handley, be appointed to protect the interests of the owners and occupiers of property on the proposed line, and to adopt such steps as they may deem expedient to oppose the measure. LEIGH.

Lord Leigh having left the chair, and the Earl of Aylesford being called to it,

It was resolved—

That the cordial thanks of the meeting be given to Lord Leigh, for his kindness in taking the chair, and the able manner in which he has conducted the business of the day. AYLESFORD.

Of the whole distance between Coventry and Leamington, viz., nine miles and one eighth, upwards of eight miles is the property of dissentients.

The following is a list of dissentients—

Stamford and Warrington	John Salmon
Aylesford	John Sparrow
Clarendon	Samuel Barker
Leigh	James Weston
Charles Bertie Percy	William Kendall
C. M. Villiers	Bazil Southam
J. R. Cave Brown Cave	Thomas Jones
Arthur Francis Gregory	Elizabeth Whitmore
John Greaves	Joseph Dormer
Thomas Cotton	John Campbell
William Henry Butler	James Roby Harbourne
John Tomes	Thomas Tidmarsh
Charles Twisleton	John Boddington
Thomas Hope	Thomas Randall
C. M. Villiers	David Holland
J. R. Cave Brown Cave	Joseph Keatley
John Lynes	John Perkins
H. T. Chamberlayne	Richard Walton
W. H. Butler	Isaac Jones
(Trustees of Kenilworth Free School & Edwards' Charity.)	Richard Humphris
	Joseph Sheasby
	Thomas Walton
Edward Greaves	James Parker
William Handley	Fanny Steeley
Richard Sanders, and	Samuel Grant
Charles Lamb (Trustees of Griffin's Charity.)	Charles Garlick
	Samuel Boddington
John Robbins	Henry Greves
Thomas Heydon	William Penn
Phillip Kench	Joseph Hopkins
John Goodhall	William Clements
John Hudson	Thomas Bradford
Joseph Jaggard	William Linney
John Burbury	Thomas Richards
Thomas Burbidge	William Price
William Boddington	Charles Heath
Hannah Littleton	Edward Hewitt

No. 165. Vol. IV.—No. 9.—Part II.] SATURDAY, FEBRUARY 27, 1841. [Price, with Part I., 1s.

WARWICK AND LEAMINGTON UNION RAILWAY.—The Provisional Committee are happy to announce to the Shareholders, that there can be no doubt of their application to Parliament in the present Session being successful. The number of assents exceed their most sanguine expectations.

The London and Birmingham Railway Company (as appears by the late Report of the Directors, together with the Earl of Warwick, and numerous influential noblemen, gentlemen, tradesmen, and others inhabitants of Leamington, Warwick and the vicinity, actively support the undertaking. The demonstration in favour of the measure, is very numerously and respectably signed. Every information may be obtained upon application at the Company's Offices at Leamington, or at No. 7, Tokenhouse-yard, London.

WARWICK AND LEAMINGTON UNION RAILWAY.—Those persons to whom shares have been allotted in the above undertaking, and who have not already signed the Parliamentary Contract and Subscribers agreement, and paid the deposit of £3 per Share, are required to do so on or before the 5th of March next, and in default they will be excluded from the Company, and their shares disposed of without further notice. The deeds lie for signature at No. 7, Tokenhouse yard, London.

By order of the Directors,
PATTERSON, HANBURY AND CHINERY,
Solicitors to the Company.

Leamington, 25th Feb., 1841.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £5 5s. per Annum. Postage, 3s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 3s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

WEST LONDON RAILWAY COMPANY, Birmingham, late Bristol and Thames Junction Railway Company.—Notice is hereby given, that the tenth Half-yearly General Meeting of the Proprietors of the West London Railway Company, will be held pursuant to the Act of Parliament, at the office of the Company, No. 11, Abchurch-lane, in the City of London, on Tuesday the 9th of March next, at 10 o'clock precisely, for the election of three Directors, in the place of two Directors who will go out of office by rotation, and one Director who has resigned, and for other purposes.

WILLIAM MORGAN, Deputy Chairman.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R. A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament street.

Provisional Secretary—Lieut. Buckler, R.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

This day is published, price One Shilling.

THE CARRYING QUESTION stated, in reference to Railways and Canals; also considerations on the mode of levying the Passenger Tax on Railways. By HENRY BOOTH.

Liverpool: Printed by Thomas Baines, Castle Street, and sold by Messrs. Ridgways, London.

EASTERN COUNTIES' RAILWAY COMPANY.—TO THE SHAREHOLDERS.—GENTLEMEN.—In reference to the statement contained in the Report made at your General Meeting this day by your Directors, that after an investigation into the Company's books a balance of £1477 17s. 2d. "has been found due to the Company" by me, and that they have caused legal proceedings to be instituted for the recovery of this balance, and "other sums which they are advised that the late Secretary is liable to pay to the Company," I think it right to state briefly for your information one or two important facts which your Directors have chosen to conceal from you. In the first place, the pretended balance of £1477 17s. 2d. has not been "found due" by any party or parties of any recognised authority in the matter; it is a trumped up claim, and wholly incapable of proof.

Second, The Directors, though they brought an action about a month ago, have not yet furnished any "particulars" of their demand, and when pressed to do so requested time!

Third. After offering me an inspection of all books and papers needful for ascertaining the exact state of the accounts between the Company and me, they have withdrawn from that offer, and now obstinately refuse all such inspection.

Fourth. I have claims against the Company for large disbursements made and liabilities incurred in their behalf, and for arrears of salary which have not been taken into account in the striking of the pretended balance of 1477l. 17s. 2d., and which, were that balance even correct, instead of being, as it is, a gross fabrication, are of much greater amount.

And, Fifth. I have been obliged, under the preceding circumstances, to file a Bill in Chancery against the Company for discovery and relief.

The last of these facts could not have been mentioned in the Directors Report, for legal notice of the Bill was only served while you were assembled to day; but Mr. Duncan, your Solicitor, who accepted service for the Company, said he would mention the circumstance to the Meeting. It does not, however, appear from any of the Reports which I have seen, that he did so.

I am, Gentlemen, your most obedient servant,
J. C. ROBERTSON.

166, Fleet-street, Feb. 25, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—Resolutions of the Half-yearly General Meeting of Proprietors, held at the Bell Hotel, Gloucester, on Tuesday, the 23rd of February inst.

Captain C. R. Moorsom, R.N., in the Chair.

1. That the Register of Proprietors now produced be sealed with the Common Seal of the Company.

2. That the Report and Statement of Accounts now read be approved and adopted, and that the same be printed and circulated among the Proprietors.

3. That the Directors be empowered to borrow and take up at interest any sum of Money not exceeding £60,000, either on the Loan Notes of the Company or in such other manner as shall seem to them most expedient.

4. That the Directors be requested to convene a Special General Meeting of the Proprietors, to be held in Birmingham, on Tuesday, the 23rd of March next, for the purpose of deciding whether any or what Trains should run on Sundays, over and above the four now carrying the mails, under the orders of the Postmaster General.

C. R. MOORSOM, Chairman.

The Chairman having left the Chair, it was taken by Joseph Gibbins, Esq., and resolved unanimously—

That the thanks of the Meeting be given to the Chairman, for his courteous and impartial conduct in the Chair.

JOSEPH GIBBINS.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

GREAT WESTERN RAILWAY COMPANY —GENERAL MEETING.

THE Half-Yearly General Meeting of the Proprietors of this Company took place on Thursday at the offices of the Company, Princes-street, Bank. CHARLES RUSSELL, Esq., the Chairman of the Company, presided. The advertisement convening the Meeting having been read,

Mr. L. HEYWORTH, begged to suggest, that the Report of the previous half-yearly meeting should also be read.

The CHAIRMAN observed, that there could be no objection, excepting it was the time it would take.

Mr. HEYWORTH considered the cause a proper and usual one. (Cries of No, no.)

A Proprietor, said the only business the Meeting had to do with, was that of which notice had been given.

Mr. HEYWORTH did not wish to raise an opposition, but he considered the course he suggested a wise and judicious one. (No, no, and Hear.)

The CHAIRMAN then proceeded to address the Meeting. It was with great satisfaction the Directors presented the Report (copies of which were already in the hands of, he believed, all the Proprietors present), amongst other reasons, more particularly because they believed it would be the last in which they would be called upon to advert to the progress of the railway works. In the next place, it was gratifying that they were enabled to announce in it a sum which they felt they were in justice bound to apply to the purposes of a dividend (Hear, hear). This dividend would not, they might rest assured, at all depreciate or interfere with the payment of the interest charged against the capital, but it was a fair and *bonâ fide* dividend accruing from the traffic. They would find that the Report of Mr. Brunel contained a very minute account of the present state of the Company's works. It must be satisfactory to observe, that the works at Wooton Basset and Bath had been greatly accelerated—holding out a hope, that the result would be the full operation of the entire line during the most productive months of the ensuing summer. Since their last meeting, he, (the Chairman), was happy to state, that the lease of the present Bristol and Exeter line had been completed, and also that the Lords of the Treasury had come to the resolution of making Dartmouth the harbour for the West India packets, which could not fail to prove useful not merely to the interests of the Company, but to the entire West of England. It must be obvious to the Proprietors, that in working a line of the magnitude of their Railway, sums of money would remain out and locked up, and be rendered inapplicable to any other purposes than finishing it. (Hear, hear.) He thought, however, that the Directors would have been justly chargeable with imprudence, had they not sought to find an equivalent for those sums. Had they not done so, they would have left themselves without a reserve at the very moment when their energies were required to be put forward for the completion of the line. In doing this he hoped the proprietors would concur that the Directors had used such endeavours for the benefit of the Company generally. He was not aware that there was any other portion of the Report to which he need direct their attention. There was, however, a subject which he wished to advert to, and one which he considered of vast importance, and on which he entertained strong and decided opinions. The Bill of Lord Seymour, which had been brought in last year for the Regulation and Control of Railways, had this year been followed by another legislative measure, and he had no doubt that the Bill of this year would be followed by another in every succeeding session. He would not hesitate to express his opinion there as he had done elsewhere, upon the merits of this Bill. He considered the course of legislation about to be pursued, progressive and aggressive as it was, not only unwise, but unsound, unjust, and unnecessary. (Hear, hear). It was unwise, because it tended to divide responsibility, and by dividing it diminished rather than increased it. It was unsound, because it was a violation of that principle which was fundamental and universal in all economical matters. It was unjust and unnecessary, because it was grounded on the assumption that peculiar danger was attached to railway travelling, whereas there could be the most clear and deliberate testimony adduced that it was a mode of travelling to which peculiar safety was attached. What were the opinions of the officers of the Board of Trade, founded upon whose report this Bill had been brought in? They said that the inherent tendency of railway travelling, even under the present system, was to cause fewer accidents than other modes. Let them then look at what was said by the Postmaster General, in his correspondence with the Grand Junction Railway Company; he asserted that the accidents on Railways had been fewer in comparison than those that had occurred by mail coaches. He would now turn to Mr. Labouchere himself; what did that gentleman say in proposing the first reading of his Bill? That a great deal of the public ill feeling against Railways was owing to the panic caused by the numerous accidents, but on the whole he believed no mode of travelling was so safe as by Railway. Then they had the testimony of Sir Robert Peel in their favour, who showed the small amount of accidents that had occurred on the London and Birmingham and Grand Junction lines, notwithstanding the thousands of passengers carried by them. Their own experience upon their own line must corroborate these opinions. (Hear, hear). The Great Western Railway had only been opened he thought two years and nine months, and during that time they had carried 216,863 passengers; notwithstanding this, and the millions of miles that had been traversed, they had had but one accident that deserved the name of an accident. (Hear, hear). That occurred to a goods' train, and it unfortunately happened that two persons lost their lives; but the very intelligent jury who were impannelled on the inquest, unanimously and emphatically appended to their verdict a declaration, that no blame whatever was attributable to the Company or any of its officers. (Hear.) It was right to accord the merit where it was due, and in justice to them he must say, that the remarkable exemptions of the Great Western Railway from accidents, was solely to be ascribed to the ability and unceasing vigilance of its executive officers. In spite of this proof it must be admitted, that a most unfavourable impression prevailed in the public mind with respect to railway accidents. It happened, unfortunately, that the most serious of them were crowded together within the months of the last autum, and the course of reasoning the public had adopted was to multiply them by four, and with the greatest horror computed the loss of life at so much annually. This was the sum total and the mode of arithmetic by which railway accidents had been computed. The panic, together with the state of parties in the House of Commons, had decided that they must have a General Railway Bill. The great recommendation of this measure (in the Chairman's) opinion was, that it was a Public Bill and not a Fiscal Bill. It interfered largely with the powers of Railway Companies, and limited and contracted their management; but the Government had seen the justice of not interfering with their practical arrangements. (Hear.) It, however, contained many objectionable clauses. What could be more unjust than compelling railways to remain unopened for ten days after they might have been completed, under a fine of 10*l.* per day. Assuming that the profits might be 1,000*l.* per day, he would ask was it fair that any Company should be fined to the extent of 10,000*l.*? (Hear.) Then came the clause which enabled the Government to preserve an interval of fifteen minutes between each succeeding train. This was a reasonable clause; but very difficult to work, especially on short lines. Even on long lines it would render it impossible for quick trains to pass slow ones, unless the slow train paused half an hour, and if this took place two or three times a day, the effect would be to entirely alter the time of the departure and arrival. With respect to the first of these two clauses, even Mr. Labouchere himself had admitted it to be a great hardship, that a line, when completed, should not be opened for ten days.

A PROPRIETOR inquired what was the object of that clause introduced by Government.

The CHAIRMAN said, the reason he believed was to give the Government officers time for inspection. He had, however, no doubt that that and some other of the clauses would be modified. With regard to the system of licensing, he did not believe the Government would feel disposed to accede to any modification, and with reference to its efficiency, he (the Chairman) had great doubts. It was at the present time a matter of great difficulty for Companies to obtain the best men, and he believed the system proposed would tend to increase that difficulty still further. (Hear, hear.) In the capacity of Chairman of the Great Western Railway Company, he had attended the Railway Conference, and he was anxious to assure the meeting that he had not compromised that which he really conceived to be the interests of the Railway Companies or the interests of the public. He had not in any way given his acquiesence to the Bill he had alluded to, but at the same time if it passed into a law, he could affirm that no Company would lend it more cheerful assistance than that over which he had the honour to preside. (Applause.)

The SECRETARY then read the Report as follows:—

REPORT.

The Accounts of Revenue, which are now presented for the information of the Proprietors, shew a total receipt during the half-year of 153,912*l.* 19*s.* 8*d.*

The number of passengers conveyed, has been 645,481; and taking the aggregate mileage travelled, (13.861,971 miles,) there has been a daily average of 1064 persons travelling the whole distance. The line between Bristol and Bath was opened on the 31st August, and the extension from Faringdon Road to Wootton Basset Road was completed for use on the 17th December.

The expenditure on revenue, for the last half-year amounts to 73,408*l.* 11*s.* 11*d.*, the particulars of which will be seen by the usual detailed account. The ratio of charge to receipt is again somewhat decreased, notwithstanding that the separate working of two detached portions of railway involves of necessity comparatively heavy expenses, by requiring distinct establishments in almost every department at each, with the disadvantage of four terminal stations instead of two, to work and provide for. The expenses in the last half-year were increased at Bristol by those always incidental to the first opening of a new line.

The Directors, acting upon the principle recommended in their last report, and adopted by the Proprietors, have cancelled the charge for interest on money borrowed, by carrying it against the revenue balance, and have also deducted therefrom 2,993*l.* 4*s.* 3*d.*, the total nett loss by fire, which occurred in a former half-year, and was adverted to in the same report.

It has, however, a sum of 49,844*l.* 5*s.* 4*d.* has been carried to the debit of revenue for the balance of all interest paid in the last half-year, to 31st December, after allowing for the interest received. It is right to

Digitized by Google

mention specifically, that this does not comprehend the payment of a sum which fell due on the 15th January, for Debenture Coupons, which will of course become a charge on the current half-year.

It is now the pleasing duty of the Directors to recommend, for the first time, that a dividend should be made from the clear nett profits of the portion opened, after charging all interest paid up to 31st December.

The balance at the disposal of the Proprietors, is 51,127*l.* 4*s.* 3*d*, and a dividend of 1½ per cent., for the half-year, on the amounts respectively called up, viz.: 65*l.* on the original shares; 50*l.* on the half shares; 40*l.* on the fifth shares; constituting a capital of 3,025,000*l.*, would amount to 45,375*l.*, leaving an unapplied sum of 5,752*l.* 4*s.* 3*d.*

The Directors have anxiously considered the equitable and fair mode of distribution of profits among the proprietors of the three distinct classes of shares, and they feel convinced that substantial justice to all can only be done (after charging upon the general fund the whole interest on money borrowed) by declaring the dividend to be payable in the proportion called up on each share. That course is clearly pointed out, and sanctioned by the enactments of the 2nd Victoria, cap. 27, and the Directors have no hesitation in recommending it as the principle to be adopted by the proprietors.

The dividend in that case would be equal to 19*s.* 6*d.* on the original share, 15*s.* on the half share, and 1*s.* 2½*d.* on the fifth share; and, if approved by the meeting, may be payable at either of the Company's bankers, on and after the 25th March.

In connexion with this subject, it seems to the Directors only just that the proprietors of the original shares should have their right to pay up the uncalled capital of 35*l.* per share at the time when the debentures may fall due, distinctly recognised by the Company, so as to secure them, at a fixed period, their fair proportion of profits from the undertaking, thereby removing at once all doubt upon the subject, and forbidding any future conflict of interest among the proprietors. It may be useful to state, that the debentures in question (issued on the anticipated capital) falling due, will require a call of 10*l.* per share early in 1844, 5*l.* in 1845, 5*l.* in 1846, 5*l.* in 1848, and 10*l.* in 1849.

The proprietors of the fifth shares, upon the same principle, will have to pay up by instalments, in January 1843, and January 1845, the uncalled amount of those shares, receiving thenceforth, of course, their augmented proportion of dividends in like manner.

The effect of these operations will be attended with the double advantage of diminishing the mortgage debt of the Company, and also of rectifying the apparent inequality in the distribution of profits among the several classes of proprietors, according to the nominal value of their interest.

The Directors look forward with the greatest anxiety to the opening of the line throughout, at as early a moment as possible. The wish of the proprietors unequivocally expressed at the last meeting, that this should be accelerated, even at an increased outlay of capital, was considered by the board as an instruction for their government, and was acted upon accordingly. The Engineer's Report, which is ordered to be presented to the meeting, will explain more particularly the means employed for that purpose—and the anticipated result—and will also furnish to the proprietors the best information on the progress of the unfinished works.

Since the last meeting in August, the lease of the Bristol and Exeter Railway, having been sanctioned by the proprietors of that Company, has been completed, and the requisite deed has been executed by each Company to give effect to it. The provisions of that lease, confirmed by the assurances of those best able to judge of the progress of the works, render it highly probable that the railway to Bridgewater will be completed and ready for use, before the 1st of June, which will be, in every respect, a most important acquisition to this Company, as determining at once the course of the Devonshire and Cornish traffic to the Great Western Line. Already two coaches, one from Exeter, and the other from Taunton, have connected themselves with the railway between Wootton Basset road and Paddington.

The Directors were induced, when the line was extended to Wootton Basset, to enter into an arrangement with the proprietors of the Bristol and Bath coaches, to work them, at a fixed mileage, between that station and Bath, for the greater convenience of the public, and the assurance to the Company of the traffic, for the full length of line opened. They trust that the proposed advantages will be realized, without loss from the coaches, in the intermediate distance.

Until the Cheltenham and Great Western Union Line shall be finished to Cirencester, the principal Gloucestershire traffic continues to and from the Faringdon station, partly owing to the bad state of the country roads in the neighbourhood of Wootton Basset, and partly to the existing arrangements of the coach proprietors in the former line of travelling towards Cheltenham. It is understood that the Cirencester line will be completed in April, and this also will be of considerable importance in profitable result to the Great Western Railway.

The final determination of working those two railways upon lease has imposed upon the Directors the necessity of providing an increased stock of locomotive engines, carriages, waggons, and other plant adequate to the trade, which may be reasonably expected.

It has also decided the Directors to provide an engine establishment at Swindon, commensurate with the wants of the Company, where a change of engines may be advantageously made, and the trains stopped for the purpose of passengers taking refreshment, as is the case at Wolverton on the London and Birmingham Railway. The establishment there would also comprehend the large repairing shops for the locomotive department, and this circumstance rendered it necessary to arrange for the building of cottages, &c., for the residence of many persons employed in the service of the Company.

The Directors have, under these circumstances, made an arrangement with responsible builders for the erection of refreshment rooms and cottages, without the employment of any capital from the Company. The profits of the refreshment business are to remunerate them for all the outlay in the accommodation required at Swindon by passengers, consequent upon the trains stopping at that place. The Company are to provide the land for the cottages, and to secure to the builders a fixed rent upon lease, which rent will of course be reimbursed by the tenants of the cottages.

The only increased demand, therefore, upon the Company for capital at Swindon, will be to defray the cost of that additional land, and of the engine establishment, and repairing shops there, which are indispensably necessary. It is a subject for consideration, whether this may not also be beneficially converted into a rent charge, instead of requiring more capital, upon which the Directors have not yet come to any fixed resolution.

The Directors have been engaged in making trial at Bristol of various qualities of coal, for the manufacture of coke, and they are happy to say that the result of those operations will secure to the Company, when the whole line shall be opened, a supply of that article, and of good quality, at a very great reduction upon the present cost. When it is stated that, of the present locomotive expenditure, 16,500*l.* has been paid in the last half year for coke alone, the importance of a considerable saving will be readily appreciated. The Directors had hoped, until a very recent day, that some responsible parties would have contracted to build ovens, and manufacture coke, at Bristol, at a fixed price per ton, which, if moderate, would have been attended with many advantages: but the time for constructing the ovens is short, and failing any such arrangement, the Company must undertake to build them, still proposing to keep open a negotiation for having them taken off, if they can thereby secure the best coke at a fair and reasonable cost.

As the works of the line, and the full locomotive stock of the Company approach to completion, it will be necessary that some arrangement should be made to replace so much money as may be temporarily employed in surplus land and freehold premises, in plant or materials used in constructing the works, or in other purchases forming no part of the permanent capital of the railway, which may not be realised in time to provide for that expenditure.

In addition to the cost of stores, and a considerable stock required both of coals and coke for carrying on the traffic, temporary provision must be made by loans, without drawing upon the permanent capital, for balances due to the Company, and also for the discharge of debenture interest, which, being due in the first month of the half year, on which it is to form the charge, as already explained in a former paragraph of this report, would otherwise absorb for some time the Company's general funds raised for the construction of the railway and works.

It seems to the Directors that a general authority should be given by the present meeting, to apply such funds as it may become necessary to raise, on the terms which the Directors may deem most advantageous, having regard to the reimbursement of such loans from the sources referred to, without augmenting the permanent capital or debt of the Company.

This course has been sanctioned by precedent in other Companies under similar circumstances, and does not commit the proprietors to any such permanent increase for which, in fact, it forms no provision.

It is still the opinion of the Directors, that they ought to postpone as long as possible any disbursement for permanent buildings at their London terminus, making, in the meantime, the best use they can of the present Paddington station, deferring all consideration of the scale and extent of such buildings, and consequently the provision of funds for them, until the requirements of the traffic shall both compel and justify the outlay.

The period of service of the undermentioned Directors expires, under the provisions of the Act, at this general meeting, but being re-eligible, they submit themselves to the proprietors, as candidates for re-election:—F. P. Barlow, Esq., Robt. Bright, Esq., Geo. H. Gibbs, Esq., Peter Maze, Esq., E. W. Mills, Esq. Wm. Tothill, Esq.

The Directors, considering it their duty to make an appointment for the general superintendence of the traffic, in order that the responsibility might devolve upon an officer of the Company, have nominated the present London Secretary for that purpose, who has consequently entered upon those duties.

The accounts of receipt and expenditure for the half-year to 31st December, 1840, have been made up conformably with the requirements of the Act, and are already printed for circulation with this report.

[The Engineer's Report and Balance-sheet will appear in our next.]

Mr. BRANDRETH moved the adoption of the Report, and that it be printed and circulated. He did so with peculiar pleasure, for although the Great Western Railway had been hitherto called by its opponents an experimental Railway, it had now become tested by experience and had proved to be the best Railway in the kingdom. (Cheers.) The late frosts and weather generally had sufficiently tested the durability of its works. As a proof of this he would only refer the meeting to the beautiful model behind the Chairman, namely, that of the viaduct at Hanwell. They were all aware of the vast and frightful inundation which had recently taken place at Brentford, and when he told them that that vast mass of water which caused such inundation passed through the viaduct in question, without doing it injury in the slightest degree, they must be convinced of the excellence and durability of the works. (Hear, hear.) This he would say was a subject for especial congratulation inasmuch as it gave the proprietors confidence that all the works throughout the line would be of the same stable description. Another subject of congratulation was, that the shareholders were to receive, although a small one, a dividend on their money, and that there was to be no further call upon the shareholders for capital. (Hear, hear.)

Mr. DANN, in seconding the adoption of the Report, observed that it was true the dividend declared was a small one but it was an honest one. (Hear, hear.) It was a dividend out of the actual profits of the concern, and although small it was infinitely better that it should be so, than that it should have been a larger one obtained by underhanded manœuvres to enhance its amount. (Cheers.) The Chairman had adverted to the measures which were in contemplation by the Directors, to endeavour to obtain the article of coke at a cheaper price and if not to manufacture it themselves. He begged to inform the proprietors that he was well acquainted with the Forest of Dean, and he wished to impress upon the Directors the benefit derivable from such knowledge. (Hear, hear.) The coal beds existing in the Forest of Dean were most extensive, and he was convinced that the article might be obtained from them at less than half the price they at present paid.

Mr. HEYWORTH said, it was a matter he felt great pleasure in congratulating the Directors upon, that their expenditure had been 4000*l.* less this year than last.

Mr. GURDON wished to call the attention of the meeting to one or two subjects, which he believed had not been touched upon in the Report, and which he considered of vital importance to the interests of the Company. The first was with reference to the removal, by Government, of the

Digitized by Google

India Packet Station from Falmouth to Dartmouth. He believed it was not yet settled whether such a proceeding would take place, and indeed he had heard from an authentic source, that it was the intention of one of Her Majesty's Ministers, to not only give it his strenuous opposition, but to divide the House of Commons upon the question. It was the interest of the Great Western Railway Company to endeavour to keep the packet station at Falmouth, and to endeavour to frustrate the endeavours of the South Western Railway Company to get the station established at Southampton. When the Exeter Railway became completed into Cornwall, the whole traffic to and from the packet station must pass *via* the Great Western Railway. (Hear, hear.) With respect to the Parliamentary measure about to be made a law, and with regard to accidents upon railways, there could be no doubt that the public were labouring under a great delusion. The effect of that measure would be to delude the public mind still further, by placing before them a statistical account of all railway accidents. If such a course was adopted, it was only fair to give a return from the various coroners of all other deaths occasioned by accidents in travelling. (Hear, hear.) It would be far better, that when accidents did happen, and a family were deprived, by death, of means of support, that Government should introduce a clause compelling railway companies to give compensation, rather than suffer the absurd and obsolete system of deodand to continue. (Hear, hear.) The deodand of 2,000*l.*, levied by the jury in the late case on the London and Birmingham Railway, was the most ridiculous thing that ever could have been contemplated. (Hear, hear.) The other part of the verdict of *felo-de-se* against the driver of the engine, was equally absurd, and could only have been returned by men prejudiced against railways. (Hear, hear.) He congratulated the shareholders, that what had been done by the Directors had tended to put an end, in a great measure to gambling speculations. They had candidly and fairly stated when all the calls were to be made, and their amount, so that it could not be misunderstood. He was a shareholder in the London and Birmingham Company, and it was with great displeasure he found that this honest cause was not there pursued. There was one other subject of great importance—namely, the absurd fluctuation which was constantly taking place in the stock of railway companies, especially in that, and the London and Birmingham Company. He had endeavoured to trace the source of this evil, and although a most difficult matter, he believed it to be mainly in consequence of the want of sufficient information being laid before the public. (Hear, hear.) In the autumn of 1839, the shares of the London and Birmingham Railway were at 135, and by the 18th of June, 1840, they had increased to 190, being 9*l.* premium per 100*l.* share; and yet, at the latter period, the state of the concern was such, that the Directors had to borrow 20,000*l.* from a reserved fund to make up a dividend of 4 per cent.

A PROPRIETOR said what remedy the honourable member would propose for such fluctuations.

Mr. GURDON could only believe that it resulted from want of proper information being afforded to the public, of the actual state of railway companies, and the only way, in his opinion, to remedy the evil, would be to publish a sort of Statistical Gazette containing every particular.

Mr. CROSSTHWAITE (of Liverpool) said he saw an item in the accounts for maintenance of way, of upwards of 13,000*l.* Now this was nearly at the rate of 200*l.* per mile. He wished to ask the engineer, whether this charge pertained to that portion of the road newly opened, or whether the outlay was upon the whole line.

Mr. BRUNEL said the outlay was upon the whole line. The cost was less between Maidenhead and Reading, than between London and Maidenhead. The greater portion of the outlay, however, was incurred on the new portions of the line.

Mr. CROSSTHWAITE—Do you find that the last 22 miles, where there is a thinner rail and lighter sleepers, are likely to incur more expense than other parts of the line?

Mr. BRUNEL—Yes, in consequence of the timbers being light.

Mr. CROSSTHWAITE said, at the last half-yearly meeting Mr. Brunel made a promise that the entire line should be opened by the first of June next. Now he had been down to the works at Wooton Basset and about four miles from Chippenham, and he felt convinced from the backward state of the works that that promise would not be kept. He wished to know when the time for completing those contracts expired?

Mr. BRUNEL—On the 15th of May, and I think there is no doubt they will be completed by that time.

Mr. CROSSTHWAITE—Then there is the west end of the Box Tunnel, near the Bath-road bridge, when is that contract likely to be completed, or when does it expire?

Mr. BRUNEL—It has expired long since, and we are using endeavours to compel its completion.

Mr. CROSSTHWAITE—What course is being pursued to compel its completion?

Mr. BRUNEL—It would not be proper for the interests of the proprietors themselves that I should answer that question.

Mr. HEYWORTH wished to know if the Directors had not a reserve of 10 per cent. on all contracts, and how they stood with regard to this particular contractor?

Mr. BRUNEL hoped the proprietary would excuse him answering such questions. Here was a contract to the amount of 180,000*l.*, and he need scarcely put it to them how detrimental it would be to their own interests that he should publicly expose the position of the Company with the contractors. (Hear, hear.)

Mr. CROSSTHWAITE said, he believed that if the works had gone on as they ought at the west end of the Box tunnel, the Company would have had the benefit of the whole of the ensuing summer traffic throughout the entire line, and now it was his conviction that it would be nothing like completed by the first of June. With regard to the supply of coke he believed they were paying about 42*s.* per ton, whilst the Railways in the North obtained it as low as 17*s.* per ton, and when they got through to Bristol he had no doubt they would be enabled to get it at from 20 to 25*s.* per ton.

Mr. ALSTON (Liverpool) said, the fact of only two lives being lost on the Great Western Railway ought to be made known to the public. There was one point in particular to which he wished to call the attention of the meeting, and that was with reference to their having 24 Directors. He really conceived a diminution in that number most desirable now the line had advanced towards completion. There were some railways in the kingdom that had but four or five Directors, and if their Board were reduced to 12 or 15 it would meet with general approbation.

Mr. HEYWORTH concurred in the latter suggestion. The London and Birmingham Company had had power vested in them to reduce their number of Directors; but he was not aware of the Directors of the Great Western Company, possessing similar powers by their Act of Parliament.

Mr. ENGLAND said, he had been to Chippenham and the Box Tunnel within the last fortnight, and from the inspection he had made, he had no doubt they would be completed by the time Mr. Brunel had stated.

Mr. ROGERS wished to know if Mr. Brunel believed it at all practicable that the Cirencester line would be completed in April as asserted.

The CHAIRMAN said, they had received a formal notification from the Cirencester Company that it would be ready on the 25th of April.

Mr. ROGERS had recently been over some of the works, and he believed such a thing totally impossible.

Mr. BRUNEL saw no reason in the world why the Cirencester line should not be opened even in March, if required, and with regard to the Great Western, he believed it would be completed throughout by the time he had stated—the 1st of June, (Hear, hear.)

Mr. BARNARD wished to put a question of some importance. There were three or four clauses in the Report containing in his opinion some vague allusions to an increase of capital. He wished to ask how it was contemplated to raise the capital, or if it was expected, as the railway was near completion, that it would cost more than the estimate of 5,750,000*l.*, and whether such estimate included the locomotive power,

The CHAIRMAN said, there would be no increase of the present capital, and the estimate did include the locomotive power. In fact the entire line of road would be opened for the money already got. (Hear, hear.)

A PROPRIETOR wished to know the amount of the debts of the Company.

The CHAIRMAN said, they were about 250,000*l.*

Mr. RIDGWAY complained that the printed Report was not placed in the hands of the proprietors before coming to the meeting. The way in which the accounts were lumped together, made it impossible for them to tell if the charges were reasonable or not. Here was the salary of the Chief Superintendent and Secretary placed together. Now, he should like to know the salary of the Chief Superintendent?

The CHAIRMAN said, the office of Chief Superintendent was combined with that of the London Secretary, and the salary was 1,200*l.* per year, which was not more than an equivalent for the important duties performed.

The CHAIRMAN said, before the question for the adoption of this Report was put, he wished to offer one or two observations. With regard to the fluctuation of shares, he believed it was a matter over which they could have no control, as already the actual state of the Company was, in every respect, published. They had no power whatever under their Act of Parliament to reduce the number of the Directors; but he should wish to have the opinion of the meeting upon the point, in order to arm the Directors with power to take steps for that purpose, should an opportunity offer by their again going to Parliament. (Hear, hear.)

The Report was then adopted unanimously.

Mr. GURDON then moved, that a dividend of 1*l.* 10*s.* per cent. on the various shares be declared, and that the same become payable on or after the 25th of March next.

The motion having been seconded,

Mr. HEYWORTH said, he perceived that there was still a balance, or unapplied sum, of upwards of 5,000*l.*, and as he conceived that it would be far better to divide that also, he would move, as an amendment, that such balance be added to the dividend.

There being no seconder, this amendment fell to the ground, and the motion was carried unanimously.

Mr. BARNARD said, as the Chairman had expressed a wish that the opinion of the meeting should be given upon the reduction of the Directors, he would suggest that a good opportunity was afforded to get a clause for the purpose in the Railway Bill now before Parliament.

Mr. RIDGWAY hoped the Directors would do all in their power to frustrate the endeavours of the South Western Railway Company, in getting the West India Packet Station removed to Southampton.

The CHAIRMAN did not believe such an attempt would be successful, but he could not hold out any hopes that they would have the station removed from Dartmouth to Falmouth, as they had received a communication officially that Dartmouth had been fixed upon from the Secretary of the Treasury.

Messrs. Barlow, Bright, Gibbs, Maze, Mills, and Tothill, the six Directors who retired by rotation, having been re-elected,

Mr. ALSTON moved, that the Directors be instructed to adopt, as speedily as possible, such measures as they may deem expedient for reducing their number.

Mr. BARNARD having seconded the motion, it was carried unanimously.

Thanks were then passed to the Board of Directors, and a similar compliment having been paid to the Chairman, he returned thanks, and the meeting separated.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the Proprietors of this Company was held on Thursday, at the London Tavern, Bishopsgate-street; HENRY BOSANQUET, Esq., in the chair.

The attendance was very large.

The advertisement calling the meeting having been read,

Mr. E. MOZLEY expressed his regret that it had been convened on the same day as that of the Great Western Company, in which undertaking many gentlemen now present were proprietors, and which they had a great anxiety to attend. It was besides "settling day" on the Stock Exchange.

The CHAIRMAN said they knew nothing about the arrangements on the Stock Exchange, and as to the two meetings, the Directors could only regret that they should have fallen upon the same day, so as to cause inconvenience to any of the proprietors. This should be obviated in future.

It was then unanimously resolved that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in presence of the meeting.

The CHAIRMAN said, in opening the business of the day, he would not detain the gentlemen present by any extended remarks. Indeed, he had little to say, that he had not on many previous occasions had the honour to submit to them; but what he had then expressed, and had always expressed during the greatest difficulties in which the Company had been involved, he would once more repeat, namely, his firm belief and conviction that the traffic of the Eastern Counties Line would ultimately fulfil the very sanguine prophecies which he and others had indulged in, respecting it. (Hear hear.) A few days ago he had been upon the old Great Western road, and he found that such had been the effect of the railway running parallel to that road, that the whole of the coaches with the exception of a heavy coach to Taunton, and a night coach to Bristol, had been knocked up, and moreover, that the turnpike tolls which formerly were let for very large sums, were now let for nothing. Such was the case with respect to the Great Western Railway, while as regarded the Great Eastern —for he thought such an expression was justly applicable to the important undertaking in which they were embarked—scarce a single coach had been removed from the highway, and the tolls were let for as much as ever, and yet the traffic was as the meeting saw it. That traffic would, doubtless, have been much greater, but for the late lamentable accidents. The panic, however, which seized the public mind in consequence of these occurrences, had, he was happy to say, entirely subsided, as well within the district of the Eastern Counties Railway, as elsewhere; and he had no doubt that with the return of fine weather, the traffic would be increased ten-fold, for the whole of the trade of the district must ultimately come upon the line. (Hear, hear.) With respect to another important point, the engineering—for the traffic and engineering were all important in a railway speculation—the proprietors had, at a previous meeting, expressed a wish to have the line examined by Mr. Locke, the eminent engineer, for the purpose of ascertaining whether that gentleman's estimates tallied with those of Mr. Braithwaite, the Company's Engineer. A Report had accordingly been received from Mr. Locke, and would be laid before the meeting, as would also a Report from a select Committee of the Directors, who were far more conversant with railways than he (the Chairman) could pretend to be, and he had no doubt, that both Reports would be found satisfactory. The Directors had within the last few days been engaged in letting contracts to be executed contemporaneously for the line between Brentwood and Colchester. They had endeavoured to comprehend everything in the items of such contracts, in order that they might know as precisely as possible, the extent of the liabilities they would have to incur; and he had much pleasure in stating, that yesterday two of these contracts, No. 22, and No. 27, for which they had received offers from all parts of England, had been let considerably under the estimate of their Engineer. (Hear, hear, hear.) He hoped and believed, and so did his colleagues around him, that the same would be the case with the other contracts, and it would be the anxious endeavour of him and of them, so to expedite the works that they might be completed to Colchester in 18 months. The simultaneous construction of the various contracts would greatly contribute to this desirable object, inasmuch, as the heaviest would be proceeded with first, and the remainder would follow as their means would permit. He could only once again express his firm conviction, that this undertaking based as it was upon considerations of public and private advantage, would ultimately—but it must have time —fully justify the opinions of himself and its warmest friends. "Great is truth and it must prevail." (Applause.)

The DEPUTY CHAIRMAN (T. W. RATHBONE, Esq.,) would only just add to one remark of his friend the Chairman, that offers had been made by responsible contractors to undertake the whole of the works to Colchester considerably under the estimates of Mr. Braithwaite and Mr. Locke. (Hear, hear, hear.)

Mr. DUNCAN, (Solicitor to the Company) then read the following Reports:—

REPORT OF DIRECTORS.

After the last half-yearly general meeting, the Directors considered it necessary to call the proprietors together at a special general meeting for the purpose of sanctioning a plan of raising the sum of money authorised by the Company's Act of Incorporation to be borrowed. At that meeting, which was held on the 29th September last, the proprietors decided to raise the authorised sum by debentures, of 5*l.* 6*s.* 8*d.* each, payable by instalments, and bearing interest at 5 per cent. per annum; and which debentures the holders should have the power, under certain restrictions, of converting into shares in the capital stock of the Company.

From the obvious advantages which these debentures offered to the proprietors, the Directors feel confident that the payments on them will be punctually made, and that there will not be any interruption to the progress of the Company's works.

In the Report made to this special general meeting, the Directors stated that, at the request of several shareholders possessing a large interest in the undertaking, they had requested Mr. Locke to revise the plans and estimates for the unexecuted portions of the line, and to report his opinion.

Mr. Locke has now completed his Report, and it will be published for the information of the proprietors, together with a statement as to the position and prospects of the line, drawn up by a Committee of the Board, under whose superintendence the investigation by Mr. Locke has been made.

In the gradients and general plan of the works now proposed and being executed by Mr. Braithwaite, Mr. Locke entirely agrees, but a slight difference exists in the estimates of Mr. Locke and Mr. Braithwaite.

The total cost of the line from London to Colchester, together with a sufficient stock of engines and carriages, and everything necessary for the efficient working of the line, Mr. Braithwaite estimates at 2,222,688, and Mr. Locke at 2,300,000. The cause of this difference is sufficiently explained by Mr. Locke, and also in the Report of the Committee before mentioned.

The result of the investigation will no doubt convince the proprietors that all means have been taken both by the Directors and their Engineer to secure the execution of the line in the best and most economical manner, consistent with its stability and its efficient working, and from the care with which these Estimates have been made and supported as they are by so competent a judge as Mr. Locke, the Directors consider them entitled to the entire confidence of the Proprietors.

For a general statement of the progress of the works at the present time the Directors refer to the Engineers' Report. The extreme and long-continued severity of the weather during the past winter has much retarded railway operations.

The Directors have now accepted Tenders for portions of the line between Brentwood and Colchester, which, as well as those previously under contract, will, during the approaching season, be actively and vigorously proceeded with. It is satisfactory to the Directors to be able to report to the Proprietors that the works thus contracted for have been let to the Contractors considerably under the Engineer's estimates. These portions of the line for which Contracts have been taken are such as require the greatest length of time for their execution and consolidation; and the directors propose shortly to let further portions, which will then bring the whole of the line as far as Colchester under contract.

In order to prevent the possibility of any risk of the prompt completion of the line as far as Colchester, or the undue sacrifice of the shares and scrip lands in the hands of the Company, the Directors have considered it necessary to bring a bill before Parliament to enable the Company to raise, if needful, by mortgage or otherwise, the additional sum of 300,000*l.*, or such part thereof as may be found necessary.

The Directors have considered it desirable to cause Parliamentary notices to be given, and plans and sections lodged, and surveys to be made for a line of railway branching from the Eastern Counties line at Kelvedon and extending to Bury. The necessary forms of Parliament require these plans and sections to be lodged before the 1st of March, and the Directors have adopted the course of complying with the standing orders of Parliament, for the purpose of forwarding the views of any parties who shall concur in raising the required capital for this line; and which, from the increasing interest that the question of a railway communication with the Metropolis is now producing in the Eastern Counties, there is but little doubt will speedily be accomplished. And as the line is one which, independent of its great advantage to the populous places through which it will pass, will bring a great increase of traffic to the Eastern Counties Line, the Directors consider it will be beneficial to the interest of this Company to aid, as far as they possibly can, the formation of an extension in this direction.

The Directors also, with a view of assisting any independent Company that may be formed, to construct a line from Norwich to Yarmouth, and ultimately to be connected with the Eastern Counties' Railway, have directed that plans and sections of the old line of the Eastern Counties' Railway between these places, shall be lodged before the 1st of March, so as to comply in respect to this line also with the standing orders of Parliament.

The receipts for the traffic on the opening of the line to Brentwood, although averaging 3*l.* per mile, per week, and with a traffic on the road continuing the same as before the railway was established, are nevertheless less than the Directors anticipated, both from the estimates and from the actual receipts for the first few weeks after the line was opened; but those fears as to railway accidents which have prevailed and diminished railway travelling generally, must soon subside, and the Directors look forward with undiminished confidence to the return of all the traffic which the railway ever possessed, and to its great increase when the line shall have been further completed towards Colchester.

The Directors anxious to promote branch lines connected with this railway, have for some time been in negociation with the Thames Haven Company for lowering the tolls on that Company's traffic, and the Directors, both as regards this branch and a branch to Harwich from Colchester, which is also likely to be made, will afford to them all the encouragement in their power.

A balance sheet of the receipts and expenditure of the Company to the 4th of January last, is appended to this Report for the information of the proprietors, together with the usual accounts of traffic to the like period.

Since the last general meeting, the Directors have in the place of Alexander Hoyes, Esq., and Duncan Dunbar, Esq. who have resigned their seats in the Direction, elected Robert Harrison, Esq., of Keppel-street, Russel-square, and James Burt, Esq., solicitor, of Manchester, Directors of this Company.

Agreeably with the provisions of the Company's Act of Incorporation, six vacancies occur in the Direction, which are to be filled up by the proprietors at the present meeting. The Directors now to go out of office by rotation are, Henry Bosanquet, Cornelius Butler, Charles Hood, William Collings Wells, Robert Crichton Wylie, and Robert Harrison, Esquires, who are all re-eligible under the Act of Parliament.

The proprietors will be called upon to give their sanction, according to the proper legal forms, to the forfeiture of 502 shares in the Company's capital stock.

In conclusion, the Directors consider it proper to inform the shareholders, that after a long, intricate, and laborious investigation of the Company's books, a balance of 1,477*l.* 17*s.* 9*d.* has been found due to the Company by the late Secretary, Mr. J. C. Robertson,* and they have caused legal proceedings to be instituted for the recovery of this balance, and other sums which they are advised that the late Secretary is liable to pay to the Company. (Great applause.)

The Directors would dwell at greater length on this subject, and also on the circumstances of the late Secretary's connection with the *Railway Times*, but that they have been advised that this paper, especially in its late numbers, contains libels so malignant against the Directors, as a body, and against several of them individually, that they have felt constrained, in justice to the proprietors, to pass unanimously the following resolution at their Board, on the 22nd instant—

"That counsel having advised that various recent numbers of the *Railway Times* contain gross libels against the Directors of this Company, and that the printers, proprietors, and authors may be proceeded against both by criminal information and civil action—Resolved, That the Solicitors of the Company do forthwith adopt against the printer, proprietors, and authors of the *Railway Times* such criminal and civil proceedings as they, under the advice of counsel, think necessary for the vindication of the character of the Directors from the foul aspersions of the *Railway Times*, and for the punishment of the libellers. (Renewed applause.)

(Signed) HENRY BOSANQUET. Chairman.
T. W. RATHBONE, Deputy-Chairman.

To the Chairman and Directors of the Eastern Counties' Railway Company.

Engineer's Office, February 22, 1841.
London Terminus.

Gentlemen,—The state and condition of the works, so far as opened between London and Brentwood, fully justify the

* See a letter on this subject from Mr. Robertson, in our advertising columns.

Digitized by Google

representations, as to their stability and efficiency, it has been my duty and pleasure to make, notwithstanding their exposure to the late unprecedented weather.

The two portions of these works left to complete have been impeded by various causes, those towards London by formalities necessary in obtaining possession of the land and houses scheduled in the Act of the Northern and Eastern Railway Company, and those in the vicinity of Brentwood partly by the subsidence of the Gubbing's embankment, and partly by having to raise under an award one of the bridges—an alteration which is in course of execution, and will be completed within two weeks from the present time, and without the least interference with the working of the line.

Other works, ordered by you, have proceeded satisfactorily, although slowly, notwithstanding the inclemency of the weather, and other obstructions.

East of Chelmsford, at Springfield, the contractor is topping daily about 1,000 yards of earth, and at Widford nearly the same quantity.

At Stanfield, east of Brentwood Hill, the works are progressing to my satisfaction.

Those works are unimportant, compared with the completion of the line throughout between Brentwood and Colchester, and on this subject it is proper for me, without commenting further upon Mr. Locke's Report, (with some parts of which I differ,) to express my gratification at that gentleman's corroboration of the statement which I had the honour to make at the last general meeting as to the sum of 2,250,000*l.* which I considered more than sufficient to finish the whole line to Colchester, including every contingent expense, either for extra land, stations, or carrying establishment. Thus the completion of this line will be accomplished at less than 45,000*l.* per mile, including the viaduct into London, and the enormous amount of nearly 700,000*l.* paid for land and compensation. The magnitude of this latter amount may be judged of by the fact that a distance of little more than 51 miles has cost in land and compensation nearly double the amount for these items paid by the London and Birmingham Railway Company, over more than double the distance, viz. 112 miles.

In justice to myself, I may be permitted to remark upon this vast expenditure which has taken place, not in my department, particularly as observations are daily made of the large expenditure over so comparatively a small proportion as 17½ miles; the allegation being that this short distance has cost a million and a half of money. In the absence of any explanation, the allegation appears to condemn the engineering department of the line; but I submit that the misapprehension is quite removed by observing that there has been an outlay of half a million for a most important entrance into the heart of London, comprising an increased expenditure for the accommodation of another Railway Company—the Northern and Eastern; and that in this sum of one million and a half is included the amount of money paid for land, not only to Brentwood, but beyond it up to Colchester. Besides, it has to be borne in mind that a return for a considerable portion of this outlay will be received from the Northern and Eastern Company, of £7,000 per annum, with an additional toll of 4d. upon each passenger. (Hear, hear.)

Having drawn your attention to these points, I have to add, that I shall vigorously and uninterruptedly proceed with the remaining contracts, and with the execution of the works in hand; but these can only be done so as to complete the line in a period of 18 months, by all the contracts being simultaneously let between Brentwood and Colchester, and by sufficient capital being found to meet the demands of the contractors promptly.

I trust that the capital necessary to carry out this simultaneous completion will be duly provided, and I have no doubt contractors can be found to undertake the completion of the remaining portions of the line to Colchester, upon terms that it will be advisable for the Company to accept, and which will, with certainty, ensure the opening of the whole railway within the period above mentioned.

I have the honour to be, Gentlemen, your obedient servant,
JOHN BRAITHWAITE.

REPORT OF COMMITTEE.

The following Resolution of the Board of Directors was passed on the 20th October last.

Resolved—"That the Deputy-Chairman, Mr. Hodgson, Mr. Harrison, Mr. Cropper and Mr. Heyworth, be appointed a Committee, to confer with Mr. Locke relative to his survey, and to forward his Report to the Board, with their opinion upon its suggestions and upon the capabilities and prospects of the line."

The undersigned as the members of that Committee, have now to bring forward Mr. Locke's Report, with their observations thereon.

Mr. Locke's Report, it will be observed, confirms very closely the estimates already prepared by the Engineer, and at the request of the proprietors, reported upon by Mr. Robert Stephenson, and establishes what different members of your Committee have long since repeatedly stated, that the entire capital which the Directors have ever had the power to raise, will be fully required to complete and put into useful efficient operation the line of railway between London and Colchester.

It appears also now established, beyond the possibility of question, that with about this capital, and at all events with but a very small further addition to it, this portion of the Eastern Counties' Railway may be entirely completed; that is to say, in round numbers, that, notwithstanding the enormous outlay on land, arising from engagements when the Acts were obtained with Lord Petre and other parties, an expenditure of from Forty to Forty-five Thousand Pounds per mile, will complete and stock this railway of fifty-one miles in length, carried further into the metropolis and to a more central station, than is ever again likely to be accomplished on anything like such favourable terms.

Mr. Locke, after a laborious investigation, states, "that the items for the various works in Mr. Braithwaite's estimates he thinks sufficient," but he expresses doubts whether a sufficient sum is put down for the final completion of the stations, more particularly at Colchester and the London terminus, in the style that Architects might urge upon the Directors, and puts down an additional sum of about 80,000*l.* for the works and permanent way between Brentwood and Colchester, chiefly in consequence of his not agreeing with Mr. Braithwaite that the ballasting of this portion of the line will be furnished, without extra expense, from the cuttings. Whether or not Mr. Braithwate is right in this latter opinion, experience can alone decide; but the essential portion of the London station being already almost completed, on a scale with ample accommodation for the largest passenger traffic ever yet seen upon a railway, and a much smaller sum than even that proposed by Mr. Braithwaite, being amply sufficient to provide at Colchester and elsewhere, working stations, adequate to all the real wants and requirements of the traffic, your Committee presume that the Board will have no hesitation in deciding not to expect one farthing beyond these comparatively small amounts, or to think of going into any purely ornamental or architectural expenses until the railway itself is completed, and the traffic in a position to warrant entertaining such considerations as these. (Hear, hear, hear.) Taking however Mr. Locke's full and total estimate of 2,300,000*l.*, the difference between this estimate and the existing capital of 2,133,000*l.* does not amount to a greater sum than railway companies have been able to command, even without the additional Parliamentary powers for which this Company is making application.

It is exceedingly satisfactory to have had the section and proposed gradients of the line between Brentwood and Colchester, examined with so much care, by so deservedly high an authority on these subjects as Mr. Locke, and that the result should be to confirm the course of proceeding determined upon by the Board, and the anticipation that in a period of eighteen months, the line may be completed as far as Colchester. Mr. Locke's commendations of the works already executed, also further confirm the opinion as to their stability and excellence, expressed by every one by whom they have been examined, and repeatedly in the Reports of the Directors; and your Committee would hope that the very important advantages already experienced from having works of this kind so executed, will prevent any change of plan in *this* respect. At the same time they so entirely agree with Mr. Locke as to the proper mode of having all great public works executed, and the necessity in the present case of avoiding all useless ornament, and providing, in the first instance at all events "the useful only," that the opinions they have expressed must be distinctly understood to be entirely founded on the strict adherence by the Board and their Engineer, to the resolutions which have been adopted and recorded on these subjects.

For their opinion of the prospects of the undertaking, as to traffic and income, your Committee refer to the valuable report on this subject, prepared by Captain Moorsom and Mr. Hall, already circulated amongst the proprietors.*

(Signed) THEODORE W. RATHBONE,
LAWRENCE HEYWORTH,
DAVID HODGSON,
EDWARD CROPPER,
RICHARD HARRISON.

Liverpool, 18th Feb., 1841.

[Mr. Locke's Report and the statement of accounts are unavoidably deferred till next week.]

The Reports were received with strong marks of approbation.

The CHAIRMAN having expressed his readiness to answer any questions.

Mr. ASHTON enquired when the line would be opened to Chelmsford. They had been told at the last meeting that it would be opened by Midsummer, and now it seemed to be put off for at least 18 months.

The CHAIRMAN certainly did not recollect that any expectation of the kind was held out at the last meeting. It was found that by executing the various parts simultaneously, the line could be opened to Colchester just as soon as to Chelmsford.

Mr. ASHTON could not but feel greatly disappointed at the excess of the estimates for the construction of the railway. At first it had been proposed to carry the line all the way from London to Norwich for 1,600,000*l.*, and subsequently this had been increased to 2,000,000*l.* They now found, however, that it would require 2,300,000*l.* to carry them to Colchester. Really these fallacies were most alarming, and not a little disgraceful. Then, they had been five years at work, and had only made 17½ miles of railway.

The DEPUTY CHAIRMAN said, the statement now made as to the amount of money required was precisely what was made by Mr. Braithwaite at the last meeting; and as to the time consumed, it must be evident that a railway could not be made without money. (Hear, hear.) They should recollect what the position of the Company had been. At first it was little better than a bubble—(great applause)—and it had been a matter of difficulty and of time to transfer the undertaking from men of straw to men of substance. (Renewed applause.) The Engineer was not present to-day, being unavoidably absent on the Company's service, but he was of opinion that the line could be finished to Colchester in eighteen months. It was useless to go first to Chelmsford when they could reach Colchester in the same time. He thought the epithet "disgraceful" somewhat too strong. (Hear, hear.)

The CHAIRMAN said, this Company was not a solitary instance of the insufficiency of estimates. The London and Birmingham and Great Western had set out with an estimate of two millions, whereas one of them had cost, and the other probably would cost, at least six millions. As to the word "disgraceful," there certainly had been not a little in the past history of the Company that well merited that epithet. It was, indeed, little better than a bubble when he was induced, without knowing its real character, to join it, and to take 300 shares, which he had since continued to hold. (Hear, hear, hear.) It was not "disgraceful" to the Directors to take up, and to endeavour to carry through, a work which might be made to be of so much utility to the public, however it might have been originated; but it was "disgraceful" that landowners and occupiers of property should have extorted so much money from them, and delayed them so much by quibbles of the law. In making, for example, the noble viaduct at Shoreditch, which was so creditable to the talents of their Engineer, they had fought their way inch by inch; in fact they had been opposed and resisted at law on all hands, from the person who advised his client not to take less than 1,200*l.* for a property for which a jury awarded 10*l.* up to those of higher pretensions who insisted that they should make a railway whether they had the money or not. (Hear, hear, hear.) He was sorry to say that a great deal too much of their money had gone in litigation. (Hear, hear, hear.)

Mr. ASHTON said, he meant nothing personal to the Directors. His remarks applied to those who framed the estimates.

Mr. FREDERICK BRAITHWAITE regretted that his brother, the Engineer, was unavoidably absent, but it was due to him to state that in the original estimate he had contemplated a line to Devonshire-street only, without the costly entrance into town—that a single line of rails was all that was then proposed—and that 60,000*l.* or 70,000*l.* was at that time considered an ample sum for land, whereas it had cost between 600,000*l.* and 700,000*l.* He hoped, therefore, that no imputation would rest upon his brother, for what really was not attributable to him. He could only say that if funds had been supplied the line would ere this have been completed. (Hear, hear.) He knew that from their difficulties in this respect the Directors had not been able to make such terms with contractors as they otherwise might.

Mr. FENTON disclaimed all personal hostility to the Engineer; but when it was stated that he had not been supplied with sufficient funds, it was but right to say that the accounts showed that 1,448,000*l.* had been paid up, the whole original estimate being 1,600,000*l.*

The DEPUTY-CHAIRMAN said the whole of that amount was not paid. Probably the honourable proprietor was not aware that the Directors had incurred serious personal responsibility for the undertaking. Besides, the Engineer had not received the whole amount, as land had been paid for up even as far as Colchester.

A PROPRIETOR said it was not correctly stated in the Report that the whole of the land to Colchester had been purchased. He knew of instances in which no arrangement had yet been come to.

Another PROPRIETOR expressed himself to the same effect.

The DEPUTY-CHAIRMAN said, there was so little unsecured that it might be said to be all purchased.

Mr. FENTON said, they might set against the sum expended on land beyond Brentwood the amount still due to Lord Petre, and then it would appear

* The traffic statement alluded to above, shows a net revenue between London and Colchester, of 319,030*l.*, being equal to 9½ per cent. on Mr. Locke's estimate.

Digitized by Google

that they had expended upon 17½ miles of railway a sum within a few thousand pounds of what was proposed originally to take them to Yarmouth. As for the Report of Mr. Locke, it was a most important document, and highly creditable to him. He gathered from it, however, that the Directors had been constructing part of the line without entering into contracts. Mr. Locke, in reference to the London station said, "It may however, if the Directors desire it, be reduced very considerably in size, and thus be made to fit the sum put down for it. It appears to me unnecessarily large, and would I fear cost more money than is expected, unless the mode of building by contract at a fixed sum is adopted, which will at least secure the Company against any very great excess, with the additional advantage that the probable cost will appear at once." From this it appeared that hitherto contracts had not been entered into.

The DEPUTY-CHAIRMAN said, that with respect to some of the works, the Engineer, Mr. Braithwaite, had preferred the execution of them at a schedule of prices, which was in fact another mode of working by contract. Mr. Locke, however, seemed to prefer lumping the works together in one sum, and although time only could tell which plan was the better, the Directors had agreed that Mr. Locke's suggestion should be carried into effect. (Hear, hear.)

Mr. FENTON then read the following paragraph of Mr. Locke's Report:—

"Before proceeding to state the cost of executing the works on this part of the line, I may be permitted to say, much will depend on the mode in which they are undertaken; without enquiring into the particular designs of bridges, or other works of art, which generally vary according to the experience or taste of the engineer, I applied to the case under consideration the result of my own practice, and I have every reason to believe that it is better calculated to ensure economy and save the Company's funds, than is the system which omits in the original contract any work that can be foreseen and specified."

He gathered from this that the contracts had not been conducted in a business-like way.

The DEPUTY CHAIRMAN could not coincide in such an inference.

Mr. FENTON said he would admit at once that his object was to control and contract the expenses of the undertaking.

The CHAIRMAN was very glad to hear it. No one could profit more by economy than the Directors.

Mr. FENTON thought money had been thrown away in consequence of the Company doing work themselves instead of letting it by contract. He would assure the Directors that this subject would not be allowed to drop, but would be brought forward again and again. He gathered from Mr. Locke's Report that Mr. Braithwaite's estimate did not include fencing or ballasting.

The DEPUTY CHAIRMAN said, Mr. Braithwaite expected to get ballasting from the cuttings, but Mr. Locke did not think it safe to trust to this contingency, and therefore put down 80,000*l.* for that item. Mr. Braithwaite might be right. He certainly had hitherto been found very correct in his views, and had not fixed his estimates too low, as was proved by what had been mentioned that day, that certain contracts had been let at 25 per cent. below what had been expected. It was therefore not right to blame Mr. Braithwaite for omitting what after all might not be required.

MR. FENTON enquired whether Mr. Braithwaite intended to get his fencing also out of the cuttings, as well as the ballasting. Mr. Locke had generally been correct in his estimates. He had been engaged on the Grand Junction.

DEPUTY-CHAIRMAN—Which was estimated at one million and cost two.

Mr. F. BRAITHWAITE again regretted the absence of the Engineer, and was proceeding to reply to Mr. Fenton, when

A PROPRIETOR complained that the Engineer himself was not present.

The CHAIRMAN said he was engaged in the survey of a line, the Parliamentary plans of which, to be of any use, must be deposited before the 1st of March.

The DEPUTY-CHAIRMAN said, it was surely enough to state that he was unavoidably absent on the Company's service.

Mr. G. KNOX thought he should not on any account have been absent. He had some questions to put which no one but the Engineer could answer.

Mr. DUNCAN said, Mr. Braithwaite had fully intended to return, in order to be present at the meeting, but this had been rendered impossible. No one could do the work but himself, and it was thought a pity that the whole of the expense already incurred in the survey should be rendered useless.

A PROPRIETOR inquired if the works upon which the Engineer was now engaged were undertaken within the Act of Parliament.

Mr. DUNCAN said the Engineer was only following the orders of the Directors, whose servant he was.

A PROPRIETOR inquired if the Directors were confining themselves to the Company's Act.

The CHAIRMAN said, certainly not; but if some little discretion were not allowed to the Board, there would be an end of all management. (Hear, hear.)

Mr. BEADEL said, he understood a letter had been written by the Chairman of the Company to Lord Sondes, the Chairman of a Committee of landowners, in reference to certain proposed lines. Was there any objection to read that letter?

The CHAIRMAN said, there was no objection at all.

The letter was read accordingly. It was of considerable length, and detailed the difficulties which had beset the Eastern Counties' Company and the progress they had made, and offered to give assistance to the formation of a line from Kelvedon to Bury St. Edmunds, if capitalists would construct a line from Norwich to the latter place by any route they might select. The letter was received with great applause.

In answer to a question it was stated, that no answer had been returned to the letter.

Mr. HUGHES said, there was so much wisdom and sound sense in the letter, and it placed the whole matter in so fair and convincing a light, that he should move that it be printed and circulated as extensively as possible in the counties. (Hear, hear, hear.)

This having been seconded,

A PROPRIETOR inquired what the expense of the survey in which Mr. Braithwaite was engaged would be.

The CHAIRMAN could not exactly say. All that the Company had yet agreed to advance was 500*l.* It would certainly be under 1,000*l.*, but the proprietors might rest assured that no farther step would be taken without consulting them. It was necessary, however, that something should be done, as other parties were in the field, and would have had a year's start of this Company, and therefore the surveys had been ordered. (Hear, hear.)

A PROPRIETOR enquired who the parties were that were to undertake the line from Kelvedon to Bury.

The CHAIRMAN said it would be seen from the Report, that it was left either for an independent Company, or for this Company. He was glad to see that the spirit of the counties was being aroused at last. His endeavours had been unceasing at all times, and in all ways—in prose as well as in verse, (a laugh)—to convince the squires and gentlemen, and inhabitants generally of the counties, that a line of railway would be most advantageous to them, and he was glad to see that they were bestirring themselves at last. (Hear, hear.)

The motion for the printing of the letter was then carried unanimously.

Mr. HUGHES called attention to the reported proceedings of another Company—the Northern and Eastern—who were closely connected with them, but who seemed to be of opinion that the connection was not at all desirable. That Company had apparently cast very gross imputations on them, and yet in their Report they (the Northern and Eastern Directors) wished the Eastern Counties' Company to reduce their tolls. They also said, in contradiction to the Report laid before the present meeting that the Eastern Counties' Directors had agreed to reduce their rent charge from 7,000*l.* per annum to 5,000*l.* Was it so?

The DEPUTY CHAIRMAN said he thought it was best to treat such imputations as those referred to with the contempt they deserved. All that he would say with respect to the allegation of a reduction of charge was that it was not true as regarded a permanent reduction. All that had been done was to make a temporary reduction until the buildings at the station should be completed. (Hear.)

Mr. HUGHES inquired whether the Directors had any intention of reducing the toll for passengers to the Northern and Eastern Company.

The CHAIRMAN said certainly not. They had a formal agreement for 20 years. It was a good bargain for the Northern and Eastern Company, and the Directors of this Company had no intention of giving up any portion of what was secured to them. (Hear, hear, hear.)

Mr. HUGHES thought the proprietors were under infinite obligations to the Directors for the course they had taken in the matter, which had doubtless excited the ire of the Northern and Eastern Company. [The honourable proprietor referred to the case of the driver Hindley.] The servant of the Northern and Eastern Company was admitted by all, even by the magistrates on the bench, to have acted improperly, and it would have been wrong if the Eastern Counties' Directors had not proceeded as they did. Instead of any stigma resting upon them, he thought a most shameful, a most infamous, stigma rested upon the Northern and Eastern Directors, and that the matter ought to be noticed.

Mr. KNOX doubted the policy of taking any public notice of such matters. (Cheers.) He wished to know how much of the 15,402*l.* received for traffic in the last half year had accrued from the Northern and Eastern Company.

[Mr. HALL, the manager, referred to some books, and to save time, as he said, Mr. Knox proceeded with his enquiries, but the question was not answered at all.]

Mr. KNOX said, in order to proceed in a more formal manner, he would move that the Reports be received, adopted, and printed for circulation, and would now ask a few further questions. It was of importance to know how far the actual cost for wear and tear, &c., agreed with the estimate. At the last meeting, the expense of working the portion of the line now opened had been stated at 40 per cent. on the gross receipts for the half year ending in June last. It appeared, however, from the accounts now submitted, that the expense had increased to about 70 per cent., and this did not include two very important items. In his evidence on oath before the bench at Romford on the subject of a rate, Mr. Sydney Braithwaite had stated that the maintenance of way was not included in the disbursements, and had calculated that upon the length now open, it would amount to about 360*l.* a mile, or 3150*l.* in the whole per annum. There was also an item for depreciation of rails, which the same gentleman calculated at about 5650*l.*, and neither of these items were included in the statement of expenditure now laid before the meeting. He should be sorry, therefore, to find, that instead of having a balance of some 8000*l.* in their favour, they should have sustained an actual loss of 800*l.* by the traffic. This account, moreover, did not include the amount chargeable for Management, payment of clerks, &c., and therefore he feared the loss was even greater than he had stated it. At the last meeting he had been given to understand, that the expense incurred for omnibuses, coaches, &c. would not be repeated, but he was sorry to find that they had been continued, and that they had increased to 1446*l.* He hoped he would on this occasion receive an answer that would not be found to be incorrect at the next meeting. With regard to another subject, he thought it utterly fallacious to expect to

Digitized by Google

recover one penny from the late Secretary, and this for several reasons. First, that person had been a shareholder in the Company—an arrangement which the Directors ought never to have permitted—and therefore he feared they could not reach him but by an action at equity, instead of an action at law. [Mr. DUNCAN—It is not at all necessary.] In the second place, he understood that the Secretary had been furnished with a certificate signed by a committee of Directors, testifying to the correctness of his accounts, subsequent to the period in respect of which the claim was now made. He would trouble the Directors upon only one other point. Doubts had been cast upon the legality of the proposed conversion of the Company's debentures into shares; had means been taken in the Bill now before Parliament to settle this point?

Mr. E. MOZLEY doubted very much the expediency of answering some of the hon. proprietor's questions and observations, as they might thus be putting weapons into the hands of their enemy. (Hear, hear, hear.)

The DEPUTY CHAIRMAN said, the maintenance of way and some other matters which would hereafter have to be included, were not included in the statement of traffic expenditure now before the meeting. He could only say that from the experience he had had in connection with other lines, he considered the per-centage of expenditure very reasonable—certainly more moderate than he had anticipated. (Hear, hear, hear). As the line became opened farther, the same amount of expenses, or nearly so, would have to be scattered over a larger surface, and consequently the per-centage would be reduced. With respect to the other matters of detail, the officers of the Company could easily answer the questions if it were deemed desirable. (Cries of "No, no.") He would only say that in all legal matters they were acting under the best legal advice. (Hear, hear, hear.)

Mr. SWIFT (Liverpool) said, allusion had been made to the Report of the Northern and Eastern Company, and if reference were made to the account of traffic which it contained, it would be found that the per-centage of expenditure in that Company had not been confined to 70, but had been upwards of 100. (Hear, hear, hear.)

Mr. DUNCAN said, the account which had appeared in the *Railway Times* of the proceedings before the Bench at Romford was not strictly accurate. (Hear, hear.) He would add that the rate in question had been appealed against, and therefore it would probably be better not to discuss it further at present. As the main grounds upon which the Directors were proceeding against the *Railway Times* for libel had reference to the remarks made upon that case, it would be equally improper, he conceived, to enter into any further notice of that point. (Hear, hear.) With respect to the action against Mr. Robertson for the balance of 1,477*l.*, the Directors had not entered upon it without due consideration, and for his own part he had no doubt whatever that they would succeed in recovering the amount. (Hear, hear.) As to the Bill, it was not yet drawn, and therefore nothing had been settled as to the debenture question.

Mr. J. COPLAND, jun., (Chelmsford) said, the only fear of himself and friends had been that the Company would not reach Chelmsford, and he was sorry to find that they were not to have the benefit of a railway communication until the line was ready to Colchester. He was present at the meeting in February, 1839, and on that occasion he had tendered a large number of votes for certain Directors; and he was sure that if ever the line were made at all, it would be mainly owing to the spirit of the gentlemen of Liverpool. (Applause.) He was quite sure that Essex of itself (he did not say could not, but) would not have made a railway, (hear, hear, hear,) and that without the assistance of the enterprising gentlemen of the north, they should have been altogether shut out from railway facilities. (Renewed applause.) Reference had been made to the enormous expense of land, and really it was most shameful that they should have already paid 600,000*l.* or 700,000*l.* under this head. (Hear, hear.) He hoped that in future, if farther lines were to be proceeded with, no such arrangements would be made, as had been made in the early stage of the Company's progress. (Hear, hear.) The landowners would be very glad to allow them to take a line in any direction, for they would hope to get fifty times its real value for their land. (Hear, hear.) The present Directors, however, were not answerable for what had occurred in the commencement of the Company. Secret arrangements had been then entered into by parties who had but a small stake in the undertaking themselves. Now, however, those who had the management of affairs were deeply involved in the success of the concern, and might therefore be regarded with confidence, for while they were expending the means of those who like him were but small holders, they were expending a much larger amount of their own property. (Hear, hear.) With respect to the traffic expenditure, there could be no doubt, that if 50 per cent. were added to the gross receipts next year, the expenditure would not increase in the same proportion. (Hear, hear.) The inclemency of the weather, and the late accidents had done much to retard the traffic, but he had no doubt, that with summer, a better state of things would be developed. He only regretted that Chelmsford was not to partake of railway facilities sooner, and he trusted that the Directors might be able to shorten the period by at least three months.

Mr. BEADEL said he lived lower down the line than Chelmsford, and he hoped the Directors would be enabled to reach *him* three months sooner. (Hear, hear, and a laugh.)

Some conversation ensued respecting the difficulty experienced in getting to the railway from Chelmsford and other parts, and the Chairman promised that the matter should be enquired into.

A PROPRIETOR asked if this Company had any hopes from the proposed Thames Haven and Harwich Lines, as a sort of set-off to other things.

Mr. DUNCAN said the Thames Haven Company had already obtained an Act of incorporation, and the Harwich Company were applying for one, but at present nothing definite could be stated as to any arrangements with this Company.

The CHAIRMAN was about to put the motion for the adoption of the Report, when,

Mr. MARRIAGE (Chelmsford) said, he rose for the purpose of moving an amendment. The hon. proprietor then at some length and amid manifest marks of impatience on the part of the meeting, proceeded to comment upon the opening address of the Chairman. He thought that the non-withdrawal of the coaches from the eastern roads, and the high rent still given for tolls, as compared with what the Chairman had described as having occurred on the western route, proved that the public had no confidence in the Eastern Counties' Railway. It had been said, that Essex was greatly indebted to the public spirit of Liverpool, and so it was; but he thought it evinced some shrewdness on the part of the Essex people, notwithstanding the designations sometimes applied to them, that they had not given 23*l.* for that which they could obtain for 9*l.* It had been said, that the landowners had been extortionate. He thought so too, but they themselves had thrown away half a million of money upon a viaduct, which might be splendid enough, but was not necessary, as for 6*d.* an omnibus would have taken passengers much farther into the city. Shoreditch was entirely out of the way for the people of Essex. Whitechapel would have been a better—in fact, ought to have been the actual—terminus. The Company had commodious stations at Ilford and Stratford, but often as he had travelled by the railway he had never seen at those parts so many passengers as would equal the number of the Company's carriages that were standing exposed to the action of the sun; in fact, the carriages and policemen together were to the passengers as four to one. The Company could have no dependance upon the short traffic, such as that from Stratford, Ilford, and Romford, and must go farther for their revenue. He objected to the terminus of the line, and complained that after the late accidents, no change was made in the mode of laying the rails, &c. The Report proposed that 300,000*l.* should be borrowed, whereas at the last meeting they had been told that the debentures would be sufficient. At the last meeting, Mr. Braithwaite had said he could reach Colchester in twelve months, if sufficient funds were supplied, and now it was put off to eighteen months, and probably at the next meeting it would be still farther deferred. Under all the circumstances, he should move that a Committee of investigation be appointed to examine, for the satisfaction of the proprietors, into the state of the Company's finances, into the causes of the low estimation in which the line was held by the public, into the rumours which were in circulation respecting it, and into the enormous expenditure which had been incurred upon so short a line—such Committee to report to a future meeting.

Mr. E. CROPPER (a Director) wished to know what number of shares were held by the party who would thus virtually put a stop to the progress of the undertaking. (Hear, hear, and murmurs.)

Mr. KNOX objected to such a question. He would resolutely oppose the appointment of a Committee, but he thought every proprietor had a right to be heard, whether he held one share or one thousand. (Hear, hear.) No person ought to be put down. (Hear, hear, hear.)

Mr. CROPPER disclaimed all wish to put any one down, but he thought the information he wished was most important.

After some delay and confusion,

Mr. FENTON seconded the amendment.

Mr. SWIFT would not inquire whether the mover and seconder of the amendment held a large or small number of shares, but they prefaced their proposal with the assumption of a fact. They assumed that the shareholders were dissatisfied, which he for one denied; and he could say for the holders of more than 1,000 shares that they were perfectly satisfied. (Much applause.) Then as to public confidence, he did not think that the way to augment *that* was to show that there was dissension among themselves. (Hear, hear, hear.) As to any practical good that could result from the amendment in the saving of money, (for that was the main point,) it was impossible that the proposition could be of the smallest service. The Directors had entered into certain contracts, and whether they had the work done or not, they must pay the stipulated price. (Hear, hear, hear.) Before so serious an imputation as the amendment involved was cast upon the Directors, and so serious, he might add so fatal, an injury inflicted on the undertaking, he thought some care ought to be taken to ascertain the feelings of at least a respectable proportion of the proprietors. (Hear, hear.) He had intended to show the opinion which he and his friends held, by moving, at a subsequent stage of the proceedings, a vote of thanks to the Directors; and reading an address which he had been deputed to present from 55 proprietors, holding in the aggregate 10,795 shares. Could the honourable proprietor show such a list? He really asked for information. (Hear, hear, hear.)

Mr. MOZLEY had hoped that the present meeting would have passed off without any of the acrimonious feelings which had been displayed on previous occasions, and that those whose stake in the undertaking was so very trifling that it would matter little to them whether the railway was made or not, would not have thwarted in the management of their own property those who had not been so *prudent* as themselves. (Much applause.) He would freely and fully admit the right of every proprietor, whether large or small, to put any question he pleased calculated to elicit information, but such questions should not have a taint of faction about them. He was far from seeking to impute motives to the gentlemen who had brought forward the amendment, but when he called to mind the obloquy—the unmerited obloquy—which had been cast upon the Directors in other quarters, from motives of the basest and most despicable description—(renewed applause)—when he called this to mind, he could scarcely believe that any man seeking *bona fide* the

Digitized by Google

welfare of the undertaking would lend the slightest support, directly or indirectly, to an opposition which had proved deeply injurious, nay, almost ruinous, to their interests. (Hear, hear, hear.) He had hoped that a seconder would not have been found in the room for a proposition which, while it cast obloquy on the Directors of the railway, threw scorn upon the *fools* who were making it. (Hear, hear, hear.) Doubtless the honourable proprietor had a deep interest in the undertaking, otherwise he would not have taken so much trouble about it—(a laugh)—but he should remember that what was sport to him might probably be death to others. He (Mr. Mozley) had embarked in the undertaking with a view no doubt to benefit himself, but at the same time with a conviction that in thus coming forward, he was helping to add another link to the great chain of internal communication, the effects of which had already been so satisfactory. If there were so much virtue in Essex and Suffolk, that they disregarded considerations of pecuniary interest, why did they not come forward and take the railway off the hands of the less patriotic proprietors, not at its prime cost, but at one-third of that amount. (Hear, hear.) He feared, however, that many of them were rather of that class, who were ever ready to stand by and to find fault, but not to lend a helping hand when it was required. (Hear, hear, hear.) The honourable proprietor had spoken—but it must have been in joke—of the expense of a London terminus, as compared with the cost of land on other parts of the line. He surely could not compare valuable property in the immediate vicinity of a city like London, with the land which, had acres of it been given for nothing by its owners, would have been but a small return for the benefits which a railway would confer on them. (Hear.) Again, as regarded the alleged inutility of a terminus beyond Devonshire-street, was the honourable proprietor aware that in the town to which he (Mr. Mozley) belonged, the Directors of a railway had at one time had a terminus at the distance of a mile and a half from the town, to which passengers were carried in omnibuses for 6d. as the honourable proprietor proposed, and that they had expended more than a million of money for the purpose of bringing the railway under and into the town—not so much that they might benefit themselves as to confer increased facilities on the public. (Hear, hear, hear.) The honourable proprietor said Shoreditch was an inconvenient station for his Essex friends, but then it was convenient for others, and they could only have one terminus. But whether the terminus was or was not the very best that could be selected, they had now adopted, and must complete it. (Hear, hear, hear.) If the line could be carried to Yarmouth, he for one would be as ready as ever to lend it a helping hand, but the question was, should the already over-burdened shoulders of the proprietors be made to bear alone the cost, or should they not rather look for and expect the cordial assistance of the landowners, who would be more benefitted by the work than any mere proprietor could hope to be. If the proprietors, instead of mutually assisting each other in an honest endeavour to get rid of the difficulties which had so long oppressed them, were to encourage and support a cabal out of doors, the results could not fail to be most mischievous. Let the proprietors rather strive to furnish the means of progress—let them when they imagined they had discovered some little fault, be charitable in their conclusions—let them reflect that if they themselves were placed in the same position as the Directors, they might possibly be no more perfect—let them do these things, and they would soon find the undertaking in a better position than it had ever yet occupied. (Hear, hear, hear.) The difficulties with which some Companies in the north had had to contend were infinitely greater than those with which this Company was surrounded, and yet they had triumphed. In *their* case success had sanctified the means, and that which in this Company was imputed as a fault to the Directors, constituted the ground of their praise. He (Mr. Mozley) was an original shareholder in the Birmingham Railway, the estimate for which was at first only 1,250,000*l*., although the actual cost had run up to 6,000,000*l*. If in this case and in others, honourable men had been under the necessity of more than doubling the original estimate, why should not the same charitable feeling be extended to the Directors of this Company, who moreover had not the responsibility attached to them of having sanctioned the sufficiency of the original calculations? (Hear, hear, hear.) He hoped the meeting would support the Directors—indeed, he was so satisfied that this would be the case, that he should not follow the mover of the amendment into farther details. (Hear, hear, hear.) He trusted that to prevent unkindly feelings, the amendment would be withdrawn—(hear, hear, hear)—and in that case he should say, that nothing in connection with it became the mover so much as his leaving it. (A laugh.) As he had already said, he should not enter into details, but he could not help mentioning a complaint which had reached him, as to the want of accommodation in getting to the line. He knew that to enter into arrangements for this purpose, must be attended with some expense, but looking at the matter in an extended view, he thought this expense would in the end be amply reimbursed.

Mr. MARRIAGE said, the Chairman would probably feel it necessary to make some remarks. (Loud cries of "no, no," "put the amendment," &c.)

Mr. MOZLEY said, he did not suppose that the proprietors would be insane enough to support the amendment, and therefore he had not thought it necessary to enter fully into the subject, but he was quite prepared to do so. (Cries of "no, no," "not necessary," &c.)

Mr. HODGSON (a Director) fully admitted the right of every proprietor to claim a hearing, but he thought that in determining a question of this kind which was really one of property, they ought to know what interest the several parties had in supporting their views. If the mover of the amendment, therefore, would not state how many shares he held in the Company, he (Mr. Hodgson) would do it for him. (Cries of "No, no," "Yes, yes," and much confusion.) It was right that he should do so. (Cries of "Order," "Go on," &c.) He was informed that the mover of the amendment was the brother of one of their late Directors. (Cries of "No; only a relative.") He had understood otherwise, but he was glad to find that he was in error, for the honourable Director referred to, with whom he had had much pleasure in being associated, had never broached such views at the Board as his relative had brought forward that day. With respect to his stake in the undertaking he understood that up to the 13th inst. the honourable gentleman had held just 2 shares. (Cries of "Oh, oh," and much laughter.) He had since purchased 10 shares, making 12 in all. [A VOICE—I hold 793 shares, and I oppose the amendment.] Such he understood was the honourable gentleman's position. Was it so?

Mr. MARRIAGE—Finish your speech.

Mr. HODGSON resumed.—It certainly seemed strange to him that a gentleman interested to the extent of about 16*l*. should think it worth his while to embroil himself in an affair of this kind, unless he had objects in view which he did not care to disclose. (Cries of "Question," and great confusion.)

Mr. FENTON said, so far from sneering at the Liverpool proprietors, he felt deeply indebted to them for their spirit. He had seconded the amendment merely to give them and the meeting an opportunity of expressing their sentiments.

Mr. COPLAND said, he represented nearly two-thirds of the shares held in and near Chelmsford, and he should feel bound to oppose the amendment. (Hear, hear, hear.)

Mr. MARRIAGE explained, and disclaimed every wish to be personally offensive to the Liverpool Directors or Liverpool proprietors. As for himself, he had taken shares in the Company according to his means. He never expected any profit from them, and had only embarked in them to forward the work. (Laughter.) If every person in the counties of Essex and Suffolk had subscribed 50*l*., as he had done, they would have had a railway without Liverpool aid. As the Lancashire shareholders were satisfied with the state of their finances, he did not see why he should interfere. (Renewed laughter.)

The CHAIRMAN inquired whether he was to understand that the amendment was withdrawn.

Mr. MARRIAGE said he should withdraw it, as he had no wish to lower the Company's stock. (Loud and long-continued laughter.)

Mr. BIGGS said, this county discussion had elicited one fact which he thought augured well for the future prosperity of the undertaking. It appeared that the traffic on the highway was not diminished, although they had carried passengers to the amount of 15,000*l*., and he inferred from this that the railway had developed a good deal of traffic hitherto latent. (Hear, hear, hear.)

The motion for the adoption of the Reports was then carried unanimously.

Mr. DUNCAN then brought forward a motion, confirming the forfeiture previously declared, of 45 shares, and declaring the forfeiture of 457 shares (the numbers of which were read) and empowering the Directors to re-dispose of them.

The motion was carried unanimously.

Mr. DUNCAN then moved the repeal of the following bye-law:—

"That it shall not be lawful for any shareholder to be put in nomination at any general or special general meeting of the Company to be a Director of the Company, unless notice in writing shall, at least fourteen days previous to such meeting have been lodged with the Secretary of the Company, stating the name, address, and profession of the shareholder intending to become a candidate, or who is to be proposed as a candidate at such meeting; and the names of all candidates for any vacancy in the Direction, to be proposed at any such general or special general meeting, shall be published along with the notices calling the general or special general meetings."

He stated that the bye law had been found inconvenient in practice, and it was doubtful whether it was altogether in accordance with the Act of Parliament.

In answer to a question from Mr. Knox, it was stated by Mr. Duncan, that it was proposed on this occasion to act to some extent upon the motion for repeal if carried, inasmuch as one of the gentlemen named in the Report had not been elected in time to have his name published as required by such bye-law.

The motion was then carried unanimously.

Some conversation took place as to whether the Directors named in the Report should be proposed for re-election separately or together, but it was agreed, that as there was no opposition they should be put up altogether.

Mr. BURGESS accordingly proposed their re-election, and

Mr. BEADEL seconded the motion.

Mr. KNOX thought the number of Directors too large.

Mr. DUNCAN said, he had received instructions to insert in the Bill now before Parliament, a clause enabling the Company to reduce the number to 12, if found expedient. (Hear, hear hear.)

Mr. KNOX, although he would readily admit that the Lancashire proprietors ought to be fully represented at the Board, hoped that when the numbers were reduced, the same proportion of Liverpool Directors would not be preserved as at present.

The DEPUTY-CHAIRMAN would only assure the honourable proprietor that the Liverpool Directors would be but too happy to retire from so laborious an office whenever a due regard to their own property, and to the wishes of the proprietors at large, would permit.

Mr. KNOX said, it was not alluded to in the Report, but it was nevertheless well known that the Directors had for some time past refused the allowance granted to them by the proprietors. This

Digitized by Google

was not at all satisfactory to him, for he thought that no body of men ought to be required to give their time to a railway without being remunerated for it, and he doubted whether without such remuneration the duties would be performed so efficiently as they might be.

Mr. MOZLEY said, he knew that the question of emolument was a secondary consideration with the Liverpool Directors. (Hear, hear.) Time such as theirs was not to be paid for. (Hear, hear, hear.) At present, however, it was better to yield to the wishes of the Directors themselves, and hereafter their claims to the gratitude of the proprietors could be enhanced. (Hear, hear.) He was quite satisfied that the number of Directors ought to be reduced, and he hoped that the Essex people would come forward and take shares, so that if necessary, a selection of Directors might be made from them.

The motion was then carried unanimously.

The CHAIRMAN, amid great applause, returned thanks, assuring the meeting that he was devoted, heart and soul, to the undertaking.

Mr. BAXTER enquired if it was intended to close the Devonshire-street station.

Mr. HALL said, it was not finally decided. Probably it would be removed to Dog-row.

Mr. BAXTER here brought forward a motion for the establishment of a station at Dog-row. He enforced the desirableness of such an arrangement, but ultimately agreed to leave the matter in the hands of the Board.

Mr. SWIFT said, he would now read the address to which he had already referred. It was addressed to the Lancashire Directors exclusively, for reasons that were explained in its commencement. It was signed by several bankers and some of the most respectable names in Liverpool. The names were obtained in a few days, and had it been open for signature longer, he had no doubt the number would have been greatly increased. The learned gentleman then read as follows:—

"To Theodore W. Rathbone, Edward Cropper, David Hodgson, Richard Harrison, Lawrence Heyworth, Robert Crosbie, Robert Mather, and Daniel Mather, Esquires, Lancashire Directors of the Eastern Counties' Rail way.

"GENTLEMEN,—At the close of your official year, we the undersigned proprietors of shares in the Eastern Counties' Railway, who cannot attend the ensuing general meeting in London, are desirous of expressing to you our cordial thanks for your past arduous services.

"We address you individually, because we cannot fail to know that the distance of your residences from the scene of your labours, calls upon you for sacrifices of a much more serious and important nature than are involved in the direction of railways nearer home, and it is on this account that we do not extend an expression of thanks on the present occasion to the Board generally. That they will receive the thanks of the body of Proprietors, at the General Meeting, we cannot doubt; and, in such a vote, we, if present, should gladly concur. Fully sensible of the various difficulties which the Board have recently had to contend with, and have overcome; and having the most entire confidence in a continuance of the same honourable and straightforward line of conduct which you have pursued through evil report and good report, and to which we are indebted for the improved and improving condition of the Company's affairs; we the undersigned beg to add the expression of our hope and conviction that you will ere long have the pleasure to witness, in the complete success of our undertaking, the result, and at the same time the reward, of your consenting to prolong your very valuable services in the direction of it.

"Signed by Magistrates, Bankers, and Merchants in Liverpool, holding 10,975 shares, many of them being or having been Directors of the principal railways in the kingdom.

"11th February, 1841."

The address was received with the most boisterous applause.

The DEPUTY-CHAIRMAN would take that early opportunity of returning his most cordial thanks for the kind expression of confidence which had just been exhibited. He and his colleagues had thought it best to treat with silent contempt the calumnies which had been directed against them, and he believed that in following this course they had acted in accordance with the feelings of the proprietors at large. (Hear, hear, hear.)

A vote of thanks to the Chairman, and the Directors generally, was then passed unanimously; and,

The CHAIRMAN, in returning thanks, said, that but for the kind support of his London colleagues, and the practical knowledge supplied by his Liverpool friends, it would have been impossible to have proceeded thus far with the undertaking.

Mr. MOZLEY would move that the address just read be printed along with the Report. He did so the rather after the most unmanly attacks which had been made upon the Directors—

A PROPRIETOR.—Most unprincipled.

ANOTHER PROPRIETOR.—Most disgraceful.

Mr. MOZLEY resumed. He would not use opprobrious epithets, but he would repeat that the attacks referred to were in every respect most improper. (Hear, hear, hear.) He was glad that the Directors had treated them with the contempt they deserved, for contempt was the only course that could be pursued where dirt was flung. (Hear.) Directors as public men were public property, and so long as attacks upon their public acts were couched in decent language—in language which one gentleman would feel himself justified in using towards another—he for one should not object, nor wish to see any restraint put upon the freedom of the press; but when the press was converted into a weapon of personal attack—into a weapon so much lower in degradation than he would venture to describe—its freedom, instead of being the subject of boasting became a matter for lamentation and regret. (Loud applause.)

Mr. F. BRAITHWAITE seconded the motion, which was carried by acclamation.

Some conversation arose as to the propriety of publishing the names of the subscribers to the document without their sanction.

Mr. SWIFT had not the slightest objection to the publication of his own name, but could not take upon himself to answer for others, as the publication of the address had not been contemplated. Ultimately it was agreed that the subscribers should be described generally.

A PROPRIETOR suggested that a vote should be passed approving of the silent contempt with which the Directors had treated the attacks made upon them.

Mr. MOZLEY and others said this would be elevating the attacks into an importance which they did not deserve.

A vote of thanks to the Chairman for his conduct in the chair was then passed, and the meeting separated.

RAILWAY MEETING AT GREAT YARMOUTH.

IN consequence of a requisition to the Mayor, numerously and respectably signed, a public meeting was convened at the Town Hall, Great Yarmouth, on Tuesday last, for the purpose of "taking into consideration the propriety of co-operating in the intended plans for constructing a railway between this town and the metropolis."

Among the company present, which was very numerous and highly respectable and embraced nearly all the wealth of the borough, we perceived Sir E. H. K. Lacon, Bart.; J. E. Lacon, Esq.; E. D. Palmer, Esq.; E. Youell, Esq.; R. S. Lonsdale, Esq.; W. S. Ferrier, Esq.; W. S. Lacon, Esq.; S. Tolver, Esq.; Isaac Preston, jun., Esq.; John Clowes, Esq.; G. W. Holt, Esq.; A. A. H. Beckwith, Esq.; Samuel Jay, Esq.; Charles Nichols, Esq.; Wm. Hammond, Esq.; W. Garnham, Esq., R.N.; Capt. Pearson, R.N.; J. L. Cufande, Esq.; Charles Cory, Esq.; J. G. Fisher, Esq.; Geo. E. Tompson, Esq.; Geo. Lucas, Esq.; Edward Sewell, Esq.; W. S. Catchpole, Esq.; Capt. Smith, R.N.; — Guthrie, Esq.; Wm. Hurry, Esq.; J. H. Palmer, Esq.; Benj. Fenn, Esq.; J. R. Staff, Esq.; Wm. Yetts, Esq.; Ambrose Palmer, Esq.; Benj. Dowson, Esq.; Messrs. J. G. Carmell, Sept. Dowson, W. H. Diver, W. H. Barnby, S. Miller, J. Fyson, B. C. Miller, John Owles, H. S. Grimmer, and many of the merchants and fish owners, who appeared to feel much interested in the meeting.

The TOWN CLERK having read the requisition to the mayor to convene the meeting, the MAYOR, SAMUEL PALMER, Esq., was unanimously called to the chair.

The CHAIRMAN said, he considered the subject which had brought them together one of so considerable importance to the town, that he hoped and trusted every gentleman who had anything to say would be heard attentively, and that as a meeting they would consider well before they decided what line should be adopted.

J. E. LACON, Esq. observed, that as some gentlemen might be present who had come to represent some particular railway, would it not be desirable that the meeting should give a little time to enable them to be heard?

G. D. PALMER, Esq., enquired if any person present had any thing to propose.

Mr. LACON had hoped, that before he should have had an opportunity of addressing them, some gentlemen representing the several lines would have attended the meeting, but as no individual representing any one of the three different lines appeared to be present, he hoped they would excuse his stating his reasons for advocating the one he did. Being connected with some property in the town, he was free to admit, that he had thought considerably on the subject. They were called on to decide on a subject of considerable importance to the town, and though the time might be driven off, the day must come, when even they, situated as they were, in the most eastern part of the kingdom must have a railroad. Perhaps he ought to explain, why he, not being a man of leisure, should trouble himself on the subject. When he attended the meeting of the landed gentlemen of the county, he had taken little part in the proceedings of that meeting, beyond stating the interest Yarmouth had in a railway communicating with the metropolis. Mr. Gurdon, in his speech at that meeting, had alluded to the correspondence which had taken place between himself and that gentleman, in which he (Mr. L.,) had refused to sign a requisition where Yarmouth was excluded. He thought they had a right to be considered as part and parcel of the county of Norfolk. In consequence of Mr. Gurdon's wish to bias the meeting that Yarmouth might be left out, and considering that, being on the Committee, he might have omitted Yarmouth, he (Mr. L.,) had felt it his duty to state, that he would make calculations to lay before that Committee, to show that from Yarmouth to Norwich, would be both the cheapest and the best paying part of the line. (Hear, hear.) He did not anticipate the labour consequent on such an undertaking, but thanks to those gentlemen who had assisted him, he was able to prepare some very satisfactory statements to lay before the Committee at Norwich, and, with their permission, he would quote a few of them to shew that this was far from being so despicable a line as had been insinuated. They had two steamers between Yarmouth and London, which, calculating 135 passengers a week between the two, for the summer months, and 50 a week for the winter, would make an annual cost of 5,500*l*. Two coaches a day, reckoning two in and four outside passengers, gave 14,853*l*. A coach to Cambridge three times a week, one in and two outside passengers, 5,134*l*. The Dublin Steam Packet had, during the last year, conveyed 3,296 passengers at 2*s*. 6*d*., 8,315 at 1*s*. 6*d*., 8,489 at 1*s*., and upwards of 18,000 at 6*d*. each, between Yarmouth and Norwich. Besides, that there were two other steamers on the river, not to mention the Sovereign which principally carried goods. Put those steamers together, and they would yield 3,000*l*. a year. Then they had two steamers and eighteen trading vessels between here and London, the average tonnage of which was 730 tons; the probable tonnage to Norwich would be about 500 tons; for Norwich, in the evidence given before the Committees of the House of Commons, on the Lowestoft Navigation Bill, claimed four-fifths of the whole. That would give them 13,000*l*. a year. Then he had been able to get the actual traffic over the new road, which was about 1,000*l*. a year, and that on the old road from 12 to 15,000*l*. a year. The expense of the steamers for the conveyance of mackerel to London, which he had obtained from a gentleman most intimately connected with that expenditure, was 1,744*l*., cutters 1,668*l*., boats from Lowestoft 850*l*., vans 2,700*l*. The total expense of conveying mackerel was 6,512*l*. a year. In the herring fishery

Digitized by Google

they had 230 boats, and they would not be satisfied, as fish merchants, to realize less than twenty lasts a boat, which would yield about 4,000*l.* a year more. The cost of transporting soles and turbot he had not been able to procure. The posting averaged about 300*l.* a week, from June to October. Some few years ago the Hungerford Company had been given up on account of the expense of getting the fish to London. Mr. Hammond had paid, weekly, the sum of 210*l.* for the conveyance of fish to market. Thus they shewed an annual outlay of 64,627*l.*, and he thought between fifty and one hundred thousand pounds would not be an excessive amount, to say the town of Yarmouth spent for carriage. (Cheers and Hear, Hear.) He trusted he had given a sufficient answer to the County Committee to prove that Yarmouth was not to be left out, and that they ought not to look to Norwich only. As to the railways coming to their notice, he knew not which should be chosen. Taking the short line first, he thought they might dismiss that at once, as the other lines offered the same advantages. He thought it would not be worth while to go to the expense of making a line merely from Yarmouth to Norwich, because whatever would be urged in favour of a short line, beyond the advantages to be derived from local management, could be said in favour of the two lines which went further. Then they were, to the two lines proposed to be had, one by Norwich and Cambridge, and the other by the Eastern Counties line. One advocated by the Eastern Counties Company themselves, the other by the Northern and Eastern Company. Before they went into the advantages offered by these two lines, he thought they ought to understand how they had been managed, and to see how far their aid would be likely to be advantageous in nursing a new line. On reading a statement in the *Railway Times*, he found that the Eastern Counties Company had raised 64,000 shares of 25*l.* each, making 1,600,000*l.*, and debentures which would increase it to 2,144,000*l.* They had called for 25*l.* a share, making 1,600,000*l.* paid up, and they had opened their railroad 17¼ miles which cost 90,000*l.* a mile. The traffic was 420*l.* a week, of which they received 150*l.* from the Northern and Eastern. It would be naturally said that the 90,000*l.* a mile was not actually expended, and that a deficiency was occasioned by some of the shareholders not paying up as they ought. But such an objection would apply equally to all companies. The Northern and Eastern had 27,000 shares, on which they had called 40*l.* a-share, making 1,080,000*l.* They had opened 19½ miles of line, averaging 15,000*l.* a mile. They had not completed making the double line, but they had pledged themselves not to exceed 22,000*l.* a mile. Having looked at the mother railroads, he would, with their permission, give them some particulars of the railways proposed to come to Yarmouth. The one under the patronage of the Eastern counties was intended to go to Kelvedon. How they were to get to Kelvedon he did not know. From Kelvedon to Bury St. Edmunds was 30 miles, which it was estimated would cost 600,000*l.* From Bury to Norwich 40 miles, which they said would also cost 600,000*l.* Than to Yarmouth, a single line, 200,000*l.* The first part of the line was to be taken up, or at least patronized by the Eastern Counties Company. There was an old saying, that when a man was about to chuse a wife, the most desirable thing was to watch the mother, and judge of the daughter by the mother. If that was to be their rule, then no railroad had ever been nourished in greatest extravagance, nor had a single one been so fruitful in accidents. Then one line had been surveyed, the other had not. In coming to the line called the Cambridge line, they came to one which had been surveyed and estimates made. From Bishop's Stortford to Cambridge was 22 miles, which would cost 26,000*l.* a-mile, a rather more rational calculation than 18,000*l.* From Cambridge to Norwich would cost only 1,126,695*l.*, the land was cheap and good for nothing, and would be comparatively of little expense. From Norwich to Yarmouth would cost 291,912*l.*, which would be 16,000*l.* a-mile. The heaviest and most expensive part of this road was the line between Bishop's Stortford and Cambridge, which would cost 26,000*l.* a-mile. One thing was, they were not obliged to take up that portion of the line as the Northern and Eastern would take it up. To get from here to Cambridge would cost only 1,400,000*l.* Having made those statements, he thought he had some reason to state, that his opinion had been backed by the county commitee, which had declared this to be the best line. A meeting in this very hall had, in 1835, pronounced this to be the best line; and he believed he was not very far out in offering his conviction that the most profitable line would be the one from Yarmouth to Cambridge. It would open a new market for their fish; they would be enabled to bring a number of strangers to the town who had never seen the sea, and who would be very desirous of coming to Yarmouth. (Cheers.) In conversation with a large fish merchant in this town, who had been in business here 15 years, that gentleman had stated he was satisfied that there was a 1000*l.* worth of fish weekly sent from this port more than there was 15 years ago, owing to the cheaper and quicker mode of conveyance, and it was not too much to expect, that when they could get to Cambridge in five hours, there would a large market be opened to us not only at Cambridge, but many miles beyond. (Hear, hear, and cheers.) Another reason why he had advocated this line was, that almost every sixpence given to the Eastern Counties line would be a suicidal act to this place. They would go down to Harwich, which would be convenient to the places beyond Southwold; whereas, if they had a railroad from Yarmouth to induce the fishing boats along the coast to come hither for London, or an inland market, they need not fear. If they did not have a railroad, he feared that Harwich would eventually be a serious injury to this place. He had little else to say beyond expressing his hope, that whatever company had the railway, the interest of Yarmouth should not be overlooked; and he trusted he had proved to them that Yarmouth ought to be considered. (Cheers.) He should conclude by moving, "That it is the opinion of this meeting, that the line of railway commencing at Yarmouth, and proceeding through Norwich, Thetford, Cambridge, and Bishop's Stortford to London, is that by which this town will be most benefitted."

G. D. Palmer, Esq., was sure, from the luminous statements which had been made by Mr. Lacon, that they, as Yarmouth people, were much indebted to that gentleman for the trouble he had taken. He could bear testimony that the data from which Mr. Lacon had made his calculations were correct, and felt confident that if a railway were made between Yarmouth and London, it would be of great importance to Yarmouth. He considered it of so much importance that he would give it all the support in his power. (Hear, hear, and cheers.) He hoped to see this scheme have that support from Yarmouth to which it was entitled. Five years and a half back they had had a meeting in that hall, when much was said but nothing done, but he hoped that time was gone by, and that they would do all they could to support the resolution which had been proposed by Mr. Lacon, and which it afforded him much pleasure to second. (Applause.)

The resolution on being put from the Chair was carried unanimously, amidst much cheering.

Sir E. H. K. Lacon, Bart., had a resolution to propose which had just been put into his hand. They could not do better than adopt the old maxim, "Once cut, twice shy." They saw how the Eastern Counties' had behaved to them; they had promised to commence at Yarmouth, but they had failed to keep their promise and forfeited their claim to the support of Yarmouth. He should, therefore, content himself with proposing, "That this meeting recommends that no assistance be given to any party promoting a railway communication till a legal assurance had been given that the work should commence at Yarmouth, simultaneously with any other part of the line."

[Lest the honourable baronet's motion should not appear quite intelligible, we have that gentleman's authority for stating, that the legal assurance here alluded to, has been satisfactorily secured by the pledge of all the solicitors and the engineer, that a clause should be introduced into the Bill securing the commencement of the line at Yarmouth simultaneously with any other portion of the line.]

Ambrose Palmer, Esq., fully agreed in the importance of the resolution just moved by the honourable baronet, and if any reason were wanting it would be found in the conduct of the last Committee, which and a half years ago, when they had unanimously resolved that a railway was necessary to the benefit of the town. If it was considered so at that time, how much more so must it be the case now, they have seen, and heard, and known so much. Yarmouth stood at the east of England, and held out her hands to the nations of Europe, and it would be madness not to attempt to support a railroad. But if they did not support a resolution of the kind before them, they would probably be again served as they had been on the former occasion. There were two railways before the meeting on the occasion to which he had alluded, almost as there were now. The Eastern Counties promises to do much, and the Northern and Eastern had done almost as much; why they had failed he did not know, but he supposed they had spent their money. But there they were, and that resolution ought to stand immoveable, that any railroad which they sanctioned should be begun at Yarmouth. It was therefore with great pleasure that he seconded the resolution which was carried unanimously.

Richard Ferris, Esq., said that the meeting having come to the resolution that the line of railway promoted by Mr. Rastrick the Engineer, would be the most advantageous to Yarmouth, and that no assistance should be given to any Company which would not commence operations at Yarmouth simultaneously with any other portion of the line, he thought the most important part of the business, was now to endeavour to form such a body, as acting together would carry out those two resolutions. First, it would be useless to meet as the town of Yarmouth, without first appointing some Committee to watch the parties who approached the town. The great evil of all public meetings, was, that after passing resolutions, they were perfectly powerless, and unless they could call them together again, the public got no service. Before the Committee of the House of Commons, the matter should be closely watched, and it was with the view to carry that out to the fullest extent possible, that he would propose. "That a Committee be now appointed to watch all parties now promoting bills for railway communication with this district, and that a strenuous opposition be given to what may be considered injurious to the interests of this town." (Cheers.)

R. S. Lonsdale, Esq., said, that after all that had fallen from the gentlemen who had preceded him, he should content himself with simply seconding the resolution that had just been submitted to them. The motion was unanimously agreed to, and the following Committee appointed.

Chairman, the Mayor of Yarmouth, J. E. Lacon, Esq., Sir E. H. K. Lacon, Bart., G. D. Palmer, Benjamin Lum, William Johnson, Thomas Hammond, Richard Hammond, E. H. L. Preston, Wm. Yetts, Richard Ferrier, Ambrose Palmer, Charles Cory, J. G. Caunell, Benjamin Dawson, W. H. Diver, R. S. Lonsdale, W. H. Barnby, E. Youell, Esqrs., Mr. S. Miller, Mr. T. Lettis, John J. G. Fisher, Esq., and Mr. Charles Wolverton.

It having been intimated to the meeting that Mr. Rastrick was present should they be desirous of hearing him; Mr. R. was invited to come forward.

Mr. Rastrick said, they had been busy in making surveys which were nearly completed, and all would be ready to be heard by next Monday. The line which they had taken commenced as was well known at Bishop's Stortford, whence they came to Cambridge, to Thetford, to Norwich, and on to Yarmouth. An observation had been made which he had heard since he had come into the room, that the inhabitants of Yarmouth were desirous that the railway should be commenced at Yarmouth. He

TO CORRESPONDENTS.

Mr. T. W. Rathbone, Mr. Edward Cropper, Mr. David Hodgson, and Mr. Richard Harrison, *are four Directors of the Eastern Counties' Railway Company, who have stood* PUBLICLY CHARGED *in this part of our paper for several weeks past with having drawn from that Company six guineas for the travelling expenses of every trip from Liverpool to London and back, though they travel the whole or greater part of the way* FREE; *but a General Meeting of the shareholders having taken place this week, without these persons volunteering any denial of the charge, or any of their constituents putting a single question to them on the subject, we feel absolved from any obligation to trouble ourselves further about it. Directors and shareholders seem in every way worthy of each other. We bid them joy.*

A Subscriber (Banbury). *No such forms have as far as we are aware been yet published, and though ingenious we do not think they would pay as a matter of business. Mr. Whishaw might make good use of such forms in the next edition of his excellent work on Railways, and we recommend our correspondent to communicate with him.*

Mr. Grainger's *pamphlet shall have our early attention.*

C. H. K.'s *suggestion is good, but we anticipate some difficulties in the working of it out. However we shall try.*

A Correspondent (Bletchingley) *had better apply to the Secretary.*

We regret that Q. in the Corner's *packet of Thursday might come too late to hand to be of any use this week.*

E. H. L., *no limitation whatever in point of time, and the only remedy a Bill in Chancery.*

We are sorry to be obliged to postpone the letter of Mr. Young, *Secretary to the Croydon Company. The reason will be found noticed below.*

Communications received, Mr. Briggs — Mr. Bannister — Mr. Grainger—Croydon—Mr. Coote—Mr. Rankine.

Although, in consequence of the great pressure of the Meetings, we issue to-day two sheets of our journal, we find, at the last moment, that the London Meetings of yesterday and Thursday have extended to such a length, that we are compelled to omit all notice of one or two provincial meetings, and to abridge our notices of others, as well as to defer several other articles for which we had hoped to find room. The other Part having previously gone to press, we had no alternative. Next week we shall give a *gratuitous* Supplement, when we hope to be able to clear off our arrears. Among the omitted meetings is that of the Birmingham and Gloucester Company, which is in type, and a farther notice of the Glasgow and Ayr, and Edinburgh and Glasgow.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 27, 1841.

ONE of the most important meetings of the present week has been that of the Birmingham and Gloucester Railway Company, and we regret exceedingly that we are compelled to postpone a detailed notice of it. In the proceedings of this Company, we recognize with unspeakable pleasure, the first attempt at RAILWAY BOARD REFORM, which has been ever made on a large, comprehensive, and decisive scale, and with thorough earnestness of purpose. It is stated to be an experiment merely; but the experiment is based on such sound principles, and is under the superintendence of a gentleman of so much energy and talent, and at whose hands it is so certain of receiving fair-play—we mean Captain C. R. MOORSOM, the new Chairman of the Company, —that we cannot but anticipate for it the most signal success, and as a sure consequence of that success, a certain breaking up everywhere of the present absurd and mischief-working systems of management. We are the more pleased with this experiment that the principles on which it rests differ in little, from those which have been all along advocated in the pages of this journal, more especially by our correspondents *A Railway Shareholder* and *Examiner*. We are glad to observe, that while Captain MOORSOM entertains a sanguine hope of being able, by his proposed reforms, to increase the efficacy of railway Boards to an incalculable extent, he nevertheless agrees with us in thinking, that a certain degree of Government superintendence and control is essentially necessary.

WE observe that at the last General Meeting of the North Union Company the Chairman, Mr. RATHBONE, was pleased to make this very singular suggestion to his constituents, "that if *one* meeting only were held every year it would perhaps be more convenient to the shareholders and save expense." And we observe also with a great deal of satisfaction, that the shareholders had the good sense to give a decided negative to the proposition.

Questionless, it would be very "convenient" and of some "saving" more or less, in travelling expenses to have only *one* meeting annually; more convenient and economical still to have but *one* meeting in *five* years or *ten*. More convenient also it would be, and of an extraordinary cheapness (looking to the matter of salary only), to have but one Director instead of a dozen. A regular *Unitarian* (if not *Union*) concern altogether!

But what if the one Director, or, as he might then be more properly styled, *Dictator*, should happen, as the Scotch say, to be 'a chiel wi' an easy conscience and rather tarry fingers?' Aye, there's the rub! There's the *chance* which makes twelve Directors better than one—a meeting only once in every five or ten years out of the question—and two meetings a year better than one. Even the best of men are said to require looking after; and of course much more so "chiels" of the equivocal description just supposed. Both convenience and economy are things which may be occasionally bought too dear. The more shareholders consult their own ease, the more they may depend upon it, Managers will consult theirs. The seldomer they travel to head quarters, to see how matters are going on, the worse matters are sure to go on for them. A guinea a-year saved is not much to each shareholder, while the expenditure of it may be the means of preventing many thousands of a Company's money from sticking to "tarry fingers." The fewer, again, the hands to which a Management—exempted through the supineness of shareholders from frequent and vigilant inspection—is left, the greater the facility for abuse of every kind. Twelve may be too many Directors than are really needed for a railway of twenty-two miles, but at all events, twelve will not suffer many wicked things to be done, which one or two would commit without scruple, and very probably with perfect impunity. "Six-guinea" dips into the strong box, (Mr. RATHBONE will understand to what we allude,) are not to be made by one or two of a Board without all the rest—a few at least—being likely to call out "shame!" and so—baulking the spoilers.

No, no; frequent meetings, and well-attended meetings, by shareholders resolved to think and judge for themselves; Boards of many, but not *too many*, members, and every member well paid for all services actually rendered—these are the only stable pillars of all Railway Company prosperity.

The modesty of the author of the proposition which we have been just discussing, is a circumstance which ought not to be passed over without receiving the tribute due to it. It was but saying in other words, "Really, gentlemen, these half-yearly meetings of yours are great farces. You see in me, a person who knows more about railways, and what is best for you, than all of you put together. It is of no use your coming here to ask questions or give advice; you cannot ask any thing which you had better not leave unasked, and you may at any time (though I say it) be a vast deal better employed than in advising your betters. Be persuaded, gentlemen, by me—stay at home—pocket such dividends as we shall send you, and rest content that they are as they are."

And, that such is by no means an exaggerated representation of the relative feelings of the two parties, is fully proved by the following remarkable incident in the proceedings:—

"Mr. Garnett suggested that a dividend of 3*l.*, instead of 2*l.* 10s., should be declared.

"The Chairman said, that the dividend having been declared (by the Directors), the suggestion *could not be entertained* (!!!) He could assure the meeting that the Directors would be very glad to make the dividend as large as possible."

Really, this "North Union," with its not-at-all arrogant or overbearing Chairman, and his fine horror of meetings, and of free deliberation, must be a very nice concern! Not at liberty even to consult how they may best dispose of their own! What could the most absolute and irresponsible and dangerous despotism desire more?

THERE are many subjects for congratulation, and very few for censure or complaint, in the Report of the Directors of the London and South-Western Railway Company, laid before the meeting on Saturday last, and in the proceedings consequent thereon. We give in another page a copy of the document referred to, as well as a full account of the further explanations called forth in answer to the inquiries of the proprietors, and to these we beg to request the attention of our readers.

It will be seen that a dividend of 1*l.* 10s. per share has been declared from the profits of the last half-year, being upon the *nominal* amount of the share at the rate of 6 per cent. per annum. It will be borne in mind, however, that from certain circumstances connected with the state of the money-market some years ago, and the then deplorable condition of the undertaking itself, it was found necessary to issue one-half of the shares at the large discount of 50 per cent. These were, of course, divided among the proprietors registered at that time, so that to an original subscriber who has kept his old shares and taken up his due proportion of the new, each share has in reality cost about 39*l.* only, although for the purpose of a dividend it is regarded as if 50*l.* had been paid in full; and to such persons, therefore, the pre-

Digitized by Google

sent dividend is at the rate of very nearly 8 per cent.

This, we think, is a highly satisfactory result, considering that the line has only been opened throughout for a very short period—that its resources cannot be fully developed until the Gosport Branch is completed—and that a variety of circumstances in connection with railways generally, and with the South-Western line in particular, tending to diminish the amount of railway travelling, have transpired during the last few months. An impression had got abroad that this line was worked with very great negligence, and the effect of such reports, whether well or ill-founded, upon any railway, but especially upon one which like the Southampton is, to a great extent, a *pleasure* line, could not fail to be extensively injurious. That these reports were not without some cause, the numerous delays, and not unfrequent accidents that occurred, gave proof; and this has since been confirmed by the Report of the officers of the Board of Trade. It is gratifying, however, to know, as well from the testimony of these gentlemen as from the recent absence of complaint on the part of the public, that a very decided change for the better has since taken place, and we gather from the remarks of the Chairman at the meeting on Saturday, that further improvements are in progress, and that *efficiency* is henceforth to be the characteristic of the establishment. The results of such a determination steadily adhered to, will show themselves in the future dividends of the proprietors. The Executive have a task of more than ordinary difficulty before them, inasmuch as they have to get rid of a certain degree of odium which attaches to the undertaking; but they must persevere, and the proprietors, we repeat, will soon reap the fruit of their labours. The position which Southampton is rapidly assuming as a port, cannot but conduce most materially to the future prosperity of the railway.

And now a word or two of complaint. Surely, the statement of accounts is most meagre! The whole of the payments of the last half-year are comprised in *six* items, FOUR of which relate to specific disbursements, namely, "maintenance of way," "police," "mileage duty," and "rent and taxes." A fifth item applies to the cost of "locomotive power," but although this might have been with great advantage more fully detailed, it is of the sixth item that we have principally to complain. Could any financial exposition (if exposition it may be called) be more unsatisfactory than this—"Carriage expenses and general traffic, viz.:—Repairs of carriages, trucks, and horseboxes, cleaning and oiling of carriages, clerks' salaries, guards' and porters' wages, printing and stationery, advertisements, insurance, *and other incidental expenses*, 18,508*l.* 17s. 8d.?" The incongruity of the matters lumped together in this large sum is ludicrous enough, but it would seem from the explanations given at the meeting that it includes likewise the Directors' *allowance*, for it was stated that this is comprised in the geneneral charges, and of course must have a place with the "clerks' *salaries*" and "guards' and porters' *wages*." Really it is little better than a mockery to submit such accounts to meetings of proprietors, with professions that they are to be considered as expositions of the state of the Company's finances. The Directors might just as well have put forward the whole of the "payments" in one item of "62,422*l.* 7s. 6d.;" for we defy any man to ascertain from the accounts as now given whether there has been due economy observed in any particular department, or in the management of the Company's funds generally.

We are more and more surprised as the meetings pass over, that proprietors should regard with so much seeming indifference the expenditure of sums so vast. With the exception of a passing remark by one proprietor, not a word was said at the South-Western meeting upon a point of so much moment, and the Chairman's diplomacy in disposing of this question and others, by promising that they should be "taken into consideration," triumphed! If railway proprietors generally do not take many very important matters of reform into their own serious "consideration," we fear that their "consideration" by Boards of Management will not be very speedily determined on. It is in vain that Directors are appealed to through the medium of the press, if proprietors will not on the only occasions that they have an opportunity of meeting them face to face, *insist* upon such changes as may be deemed salutary. The press has done much to prepare the way for very important reforms, and although such persons as Mr. AMBROSE HUMPHRYS may affect to sneer at it, neither he nor any other Director, however powerful, can long resist its influence, when it has truth and fair dealing and the body of proprietors on its side; but the remedy after all must rest with the proprietors themselves.

It is but right to state that this meagreness in the South-Western financial statements has not originated since the recent changes in the Company's Executive. On referring to the Reports of last year we find the very same items as we have been commenting upon. It would appear, however, from what was stated at the meeting that a bad practice has recently sprung up, namely, the refusal to allow any proprietor to inspect the share register of the Company. We know that this practice has long prevailed in some other Companies, and that it is justified on the ground that no man has a right to pry into the pecuniary circumstances of another. This is quite true in ordinary cases, but railway speculations form an exception. It is surely but proper that proprietors should know who their *partners* are before giving their sanction to measures which may involve the expenditure of an immense amount of property; for although it is true that no proprietor can be held responsible for more than he has personally subscribed for, it is equally true that his partners may involve his property in difficulties such as to render it totally worthless—difficulties occasioned by pursuing objects of their own, distinct from *his* interests, and which had the names of his co-proprietors and the stake which they severally hold been previously known to him he might have discovered and defeated. How, for instance, can a proprietor know, except from an inspection of the register, whether any or all of the Directors may not have been turning their official information to account by trafficing in shares, or whether their interests as Managers may not outweigh their interests as proprietors? The very fact elicited at the meeting that a late Director of this same Company was for a period, no matter how short, a *non*-proprietor shows that this latter source of apprehension is not altogether visionary. We disclaim most distinctly all offensive reference to the Directors of the South-Western Company; our remarks have a general scope, for we hold that Managements should not only be *innocent* of mal-practices, but that they should afford no grounds whatever to be *suspected*.

We cannot conclude our notice of this meeting without just alluding to the differences (we trust we may say the *late* differences) in the Direction. The parties, with much good taste we think, abstained from making them the subject of discussion at the meeting, and we would fain hope that we shall hear no more respecting them. The zeal, talent and energy of the late Chairman, without whom we are satisfied there would at this moment have been no Southampton Railway, we have repeatedly had occasion to notice, and if the unanimous expressions of affection and respect shown by one of the largest and most respectable railway meetings ever assembled can be at all relied on, the honourable gentleman must have seen on Saturday that his labours were not unappreciated. We were rejoiced to hear from himself that his good will and most valuable exertions are to be continued to the undertaking, and we can wish the Company no better fate than to find in the highly-respectable gentleman who has succeeded Mr. EASTHOPE in the chair, the same able, unceasing, and successful advocacy and support which distinguished his predecessor.

NOBODY, we believe, disputes the bad pre-eminence of the Eastern Counties' Railway Company. Others may have sunk to zero; but none so far below. Its nearest neighbours (who should know it best) complain that they have been woefully damaged from having been accidentally confounded with it, in popular estimation (see last week's proceedings of the Northern and Eastern Company); and a journal (*The Times*) which represents the largest amount of public opinion in the world, has gone so far as to discuss the necessity of having it abated as "a public nuisance"! It has furnished, by its misconduct, more weapons, and sharper, to the enemies and jealous observers of the Railway System, than any other dozen railways that can be named, and as a natural consequence has drawn down upon itself, a more than ordinary share of censure and reproach, from all who have the welfare of that system sincerely at heart.

From the prominent part we have ourselves taken in exposing the misdeeds of this Company, we have always reckoned on its deadliest enmity as a thing of course—not forgetting, as a matter of prudence, to measure to the best of our ability, the probable strength of that enmity against an honest advocacy of truth and justice—yet when satisfied that the latter had nothing to fear, pursuing what we deemed to be our path of duty, boldly and unflinchingly. Neither has any thing occurred to induce us to think ourselves mistaken. In Report after Report the Directors of this Company have inveighed against this journal and its strictures upon them, but always in such terms as showed that though wincing under them, they could not grapple with the stubborn facts on which, we were careful, that they should be founded; and now that they have resolved—as appears from their Report to the General Meeting of their constituency on Thursday last—to call in the terrors of the law to their aid, what is the first thing we encounter? Why, a Board Resolution, or proclamation of war, as it may be called, in these terms:—

"That counsel having advised that several *recent* numbers of the *Railway Times* contain gross libels against the Directors of this Company, and that the printers, proprietors, and authors *may* be proceeded against both by criminal information and civil action—Resolved, that the Solicitors of the Company do forthwith adopt against the printer,

Digitized by Google

proprietors, and authors of the *Railway Times*, such criminal and civil proceedings as they, under the advice of counsel, may think necessary for the vindication of the character of the Directors, from the foul aspersions of the *Railway Times*, and for the punishment of the libellers."

We do not think the Directors could have had far to seek for such advice as that recited in the preamble of this resolution. Whether the statements alluded to are libels or not depends, of course, on their correctness—unless, indeed, the Directors place their hopes on that respectable maxim of the law, that the *greater the truth the greater the libel;* and to talk, therefore, of counsel who could have no personal knowledge of the facts, advising that they were libels, is nonsense. Any person, too, could have told the Directors, as well as a gentleman in a wig, that the printers, proprietors, and authors "*may* be proceeded against," and could have told them also that the prosecutors *may* get confoundedly beaten for their pains. The counsel, it will be observed, did not advise that they *should* be proceeded against. That is a conclusion to which the Directors themselves have rushed *without any advice*—taking counsel only of their passions, and, as people always are who listen to such counsellors, enormously blinded by them.

And so they are going to prosecute us—for what?—For certain articles contained in several "*recent* numbers of the *Railway Times*." *Recent* numbers," be it remarked. All *former* articles in all *former* numbers of this journal they pass over—though many of them contained much severer things, about these same Directors, than any we have *recently* published—they pass them over, not, we may be assured, because of any unwillingness to make them the basis of a prosecution, but simply because they have been founded, as we have before said, on facts too stubborn to be grappled with; but now they think they have caught us tripping at last, and are determined to let loose the blood-hounds of the law against us. Have they, indeed? When we know what the particular statements are that they charge as libellous, we shall be better able to judge of the degree of peril we are in; but, for the present, we can only say, that we are not aware of having published anything respecting these Directors, which is not perfectly true, and which we do not believe ourselves well prepared to substantiate the truth of, before a jury of our country.

The resolution of the Board states that the proceedings are to be taken "for the vindication of the character of the Directors;" but the Report says that they have for their object "justice to the proprietors,"—meaning, we presume, by that, justice to their proprietary interests, which are damaged by the impeachment of the conduct of their Directors. Now, whether the one or the other be the true object, or whether the one is to be considered as convertible into the other, we beg to say, that in either case we can put them upon a much speedier mode of accomplishing such vindication and such justice, than by any legal proceedings, whether criminal or civil. *They have only to show (which they have never yet done, nor offered to do) by facts and figures, that the various disreputable things laid to their charge are untrue.* We shall, on our part, give instant publicity, and all the publicity in our power, to any such vindication on their's.

We collect from the discussion which took place upon the Report of the Directors, that certain remarks made by us upon the traffic accounts of the Company, to the effect, that they represent a gain to have been made, when in fact there was a serious loss incurred, form part of the libellous statements laid to our charge. Now here is a simple matter of arithmetic, capable of almost instant determination, and which it is of the utmost importance, should be speedily determined, not only for the sake of the shareholders, but of third parties, who may be disposed to lend money to the Company, if there were any clear revenue out of which they might be certain to obtain payment of the interest on their loans; yet when a shareholder expressed a desire to have some information about it—he was interrupted by the Solicitor to the Company with a "Stop! stop! don't say any thing about *that — you will spoil our case against the Railway Times if you do.*" However lawyer-like this mode of disposing of the matter may be, we submit that it is not that which any honest man, or body of men, desirous only of what is right and consulting the true interests of their constituents would have adopted. Truth is suppressed for the sake of the action, and not the action brought for the sake of truth. Vindictiveness, and not simply a desire of vindication, is the feeling at the bottom of such pettifogging proceedings as these. Proceedings the more to be condemned that the charge of misrepresenting the actual state of the Company's carrying business, is not as the Directors would have it believed, a *recent* charge, but one of six months' date, and which if worth refuting now in any shape, ought to have been refuted long ago.

The shareholders present at Thursday's meeting seem, however, to have approved very cordially of the evasive and unsatisfactory course adopted by their Directors; and so far as the plaudits of a set of people, without the sense or spirit to insist on a full insight into their own affairs—content to part just as ignorant of them as when they met—careless whether their Directors are men of clean hands or not—and to all appearance, with sympathies only for dishonour and disgrace, are worth anything, the Directors have much to be proud of. Fortunately for us, it is not by a jury of such men, that the cause between this journal and the Company is likely to be tried.

It is not a little amusing to observe a certain vein of affectation which runs all through the speeches of the persons who figured at this Eastern Counties' meeting. Every thing to their disadvantage, deserves only to be treated with "contempt"—"silent contempt"—though all the while they talk and think of nothing else! The Deputy-Chairman, who is a great performer in this line, thinks the conduct and observations of the Directors of the Northern and Eastern Company should only be regarded "with the contempt they deserve!" Such language as this from any Liverpool gentleman whatever, far less from a person of Mr. RATHBONE's Liverpool standing, towards a Board comprising such metropolitan names as MARSHALL, MASTERMAN, CRAWSHAY, and ROUTH, requires only to be noticed, to settle with the public on this side of the island, the place to be assigned to the utterer of it in the scale of good sense and good breeding. Again, one — two — three — we forget how many—speakers thought "contempt" *our* only portion; while in the same breath they honoured us with all the abuse they could find tongue for; and as if this were not enough to immortalise them for *consistency*, they approved by a formal vote, of the Directors' resolution to prosecute by all possible means, and to punish in all possible ways, the journal which they so sincerely and unaffectedly contemn! No, no, Messieurs Directors and proprietors of the Eastern Counties' Railway! You may delude yourselves by such airs and verbiage, but depend upon it, nobody else. *Facta non verba*, must be your motto, if you would hope ever to be deserving yourselves of more, than the most thorough and abiding contempt, or to regain any thing like a respectable standing among the public undertakings of the country.

We invite attention to the proceedings of a Public Meeting held at Yarmouth this week, to promote the success of the East Anglian Railway. The besotted shareholders of the Eastern Counties' Railway, will find in these proceedings, and in the expressed determination of all parties to have nothing more to do with them, some further materials for grave reflection. Will it be believed, that though it is as clear as day, that if the Norfolk traffic is diverted into the channel of the East Anglian, the Eastern Counties' can never possibly yield a remunerative return on the capital invested in the working of it, as far as Colchester, none of these shareholders were at the smallest pains, at Thursday's meeting, to ascertain how so great a danger might be averted? Some innocent sufferers there must, of course be, but as for the mass—they deserve only the worst that can befal them. We mentioned, a short time back, that the Northern and Eastern Railway Company were not only quite free to support the East Anglian plan, if they saw fit, but stated also our belief that *they would do so;* and from the proceedings of the General Meeting of that Company held last week, our readers would see that we were in the right.

MR. BELL, one of the members for South Northumberland, has given notice of his intention to move several amendments in Committee on the new Railways' Bill. These amendments neither affect the principle of the measure nor interfere very materially with its details, being confined to certain points connected with the proposed licensing of drivers, and having for their object to increase the powers of Directors and diminish those of the Board of Trade in this particular. MR. BELL being himself a Railway Director, is naturally anxious to extend the influence of "his order," but we doubt very much whether the House will be disposed to go along with him in this instance, or whether some of the alterations which the honourable member proposes would be in themselves desirable.

The first amendment to be brought forward by Mr. BELL, would modify that clause (the fourteenth) in the original Bill, which renders a Company liable to a penalty of 5*l.* per day for employing any driver who shall not first have deposited his license with such Company. Mr. BELL proposes, that any driver "being first so licensed" may be legally employed. The amendment would probably subject the Companies to less trouble than the original clause, but one main object in requiring a license would, thereby, be defeated. By a subsequent clause (the twenty-second) which Mr. BELL seems to have overlooked, it is provided, that in case of the dismissal of a driver, the Company are to retain his license until instructed by the Board of Trade how to dispose of it. By this means an opportunity will be afforded of "endorsing the license," with a description of the offence which has led to the man's dismissal—an arrangement somewhat analogous to that which is adopted in the case of the drivers of hackney carriages convicted by a magistrate of police. There may be cases of

Digitized by Google

misconduct in which it would be too severe a punishment entirely to rescind a license, and yet with the particulars of which it would be desirable that the future employers of the offenders should be acquainted. The "endorsing" of the license would effect this object, and moreover the Board of Trade would, as the case now stands, be enabled to watch the movements of every driver much more closely than they could possibly do, if merely "being first so licensed" were sufficient.

The next proposed amendment of Mr. BELL has reference to clause sixteen, and would substitute "Directors" for the Board of Trade in the examination of drivers, and in the granting and revoking of licences. It is absurd to suppose that an amendment like this can be carried. It would be rendering the whole machinery of examination and license a perfect farce, for as even matters stand at present, Directors satisfy, or are supposed to satisfy, themselves as to the qualifications of a driver, and therefore any further examination by *them* would be superfluous. One great object in rendering the possession of a license imperative, is to give confidence to the public that improper persons will not be entrusted with so responsible an office as the conducting of a railway train. If the public think that Directors do not take sufficient care *now* to ascertain the fitness of this class of servants, how would the proposed amendment alter their opinion? There is one good point, however, in this amendment, namely that an examination should take place "of *every* person who shall apply to be licensed," instead of confining it to persons nominated by the Companies. In our first notice of the Bill we suggested a similar amendment, and we trust that it will be carried out. We see no shadow of a reason why nominees of Companies should alone be eligible; let any man who chooses to submit to the test, be examined; and if found duly qualified, it will be for the Companies to employ him or not, as they may think proper.

The fourth amendment would vest the appointment of examiners in Railway Boards instead of the Board of Trade — an alteration open to the same objection as the one preceding.

The fifth proposes that a register of licences should be kept in the office of every Railway Company, instead of in the office of the Board of Trade—an arrangement which would be impracticable, seeing that "*the particulars* of every license" are to be entered in such register, and moreover wholly unnecessary, since it is proposed by the Bill to be enacted, "that every person shall be at liberty to inspect any such register at all seasonable times, without payment of any fee or reward."

The sixth and last amendment would empower and "require" Directors to provide badges to be worn by drivers, instead of rendering it "lawful" for the Board of Trade to do so.

Upon the whole, we cannot think that the proposed amendments would be improvements. They certainly do not appear to us to be improvements of so decided a character as to justify their being pressed at the risk of rendering the public mistrustful, as to the efficient carrying out of the measure. Nor do we see what good purpose they would serve. Directors have already quite enough upon their hands, without having their responsibilities increased.

In the *Railway Times* of the 13th instant, we gave a copy of the entire Bill as brought in by Mr. LABOUCHERE, and we now subjoin, for the purpose of comparison, the clauses above referred to, as they would stand were Mr. BELL'S amendments adopted:—

"*Clause* 14. And be it enacted, that on and after the next after the passing of this Act, no person shall be employed on any railway as an engine-driver in the course of the public traffic, unless he shall have been licensed in pursuance of the provisions of this Act in that behalf; and if any person shall be so employed on any railway without being first so licensed, such Company shall forfeit to her Majesty the sum of five pounds for every day during which such person shall be so employed, and every such penalty may be recovered in any of her Majesty's Courts of Record.

"*Clause* 16. And be it enacted, that it shall be lawful for the Directors of every Railway Company, and they are hereby required to cause to be examined every person who shall apply to be licensed to act as engine-driver, and to license any such person as shall appear to the Directors to be duly qualified for that purpose, and if and when they see fit, to revoke or suspend the license of any such person.

"*Clause* 17. And be it enacted, that it shall be lawful for the Directors of every Railway Company to appoint, from time to time, two or more persons, one of whom shall be the engineer of the Company, or some engineer selected by the Company by whom the candidates to be examined shall have been nominated,* to examine the candidates for licenses to act as engine-drivers, and the said examiners shall examine such candidates at such times and in such manner as the Directors shall appoint.

"*Clause* 18. And be it enacted, that there shall be kept in the office of the Directors of every Railway Company a register of licenses, in which shall be entered the particulars of every license granted in pursuance of this Act; and in all courts, and before any justice of the peace, and upon all occasions whatsoever, certified copies of the entries made or contained in such register shall be received as evidence, and be deemed sufficient proof of all matters and things therein registered or contained, without requiring the production of any such register, or of any license or other document upon which such entries shall be founded, and without any further proof than the production of such certified copies, and every person shall be at liberty to inspect any such register at all seasonable times without payment of any fee or reward.

"*Clause* 19. And be it enacted, that it shall be lawful for the Directors of every Railway Company and they are hereby required to provide badges to be worn by licensed engine-drivers, and every engine-driver to whom any such badge shall have been given, shall at all times during his employment upon any railway in the course of the public traffic thereon, and when he shall be required to appear before any justice of the peace, wear such badge conspicuously upon his breast, in such manner that the number thereon shall be distinctly visible and legible."

The following is the twenty-second clause of the Bill, above alluded to:—

"And be it enacted, that every Railway Company shall retain in their custody the license of every engine-driver employed by them, so long as such engine-driver shall be in their employment; and in case such engine-driver shall leave or be dismissed from or shall die in their service, such Company shall forthwith give notice thereof in writing to the Lords of the said Committee, and shall retain the license of such engine-driver until they shall have received Directions from the Lords of the said Committee as to the disposal of such license; and if such Company shall not give such notice as aforesaid, or shall dispose of such license without or contrary to the directions of the Lords of the said Committee, every such Company shall forfeit to her Majesty for each offence the sum of Twenty Pounds, and every such penalty may be recovered in any of her Majesty's Courts of Record."

* We make the alterations as they are notified in the official records of the House, but of course, if the amendment to *clause* 16 were carried, the amendment to *this* clause would require to be altered.—ED. R. T.

Last night was appointed for going into Committee on the new Railways' Bill, but at the request of Mr. LABOUCHERE, no discussion took place, the Committee being merely *pro formâ*, for the purpose of having certain intended alterations printed.

SIR FREDERIC SMITH is now occupied in the examination of Mr. Walker's plan for a line from London to York, *via* Cambridge and Lincoln. We believe this is the last of the competing Great Northern Lines, which remains to be inspected; so that we may now hope to have in a week or two the Report of the Government Commissioners upon the entire subject.

—o—

THE Leeds and Manchester Railway was expected to be opened to Normanton on Monday next; but some defects have been just discovered in the Summit Tunnel, the reparation of which may possibly delay the opening for two or three days.

—o—

AMONG the petitions presented this week to the House of Commons, praying for a modification of the passenger tax on railways, are one from the Manchester and Birmingham Company, one from the Manchester and Leeds Company, and one from the Edinburgh and Dalkeith Company.

—o—

ON Monday last it was determined at a meeting of the proprietors and inhabitants of the Waterloo-bridge Company, that the tolls to foot-passengers over that noble structure shall, on and after Monday next, be reduced from a penny per passenger to a half-penny. The alteration is adopted avowedly as an experiment, for the purpose of ascertaining whether greater profits will not accrue to the Company from a larger number of passengers at a reduced price than from a smaller number at a higher rate. The matter does not fall directly within our sphere, but as an illustration of the results of high and low charges, the following facts brought forward at the meeting may be interesting to those who, like ourselves, are advocates of low fares on railways:—

When a charge is reduced unreasonably (like the postage to Ireland) it diminishes the revenue; but when it is reduced about one half (as in the range of the late twopenny post) it adds greatly thereunto.

Forty times more letters pass through the offices of Stroud and Nailsworth, since the postage was reduced from 4d. to 1d.

The reduction of duty on spirituous liquors has added greatly to the revenue.

There are 140,000 weekly papers at 1d. or 2d. each, but there were not 1,000 when each cost a shilling.

The railway charge from Ghent to Brussels was lowered half, which increased the revenue threefold.

The visitors to the Tower are ten times more, now the charge is only sixpence.

The omnibuses at sixpence, carry a hundred times more persons now, than while charging a shilling.

The toll-bridge at Rouen pays six per cent. on its outlay, besides an annual sum for its repairing fund; and though between two free bridges, it has three times more passengers than both of them together, although they are only four hundred yards off; and it is solely because the work people can afford to pay a centime.

When the penny-toll at Richmond-bridge was

Digitized by Google

lowered, the revenue doubled immediately, and quadrupled in three years. Thus a halfpenny-toll brought eight times more people than a penny toll.

—o—

In our last we gave a somewhat lengthened notice of the proceedings at the Sheffield and Manchester Railway meeting, with an abstract of the Directors' Report. In our advertising columns to-day, the Report will be found in full.

RAILWAY OFFENCES AND OFFENDERS.

A few days ago the Directors of the London and South Western Railway Company, brought one of their porters named Henry Cunningham before the magistrates of Kingston, on a charge of being drunk and neglecting his duty. It appeared that some waggons having been left behind at the Kingston station, in consequence of a deficiency of power in one of the up trains, it became necessary to remove them out of the way of a train which was shortly to follow. While a policeman named Royle was engaged in this operation, Cunningham came up and was told to attend to the "points," but this he neglected to do, and a collision, fortunately unattended with any serious consequences, was the result. It was alleged that Cunningham was drunk, but the weight of evidence inclined to the other side, and it being proved that his proper employment was that of a porter, wholely unconnected with the working of the trains, the magistrates dismissed the case.

A charge arising out of the above, was then gone into against a Mr. Jones the superintendant of the station referred to. It was clearly proved (and indeed admitted by Jones himself) that on the occasion of the collision, he was absent from his post without leave, *having entrusted the performance of his duties to a common policeman*! It was contended that if Jones had been at his post, his *locum tenens*, the policeman, would have been able to assist in the removal of the waggons. Mr. Jones endeavoured to excite the sympathy of the Bench in several ways. He said the policeman referred to had on a previous occasion been allowed, *with* the cognizance of his superiors, to do duty for him, and *therefore* he thought there could be no great harm in committing on that occasion the charge of the station to the individual *without* leave. He further pleaded the small remuneration, which he received for his services in the office in question, as if the duty had been thrust upon him, and not, we will venture to say, eagerly sought after. The Bench however, very properly disregarding all these and other pleas, amerced him in the penalty of 5*l.*, which (so says the report which appears in some of our daily contemporaries) "was immediately paid."

The Directors of the South Western Company have done themselves great credit by following up this case, and we trust that, as a warning to other persons in their service, Mr. Jones has been dismissed. The Directors of this Company cannot forget what fatal consequences resulted, and what odium has been thrown upon the railway, from the *absence without leave* of one of their officers in the case of the fatal accident at the Nine Elms terminus.

We hope it is unnecessary for us to say, that in earnestly recommending the adoption of what may possibly be called severe and *harsh* measures on the part of railway managements, we have no other object in view than the good of the Companies themselves, as depending upon the confidence placed in them by the public. We may be sorry for an individual whom a first lapse has subjected to dismissal or to a severer punishment, but we are more and more convinced that nothing but this strictness of discipline will ever satisfy the public, or bring railway establishments to that pitch of efficiency which it is so desirable they should attain.

In his defence Mr. Jones attempted to show, that even if he had been present the accident would probably have occurred, and referred to two cases *within the last twelve months*, in which signal lights had been disregarded by drivers. It came out, however, that in one at least of these cases the driver had in consequence been discharged, and we hope it was so in the other case also. We have no hesitation in saying that the railway executive, who in any way or to any extent connive at even the *first* offence of any officer, whether high or low, where the public safety is concerned, are morally responsible for the results of future negligence on the part of such officer, and for the widely extended effects of even *one* case of impunity, upon the conduct of their servants generally.

Some malicious scoundrels having placed large stones upon the Eastern Counties' Railway, near Three Colt lane, Stratford, the Directors have offered a reward of 2*l.* for the detection of the offenders. The offer is much too small. It should be 20*l.* at least, and in case of a discovery, a prosecution should follow to the full extent of the law.

On Tuesday last a farmer named Boulter, was brought before the Pershore magistrates, by Mr. Such, inspector of permanent way on the Birmingham and Gloucester Railway, and fined 3*l.* for an aggravated case of trespass.

Yesterday week George Pain, a foreman on the Eastern Counties' Railway works, at Springfield, was fined by the Chelmsford magistrates 5*s.* (with costs amounting to 19*s.* 6*d.*) for having set labourers to work on Sunday. The practice of working on Sundays was not sanctioned, it appeared, by the Directors. The prosecution was at the instance of the Churchwardens.

IMPROMPTU

ON A WEEPING CHAIRMAN.

——— "he was moved even to tears."
Unpublished Letter.

Weep! Chairman of a ruined line!
Your Boards disgrace, your Stocks decay;
Oh! would that every tear of thine
Could wash some "damned spot" away.

Weep! for your tears are Folly's tears,
For substance spent and credit gone;
Weep! weep! through all your future years,
You'll ne'er for all your faults atone!

Q. IN THE CORNER.

Paris and Rouen Railway.—"The Company," says the *Courrier de l'Eure*, "has entered into a contract, under penalties, for the construction of the whole of that part of the railway which is to run from Poissy to Asnieres, where it will join the St. Germain road. This contract includes two large bridges over the Seine, one at Besons and the other at Maisons. Another contract has been made for the execution of the two most important and difficult undertakings among the whole line, a tunnel of 3,000 metres between Rolleboise and Bonnieres, and a cutting at Venables, in the arrondissement of Louviers. A third contract will shortly be concluded for the line between Poissy and Mantes. In fine, all measures have been taken for ensuring the completion of the whole road between Paris and Mantes in fifteen months, so that it may be brought into use in the summer of 1842."

RAILWAY SIGNALS.

To the Editor of the Railway Times.

Sir,—I perceive in your Number for the 15th instant, you publish a description of a mode of making signals, proposed by Sir George Cayley. You will find in No. 863 of the Mechanic's Magazine for Feb. 22, 1840, a diagram and description of the very same invention, being a modification of my patent, dated August, 1838. Allusion is likewise made to this modification of my invention in No. 51 (Dec. 19, 1840,) of the Railway Times, which would then have appeared but for the circumstance of the wood-cut having been mislaid. Your insertion of the above in your valuable paper will oblige

Your obedient servant,
W. J. CURTIS.

15, Stamford-street,
Blackfriars Road, Feb. 20, 1841.

RAILWAY MEETING AT GREAT YARMOUTH.

(*Continued from page* 251.)

thought a clause put into the Bill would effect that object for them in the same way as on a line with which he was now busy, the London and Brighton Railway. In this bill a clause had been inserted, that the line from Brighton to Shoreham should be commenced simultaneously, and the consequence had been this that line had been commenced simultaneously with the main line, and had been in operations since last May, though the main line was not completed. Therefore, such a clause would meet the object they had in view, and here was a case exactly in point. [Mr. Fenn said, "It was a most important point."—Hear, hear.] The line itself, which he (Mr. R.) had surveyed, appeared to be as favourable as any line he had met with of the same extent. (Hear.) From Bishop's Stortford to Cambridge would be the most difficult line—there would be three short tunnels. On the portion of the line from Cambridge to Norwich there would be no work of magnitude, except a viaduct at Thetford across the the river, but other portions of the line would make up for that expense. And the thing was, that the materials throughout the line of country over which they passed was of the most favourable kind for embankments and for roads. The line from Norwich to Yarmouth was a most favourable line, being nearly straight, and contiguous to so many villages, (Cheers, and "hear.") He was not aware that there was anything else he wanted to say upon the subject, unless any gentleman present wished to ask him any questions.

Mr. Lacon inquired if it would not be more desirable that the Northern and Eastern should take the line from Bishop's Stortford to Bambridge.

Mr. Rastrick said, that though that was the most expensive portion of the line, it was that which must pay the best. All the North traffic must come there, and that towards Lincolnshire, Lynn, and other northern ports, and pass over it. He believed if that part of the line were taken away from the main line, it would reduce the profit upon that portion of the line. For that reason he thought it desirable that they should retain that portion of it. (Cheers.)

Mr. Lacon again inquired, if it were not true that a railway was talked of from the North Midland, and whether it would not have a good effect on them.

Mr. Rastrick replied, that the line had been surveyed, and that it would be of much benefit to the present line. He had been applied to by the North Midland Company, who were desirous of coming to Cambridge, which would open the line westward, Mr. R. apologized for being brief, by stating that he was just off a journey, having been travelling 18 hours.

B. Term, Esq., proposed a vote of thanks to the Mayor for his handsome conduct on the present, and all other occasions, which was carried by acclamation.

NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Proprietors of this Company was held yesterday at the London Tavern, Bishopgate-street, and was very numerously attended. GEORGE CARR GLYN, Esq. presided.

The advertisement calling the meeting having been read, it was resolved unanimously that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in presence of the meeting. The minutes of the previous half-yearly meeting were then read and confirmed.

The CHAIRMAN said, he hailed with much satisfaction the attendance of so numerous a body of proprietors. The Directors were most desirous to meet their constituents, in order, if possible, by an examination of their accounts, to dissipate the alarm which seemed to have arisen with respect to the condition and prospects of this undertaking. It was the more necessary that this should be done, as the Directors for reasons which would be found stated in the Report, would recommend that for the present no dividend be declared. The balance of profits from the working of the line during the last six months was, they would see from the statement of accounts now in their hands, 31,000*l.*, but it was right to state that that amount was subject to several deductions. In the first place, there was a considerable sum payable, but not paid, on account of interest. Then there had been but a very small charge for maintenance of way, as the contractors had hitherto had to keep the greater portion of the line in repair, according to the usual terms of their contracts. There was also but a small amount put down for rates and taxes, and no fund had been established for depreciation of stock. All these deductions would have to be made, and although even then there would remain a very considerable surplus, the Directors after mature consideration had thought it better not to recommend a dividend on the present occasion. (Hear, hear.) The next point touched upon in the Report was the necessity for another application to Parliament for the raising of further capital. At the last meeting he had expressed a hope and belief that no further application would be required, but that they would be enabled on the credit of the undertaking to make up any deficiency that might arise. They had found, however, in the working of the line that a much larger expenditure would be required than was then contemplated, but he begged that the meeting would not suppose that the further capital now spoken of would be unprofitable, or that it would not add to the revenue already received. In point of fact it would open up new sources of revenue. One object to which it would be applied was the purchase of a part of the line originally intended to belong to the Birmingham and Derby Company, but of which it was necessary this Company should now obtain possession in consequence of the removal of their station from a place called the Old Meadows to its present site. The cost under this head would be about 23,000*l.*, but it would be productive of a double revenue, namely, from the tolls of the Midland Counties' Company, as well as from their own line. The next item of excess was a sum of 100,000*l.* for extra works, and he thought it right to state that this excess had arisen almost entirely upon those parts of the line which had been forced upon them by the opposition which they had met with in Parliament. These portions of the line were of an exceedingly heavy character; they comprised difficulties which no engineer could have foreseen, and had involved of late a very great expenditure. Another unexpected expense had arisen from the necessity of erecting a station at Normanton, for the joint use of this Company and the Manchester and Leeds and York and North Midland Companies. In addition to this, the goods' traffic required a larger supply of engines and waggons, and further warehouses, to the extent in all of 30,000*l.*—an increase rendered necessary by the augmentation which was daily taking place, in this department of the Company's business. He thought these explanations would sufficiently account for the amount of 350,000*l.*, which it was now proposed to raise. He begged to say, that in that amount was included a very liberal allowance for certain contingencies; for he was too well acquainted with railway estimates not to provide against the possibility of having to make a future application of the same nature. The next point in the Report to which he wished to advert, and it would be followed up by a resolution, was the proposed reduction in the number of the Directors from 21 to 13. (Hear, hear, hear.) At the commencement of a railway, a large number of Directors was useful, both in forming the share-list and in inspecting the works, but when a line had arrived at its completion it would be found both convenient and desirable that the number should be diminished. (Hear, hear, hear.) There was only one other subject upon which he would offer a remark, and it was for the purpose of setting the Company right with the public, in reference to the Report of the officers of the Railway Department of the Board of Trade, recently laid before Parliament. They were aware that considerable excitement had of late prevailed in the public mind on the subject of railway accidents. He thought, however, that there had been attempts made in certain quarters to throw an undue share of odium upon those lines which had been opened for the first time in 1840. If the meeting would take the number of miles travelled previous to that period, and compare them with the number of accidents, they would find that the proportion of accidents was not larger now than it was then. With regard, however, to the particular case of this Company, he found in a return contained in the Report alluded to, that they were charged with having killed two persons on the 11th of September, and having wounded two others. He did not know whether any such accident had occurred on that day upon any other line, but it certainly had not occurred on the North Midland. (Hear, hear.) He should not further detain the meeting. The Report contained very fully the points which the Directors were anxious to bring before the proprietors, as in the present position of the Company's shares they had deemed it better that explanations should be given in an official document, than verbally by himself. (Much applause.)

The SECRETARY (Henry Patteson, Esq.) then read the Report as follows:—

REPORT.

The Directors upon presenting to the proprietors this their first Report since the opening of the line throughout, would gladly have accompanied it with the declaration of a dividend; but after deliberate consideration, they have deemed it more prudent to recommend, that the considerable surplus balance shewn by the accounts annexed, should be carried forward to the current half-year. Such surplus, however, will be subject to a reduction in the accruing interest payable in February, amounting to about 10,000*l.*

In the examination of the accounts, the proprietors will not fail to observe the evidence they afford of the economy with which the working of this line of railway has been commenced; but although the expenses incurred in working the line, have been less than might have been expected, the Directors are of opinion that considerable saving may yet be effected, and beg to assure the proprietors that their vigilant and unwearied attention shall be paid to this important subject.

The Directors will not attempt to conceal from the proprietors that they feel disappointment at the present results of the passenger traffic, but at the same time, it is only fair to notice, that the accession which was reasonably to be expected from the entire opening of the Manchester and Leeds, and of the Great North of England Lines, has not been attained, the former not being yet opened through, and the latter only carrying minerals; this circumstance, together with the unfortunate accidents which have occurred on several railways, and the general depression of trade, has tended materially to retard the development of this branch of business.

The Directors, however, have much pleasure in announcing to the proprietors, that for several months past no accident to any passenger has occurred on this line, and that the trains have on the whole kept regular time; under these circumstances, therefore, the Directors trust, without raising undue expectations, that in the course of this year the profit from this class of traffic, may approach more nearly to their anticipations. After expressing their opinion upon this part of the subject, the Directors advert with satisfaction to the state of the goods and mineral traffic, both which promise to become hereafter, most important features in the business of the Company. For their efficient working, great increase in the outlay for the stock of waggons, engines, machinery, &c., is necessary, which compels the Directors, in conjunction with other causes, to make application to Parliament for an addition of 350,000*l.* to the capital of the Company, and they hope this sum, or such part as may be required, will be raised by mortgage of tolls, rather than by an issue of shares.

Arrangements have been made for the building of a commodious station at Normanton, in conjunction with the Manchester and Leeds, and the York and North Midland Railway Companies, (the expense to be equally borne by the three Companies,) at a point of the North Midland Railway, convenient for the passengers using the three lines.

When the Directors confidently expected that the capital authorized by Act of Parliament would be sufficient for the purpose of opening the whole line, they did not anticipate the heavy outlay which would be required to complete the works upon certain points, especially those where they were compelled to deviate by Parliamentary opposition. These works have proved exceedingly heavy, and attended by contingencies in their construction, for which no human foresight could provide; the excess arising on this head, together with the necessity for increased stock for the goods' traffic, the formation of the branch for the collieries of the Duke of Devonshire and Sir Henry Hunloke, under Parliamentary agreement, with the additional stations at Normanton, and for the merchandize and mineral traffic, form the principal items which render this additional capital necessary; but it may be remarked, that upon a considerable portion of it, viz.—the branch line, and the goods' and mineral stations, distinct additional receipts will accrue to the Company.

The proprietors have always been aware that the nature of the country through which the line passes, demanded a great outlay on the works, and that it was sound policy to construct them in the most solid and durable manner; and the advantage of this principle has been fully proved during the present most severe winter, by the works having sustained scarcely any injury, which form a reasonable ground for expecting that the permanent way will be maintained at a comparatively moderate charge.

The Directors beg to mention, that on the decease of Mr. Bagster, the superintendant of the Company, which occurred at a period most calculated to interfere with the progress of the arrangements, Mr. Robert Stephenson kindly stepped forward to carry on temporarily, the duties of the superintendant's department, but having obviated by this intervention, the difficulties in which the Directors were placed, he has retired from the office, retaining, however, the superintendance of the locomotive department, and has been succeeded by Mr. Hanson, with whose exertions the Directors have just cause to be satisfied.

Arrangements have likewise been made to enable the Secretary to pass the greater portion of his time at Derby, maintaining that intercourse with the Chairman, and Board of Directors, which the interests of the Company imperatively demand.

The Directors have now to notify to the proprietors the intention of recommending, for their sanction, that the number of Directors constituting the Board, be reduced from 21 to 13, which number they think will be fully competent to insure the general good management of the undertaking, and at the same time will be a saving to the Company.

In conclusion, the Directors cannot refrain from expressing their sanguine hope, that the causes which have temporarily interfered so seriously with the prospects of this, and of railways in general, will now quickly pass away, and that by co-operating zealously with the authorities of the Board of Trade, and giving full effect to those regulations and arrangements which practical men may suggest, the full advantages which railways possess over every other mode of conveyance, will be realized, and that the proprietors may enjoy the profit to which their enterprise and confidence so fully entitle them.

In compliance with the provisions of the Act of Parliament, the following Directors go out by rota-

The CHAIRMAN moved that the Report be received and adopted, and printed for circulation among the proprietors.

The motion having been seconded,

Mr. BAIN enquired how the further capital could be raised on loan with justice to the present debenture holders?

The CHAIRMAN said, the previous mortgages would, of course, have a priority over the new loan.

Mr. MARTINEAU entirely agreed with the Directors as to the policy of declaring no dividend at present—(hear, hear)—but he was not quite satisfied with the case that had been made out for the necessity of raising further capital. He thought the application to Parliament would alarm the proprietors and the public, unless further explanations were given. (Hear, hear.)

Mr. BAIN said the most unsatisfactory part of the Company's position in his opinion was the small amount of passenger traffic. He had understood that delays had frequently occurred at Rugby, in consequence of the Midland Counties' train missing that of the Birmingham Company. He was acquainted with one case in which the mail had been detained for a whole night. He thought the Directors of this Company ought to see not only that the public were safely and expeditiously conveyed over their own line, but that no delay took place on others. He would suggest, that when a train arrived at the Rugby junction too late for the usual Birmingham train, it should be forwarded by a special engine. (Hear, hear, hear.)

The CHAIRMAN was sure the honourable proprietor would be glad to learn that his suggestion had been acted upon for some time past. In cases of delay the passengers were always sent on by a special train. (Hear, hear.) This was not the case with respect to the mail bags, but as the arrangements in regard to them rested solely with the Post Office, it was for the authorities of that establishment to justify to the country, if they could, the detention for hours of the mail bags, when as had recently happened, the passengers coming by the same train had been sent forward. (Hear, hear.)

Capt. PORTER enquired at what rate minerals were conveyed along the line.

The CHAIRMAN said, the mineral traffic was as yet clearly but in its infancy. Their charge was 1½d. per ton per mile—a charge which had been called too low by some, but which still left very considerable profit. This rate was higher than was charged on the Midland Counties' line, but it might be satisfactory to know, that as the traffic became larger the Company's profit would increase, the charge having been based upon a larger amount of trade than they had yet any right to expect.

Lieut.-Col. NORCLIFFE expressed his gratification at the appointment of a working superintendent so well qualified as Mr. Hanson, and with the intention of their able Secretary to reside at Derby during the greater part of the year.

Mr. COLLETT thought the per centage for working expenses was very high, amounting, if his calculations were right, to 57 or 58 per cent. on the gross receipts, including the money received from other Companies.

The CHAIRMAN said, the sum mentioned in the accounts (33,000*l.*) had been received solely from the working of their own line. It must be evident that the per centage of working expense would be high or low, according to the amount of traffic. It was in the deficiency of traffic that the difficulty lay with this Company—a difficulty which the Directors acknowledged in the Report and sincerely deplored. They ran trains, but these trains were sometimes almost empty, while the expense which they involved was in either case nearly the same. Then, their staff and establishment were proportionate to the traffic which they expected would come, and ultimately he felt persuaded must come, upon the line. If, therefore, their expenses were higher than those of some other Companies, it was easily accounted for; but he did not believe that they were really higher, and he thought if the first half-year's expenses of some of the Lancashire lines were looked to, it would be found that he was right. Of course it was not fair to test their expenses by a comparison with the London and Birmingham, Grand Junction, and other lines, as now for some time established. (Hear, hear, hear.)

Mr. BECK entered at some length into a comparison of the expenses incurred in the construction of the North Midland, and York and North Midland lines. He found, he said, that the amount for land and compensation came to a great deal more per mile on the North Midland than on the contiguous line—that the engineering cost 270*l.* per mile more, and the works 12,570*l.* more. In fact every charge was greater in the one case than in the other, and as a natural consequence their shares were at a discount, and they had no dividend, while the shares of the other Company were at a premium, and they had received a very satisfactory dividend from even the first half-year's receipts. He only referred to the past, that they might draw a lesson for the future, as to economy.

Digitized by Google

Mr. VICKERS expressed his perfect confidence in the capabilities of the line, which only required time and good commercial management to develope them, especially the mineral traffic, which might be rendered unequalled upon any other line on this side of York. There was one item in the accounts which appeared so small, that he thought there must be some mistake. It was an item of only 2,287*l.* for the expenses of two offices, one in London and one in Leeds, including salaries to secretaries, clerks, &c., and every other charge.

The SECRETARY said there was no mistake at all. It comprised the whole of the charges under this head at both establishments during the last six months.

Mr. VICKERS was very glad to hear it. (Hear, hear, hear.) The honourable gentleman then entered into various details respecting the weight of engines, &c., and the form best adapted for the North Midland line, but the opinion of the meeting seemed to be that these suggestions however valuable should be submitted to the Directors, and not brought before a public meeting.

Mr. ALSTON (of Liverpool) strongly recommended that the Report and accounts should be submitted to the proprietors at least a few hours previous to the meeting, in order to give some time for their dispassionate consideration. He alluded to the practice followed by the Liverpool and Manchester, Great Western, Grand Junction, and other lines, and thought it might be advantageously followed in this case. He expressed his gratification at the intention to reduce the number of Directors, and was happy to find that the Directors in their own department were giving such convincing and practical proofs of their desire for economy. (Hear, hear, hear.) He would strongly urge upon the Board the propriety of having as many local Directors as possible.

The CHAIRMAN explained, that of the 13 Directors whom it was proposed to retain, nine were local Directors, and only four resided in London, and that almost all the Board meetings were held in Derby.

Mr. ALSTON urged the great importance of having as much as possible the personal inspection of Directors. He then recommended the policy of low fares, and alluded to the great reduction of 10 per cent. which on the Grand Junction Railway—a model, as he said, for all other lines—had been effected in the working expenses of the last half-year, as compared with those of the preceding.

The CHAIRMAN went over the points touched upon by the several speakers, giving further details of the items of extra expense. In addition to those mentioned above, he said a sum of 87,000*l.* would be required for stations, (including the Company's share of the new station at Normanton); 30,000*l.* for goods' engines, waggons, &c.; 20,000*l.* for the completion of the Company's workshops; and 15,000*l.* for the erection of houses for the Company's servants—an arrangement which he was sure would prove greatly beneficial. (Hear, hear, hear.) With respect to the comparison with the York and North Midland line, although he much rejoiced in the success of that Company, it was not fair to judge of the one establishment by the other. All such comparisons were unsatisfactory and unfair, unless the elements of calculation were in both cases the same. Were the gradients and expenses connected therewith the same in both cases? (Cries of "No," "no.") He would ask the local proprietors if the character of the works upon the two lines was the same? ("No," "no.") Was the value of the property required in the two cases at all similar? ("No," no.") But after all, the secret of the success of the York and North Midland Company lay in this, that their trains were full trains, whereas those of the North Midland had not yet attained that measure of prosperity. With respect to local Directors, he fully agreed in the preference which, other things being the same, ought to be given to them, but he was rather surprised to hear the suggestion come from a Lancashire gentleman. [Mr. ALSTON—Not a Lancashire Director. (Hear, hear.)] If there were any persons who thought local Directors not preferable, it was the Liverpool gentlemen; and in many cases he believed they had been right, for in the first commencement of railways, no other persons had had nearly so much experience in this species of undertaking. (Hear, hear, hear.) As for himself, he confessed that he had intended to retire whenever the railway should be completed. (Loud cries of "no, no," from all parts of the room). He certainly did not covet the office which he had now the honour to hold, but unless it were the wish of the proprietors, he should be sorry to give it up, until he and his colleagues had placed the undertaking in that position which it ought to assume, and which he was satisfied it would at no distant day assume. (Much applause.) He had already referred to the working expenses of some of the Lancashire lines during the first half year of their existence, and a note had just been put into his hand of the cost of working on the Grand Junction Railway during the first half year, from which it appeared that while the gross receipts had been 116,740*l.* the profit had been only 60,704*l.*, thus showing that a comparison of the expenditure of the North Midland line would not be disadvantageous. At the same time he gave every credit to the Grand Junction and Liverpool and Manchester Directors for the reductions which they had recently made under this head of expense, and which, although perhaps in some measure forced upon them by the example of another line, were not on that account the less beneficial to the proprietors. He trusted that the North Midland line would ultimately be on a footing with the most economical railways in the kingdom. (Much applause.)

The motion for the adoption of the Report was about to be put, when,

Mr. BARTON (of Liverpool), handed to the Chairman an amendment to the effect that the question of raising farther capital be put off till next meeting.

The amendment however was not seconded, and the original motion having been put, was carried unanimously.

The CHAIRMAN then proposed a resolution respecting the reduction in the number of Directors, which also was carried unanimously.

Mr. BUCKLEY then proposed the re-election of Mr. Newton, Mr. Titley, and Mr. W. Hood, passing a high eulogium on their efficiency. He was glad to see the number of Directors reduced, as he took it for granted the allowance would be reduced in the same proportion.

The CHAIRMAN—Certainly. (Hear, hear.)

CAPTAIN PORTER seconded the motion.

Mr. BARTON handed the Chairman an amendment to the effect that Mr. Hood be not re-elected, as he held only 10 shares in the undertaking.

There was no seconder, and the amendment fell to the ground. The original motion was then carried unanimously.

Mr. BARTON then brought forward a substantive resolution to the effect that all unnecessary officers be dismissed—that there be but one Secretary, one Treasurer, and one Accountant on the line, and that they reside at Derby.

It was explained that there was only one Secretary, with an assistant Secretary resident at Leeds, and no Treasurer at all.

Some conversation having arisen as to the necessity of having a seconder to a motion or amendment, several proprietors said they would second the motion if the preamble could be proved—namely, that there *were* unnecessary officers. As, however, the honourable mover did not give the data upon which his motion was founded, no seconder appeared, and the proposition fell to the ground.

Mr. BARTON was about to propose a resolution for a list of officers at the stations, with their salaries, when,

The CHAIRMAN said, the Directors would voluntarily supply that and any other information that might be required.

Mr. CHAMBERS went at some length into the question of Sunday travelling by railway, and complained that all the Company's servants were employed for the whole seven days of the week. He thought the blessing of God could not rest upon an undertaking so conducted, and he was of opinion, that even in a pecuniary point of view they were injured. He would move a resolution, that every man be asked whether he would not prefer a smaller salary with the whole of Sunday to himself, rather than a larger salary as now employed.

The CHAIRMAN said, the honourable proprietor was in error as to a fact, inasmuch as one-third of their establishment were wholly unemployed on Sunday. (Hear, hear, hear.)

Mr. GOLDSMID strongly deprecated the discussion of such questions before a commercial body, as calculated to inflict injury on religion. Parliament should be applied to, and if necessary, a general law would be passed applicable to all Companies. (Hear, hear, hear.)

After some further conversation, the motion fell to the ground from want of a seconder.

A motion was then brought forward and unanimously carried, sanctioning the proposed application to Parliament.

Captain PORTER, after dwelling at some length, and with much force, upon the desirableness of there being the very best understanding among Companies so closely connected as the Manchester and Leeds, North Midland, and York and North Midland, suggested that the Chairmen of the three Boards, Mr. Glyn, Mr. Houldsworth, and Mr. Hudson, should meet together and make any arrangements that might be required for the good of all the Companies. The gallant proprietor paid a high compliment to the three Chairmen, particularly to Mr. Glyn, without whom he said he was sure the North Midland Railway would never have been made. The gallant gentleman's address was much applauded.

The CHAIRMAN acknowledged the compliment paid to himself. There were few duties which he should deem irksome if benefit could thereby result to the North Midland Railway. The principle of the suggestion was excellent, namely, that there should be a Committee of the three Boards. Such an arrangement had been adopted with excellent effect upon a metropolitan railway. He doubted, however, whether his local knowledge—he said nothing of his convenience—would enable him to form one of such Committee, but the subject should receive every attention. (Hear, hear, hear.)

Mr. HUDSON (Chairman of the York and North Midland Company) spoke to the same effect, and stated that at present the best feeling existed, so far as he knew, among the three Boards.

Mr. PARSONS inquired if the North Midland Company had agreed to reduce the tolls payable by the Manchester and Leeds Company, so as to enable that Company to carry passengers by a round-about route in rivalry to the Grand Junction Company.

The CHAIRMAN said, the North Midland Directors had been perfectly cognizant of the arrangement alluded to, but from what had transpired that morning, he doubted whether after all it could be carried into effect. The Directors of the North Midland Company had felt themselves bound, on the score of revenue, to entertain the proposition made by the Manchester and Leeds Company, as it would involve no additional expense; but he doubted the policy of the arrangement. With regard to the neutral traffic, as he might call it, such as that from Halifax and other places, the tolls remained without diminution.

Mr. PARSONS said, he was not interested in either the Grand Junction or Manchester and Leeds line, but he thought rivalry of this kind between Companies ought not to be encouraged. (Hear, hear.) They had enemies enough elsewhere, without fomenting dissensions among themselves. (Hear, hear, hear.)

Lieut.-Colonel NORCLIFFE inquired if the Directors had received any definite information respecting the coast line to Scotland, which would, exert so beneficial an influence on the North Midland line.

The CHAIRMAN said they were awaiting the Re-

Digitized by Google

port of the Commissioners, but there could be no doubt that under any circumstances a line of railway communication would be completed from York to Darlington, which could not fail to be of great importance to the North Midland line. (Hear, hear, hear.)

In answer to a question it was stated that the receipts from the Manchester and Leeds line were included in the weekly returns of traffic, published in the *Railway Times*, and that minerals were comprised under the term "goods."

The CHAIRMAN, having consulted with his colleagues, said, there could be no objection at all to having the Report and accounts ready a few hours previous to the meetings. (Hear, hear, hear.) There were strong objections to an earlier publication, principally as taking off from the interest of the meetings.

Mr. ALSTON felt greatly indebted for the promptitude with which his suggestion had been met, and begged in his allusions to local Directors to disclaim all reference to their excellent Chairman, of whose value they had that day had an additional proof. (Much applause.)

Captain PORTER then moved, and Mr. ALSTON seconded, a vote of thanks to the Chairman and Directors.

A PROPRIETOR suggested that in the event of a vacancy at the Board, Mr. Hudson, Chairman of the York Company, should be appointed.

Mr. HUDSON begged to decline the honour, in case any subject of difference should arise between the two Boards—which, however, he did not anticipate. (Hear, hear.)

The motion was put by Captain Porter, and carried by acclamation.

The CHAIRMAN returned thanks, expressing a hope that he should preside at many a pleasanter meeting, when they would have a handsome dividend to declare.

The meeting then broke up.

LONDON AND BLACKWALL RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly General Meeting of the proprietors of this Company was held yesterday at the London Tavern, Bishopgate Street, WILLIAM ROUTH, Esq., in the Chair.

The CHAIRMAN, in commencing the proceedings of the day, said, in compliance with the wish expressed at the last meeting, a copy of the Reports, as well as a statement of the accounts, had been sent to every proprietor, and although these documents had thereby probably lost some of their interest, it was requisite that they should be formally read, and as the Secretary was labouring under a very severe cold, Mr. Tyreman, one of the Company's solicitors, would, with permission of the meeting, read them.

Mr. TYREMAN accordingly read as follows:—

DIRECTORS' REPORT.

SINCE the last meeting of the shareholders, the railway has been in uninterrupted operation, notwithstanding the various impediments which the heavy fogs and severe frosts have occasioned in other modes of travelling. The number of passengers conveyed on the railway up to the 31st December, comprising a period of somewhat less than six months, has been 949,246; considerable as this number is, it will be remembered, that up to the month of August, one line of rails only having been completed, the traffic was necessarily confined to half-hour trains, and that some of the intermediate stations could not be opened till the end of September. It was found too, that almost all the steam boats had fixed engagements at other wharfs, which either prevented them altogether from transferring their traffic to Blackwall, or were the means of delaying their doing so, until the best part of the season had passed away.

These circumstances, acting in connection with the inconvenience which, as the Directors foresaw, has resulted from the distance of the station at the Minories from the seat of business, have of course operated to delay the development of the traffic that may fairly be expected on the line; but enough has already been elicited to induce the Directors to believe, that they have been justified in the sanguine expectations which they had formed.

The Directors have used every means in their power for the early removal of all these difficulties and arrangements have been made for steam communication during the ensuing season, which they doubt not will lead to a very large increase of traffic.

The Woolwich Steam Boat Company, the first to try the experiment of opening a direct communication between Woolwich and Blackwall in connection with the railway, are building, and will in a few days launch some boats specially for this service; and they have entered into arrangements to run from and to Blackwall every 15 minutes throughout the day.

The Watermen's Company are building new steam boats, some of which are to run between Blackwall and Greenwich; and the Directors finding it impossible to make any satisfactory arrangements with the owners of the present Gravesend boats, the very large traffic of that place has proved almost wholly unproductive to the railway; and the Directors have therefore been instrumental in getting three iron steam vessels built, to run exclusively between Gravesend and Blackwall; and they have reason to believe, that their superior construction, and great power, will ensure a large proportion of that important trade.—One of these boats is already launched, and in a few days the proprietors will be able to fix the time for the running of all three.

Other arrangements for the developement of the river traffic are under negociation, but the Directors are not yet enabled to speak of them with the same certainty.

The arrangements for the extension of the line into Fenchurch-street are in active progress. The property is all purchased, and a great part of the ground is cleared. The contract for the execution of the work has been taken by Mr. Thomas Jackson, under an engagement to complete the same by the 15th May next; and with some little additional time for laying the rails and other requisite arrangements, the whole line may be ready to receive the trains in the month of June.

In considering the precise position of the terminus in Fenchurch-street for this contract, with a view to opening the most convenient area for carriages, as well as the most useful and profitable appropriation of the surplus ground, it was suggested, that an important improvement might be made by carrying the railway across London-street westward, and by clearing the space between that street and Mark-lane, including the frontage to Fenchurch-street; thus making an opening at once to Mark-lane, Billiter-street, and Fenchurch-street, and at the same time removing the inconvenience resulting from the narrowness of Fenchurch-street at that particular point.

The Directors are so convinced of the advantages which would result from this change, that they propose applying for power to make the alteration, and have proceeded to give the requisite notices. In case the change shall be effected, a great deal of the property which they have already purchased will remain undisturbed, and for the present they have confined their arrangements to a temporary station, which, however, will be on a scale to answer all the necessary purposes.

With this uncertainty as to the cost of the property and the value of that which will remain, it is impossible for the Directors to state exactly what the ultimate cost of the line may be, but, it is clear, that it will require a sum considerably beyond the present capital, and the money which the Company have the power to borrow; and the Directors recommend that in the intended application to Parliament, powers be taken for raising the amount that may, under any circumstances, be required.

In works of this nature, where those of a similar description have been previously executed, an excess of the estimates has in most, if not in all cases, been found inevitable, and the excess in the present case may be attributed partly to the same causes, but mainly to the novel character of the line in all its leading features, and to the violent and persevering hostility which has attended every step of its progress.

In order to meet the possible extent of this excess, the Directors recommend that a sum of 150,000*l.* be raised by new shares; that they should have power to issue them on such terms as may hereafter be determined upon, on the principle that they be offered to the holders of the present shares at such a rate as will, at the time, give them a fair bonus,—when this capital is subscribed for, the Directors will have the power to raise a further sum of 50,000*l.* upon debentures, which they purpose doing, and any part of the 150,000*l.* not required for the completion of the works will of course not be called, but will remain as a fund towards the extinction of the debenture debt.

The Directors have already adverted to the fact, that 949,246 passengers were carried on the railway between the 6th July and 31st December, during which time the receipts amounted to 15,781*l.* 11s. 6d. Against this, the disbursements for coals, stores, mileage duty, rent to the Dock Company, gas lighting, and the wages of all persons whatever employed on the line, or at the stations, were 7,630*l.* 1s. 3d., besides the sum of 2,000*l.* 8s. 5d. due on the 31st December for similar expenses, which would leave an apparent balance of 6,151*l.* 1s. 10d. in favour of revenue; but the Directors, while they on the one hand wish to state that many of these expenses were necessarily heavier during the first few months that the railway was opened, than they are likely to be for the future, think it right to remind the proprietors that there are several items of expenditure not included under the above heads, some part of which would be chargeable to revenue. The Directors allude to the first cost, and wear and tear of the rope and sheaves on the first experimental working of the line, and to various other items which, though they will necessarily involve a certain annual charge of an amount not at present ascertained, have occasioned an expenditure which cannot upon any fair principle be charged against the revenue of a single half year.

They also allude to the general expenses of the Secretary's and Engineers' departments, some of which arise out of, and others are greatly increased by the prosecution of the new works.

On account of the impossibility of ascertaining what portion of these expenses ought respectively to be charged to revenue and to capital, the Directors have found themselves unable to lay before the proprietors an accurate revenue account up to the 31st of December, which they regret the less, because they do not recommend any division of that fund arising from this, the experimental working of the first half year.

The Directors, however, think it will be satisfactory to the proprietors to know, that upon as accurate an estimate as can be made of all the current expenses, including every item of expenditure except the mileage duty (the amount of which entirely depends on the extent of the traffic), and the interest of the debenture debt, they have every reason to believe that they will not exceed 425*l.* per week.

In conclusion, the Directors have to submit to the proprietors the Report of the Engineers, and to state that with reference to the necessary speed from end to end—to the almost unlimited number that can be carried in each train—and the advantages of numerous intermediate stations, proved as they are by the experience of the last eight months—they are more than ever satisfied that the plan of working the railway by stationary power is the only one that could with advantage have been adopted. They also concur with the Engineers in the opinion they have expressed of the efficiency of the engines and machinery, and of their expectation that all difficulties with regard to the rope will be removed by the means that are proposed; and it is a satisfaction to them that on the introduction of a principle involving so much of an experimental character, so large a traffic has been conducted without the occurrence of a serious accident to any passenger.

On this occasion three of the Directors go out of office by rotation, and the lot having fallen on Mr. William Routh, Mr. Henry Harvey, and Mr. William Haigh, these gentlemen being eligible offer themselves for re-election.

The usual half-yearly account, together with a general statement of the receipts and disbursements up to the end of the past year, accompanies the Report, and will be in the hands of every shareholder.

[We must postpone the Engineer's Report and Balance-sheet till our next.]

The CHAIRMAN said he believed the points upon which the meeting would be most anxious to receive explanation were, first, the proposed change in the site of the London terminus; and, secondly, the farther amount of capital required. (Hear, hear.) With respect to the first point, he had only to say, that whether they crossed London-street or not, it was the unanimous opinion of the Directors, and the opinion of others, that the public convenience would be promoted, by effecting an opening to the westward instead of to the north, as originally intended. They would thus have a more direct communication towards the western part of the metropolis, which was considered of greater importance than one to the north. They would also be enabled to communicate with Billiter-street, which would have been impossible, under existing arrangements,

Digitized by Google

and have the farther advantage of having but one area for carriages instead of two. The Directors were of opinion, that the alterations now in contemplation, instead of adding to the cost of the undertaking would be a measure of economy. Till they obtained power to effect these changes, the Directors proposed to take steps for opening a temporary communication with London-street. They would endeavour to secure the insertion of a clause in the Company's Bill now before Parliament, to authorize the proposed alteration, but it was doubtful whether they would succeed. (Hear, hear.) If they did not, it would arise solely from the operation of the Standing Orders, for the Directors had reason to know that the neighbourhood, the public, and such members of the Corporation as they had communicated with on the subject, were anxious that the alteration should take place, for this reason, among others, that it would remedy the inconvenience to be apprehended from the narrowness of Fenchurch-street, near Mark-lane. With regard to the excess of estimates, this had arisen from various causes as adverted to in the Report. A considerable excess had taken place on the estimates of the engineers, but it was due to these gentlemen to state, that in the original estimate, the cost of the stationary engines and engine house, had been set down at 35,000*l.*, and the annual expense of working at 12,000*l.* per annum; whereas, after mature consideration it had been deemed advisable to substitute another description of engine of a much more expensive kind. It had been considered that the high-pressure engines at first contemplated, would not be on the whole the most judicious. Had these been adopted, the first cost would have been less, the space required for them would have been less, and the machinery would altogether have been of a less ponderous description. The engineers, however, had given the preference to low pressure engines, and the first cost had therefore been increased. The engines had cost 47,000*l.*, the tank and well 9,000*l.*, and the engine-house 25,000*l.*, being in all 84,000*l.*, or an excess of 49,000*l.* over the original estimate. An excess of this character was not to be justified except on the ground that the annual expense of working would be reduced and this had been the case; for instead of 12,000*l.* it had been reduced by 4,720*l.*, namely, to 7,280*l.* In addition to this great saving, the engines now in use were less liable to accidents. The great saving had been in the important article of fuel. It had been expected that 200 tons of coal would have been required per week, whereas the actual amount had been reduced as low as 54 tons per week. With regard to the other estimates, he would say, that no excess had arisen on the estimates for property. The Directors had hoped, indeed, that when the width of the viaduct was reduced, a reduction would have taken place in the estimate for land; but when he informed them that they had had 1202 claims before them, and when they recollected that in all such cases the scale was uniformly turned in favour of unwilling sellers, they would see that even so small a sum as 10*l.* in each instance, would, in the aggregate, amount to a very large sum. Another cause of excess had been the law expenses arising from the litigious spirit with which they had been met at every point. (Hear.) He hoped the proprietors would not think that the Directors had gone unnecessarily into court, when he informed them, that out of the 1202 cases above referred to, they had been compelled to go into court with only 52, nor that these cases were not fit objects for consideration of a jury, when they knew that the claims in respect of them had been 104,900*l.*, and the awards 56,000*l.*, being a saving of 50,000*l.* (Hear, hear.) He was sorry to say, that although they had, in every case where they could, taxed the costs of adverse solicitors, these costs had been little short of 20,000*l.*, and of course had led to expenses with the Company's own solicitors. On this point he had nothing to add, except that the accounts were always open for the inspection of proprietors, and that the Secretary was instructed to afford every facility for this purpose. (Hear, hear, hear.) Another point of interest was the rope by which the line was worked. The engineers were of opinion, and the Directors agreed with them, that all difficulties were got over, and that before the large stream of traffic came upon the line, they would be enabled fully to receive it. (Hear, hear, hear.) The number of passengers had not disappointed the Directors, all things considered, and the receipts would have been greater had it not been that the fares were, for certain reasons, 3d. at first instead of 4d. They had also, for precaution's sake, employed two conductors on every train, but this would be only for a time. The extension of the line would be opened in June, and till then their traffic could not be fully developed. It was satisfactory to state, that the whole of the shares were placed, and that the total arrears on calls, including the last call in November, and referring principally to it, were under 19,000*l.* (Hear.) If the Report were confirmed, the Directors had made such arrangements that only one call of 2*l.* would be made on the new shares during the present year. (Hear, hear.) Reverting to the expenditure, it would be satisfactory to know, that in the calculation of 425*l.* a week, a very liberal scale had been adopted, and that this was the maximum expense of the maximum traffic. Unlike other lines their expenditure would not be a per centage on the gross receipts, but would remain almost the same (mileage duty excluded) whether the traffic were large or small. If, therefore, their traffic were trebled, as there was good reason to believe it would be, the per centage of expense, instead of 50 would be about 16. (Hear, hear, hear,)

In answer to a question, the CHAIRMAN stated that the iron steamers referred to in the Report were totally unconnected with the Company, being at the risk of the Directors and some of the principal shareholders, but by and by, when their operations were enlarged, any proprietor who pleased, would be admitted to a participation in the speculation.

In answer to another question it was stated that the total law costs incurred in the purchase of property, had been little less than 50,000*l.*

A PROPRIETOR inquired if the Directors had determined at what prices the shares were to be issued.

The CHAIRMAN said, they had not yet determined the price.

A very long, and, at times, rather acrimonious discussion followed, but the particulars we are compelled to defer till next week.—An amendment was moved, but ultimately withdrawn, that the Report be not adopted. The Report was then received, and adopted with but one dissentient. The Directors named in the Report were next re-elected; and after a vote of thanks had been passed to the Chairman, the meeting separated.

EDINBURGH AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

THE Sixth Half-yearly General Meeting of the Proprietors of the above line of railway was held on Monday in the Railway Office, Queen-street, Glasgow; JOHN LEADBETTER, Esq., Chairman of the Directors, presiding.

The Directors reported favourably of the progress of the undertaking during the last 6 months; they look forward to the opening of the line in August, and they state that the sum expended on the works since last June to December amounts to 194,179*l.* 7*s.*, which would enable the shareholders to judge of the amount of work performed during that period. The report was unanimously approved.

The next subject was one of great importance to the undertaking, and one which has caused considerable difference of opinion, namely, whether the line, after its opening, shall be divided into two portions, called the Edinburgh division, and the Glasgow division, the management of which is to be entrusted to two Committees of the General Board of Directors, having co-ordinate power, as has been the case during its formation; or whether the whole is to be managed as one entire and continuous railway by the General Board itself.

Mr. LEADBETTER moved a series of resolutions in favour of concentration, and a concentrated board of management to sit in Glasgow; and also in favour of a union of the engine and carriage workshops, both on the score of economy and efficiency.

Mr. LEARMOUTH, of Edinburgh, moved an amendment, that the line should continue to be managed as hitherto.

There were about sixty proprietors present, and the subject underwent a lengthened discussion. The concentration plan was supported by Messrs. J. G. Hamilton, Mackenzie Kirkland, Andw. Brand, and others. The division plan was supported by Messrs. H. J. Caddell, of Cookenzie, S. J. Sligo, of Carmyle, and others. J. Christison, Esq., advocate, and E. D. Sandford, Esq., spoke in favour of delay. The meeting came to a division, when the voting stood as follows:—Proprietors in favour of the concentration plan, either present or by proxy, represented 10,000 shares, and gave 1,575 votes; those for division represented 3,650 shares, and gave 454 votes.—Majority, 6,400 shares, and 1,121 votes. Nearly the whole of the qualified proprietors voted on the occasion, either personally or by proxy. Resolutions in favour of concentration have been passed in Manchester and Liverpool.

[We must, for the present, content ourselves with this short sketch, but shall give farther details in our next.—ED. R. T.]

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BRISTOL AND EXETER RAILWAY.

Feb. 24.—Petition for Bill reported, and Bill ordered to brought in by Mr. Henry Berkeley, Mr. Philip Miles, and Mr. William Miles.

DURHAM AND SUNDERLAND RAILWAY.

Feb. 19.—Bill "to enable the Durham and Sunderland Railway Company to raise a further sum of money, and for amending the Acts for making the said railway," presented and read the first time.

Feb. 22.—Printed brevinte of Bill laid on the table.

Second reading fixed for Friday, 26th February.

EASTERN COUNTIES' RAILWAY.

Feb. 22.—Bill read a second time and committed, and referred to the Committee of Selection.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

Feb. 19.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Wallace and Lord James Stuart.

Feb. 22.—Bill "to enable the Glasgow, Paisley, and Greenock Railway Company to raise a further sum of money, and to amend and enlarge the powers and provisions of the Acts relating to the said railway," presented and read a first time.

Feb. 25.—Printed breviate of Bill laid on the table.

GREAT NORTH OF ENGLAND RAILWAY.

Feb. 19.—Bill "for amending and enlarging the provisions of the several Acts relating to the Great North of England Railway Company, and for other purposes relating thereto," presented and read a first time.

Feb. 22.—Printed Breviate of Bill laid on the table.

LONDON AND BLACKWALL RAILWAY.

Feb. 24.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Alston, Mr. Thomas Duncombe, and Mr. Muskett.

PRESTON AND LONGRIDGE RAILWAY.

Feb. 19.—Bill read a second time and committed, and referred to the Committee of Selection.

Feb. 23.—Bill referred to Mr. Bernal, Sir Hesketh Fleetwood, and Mr. Townley Parker.

Meeting of Committee fixed for Thursday, March 4th.

SHOTTS AND WILSONTOWN RAILWAY.

Feb. 23.—Committee on petition postponed from Monday 1st, till Wednesday 3d, March.

SOUTH-WESTERN RAILWAY (No. 1.)

Feb. 22.—Bill read a second time and committed, and referred to the Committee of Selection.

Digitized by Google

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

Feb. 23.—Petitions in favour of the application: from Nuneaton and Atherstone; to lie on the table.

Feb. 24.—Petitions complaining of non-compliance with the Standing Orders:—From owners and occupiers of lands upon the proposed line (two petitions); Company of Proprietors of the Trent and Mersey Navigation; Company of Proprietors of the Staffordshire and Worcestershire Canal Navigation; and, Birmingham Canal Company; referred to the Select Committee on petitions for Private Bills.

THAMES HAVEN DOCK AND RAILWAY.

Feb. 20.—Committee on petition fixed for Wednesday, 3rd March.

WISBAW AND COLTNESS RAILWAY.

Feb. 19.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Oswald and Mr. Lockhart.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

Feb. 19.—Bill read a second time and committed, and referred to the Committee of Selection.

Feb. 23.—Bill referred to Mr. Bernal, Mr. John Dundas, and Mr. J. H. Lowther.

Meeting of Committee fixed for Thursday, March 4th.

Feb. 24.—Committee on Bill fixed for Thursday, 4th March.

Feb. 25.—Petition of the Hull and Selby Railway Company against the Bill; referred to the Committee on the Bill; counsel ordered.

RAILWAY ADJUDICATION.

BASTRICK v. LAMBERT.

Court of Exchequer, Feb. 22.—This was an action brought by the plaintiff, a civil engineer of eminence, to recover from Mr. Gustavus Lambert, an Irish gentlemen of extensive property, the sum of 337*l.*, for professional services.

Sir F. Pollock for the plaintiff, and Mr. Kelly, with whom was Mr. Smith, for the defendant.

It appeared that in the year 1836, when the Dublin and Drogheda Railway Company Bill was before Parliament, Sir Henry Meredith and other gentlemen, amongst whom, it was alleged, was the defendant, sought to establish a rival Company, and to bring under the notice of the legislature a rival, and as they contended, a better line of railway. A Provisional Committee was formed to superintend the proceedings in Parliament, and oppose the Dublin and Drogheda Bill, and a Mr. Pentland, a solicitor, was employed to conduct the opposition The plaintiff made surveys, examined maps and plans, attended before a Committee of the House of Commons, and in other respects performed services of great importance in furtherance of the views of those who projected the rival line. The result of the opposition was, when the Dublin and Drogheda Railway Bill got before the House of Lords, it was deemed expedient to buy off the opposing Company, which was effected upon the payment of a considerable sum of money. The defendant was one of the provisional Committee of the rival Company, and it was proved had himself nominated some of the other members of the Committee. The defence set up was that the opposing Company was not a genuine Company, but a mere experiment by Mr. Pentland, who had induced the defendant and others to lend their names, and had employed the plaintiff without any authority from the members of the provisional Committee.

Lord ABINGER told the jury the question was whether the defendant, by allowing his name to go forth as one of the Committee, had not induced the plaintiff to give his services, and thereby rendered himself liable. If Mr. Pentland was employed by the Committee to oppose the Bill, he might retain the plaintiff, on their credit, if his services were necessary.

The jury found for the plaintiff—Damages 337*l.*

ACCIDENT ON THE GREAT WESTERN RAILWAY.—An accident occurred to the *Lion* engine attached to the short train to Maidenhead, which left Paddington at half-past eight o'clock on Saturday morning last, causing considerable alarm to the passengers, but fortunately unattended with any serious results. Just as the train arrived at about the centre of the Hanwell viaduct it came to a sudden stop, in consequence of a large piece of iron attached to the engine becoming loose and getting entangled in one of the large centre wheels. A man was immediately sent back to the Hanwell station to have signals instantly hoisted to prevent the next train, which was expected in a few minutes, from running into the one delayed. After a stoppage of nearly an hour and a half (during which time none of the passengers were allowed to leave the carriages), the engineers, with hammers and other tools, managed to clear the piece of iron from the wheel of the engine; but in consequence of some damage which had been done to the machinery in the course of their labours, the engine would not move an inch—the steam rapidly escaping, apparently from the bottom of the boiler. Long before this time the nine o'clock down train, with the *Hesperus* engine, had arrived on the viaduct; and the only mode of getting forward with both trains was found to be to have recourse to the engine of the last train to push behind. This was done, and the whole party arrived at Maidenhead about two hours beyond the usual time. One gentleman, who had to be at Southal to attend to an important appointment, scrambled over the doorway of the carriage, which was securely fastened, determined to disobey the regulations of the company.—*Daily Papers of Monday.*

MARYPORT AND CARLISLE RAILWAY.—A General Meeting of the shareholders in this Company was held at Aspatia, on Friday last, Sir Wilfred Lawson, Bart., in the chair. A report was read from the Directors, showing a profit of 2½ per cent. per annum since the opening of seven miles at Maryport in July last. There are several coal pits opening near the line, and it is expected the revenue will be nearly doubled in a short time. Nearly 5000*l.* was invested in new shares at the meeting, which puts the Company in a position to raise funds by borrowing. It is probable that the line will be commenced from Carlisle to Wigton in the course of the summer.—*Carlisle Patriot*, Feb. 19.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 916, Published this day, price 3d., contains Abstracts of the following recent Specifications:—Froulat's, for improvements in the manufacture of Vinegar; Sanders, Williams, and Taylor's, for improvements in ploughs; Trewhitt's, for improvements in applying the power of Steam engines to paddle-shafts used in propelling vessels; Beetson's, for improvements in water-closets and stuffing boxes, applicable to pumps and cocks; Smith's, for certain improvements in carriage wheels, rails, and chairs for railways; Edwards', for preserving potatoes and other vegetable substances; Wetterstedt's, for preserving vegetable, animal, and other substances from ignition and decay; Poncy's, for improvements in clocks and chronometers.

Also, descriptions, with engravings, of an improved drainage water wheel; a disquisition on the blow-pipe, and on the passage of flame through reticulated structures: an improved break for railway carriages; papers on the prevention of railway accidents; rotary and reciprocating engines, screw propellers; everlasting pens; on lighting and heating conservatories with simple gas burners; practical trisections of angles; new sounding lead; on the crank, and long and short connecting rods; extraordinary experiment—terrific explosion; city fire escapes; science in Calcutta; Lists of Designs Registered and Patents granted in February, &c. &c. &.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

THE RAILWAY CALENDAR FOR 1841, Illustrated with an elaborate and splendidly executed MAP OF THE RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information, besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street, and sold by all Booksellers and Newsmen.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan *(Manufactured by Machinery, and registered pursuant to Act of Parliament)* offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10*s.* to 15*s.* per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

THE THAMES TUNNEL is open every day (except Sundays), from nine o'clock in the Morning until 6, p.m. Admittance, 1*s.* each. Entrance on the Surrey Side of the River, close to Rotherhithe Church. The Tunnel is brilliantly lighted with Gas. Visitors can now walk under the entire breadth of the River, and approach the Shield, which is advanced to within the limits of High Water Mark at Wapping.

By Order,

J. CHARLIER, Clerk to the Company.

Company's Office, Walbrook Buildings, Walbrook,
February, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

REPORT TO THE GENERAL MEETING, 17th February, 1841.

During the time which has elapsed since the General Meeting in August, the Directors have been actively engaged in forwarding the execution of the works then announced as contracted for, which, with the Etherow Viaduct, now also under contract, completes the letting to Glossop. Although extending over only 11 miles on the rails, these works contain more than one-half of the earthwork of the whole line, and the contractors are proceeding rapidly with them, for the purpose of opening about eight miles to the crossing of the Hyde and Mottram Turnpike Road in September next, (which will accommodate the traffic of Mottram, Godley, Hyde, Newton, Dukinfield, Stalybridge, and Ashton,) and the remainder of the line to Glossop in the spring of 1842. The tunnel works are steadily and satisfactorily progressing, details of which, and of the state of the whole of the works under contract, will be found in the Report of the Engineer.

The Directors being anxious to give full information to the shareholders upon all matters connected with this undertaking, have caused an account to be taken by competent persons of the present traffic between Manchester and Glossop, and the intermediate places, and, after careful revision, they have much pleasure in laying an abstract of it before the meeting. In this statement they have excluded all traffic of a doubtful character, such as the goods' traffic of Ashton, Staleybridge, Dukinfield, Godley, Newton, Hyde, and Sheffield, the greater portion if not the whole of which must ultimately come upon the line.

On the 31st of December, 1840, the outlay amounted to £168,077 13*s.* 6½*d.*, as shown in the annexed abstract of accounts. For the completion of the contracts to Glossop, tunnel works, Management, payment for the purchase of land, the Manchester stat on, and all incidental expenses, a further sum of £318,020 is estimated to be required, making the total outlay on the 1st of May, 1842, £486,097 13*s.* 6½*d.* From that part of the line from Manchester to Glossop, then ready for opening, a net annual income of £31,914 2*s.* 4*d.* may be safely calculated upon, which will yield a profit of 6½ per cent. per annum upon the whole expenditure then incurred; and it must not be forgotten that in this sum is included nearly £180,000 paid on account, and forming a part of the estimated cost of the whole line.

The Directors have frequently discussed the question of commencing the eastern division of the line. They are convinced that a very large thorough traffic would be commanded by the completion of the works on both sides of the tunnel, and, until that was opened, running coaches over the Summit Ridge; but the contracts already entered into have absorbed, and required even more, than the whole of their available funds.

The Directors cannot omit to congratulate the shareholders upon the successful termination of the legal proceedings, by the decision of the Court of Exchequer, in favour of the Company upon all the points raised at the trial of the actions at the Liverpool Assizes. There is little doubt that many wealthy shareholders, not parties to those actions, held back the amount due from them awaiting their decision. This, combined with the large amount owing by the parties against whom actions had been brought, and the commercial depression of the country, compelled the Directors to exact from the shareholders who had the means, and the inclination to pay, frequent and heavy calls; and they assure those shareholders that they did this with great reluctance, and that prompt and vigorous measures will now be adopted for obtaining payment of all recoverable arrears.

Desirous of acquiring a thorough knowledge of the proprietary, the Directors have carefully examined the share list, and concluded to recommend for forfeiture 219 shares, upon which an average of 9*l.* 14*s.* 1½*d.* per share has been paid. To the holders of these shares the requisite notice

Digitized by Google

have been given, and it remains with the meeting to determine upon the confirming their forfeiture.

The investigation of the share list is a work of considerable time and labour; but the Directors feel confident that when it is effectually weeded there will remain a sound and responsible proprietary, fully equal to carry so large a portion of the line to profitable operation, as will enable the Company to avail itself of the clause in its Act of Parliament which empowers it to obtain money on loan, and thus afford relief to the shareholders in the payment of future calls; and that eventually the doubtful shares will get into such hands as will ensure the successful completion of this great national undertaking.

ABSTRACT OF TRAFFIC.

To the Directors of the Sheffield, Ashton-under-Lyne, and Manchester Railway Company.

Gentlemen,—I beg to submit to you the following Report of the state of the works now in operation:—

No. 1, or Ardwick Contract.—The long embankment at the commencement of this contract is going on well; locomotive power being now employed to transport the earth for its formation. The brick retaining walls are completed, and the occupation bridges are in an advanced state from the Pottery-lane to the Stockport canal.

The aqueduct which passes the railway under this canal is finished, and a single line of permanent road is laid for three-quarters of a mile in length from this point. A considerable quantity of spoil cutting has been disposed of west of "Trail Dogs."

No. 2, or Newton Contract.—A length of half a mile at the westerly end of this contract has been formed ready to receive the ballast for the permanent way. The only work of consequence on this portion of the line is the Tame valley embankment, which is being carried forward from each end, a temporary bridge having been erected over the Peak Forest canal to avoid the stoppage which would otherwise have taken place until the permanent bridge was finished. The masonry on this contract is in a very advanced state. Nearly a mile has been formed and ballasted at Duckinfield, for the permanent road, which will very shortly be laid at that place.

No. 3, or Hattersley Contract.—A good deal of work has been executed on this length since my last report. The viaduct at Mr. Turner's is ready for receiving the centres, the piers being all up to the springing level. The arches across the turnpike road at Godley are finished, and the embankment at that place is in active progress. The spoil cutting at Hattersley presents an animated picture, from the number of men employed there. The Hattersley tunnel, from the large quantity of water and quicksand, has only been worked from one shaft.

A side drift is, however, in progress, which will remove this difficulty, and we will shortly be enabled to advance here more rapidly. The retaining walls opposite to Harewood Lodge are also in progress.

No. 4, or Etherow Viaduct.—Since my last Report this viaduct has been let to Messrs. Henry and Co., and consisted of four stone arches. In consequence of the opposition of the lessee of the land upon which one of the piers was to have been placed, it is thought probable that the design of this bridge may be altered to one which will span across the ground in dispute. If this be the case a timber structure upon stone piers will be the cheapest and most expeditious mode of obviating the difficulty—no time will be lost in getting this matter settled.

No. 5, or Gamely Contract.—The embankments at each end are going on favourably from the cutting in the centre. This is a short contract and almost entirely earthwork.

Summit Tunnel.—The works at the summit are now in a much more favourable position than they have been. In the western driftways a bed of shale has been entered upon, and it is expected to continue for some distance.

No. 1 shaft has been delayed in consequence of an accident which happened to the engine there. It has at length, however, been put right, and the sinking recommenced. We have been much delayed by water at all the other shafts, but they are nevertheless steadily progressing, every precaution having been taken to keep out the various springs. The eastern driftways in consequence of the rock being more open are advancing rapidly.

In conclusion, I have much pleasure in stating that the works are going on very satisfactorily, and that much activity is displayed on all the contracts.

I am, gentlemen, your obedient servant,
ALFRED D. JEE.

Dinting Vale, Feb. 16, 1841.

Examined and approved, JOSEPH LOCKE.

Moved by David Waddington, Esq., seconded by Cornelius Randall, Esq., and carried unanimously—

That John Parker, Esq., M. P., take the chair.

Moved by W. P. Bradshaw, Esq., seconded by John Bennett, Esq., and carried unanimously—

That the report of the Directors now read be received and printed for circulation amongst the shareholders.

Moved by John Sidebottom, Esq., seconded by Samuel Lees, Esq., and carried unanimously—

That the abstract of accounts now produced be also printed and circulated with the Report.

Moved by James Bernard, Esq., seconded by Samuel Lees, Esq., and carried unanimously—

That the Report of the Resident Engineer, certified by the Engineer-in-Chief, now read, be printed for circulation amongst the shareholders.

Moved by Thomas Smith, Esq., seconded by William Butcher, Esq., and carried unanimously—

That the declaration of forfeiture made by the Directors of the following shares of the following parties be confirmed, viz.—

James Hopwood	15	shares,	numbered	2444 to 2458 inclus
Henry Hough	15	do.	do.	3480 to 3494 do.
Charles Bradbury	10	do.	do.	2940 to 2949 do.
Wm. Christ Hardy	30	do.	do.	1101 to 1130 do.
Robert Gainsford	10	do.	do.	1151 to 1160 do.
John Brown	2	do.	do.	5757 to 5758 do.
W. Burrows Naylor	5	do.	do.	822 to 826 do.
Thos. Asline Ward	23	do.	do.	5802 to 5824 do.
John Yeadon	6	do.	do.	4419 to 4424 do.
Robert J. Gainsford	103	do.	do.	61 to 70 do. 8887 to 8896 do. 4404 to 4408 do. 118 to 145 do. 736 to 765 do. 5825 to 5844 do.

Moved by James Sidebottam, seconded by Benjamin Beddome, Esq., and carried unanimously—

That the Directors of the Company be authorised and directed to dispose of the shares of which the forfeiture has this day been confirmed by sale as provided in the Act, and for such price as they may think fit.

Moved by James Sidebottam, Esq., seconded by Thomas Blake, Esq., and carried unanimously—

That John Parker, Esq., M.P., be re-elected a Director of this Company.

Moved by William Butcher, Esq., seconded by John Turner, Esq., and carried unanimously—

That John Sykes, Esq. be also re-elected a Director.

Moved by Thomas Blake, Esq., seconded by Cornelius Randall, Esq., and carried unanimously—

That Thomas Smith, Esq. be also re-elected a Director.

Moved by John Sykes, Esq., seconded by David Waddington, Esq., and carried unanimously—

That John Chapman, Esq. be elected a Director of this Company.

Moved by D. Waddington, Esq., seconded by John Chapman, Esq., and carried unanimously—

That the money, by the Company's Act of Incorporation authorised to be raised by subscription, being found to be insufficient for the making, completing, and maintaining the railway and other works by the said Act authorised to be made, and for defraying all necessary charges and expenses relating thereto, or for the purposes of the Act, the sum of £233,000 be borrowed, and taken up at interest on the credit of the railway undertaking, and that the Company, or the Directors thereof, be authorised and empowered to mortgage and assign the property of the undertaking, and the rates, tolls, and other sums arising, and to arise, by virtue of the Act, as a security for the money advanced, with interest to such person or persons as shall advance the same.

Moved by Thomas Dalton, Esq., seconded by Charles Appleby, Esq., and carried unanimously—

That the Directors be authorised to contract with any person or persons for the loan of any sum or sums of money, in conformity with the preceding resolution, and at such rate of interest and on such terms as they may think fit.

Moved by John Sykes, Esq., seconded by John Sidebottom, Esq.—

That the grant of an allowance of £1,600 per annum to the Directors, made on the 29th of August, 1838, be now reconsidered, with the view that it be either discontinued or confirmed.—This motion was negatived, and the grant therefore confirmed.

Moved by Benjamin Beddome, Esq., seconded by John Livesey, Esq., and carried unanimously—

That the best thanks of the Company be presented to the Directors for their very assiduous attention to the Railway undertaking, and to the interests of the proprietors.

Moved by John Wood, Esq., seconded by James Bernard, Esq., and carried unanimously—

That the best thanks of this meeting be given to Mr. Joseph Locke, for his able management of the engineering department of the Company.

JOHN PARKER.

Mr. Parker having vacated the chair, it was taken by William Sidebottom, Esq., the Deputy-Chairman, and

Moved by John Turner, Esq., seconded by Cornelius Randall, Esq., and carried unanimously—

That this meeting gratefully acknowledges its obligation to John Parker, Esq., as well for his able and impartial conduct in the Chair, as for his constant and zealous regard to the interests of the Company.

WILLIAM SIDEBOTTOM.

MANCHESTER AND BIRMINGHAM RAILWAY.—Company's Offices, 43, Piccadilly, Manchester, February 15, 1841. The next Half-yearly General Meeting of the Proprietors will be held on Thursday the 4th day of March next, at the York Hotel in Manchester. The Directors give notice that the declaration of forfeiture of certain shares for non payment of calls made by them on the 27th day of August, 1840, will be submitted to the meeting for confirmation or otherwise. The Chair will be taken at twelve o'clock precisely.

Notice is also hereby given, that the Transfer Books of the Company will be closed on Thursday the 25th day of Feb. instant, and will not be re-opened until Friday the 5th day of March next.

THOMAS ASHTON,
Chairman of the Board of Directors.

No. 166. Vol. IV.—No. 10.] SATURDAY, MARCH 6, 1841. [Price, with Supplement, 6d.

BIRMINGHAM AND DERBY JUNCTION RAILWAY. At the Half-Yearly General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company, held at Dee's Royal Hotel, in Birmingham, on the 25th of February, 1841, pursuant to public advertisement duly inserted,

Henry Smith, Esq., Chairman of the Board of Directors, in the Chair.

The proceedings of the last Half-Yearly Meeting and of the Special General Meeting of the Proprietors, held on the 31st of December, 1840, were read.

The Common Seal of the Company was affixed to the Register of Proprietors.

The Report of the Directors and Statements of Account, were read, and the following Resolutions were agreed to:—

Resolved—That the Common Seal of the Company be now affixed to the Register of Proprietors.

Resolved—That the Report and Statements of Account now read be adopted, and that the proceedings of the Directors be approved and confirmed.

Resolved—That a Dividend of Fifteen Shillings on each original share of £100, and of Five Shillings on each new share of £33 6s. 8d., in this undertaking, be now declared payable on the 10th day of March next.

Resolved—That the thanks of the Proprietors are due to the Directors, for their attention to the interests of the Company.

(Signed) HENRY SMITH, Chairman.

The Chairman having left the Chair,

It was resolved—

That the thanks of this Meeting be given to the Chairman, for his conduct in the Chair.

EDINBURGH AND GLASGOW RAILWAY. —EIGHTH CALL OF £5 PER SHARE.—NOTICE is hereby given, that in pursuance of a Resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further Instalment of £5 per Share making £40 per Share paid up, on or before Tuesday, the 23rd day of March next, to any of the under-mentioned Bankers:—

Glasgow .....The Glasgow Union Banking Company.
Edinburgh ....The National Bank of Scotland.
Do. ....The Western Bank of Scotland.
Liverpool .....The Bank of Liverpool.
Manchester .... Messrs. Wm. Jones, Loyds, & Co.
London ..... Messrs. Glyn, Halifax, Mills, & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
7, North Queen Street,
Glasgow, 27th February, 1841.

NORTHERN AND EASTERN RAILWAY. —FORFEITED SHARES.—NOTICE is hereby given, that the Directors will meet on the 11th day of March, 1841, at their Offices in Shoreditch, London, to receive Tenders in writing, for any Number of Shares in the Northern and Eastern Railway Company, not exceeding in the whole 52 Shares, which were declared forfeited under the provisions of the Act for incorporating the said Company, on the 18th day of February, 1841.

The Shares must be tendered for, as Shares upon which Calls to the amount of 50*l.* will have been paid prior to the Transfer to the Purchaser.

Tenders to be delivered (sealed) before 1 o'clock, on or before Thursday, the 11th day of March, 1841, addressed to the Board of Directors, at their Offices in Shoreditch, and parties tendering may receive replies to their Tenders at 3 o'clock on the same day.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 26th Feb. 1841.

LOCOMOTIVE ENGINES.—FOR SALE, THREE LOCOMOTIVE ENGINES and TENDERS, most substantially made and highly finished. Cylinders 12 inch diameter, with 5 feet driving wheels, adapted to the usual gauge.

Apply to Mr. Humphreys, 6, Holland-street, Blackfriars.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R.A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, R.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 30, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

This day is published, price One Shilling.

THE CARRYING QUESTION stated, in reference to Railways and Canals; also considerations on the mode of levying the Passenger Tax on Railways. By HENRY BOOTH.

Liverpool: Printed by Thomas Baines, Castle Street, and sold by Messrs. Ridgways, London.

BRISTOL AND EXETER RAILWAY.—Seven Contracts to be Let on March 19.—To Contractors, &c. For Sale, at the Port of Gloucester, about 500 Tons of Iron Rail, T pattern, 42 to 44lb. per yard, as good as when it first came from the foundry.

120 2½ Earth Waggons 2 feet 6 wheels 3 feet 6 gauge, strongly made, and nearly as good as new having worked only one small contract.

The whole will be sold at half the cost price. May be seen on the line near the Depot of the Birmingham and Gloucester Railway, Gloucester, and particulars obtained at Mr. Church's, near the Cattle Market.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.—NOTICE is hereby given, that the Directors will receive, at their Office in Broad-street, Bristol, on or before Friday, March the 19th, at Twelve o'Clock, TENDERS for the execution of the several works comprised in Seven Contracts, extending from the station at Bridgewater, to the proposed station at Taunton, a distance of eleven miles 35 chains. These Contracts comprehend the entire completion of the Works, including the Ballasting, but exclusive of the laying the permanent rails.

Drawings and Specifications will be exhibited on and after Monday, February 15th, at the Resident Engineer's Office, Coronation-road, Bristol.

Printed Forms of Tender may be had at the same place, and at the Company's Offices, Broad-street, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office in Broad-street, Bristol, at Twelve o'Clock on the said 19th day of March.

J. B. BADHAM, Secretary.

Bristol and Exeter Railway-office, 30, Broad-street, 5th Feb., 1841.

LONDON AND BIRMINGHAM RAILWAY. —On and after Monday, the 8th of March, the following ALTERATIONS will take place in the times of DEPARTURE of the TRAINS:—

9 a. m. Down Train will be 8½ a. m., (arriving in Birmingham about 2 p. m.)

9½ a. m. Down Train will be 9½ a.m.

2 p. m. Up Train 3rd class will be 2h. 20m. p. m., and corresponding alterations will be made in the times of departure of the same trains from the several intermediate stations.

By order R. CREED, Secretary.

Euston Station, February 20, 1841.

Note.—The alteration in the time of departure of the 6½ a. m. Up train from Wolverton, advertised a few days since, will not take place.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

[Documents supplementary to the report in our last number]:—

REPORT OF MR. LOCKE.

To the Directors of the Eastern Counties Railway Company.

GENTLEMEN,—Having been requested by letters from your Deputy-Chairman and your Engineer to undertake the revision of the estimates for completing the works of the Eastern Counties' Railway, I put myself in communication with Mr. Braithwaite, and obtained from him copies of the estimates, together with the plans, sections, and other documents necessary for the enquiry.

After inspecting the line from Brentwood to Colchester, I found it desirable to obtain more specific instructions as to the nature and extent of the information required; and I obtained from a Committee of your Board the following minute:—

"Resolved,—That Mr. Locke be requested to examine the line between Brentwood and Colchester, together with the plans, sections, and estimates prepared by Mr. Braithwaite, and to report whether, in his opinion, they are sufficient for the purposes for which they are intended; and also whether, in his judgment, any modification can be made, by which the funds of the undertaking can be saved, without impairing the efficiency of the line, or extending the time required for its execution."

From the directions of this minute, I confined my investigations to the line between Brentwood and Colchester, but I afterwards found that certain items in the estimates sent to me related to the unfinished works between London and Brentwood. On a representation of this circumstance, the following additional minute was sent to me:—

"Resolved,—That in order to render the proposed Report as complete and satisfactory as is requisite, enquiry be made by Mr. Locke as to what may still be due to the contractors for the completion of the works between London and Brentwood, including all the stations, the whole of the carrying establishment, and every other item which can interfere with the completion of the whole undertaking for the present capital of 2,133,000*l.*"

On receiving this latter instruction, I again put myself in communication with Mr. Braithwaite, as well as with Mr. Hall, and obtained further information relative to the liabilities of the Company, and to the sums already expended on the works.

I afterwards prepared an Estimate and Report, embodying, as I believed, all that was required; and, as you are aware, forwarded them to you on the 7th of October last.

Some discussion, it appears, arose on the question of gradients—viz., whether the section between Brentwood and Colchester, proposed and adopted by me, was or was not identical, or nearly so, with that contemplated by Mr. Braithwaite.

To obviate any objection on that ground, and to prevent any further misapprehension, I agreed to withdraw the Report, to receive another section from Mr. Braithwaite, showing the gradients he proposed to adopt, together with an estimate of the cost of completing the works, and to include the consideration of these documents in the Report, which I have now the honour to lay before you.

The latter section (which was given to me by Mr. Braithwaite on the 17th) does not differ materially from that on which my former estimate was founded. It exhibits the following list of gradients:—

Gradients of Eastern Counties' Railway, from Warley-lane near Brentwood, to Colchester.

61 chains	rising	1 in	100
50 "	level		
131½ "	falling	1 in	132
66½ "	rising	1 in	730
83 "	falling	1 in	195
68½ "	rising	1 in	2250
120 "	falling	1 in	225
154 "	falling	1 in	330
65½ "	rising	1 in	375
86 "	falling	1 in	330
10 "	level		
19 "	rising	1 in	660
11 "	level		
48 "	falling	1 in	330
104 "	rising	1 in	330
99 "	falling	1 in	256
109 "	rising	1 in	4224
75 chains	falling	1 in	380
92 "	rising	1 in	176
145 "	falling	1 in	170
113½ "	rising	1 in	830
32 "	falling	1 in	528
48 "	rising	1 in	352
73½ "	falling	1 in	1600
63 "	falling	1 in	1400
126 "	rising	1 in	208
183 "	falling	1 in	1100

143 "	falling	1 in	170
49 "	rising	1 in	1320
44½ "	falling	1 in	3911
28½ "	rising	1 in	315

The General Estimate accompanying the Section is stated below.

FINAL ESTIMATE OF TOTAL COST.

Expenditure for works and land		£1,322,121	4 8
Remaining due for land		199,881	5 10
		£1,522,002	10 6
Amounts due to contractors—			
£59,607 7 9			
8,360 12 3			
41,891 15 8			
	109,859 15 8		
To complete London station	24,000 0 0		
		133,859	15 8
Estimated cost of line from Brentwood to Colchester		440,813	17 6
Stations—excluding London		20,000	0 0
Engine house and coke ovens		18,000	0 0
Carrying establishment		98,760	0 0
		£2,233,436	3 8
Deductions, carrying establishment, and stock		77,751	0 0
		£2,155,685	3 8
Contingencies and extras on permanent way		66,983	13 5
Total		£2,222,668	17 1

The detailed estimates of the works between Brentwood and Colchester, included in the foregoing, is stated by Mr. Braithwaite, as follows:—

ESTIMATES.

BRENTWOOD TO CHELMSFORD.

Earthwork		£122,284	4 5
Masonry		63,152	0 0
Permanent way, 13 miles at 4,000*l.*		52,000	0 0
		£238,136	4 5

CHELMSFORD TO COLCHESTER.

Earthwork	77,874 8 10		
Masonry	52,431 10 0		
Permanent way	84,000 0 0		
		214,305	18 10
		452,442	3 3
Deduct 10 per cent. on masonry.			
Brentwood to Chelmsford	6,385 4 0		
Chelmsford to Colchester	5,243 2 0		
		11,628	6 0
Total		£440,813	17 3

The first item in the general estimate of 1,522,002*l.* see schedule in detail marked A and signed by Mr. Hall represents the sum already expended on land and works, and the liabilities for land, &c., taken up to the 31st of October last.

The second item amounting to 133,859*l.* see detailed schedule marked B is the amount due to contractors for work done, and for completing the unfinished works between London and Brentwood.

Of this sum about two-thirds is due for works already done, and may therefore, like the first item, be taken as a statement of account, on which I cannot offer an opinion, the remainder is put down for completing the works on the line and erecting the London terminus.

The items for the various works are, I think, sufficient, and although the slips in some of the embankments are liable to contingencies, they cannot amount to any very serious sum.

The London terminus, estimated at 24,000*l.*, is an important item, and since it is more a question for the architect than the engineer, I am scarcely able to say what will be the cost of the design proposed.

It may however, if the Directors desire it, be reduced very considerably in size, and thus be made to fit the sum put down for it. It appears me unnecessarily large, and would I fear cost more money than is expected, unless the mode of building by contract at a fixed sum is adopted, which will at least secure the Company against any very great excess, with the additional advantage that the probable cost will appear at once.

The sum of 20,000*l.* for the other stations is I think insufficient. In the former detailed estimate, not now referred to, the station at Colchester was put down at 6,000*l.*, whilst 10,000*l.* will probably not be found too much for it. These however, like that in London, to which I have already adverted, depend so much on the taste of the architect, and the scale and magnificence of the accommodation, that in adding 4,000*l.* to this amount, I am not certain that even that sum will be found sufficient.

I adopt Mr. Braithwaite's amounts for, "engine house and carrying establishment," and have made the allowance of 77,751*l.* for the amount already paid for this description of property. A detailed statement of the amount is appended in the schedule (marked C), which contains also an account of money paid for work done east of Brentwood.

The cost of forming the line from Brentwood to Colchester is the only remaining item in the list, and upon this it will be necessary to enter more fully into detail.

Presuming that since the land is already purchased, it was not intended I should make any suggestion for the purpose of modifying the course of position of the line, I have not directed my attention to that subject.

Before proceeding to state the cost of executing the works on this part of the line, I may be permitted to say, that much will depend on the mode in which they are undertaken; without enquiring into the particular designs of bridges, or other works of art, which generally vary according to the experience or taste of the engineer, I applied to the case under consideration the result of my own practice, and I have every reason to believe that it is better calculated to ensure economy and save the Company's funds, than is the system which omits in the original contract any work that can be foreseen and specified.

I am of opinion that all works, however tedious and laborious it may be to describe them, should be included in the original contract. That those works should be tendered for in one sum, with a penalty for non performance in due time. That a schedule of prices should be attached for settling extra or omitted works, and that the liabilities of the contractor should be so great as to insure his personal care and attention to every part of the work.

These remarks have been suggested from having ascertained that some portion of your works have been executed in a manner different from that just described; and in those cases were contracts have existed they have not included some items, (such as fencing, bridge approaches, &c.,) on which contingencies are likely to arise.

Viewing the works in question and taking the most favourable mode of construction, I am of opinion that the sum of 400,813*l.* is not sufficient.

It appears not to include either fencing or ballasting, and I do not believe the cuttings will furnish the latter without extra expense.

It is true that in the general estimate the sum of 66,983*l.* is put down for contingencies, and which of course is applicable amongst other things to make up this deficiency; but since certain incidental expenses, inevitable in undertakings of this kind, are not estimated, I do not think this sum should be so appropriated.

The estimate of these works, which after a careful revision I have still adhered to, is as follows:—

Earthwork, masonry, bridges and culverts from Brentwood to Colchester	£340,000
Rails, chairs, sleepers, fencing, ballasting, and laying railway	180,000
Total	£520,000

This sum for a line of 34 miles in extent, with works not of the lightest kind, may, notwithstanding the excess on Mr. Braithwaite's estimate, still be considered very low. The material however is generally favourable and the contingencies on the works are not likely to be great.

It appears however that on this item there is an increase of nearly 80,000*l.*, which together with the 4,000*l.* for the Colchester station, will cause an addition of about 84,000*l.* to the general estimate of Mr. Braithwaite.

A consideration of these circumstances leads me to the conclusion, that the sum of 2,300,000*l.* will be required to place the works in the state contemplated in your instructions to me. In this sum there is no allowance for ornament, the useful only is estimated, but it does include the 66,000*l.* put down by Mr. Braithwaite for contingencies and which I do not think it prudent to omit.

The detailed statements in the appendix are given as they were presented to me. They exhibit very clearly the expenditure, liabilities, and assets of the Company. It cannot be expected so far as they relate to mere statements of account that I can form an opinion so correctly as can Mr. Braithwaite or Mr. Hall. Those items however on which I have been able to form a judgement appear correct.

The stations and carrying stock are calculated for a fair amount of trade, but it is probable that as the demand arises, further accommodation will be necessary. This kind of increase however is unlike that which occurs in the construction of the works. Here there is always a stock for the money; and the proprietors would not, I think, object to increase the number of engines and carriages, if the trade of the line required them to do so.

I do not see that any modification of the present section can be made by which "the funds of the Company can be saved without impairing the efficiency of the line;" nor do I see that any reduction of time in the execution of the works between Brentwood and Colchester can be effected—eighteeen months will be required.

The line from London to Brentwood seems well and substantially executed.

The station in London is very central, which accounts in a great measure for the large expenditure already incurred. The advantages of extending the line to Colchester, by which the average cost per mile of the whole will be reduced, are too obvious to require comment.

You will no doubt perceive that there is a difference in the amount of capital stated in your second resolution, and in the general estimate presented by Mr. Braithwaite. The figures will shew that my observations have reference to the latter. There is a discrepancy also between the former and the recent sections delivered to me; the latter however I have taken as correct. It obviates the objection to the crossing of Duke-street, at Chelmsford, to which I before called your attention.

Any further explanation I shall be glad to offer.

I remain, Gentlemen,
Your obedient Servant,
(Signed) JOSEPH LOCKE.

London, 20th January, 1841.

GREAT WESTERN RAILWAY COMPANY —GENERAL MEETING.

[Official documents referred to last week.]

ENGINEER'S REPORT.

GENTLEMEN—I am happy to be able to report that satisfactory progress has been made towards the completion of the entire line since the last general meeting of the proprietors, such as will ensure this being my last half-yearly report upon the state of incomplete works. Since that period an additional portion of railway, of about 28¼ miles has been brought into operation, the line from London to Faringdon Road having been extended to the Wootton Basset Road, a total distance of 80 miles; and that between Bath and Bristol, a distance of 12 miles, having been opened to the public immediately after the last meeting.

The interval still remaining unfinished extends over about 26 miles. At the latter end of August last, it was stated, that we might reasonably expect the completion of these works within a twelvemonth from that time; but it was strongly urged by several proprietors at the public meeting, that means should be adopted, even at some increased expense, to render this more certain, and to hasten still further the period of the opening of the entire line. Such means have been adopted. The quantity of side-cutting for the formation of embankments, and the carrying materials from cutting into spoil, have at various points been increased, and other modifications of the original mode of constructing the works have been introduced; but as this portion comprehends several of the heaviest works on the line, and the opening must of course depend upon the means applied being successful in every case, I cannot fix the precise period of the final opening, but there is no doubt that it will have been much expedited, and particularly, that the time gained will comprehend some of the most profitable part of the year, and that if the contractors complete the several works which they have undertaken (and of course steps must be adopted to enforce the terms of their contracts), then I think we may fairly hope to open the line in June.

Exertions have been made during the whole of the past season to push forward the works, and at the same time to avoid, as far as possible, the necessity of executing any embankments during the wet weather, and I am happy to state, that although we have again been unfortunately impeded by very severe weather, unusually long and severe frosts, and subsequent floods, yet, upon the whole, the efforts we have made have been successful. Much has been done, and wherever the principle of avoiding the formation of earthwork during wet weather has been strictly adhered to, all that has been completed has been well and permanently done.

In the immediate neighbourhood of Bath, much still remains to be executed on one contract. The diversion of the Kennet and Avon Canal, in the progress of

which very serious difficulties had occurred, caused principally by continued wet weather at a critical period of the works, requires most attention; the retaining wall, however, is nearly completed, and when the course of the canal is diverted, which will shortly be done, the construction of the railway itself at this point, is a simple and easy operation.

With the exception of this one point, the works are in a sufficiently forward state between Bath and Bathford. At Bathford the bridge across the Avon is much in arrear, but the necessary means have been, and shall be adopted for securing its early completion.

From this point to the Box Tunnel, the works are in a forward state; the long embankment requires but a small additional quantity for its completion, and we are commencing to form the surface preparatory to ballasting.

The small tunnel in Middle Hill, and the adjoining cuttings are nearly finished.

Upon the remainder of the line, from the Box Tunnel to Wootton Bassett inclusive, all the works are heavy, but fortunately not attended with any great difficulty of construction. The Wootton Basset, or No. 7, (C) contract, is nearly completed. Of the great embankment, containing about half a million cube yards, about 25,000 yards only remain to be finished. Upon the next contract the principal embankment is still nearer completion, from 5,000 to 6,000 yards only being wanting. On the next contract, No. 5, (C,) the works are also nearly finished, and on both contracts a considerable portion is ballasted, and the laying of the permanent way is commenced.

The bridge over the Avon will be completed in a very short time, the late frosts, &c. having delayed it.

Upon the two next contracts extending to Chippenham, the principal work remaining to be done consists of the burning and spreading the ballast preparatory to the laying the permanent way.

The works between Chippenham and the Box Tunnel, which have generally been considered as likely to be the latest, are now in such a state that by proper exertion, their completion within the time required, may be ensured; this exertion shall not be wanting on my part.

The Box Tunnel itself will be completed and open throughout, from the western face to the shaft No. 8, which has always been considered as the eastern extremity, during the next month; and if the whole tunnel cannot be then said to be finished, it is only because the eastern end which is entirely in rock, and belonging more properly to the contract last referred to, of No. 1 C, has been extended a few yards in order to diminish the quantity of excavation required in the open cutting. The permanent way in the tunnel also will shortly be commenced.

The account I have above given of the advanced state of the works, will, I trust, prove satisfactory.

Such exertions as were required to hasten the successive opening to Steventon, to Faringdon Road, and to Wootton Basset, and the arrangements consequent upon each partial opening, are at all times attended with serious expenses, and it is a source of great satisfaction to me, that only one more opening is to take place. I have endeavoured to ascertain the increased cost thus incurred, but I have been unable to do so with sufficient accuracy to venture upon an estimate, and as the period is so fast approaching, when the actual outlay upon each contract can be positively ascertained and dissected, I trust, that any statement, which could not be accurately depended upon, will not be expected of me at the present time.

Upon the whole I have reason to hope that the means which have been adopted for the purpose of thus advancing the works, will not prove more expensive than was anticipated by those who urged their adoption; that the additional expense will have been usefully incurred; and that before our next half-yearly meeting we shall have reaped the benefit of this expenditure, when the whole line from London to Bristol, and Bridgewater towards the South-west, and from London to Swindon and Cirencester towards Cheltenham, will be in full operation. Your obedient servant,

I. K. BRUNEL.

MANCHESTER AND LEEDS RAILWAY: OPENING OF THE LINE THROUGHOUT.—This line was opened throughout on Monday last. The Directors and a party of their friends, including Mr. G. Stephenson and Mr. Gooch, the engineers, made the trip in a special train; starting from the Manchester station about half-past nine in the morning, and proceeded to Normanton, where the line joins the North Midland. They were joined at the Summit Tunnel and at Ossett by bands of music. The average speed maintained throughout, exclusive of stoppages, was thirty miles an hour. The party returned to Wakefield, where they partook of a cold collation, provided at the goods' station, at which Mr. Houldsworth, Chairman of the Directors, presided. The regular passenger and goods' trains commenced running at an early hour, and several passed through the Tunnel before the half-past nine o'clock special train.

LONDON AND BLACKWALL RAILWAY COMPANY—GENERAL MEETING.

The following are the documents and the further particulars of the proceedings for which we could not find room in our last :—

ENGINEERS' REPORT.

To the Chairman and Directors of the London and Blackwall Railway Company.

In submitting to you this Report on the London and Blackwall Railway works, after the very severe winter to which they have been exposed, we have much satisfaction in referring to their present perfect condition, in confirmation of the opinion formerly expressed by us of their being generally sound and substantially constructed.

The arrangements adopted for the traffic, exposed as they have been to the difficulties always attending new regulations, and especially when connected with a mechanical adaptation of so novel a description have been found capable of meeting all the changes resulting from the dense fogs, high winds, and severe frost of the past season.

The stationary engines and machinery have realised our expectations; and, as yet, no one case of inconvenience has been occasioned by any imperfection in their construction or design, although upwards of 20,000 trains have passed upon the line.

We cannot allude, however, so satisfactorily to the ropes, which, to the present time, have occasionally caused delays by breakages. It would appear that our first opinion of the necessary strength of the rope has not been supported by experience, and that the unsoundness arising from the unfair usage it sustained at the commencement of the working of the railway was much more extensive than we supposed; and although the additional experience acquired by the men in starting the engines, and controlling the large drums, would obviate a considerable proportion of these difficulties, we conceive it necessary to recommend that for the future a strong rope, similar to that portion which you have lately tried, should be adopted, in order that its power of resistance may be so much above any strain to which it may be subjected, that its strength may remain unimpaired, by any check that it may sustain from accidental causes. We propose, at the same time, to introduce a wire rope at each extremity, to be attached to the drums, and extending about three-quarters of a mile from the same: a two-fold object is thus attained, viz., the getting a wire rope of equal strength with the enlarged hemp rope in so much less compass, as to leave sufficient room on the drum for the latter, whilst, from its hard texture, it is more capable of resisting the great pressure of the superincumbent rope whilst on the drum. The success of the short piece of wire rope which has been in use upon your line since last August, ensures, we think, a similar result to the more extended experiment.

Whilst on this subject, we beg to call your attention to the present condition of the permanent way and carriages as a proof of the very diminished wear and tear occasioned by the use of ropes in place of locomotive power.

(Signed) GEORGE STEPHENSON.
GEORGE P. BIDDER.

Mr. G. Rennie said, he had hitherto given his approbation to the various Reports that had been presented by the Directors, but with the present he must confess himself much disappointed. (Hear.) In the Report of February, 1839, the annual cost of working the line had been estimated at 8,000*l.*, whereas the present Report showed, that for salaries, coals, &c., during the last half year, the amount of expence was 7,630*l.*, being upwards of 15,000*l.* annually. (Hear.) The rope also, he regretted to find, was still in a most unsatisfactory state. The amount of breakages were nearly as great as they were at first. (Hear.) At the last meeting, in August, the breakages were attributed by the engineers to the inexperience of the breaksmen; but that inexperience had then become remedied, and yet, even within the last month, five or six breakages had taken place. The Directors should have fairly tested the wire-rope, in order to be enabled to give the proprietors some definite assurance, that the time of the public would not be trifled with by continued delays on the line, consequent on breakages of the rope. The object persons had in view in travelling by railways was to save time, and, therefore, the success of a railway mainly depended upon the general management of such railway, and the accuracy of the mode of travelling adopted upon it. (Hear.) They were to have now an alteration in the terminus, and although the entire line would not be opened before June or July next, the Directors now called upon them to go to Parliament for the purpose of raising another 200,000*l.*, and at a ruinous expense. (Hear.) He was strenuously opposed to such a proceeding. Already had there been an increase of the estimate of 200,000*l.* for completing this line, and now it was sought to raise, by new shares, 200,000*l.* more. He must confess that this alarming addition to the cost of the line, tended greatly to shake his confidence in the engineers. (Hear.)

Mr. Sergeant Gazlee, concurred that the present was the most unsatisfactory Report that had ever been presented to the proprietors; and if no one else would do so, he should feel it a duty to take upon himself to move, that it be not confirmed. He understood something about legal matters, and he would say, that he believed the outlay on law had been enormous. (Hear, hear.) He believed that as much as 52,787*l.* had been expended for obtaining the Acts of the Company, and now, merely beeause the Directors thought a Western entrance to the London Terminus preferable to a Northern one, they again asked the proprietors to support them in going to Parliament, to incur another heavy expense. (Hear, hear.) In addition to the amount spent in getting the Acts, a sum of nearly 50,000*l.* had been expended in adjusting claims, and for the Chairman to say, that that accounted for the expenses exceeding the estimates, was no answer at all. (Hear, hear.) He did not see, although the Directors had taken much credit to themselves for having reduced the amount of claims for compensation to the extent of 50,000*l.*, that much was due to them, if they had spent nearly that amount in obtaining such reduction, (Hear, hear.) Then with respect to the Engineer's Report. It was true it was replete with soft and honeyed words, but still, in his (Mr. Gazlee's) opinion, most unsatisfactory. They found an estimate of 35,000*l.* raised to 85,000*l.* (Hear, hear.) Under such circumstances, had he been a Director, he should have felt it to be his duty to have called in some other engineers, in order to ascertain if the Company had been fairly dealt by. (Hear, hear.) He did not mean to say that they had not, but he should have thought such a course a proper one. There appeared on the face of the balance sheet no account whatever of the solicitors for the last half-year, notwithstanding which he (Mr. Gazlee) had been obliged to see by the papers almost every day, that a formidable array of counsel, had been retained by the Company at enormous fees. This omission was very singular, and he should much like to know how it arose. He understood that the Company had not only bought but sold a great deal of property; now he saw no statement of any receipts whatever for such property sold. He was of opinion that in this as well as in all other railway concerns, a great deal too much money was expended in law, and if the Directors had knocked off 50,000*l.* from the claims at an expense of 30,000*l.*, there was not much saved. He would direct the attention of the proprietors to the gradual decline of the shares of the Company, and then ask if they did not dread the lavish expenditure which must necessarily be incurred in again going to Parliament. (Hear, hear.) He was one of those who believed, that to the large body of proprietors the concern would never answer, and yet it was proposed to issue new shares, and probably it was intended that the new

Digitized by Google

shareholders should be entitled to a dividend before the original proprietors. (Cries of "no, no.") This going to Parliament would tend to depreciate the shares of the Company. He believed that the proposed change in the terminus would be productive of very little benefit, the excuse for the great excess of the estimate was most unsatisfactory, and that the going to Parliament again would be productive of great injury and expense without any benefit, and therefore he would move, "that the report be not adopted by the meeting."

The motion having been seconded,

A PROPRIETOR observed that he did not agree with the motion, as he believed it would not be productive of any benefit, but nevertheless he cordially concurred in the observations of the previous speaker. The accounts appeared to him to present a strange and most anomalous appearance. This he believed resulted from there being no auditors as there were in all other societies. (Hear, hear.) It was all very well for the Chairman to say that the books were open to any of its members, but there were many who lived in distant parts of the country, and could not make it convenient to wade through large volumes of accounts. It was therefore highly necessary that they should have a Board of Auditors in whom they could rely, independent of the Directors. They had been told by the Chairman that the average weekly expenditure did not exceed 425*l.* per week. The receipts for months past had not averaged more than 400*l.* per week and he should like to know therefore what benefit could accrue to the proprietary. He was quite opposed to their going again to Parliament, and he should be glad to know from the solicitors what right the Directors had to go to Parliament without calling a special meeting of the proprietors to obtain their sanction. He should also like to hear from the Directors what had been the effect of raising the amount of the fares on the line from 3d. to 4d. each passenger.

The CHAIRMAN said, with regard to there being laid before the proprietors a more detailed statement of the accounts, the Directors he was sure had not the slightest objection, but they considered it far better that they should give an aggregate account, leaving it to the proprietors themselves to make a minute inquiry. With regard to the appointment of Auditors, it was not at all usual in Railway Companies. The duties of Auditors would have a tendency to restrain the acts of a Directory; and he (the Chairman) was of opinion that if such a course were pursued, they would soon find that no gentlemen of character or respectability would be found to fill the office of Directors. With respect to the increased amount of capital to complete the line, the estimates of the Directors only amounted to an additional 150,000*l.*, but in order to provide for any contingencies which might arise, they thought it advisable to raise upon new shares the sum of 200,000*l.* Mr. Rennie had called the attention of the meeting to the state of the rope. The Directors had already done that which that gentleman had suggested. They had about 14 miles of rope at work altogether, and two and a half was of the wire rope, which he (the Chairman) had every reason to believe would answer every expectation. Another proprietor had adverted to the sale of property by the Company. Property had been sold to the extent of 18,000*l.*, but the money had not been paid in sufficient time to be properly placed in the account then before the meeting. Then with regard to the expensive array of counsel that had been spoken of. When the proprietors remembered that the Company had brought against them such personages as the Attorney-General, Sir F. Pollock, and others, they must agree with the Directors that it was necessary they should endeavour to obtain equally able men on their side of the question. (Hear, hear.) If the Directors had not spent money in this way they would have been subjected to outrageous claims very probably in the whole of the 1202 cases. With respect to the question of raising the fares he regretted that he could not give a distinct answer to it, any farther than that the result proved that the Directors had done perfectly right in raising them at the time they did.

A PROPRIETOR desired to know at what time it was likely the goods' train would be put upon the rails.

The CHAIRMAN said, that he thought about July as the Directors were of opinion that if the goods' trains were set running before they would materially interfere with the summer's traffic.

A PROPRIETOR.—Is it a fact that a preference is likely to be given to the new shareholders over the old?

CHAIRMAN.—Certainly not.

Another PROPRIETOR, wished the question answered, with respect to there being no solicitors' charges in the last six months account?

CHAIRMAN.—The reason is a very creditable one to the solicitors. They have very kindly consented to forego their account, till the next call is made.

The PROPRIETOR.—And pray, what may be the amount of their account.

CHAIRMAN.—The amount due to the solicitors, and unpaid, is 21,000*l.*

The PROPRIETOR, thought, at least, such a bill as that ought not to be allowed to pass, without being subjected to the scrutiny of a Board of Auditors.

The CHAIRMAN thought that observation involved a great question, and even the respectability of the Directors. He would put it to the proprietors, whether they really believed the Directors would suffer a bill of 21,000*l.* to pass without investigation.

Another PROPRIETOR, wished to know if the additional 200,000*l.* required, could not be raised without the expense of again going to Parliament?

The CHAIRMAN said, it could not, but he believed the expense would not exceed 7 or 800*l.*

[Mr. JEFFREY here indulged in a personal charge against one of the Directors; but it was at once scouted by the meeting.]

A PROPRIETOR, considered all the answers and statements most satisfactory, with one exception, and that was, why were not all the new engineering plans carried out at first.

The CHAIRMAN said, that at the time the line opened, stationary engines were then in their infancy, and like everything else, subject to improvement.

A PROPRIETOR said, he understood that there was a company formed for the erection of Wet Docks for steamers, on the South side of the Thames. Now it was obvious to every one, that it would materially affect the Dock and Victualling Yard at Deptford, and equally so that the North side of the Thames was by far the most proper place for such Docks; and if the present plan was persisted in he hoped the Company would give it their strenuous opposition.

The CHAIRMAN said, the Bill would not be applied for this Session, as the parties had not complied with the Standing Orders of the House of Commons.

The Chairman was here about to put Mr. Gazlee's motion, when it met with cries of "No, no."

Mr. GAZLEE said, as it appeared the wish of the meeting he would withdraw it.

The adoption of the Report was then moved, seconded, and carried with but one dissentient.

Mr. W. Routh, Mr. Henry Harvey, and Mr. W. Haigh, the three Directors, who retire by rotation, having then been unanimously re-elected,

A vote of thanks was was moved by Mr. Stock, and unanimously given to the Chairman, and the meeting separated.

THAMES HAVEN DOCK AND RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly General Meeting of this Company (which had been adjourned from last week) was held on Thursday at the London Tavern, Bishopsgate-street, JAMES ESDAILE, Esq., in the chair.

After a long discussion the meeting was again adjourned for a fortnight to await the issue of certain negociations with large coal proprietors in the North. It appeared to be confidently anticipated that these parties would embark so extensively in the project as to place its success beyond all doubt. Every person who took part in the discussion, expressed his high opinion of its merits, and only regretted that various circumstances had hitherto concurred to retard the scheme,

Some changes were made in the Direction, it being the wish of all parties to secure the services of an efficient *London* Board. We hope to be able to find room for a more detailed notice of the next meeting. The following is the

"REPORT.

"IT will be in the recollection of the proprietors that at the last half-yearly general meeting, held in August, an anxiety was expressed by the shareholders, resident in Manchester, to abandon the undertaking; and that a resolution to that effect was proposed, but that it was subsequently withdrawn, upon the explanations that were given by Mr. Amsinck, and confirmed by Sir George Stephen, that by some further and more determined exertions, a Company offering so many advantages to the public, and so much profit to the shareholders, might yet be carried through. In pursuance of this opinion, and to bring in an increased influence and a working direction, the seven Directors resident at Manchester, being more than half of the whole Board, declared their willingness to resign, as they might be required, to be replaced by gentlemen resident in London; four have, in consequence, sent in their resignations, and two of the vacancies thus created, have been filled by Robert Ewart Norman, Esq., and Benjamin Hill, Esq.; the other two vacancies will be filled by a selection of the most influential among parties who are now in communication with the Board upon the subject.

"The Directors have thus made some steps towards securing the public confidence: but the difficulties which have attended this undertaking, arising from the want of that local interest which has uniformly assisted all other similar works; from the state of the money market, and the commercial relations of the country, and also from the general prejudice which numerous recent accidents have excited against railway speculations, have made their efforts much more arduous and yet less efficient than would otherwise have been the case. These difficulties still exist, but they should operate as a stimulus to increased exertion, and induce all parties connected with the undertaking, both collectively and individually, to render their aid to the Directors to overcome them. The objects of the Company are of that highly beneficial nature to the public, that it will hereafter be a source of pride to any body of shareholders to have been the means of carrying them through, while the extensive use and economy of construction of the intended works are such as to secure a highly remunerative return.

"The Directors have felt, however, that they ought not to rely for success only on the character of the undertaking, but should exert themselves strenuously to obtain the influence and assistance of every commercial interest, that is likely to be beneficially affected by it. They have, therefore, opened a negociation with the coal-owners in Durham and Northumberland, from the peculiar position of that trade, and the positive necessity that exists for some alteration in the price and supply of coals to the London market, there is every reason to believe that the Company will receive such assistance from this quarter as will enable them speedily to carry through the works. This negotiation is still pending, and, therefore, the Directors propose to adjourn this meeting for a week, when they hope to lay before the proprietary such a favourable report as will not only induce them to increase their own interest, but to recommend the speculation successfully among their friends. The Directors are quite assured, that if once a body so powerful as the coal owners shall be induced to give its support to the Thames Haven Dock and Railway Company, as a means of supplying the metropolis with coals, more cheaply and at a uniform price throughout the year, no further pecuniary difficulties will arise.

"The Directors are also engaged in negociations with the General Steam Navigation Company, but these negociations are not yet sufficiently advanced to be stated to the shareholders.

"The Directors have reason to believe that no

Digitized by Google

difficulty will exist in obtaining the land required for the Railway, although the powers given to them by the Act in that respect, have expired; feeling that would be injudicious to trust the interests of the Company to the favourable disposition of any parties, they have taken the necessary means for renewing the powers given by the Act, and have petitioned accordingly.

"The Directors have also felt it their duty to open a fresh negociation with the Directors of the Eastern Counties Railway, for the amount of toll to be paid for the use of that line, between the junction at Romford and the Station at Shoreditch. They are happy to inform the Proprietors, that the toll now demanded, is such as the Directors are fully justified in acceding to it, and they hope that the Directors of that Company will see how much it is for their interest, as well as for the benefit of the public to give every facility to the traffic of the Thames Haven Railway.

"The Directors consider it their duty to make this detailed Report at their meeting, although they hope to make another at the adjourned meeting, when the Secretary will be present. As the present meeting is prescribed by their Act, and could not be postponed, it seemed incumbent on them not to omit the opportunity of showing how entirely they have been occupied in advancing the interests of the Company since the last meeting. They have every reason now to believe, that their endeavours will be successful, and particularly if omitted by the combined efforts of the Proprietors.

"The Directors would now propose, that this meeting should be adjourned to Thursday next, the 11th instant at 12 o'clock, when they hope to have a full attendance of the Proprietors, and satisfactory information to lay before them."

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL Meeting of the proprietors of this Company was held at the London Tavern, on Tuesday, to have laid before them the drafts of two Bills introduced into Parliament by the Directors — one for the purpose of effecting certain deviations in the line between London and Bishop's Stortford, and regulating the shares of the Company — the other for making a branch from the main line to the towns of Hertford and Ware.

Both Bills received the sanction of the Meeting and a conversation ensued bearing on the extension of the line to Cambridge, and the probability of this being a great railway to the North, but the particulars we are obliged to postpone until next week.

RAILWAY ADJUDICATION.

JAMES GRAVES *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Ilford Petty Sessions, February 27.—The Company, by Mr. Hall, their Managing Director, appeared before the Bench to-day, pursuant to a notice served upon them by Mr. Graves, a gentleman residing at Great Ilford, who claimed to have made, erected, and maintained for his use a convenient carriage way through the embankment of the Railway, into a field called the Shed field, at Great Ilford.—Mr. Francis attended as solicitor on behalf of Mr. Graves, and Mr. Duncan on behalf of the Company.—Mr. Francis stated, that on the 21st June, 1836, an agreement was entered into with Mr. Graves, by which he was to have a tunnel, or some other proper communication, from one field to the other; a communication had been made by crossing the Railroad on a level, and the question was whether under this agreement Mr. Graves was to go over the Railroad or have an archway under it. In March, 1838, the Company and Mr. Graves not agreeing, both parties, under the provisions of the Act of Parliament, came before the Bench, and the Bench then recommended a settlement, but not succeeding in this, they, in October in the same year, came again before the Magistrates, who then gave an opinion that the money Mr. Graves had received, which we understood to be 7,000*l.*, met the justice of the case. A model of the gates proposed to be erected by the Company, was produced, and the Magistrates then decided that they would make no other. Mr. Francis contended at some length that the Company had not given Mr. Graves a safe and proper communication, and the communication given was in direct opposition to the Act of Parliament, and dangerous to persons using it; as to the gates erected by the Company, they were contrary to the Act, as they opened towards the Railway, and not towards the land. He (Mr. Francis) admitted that Mr. Graves had received compensation for the value of the land taken, but that did not preclude him from his present claim; for the extra land taken he believed Mr. Graves had received 1,000*l.*; but if he was to keep an extra man to attend to these gates it would soon swallow up the interest. Mr. Francis concluded by saying that he should call Mr. Cubit, an experienced gentleman in Railroad matters, who would tell them that a communication under a Railroad was always referred to crossing the same on a level.—Mr. Duncan respectfully submitted to the Bench, that in this case they had no jurisdiction: this was not an application to do and perform certain repairs, but an application to make an archway through the Railroad embankment after such embankment had been completed, and as the Company submitted a good and sufficient communication had been made for Mr. Graves over the Railway, protected by good and sufficient gates, he had no further claim upon them. An agreement had been entered into between the parties, and such being the case, the jurisdiction of the Magistrates ceased. If any dispute arose under that agreement, the courts of law were the only tribunal that could determine it: the Company, after having purchased part of Mr. Grave's property at Ilford, for which they gave him 7,000*l.*, treble the value, required 1 acre and 36 perches more land of him, for which they gave him 1,000*l.*, which was to compensate him for all damage and inconvenience for severance or otherwise. Under these circumstances he submitted Mr. Graves could not now turn round upon them and require them to make the archway in question; however, he was directed by the Company to say that if Mr. Braithwaite, their engineer, could devise any plan with Mr. Cubit at a reasonable cost to further accommodate Mr. Graves, they would willingly do so.—The magistrates then retired to consider the question, and shortly afterwards returned, and the chairman said they had given the case their best attention, and were of opinion that under the Act of Parliament, the question was still open for their decision, but as a hint had been thrown out in the way of an amicable arrangement, the bench advised that a meeting should take place between Mr. Braithwaite and Mr. Cubit, and if they could not agree, they would at a future time be ready to enter into and determine the matter in dispute. It was then agreed that a meeting should take place as advised between Mr. Braithwaite and Mr. Cubit.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

DURHAM AND SUNDERLAND RAILWAY.

March 1.—Bill read a second time and committed, and referred to the Committee of Selection.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

March 1.—Bill read a second time and committed, and referred to the Committee of Selection.

The object of this Bill is to enable the Glasgow Paisley, and Greenock Railway Company (incorporated by an Act of the 1st Vict.) to raise a further sum of money. By their Act of Incorporation the Company were empowered to raise a sum of 400,000*l.*, in shares of 25*l.*; and so soon as 200,000*l.* should be paid up, to borrow a further sum of 133,333*l.* on mortgage, with power to convert the latter sum into capital. The Bill empowers the Company to raise a further sum of 100,000*l.* by the issue of shares of such amount, and bearing such annual sum, and with such preference over the present shares as the Company or the Directors shall think proper. After the 100,000*l.* is subscribed for, the Company are empowered to borrow the sum of 33,333*l.* on mortgage, the priority of existing mortgages being saved. The Company are empowered to mortgage the ferry (which they were empowered to establish under an Act of last session,) and the rates arising therefrom, so soon as the ferry is established, as a prior security for the sums borrowed under this Act. They are empowered to convert any of the borrowed money, under this or the former Act, into capital by the issue of new shares, to be disposed of in all respects as the shares created under this Act.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

Feb. 26.—Petition of John Richardson and John Connell, complaining of non-compliance with the Standing Orders; referred to the Select Committee on petitions for Private Bills.

March 1.—Committee on petition postponed from Wednesday 3d, till Friday, 5th March.

March 3.—Committee on petition postponed from Friday 5th, till Monday, 8th March.

GREAT LEINSTER AND MUNSTER RAILWAY.

Feb. 27.—Committee on petition fixed for Wednesday, 10th March.

GREAT NORTH OF ENGLAND RAILWAY.

Feb. 26.—Bill read a second time and committed, and referred to the Committee of Selection.

MANCHESTER AND LEEDS RAILWAY.

March 1.—Petition for Bill reported; Report referred to the Select Committee on Standing Orders.

NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

Feb. 25.—Committee on petition fixed for Thursday, 11th March.

PRESTON AND LONGRIDGE RAILWAY.

March 1.—That the order for the meeting of the Committee on the Preston and Longridge Railway Bill, on Thursday, 4th March, be discharged.

March 4.—Committee on Bill fixed for Friday, 12th March.

Bill referred to Mr. Bernal, Sir Hesketh Fleetwood, and Mr. Townley Parker.

SHOTTS AND WILSONTOWN RAILWAY.

March 1.—Committee on petition postponed from Wednesday 3rd, till Monday, 8th March.

SOUTH-WESTERN RAILWAY (No. 1.)

March 1.—Committee on Bill fixed for Monday, 8th March.

Bill referred to Mr. Bernal, Mr. Hawkins, Mr. W. J. Blake, and Mr. B. Wood.

SOUTH-WESTERN RAILWAY (No. 2.)

March 4.—Committee on petition fixed for Monday, 15th March.

THAMES HAVEN DOCK AND RAILWAY.

March 1.—Committee on petition postponed from Wednesday 3rd, till Wednesday, 10th March.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

Feb. 26.—Petitions against: from John Norrison; and inhabitants of the city of York; referred to the Committee on the Bill; counsel ordered.

Ordered, that the order of reference of the York and North Midland Railway Approaches Bill, of Wednesday the 24th inst. be discharged, and the Bill be committed to the list for the West Riding of York and the following selected members:—Lieut.-Col. Hon. G. R. Abercromby (Stirlingshire), Mr. William Crawford (London), Mr. J. Buller East (Winchester), Mr. Ludlow Bruges (Bath), Mr. L. W. Buck (Devonshire, North); that three be the quorum of such selected members.

March 3.—Petition of owners of estates in Ulleskelf against the Bill; referred to the Committee on the Bill; Counsel ordered.

WEST DURHAM RAILWAY.

March 1.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Harland, Mr. Bowes, and Mr. Liddell.

WISHAW AND COLTNESS RAILWAY.

March 1.—Bill "for enabling the Wishaw and Coltness Railway Company to raise a further sum of money," presented and read a first time.

March 3.—Printed Breviate of Bill laid on the table.

Second reading fixed for Monday, 8th March.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

[From the *Hull Times*, March 2.]

THE Annual General Meeting of the Shareholders of this Company took place at noon, on Saturday last, in the Court of Requests, adjoining the Town Hall, HENRY BROADLEY, Esq., M.P., the Chairman of the Board of Directors, in the chair.

The CHAIRMAN, in opening the business of the meeting, said he should best consult the convenience of the proprietors, and also best promote the objects they all had in view, by rendering the remarks, which he might feel it his duty to make as brief as possible, They were aware that the cause of their meeting on that occasion was to hear the Report of the Directors of their proceedings during the past year. They would have also to elect five Directors in the place of that number who retired, according to the provisions of the Act of Parliament, and those gentlemen, he had no doubt the meeting was aware, were eligible to serve again if the shareholders chose to re-elect them. In reference to the Directors, there was one point of the report to which he begged to call their attention—he alluded to the very valuable assistance they had lost in the services of a gentleman connected with the railway—he meant the late deputy chairman; and he was sure that all would agree with him, that not only the Company, but the town in general had sustained by his decease a serious deprivation, in the services of a valuable public agent. (Approbation.) A short time previous to that melancholy event, the deceased had given in a resignation, and another gentleman had been chosen as his successor; that gentleman, however, according to the Act, would then go out of office, but if they were satisfied with his services, was eligible to be reappointed. He next came to the finances of the Company, and on that particular branch he could assure the proprietors that the Directors had been most anxious and vigilant to economise their funds. (Applause.) It was true there was an excess of expenditure over the original estimate, but this was to be accounted for by the extensive possession of land and other property acquired by the Company, and which could not by any possibility be entered into the estimates when the Bill was before Parliament. He next noticed the additional capital required, observing that he thought it would be good policy, and indeed highly expedient, to raise what further sum might be necessary, on the bonds of the Company. The railway was opened on the 1st of July last, and consequently half a year had elapsed on the 31st of December; up to that period a dividend was due, and which the Directors thought it right should be paid. The amount, it was true, was only small, but there was good ground for hoping that it would be larger hereafter. On this subject it had been suggested to him that the line was not open for traffic—the conveyance of goods and luggage—till several weeks had elapsed from the first opening, and which might account for the amount being somewhat less than perhaps many persons had anticipated. (Applause.) With respect to passengers, it had been calculated that the number would be 180,000 annually. The returns for the half year being 109,978, the annual amount on the Hull and Selby line might be stated at 220,000. Next year we could fairly calculate on an increased number. On the 1st of March another very important line of railway would be opened; he alluded to that connecting Manchester with Leeds, and from what he knew of that Company he felt justified in asserting that they would give us every facility for passengers and goods that should pass from our railway to theirs. (Cheers.) The Chairman continued—stating everything had been done that could be done to promote the interest of the proprietors, as well as those of the public at large which were interwoven with them. He then adverted to a great advantage derived by the Company from a series of experiments made by one of their engineers, resulting in a discovery whereby one-half of the fuel formerly consumed had been saved and the expense of working the engines on the line considerably lessened; of this discovery the Directors judged it wise to avail themselves, and would continue to do so if it met with the Company's approbation. (Cheers.) Another experiment which had been suggested by an intelligent and influential individual, that of conveying persons to and from the markets on Tuesdays for one fare, had been tried, and promised to answer so well as to warrant the Directors in their intention of pursuing it, unless they should see some reason for its discontinuance. Observing that we had now arrived at a period when trade might fairly be expected to increase, and our prospects of success look brighter than ever, he said they were all aware of what had occurred on the line during the past half year, as well as before that period, adding that he need scarcely refer to the melancholy and deeply to be deplored event which occurred almost immediately after it was opened; he had no doubt that all had made themselves acquainted with the unfortunate circumstances. None, he assured them, felt more acutely on the subject than the Directors, whose sentiments would be expressed in the Report. In consequence of these untoward circumstances it was not surprising that there should have been some falling off experienced in the receipts. It was not for him to attach blame to any individuals, neither did the Directors see cause for reflecting upon any of their servants, with reference to the unfortunate accidents to which he alluded; they were felt, as he had already said, by none more acutely than by the Directors, and every care had been taken to prevent their recurrence. He would not occupy the time of the meeting, feeling that it was of more value than his observations, but after the Report had been read, if any explanation were required, he as well as the other Directors would be ready to give it. He had then only to remind the proprietors that the mode of replacing the retiring Directors was optional with themselves, either individually or collectively—by ballot or otherwise, as they the proprietors, might think proper.

Mr. LOCKING, the Secretary of the Company, then read the following

REPORT.

"In presenting the proprietors with a statement of their proceedings during the past year, your Directors beg to observe that in accordance with the promise made at the last general meeting every possible effort was used in order that the line might be opened for traffic early in the summer; they were aware of the importance of this in every point of view, and especially that the Company might have the advantage of a portion of the best season for travelling, when passengers would be the most numerous, and the various servants of the Company have better opportunities to perfect themselves in their various duties.

"On the first day of July the railway was accordingly opened by the proprietors, accompanied by some of the authorities of the town, proceeding from Hull to Selby, and, after a short stay there, returned to Hull. On the following day the railway was opened for the conveyance of passengers and parcels, but the arrangements necessary for carrying goods prevented their being taken on the line until the 19th of August.

"Aware of the necessity of using every possible precaution to ensure safety in travelling, your Directors were particularly careful in all their arrangements with special reference to this object. It will be almost needless to state, that notwithstanding these precautions, two accidents have taken place upon this railway, exciting the most painful feelings and the deepest regret. The occasion of both those deplorable events are too well known to render further detail necessary; and a careful consideration of all the circumstances of the cases will go far, as the Directors think, if not entirely to remove, at least to exonerate the officers and servants of this Company from much of the blame which has been unsparingly cast upon them, and it is satisfactory to know that no accident has happened to any passengers by the trains leaving Hull.

"During the last year the North Midland, and York and North Midland Railways were opened throughout; and that of the Manchester and Leeds Railway, which had been postponed, is now fixed to take place on Monday, the 1st of March, both for passengers and goods; this it is confidently anticipated will bring a large accession of traffic upon the Hull and Selby Railway; and your Directors are happy to state that with the Directors of the North Midland and Manchester and Leeds Railways the best understanding exists. Since the last general meeting an event has taken place which at that time was not anticipated, viz., the leasing by the Leeds and Selby Railway Company of their line to the York and North Midland Company for a term of 21 years. An arrangement had been previously entered into with the Directors of the Leeds and Selby Railway Company that the tugs which had been employed by them in conveying goods to and from Selby and Hull were to be given up when the Hull and Selby Railway was in a condition to convey goods, but since the agreement above mentioned was entered into, your Directors regret to state that plans have been formed for continuing the tugs, and increasing the number of them, Should this proceeding be persevered in, it will be alike injurious to both Companies, and must necessarily interfere with that cordial co-operation which on every account ought to be promoted between Railway Companies, especially when so closely connected with each other.

"Your Directors are, and ever have been, anxious to maintain a good understanding with all Railway Companies, and regret much that any opposition to the Hull and Selby Company should have been commenced by another Railway Company, arising from their connexion with and support of the tugs; they are determined, however, to use every effort in their power to counteract its effects, and to establish and extend the traffic on your line; and they feel confident that the manifest and acknowledged advantages which it affords of expedition, safety, and punctual delivery, will ensure its having the great bulk of the traffic to and from Hull.

"The probability which has for some time existed that the trade of the railway would be such as to render increased accommodation necessary, it appeared to your Directors very desirable to secure, whilst they had the opportunity to do so, a plot of ground on the south of, and adjoining the terminus—having one frontage to the dock, and another to Wellington-street; they accordingly offered a negociation with the owner of it, and succeeded in purchasing of him upwards of 5,000 square yards on advantageous terms—they are now therefore in a position to afford to the carriers and the public all the accommodation which is likely to be required for some time to come. Your Directors were also advised by their Engineers to purchase a portion of ground opposite the end of Cogan-street, and the house attached to it, in order to prevent the great risk and annoyance which a crossing there would occasion if made, and it also presented the very desirable opportunity of obtaining a residence for the general Manager near the Company's premises. They have likewise purchased about nine acres of land at Hessle, which from its contiguity to the opposite coast of Lincolnshire, will probably become a station of some importance, especially for cattle, sheep, &c., in order to their being forwarded to the Leeds, Wakefield, Manchester, and other markets.

"From the preceding statements the proprietors will not be surprised that an additional amount of capital will be required, it having also been found necessary to make various additions to the works both in Hull and on the line, and, in order to raise the additional amount thus rendered necessary, your Directors recommend that the Company should give them power to raise the sum of 50,000*l*., by issuing bonds under the Company's seal, in sums of not less than 200*l*., to that amount, which they anticipate will be readily taken up, interest being allowed thereon at the rate of 5 per cent. per annum. By this mode an application to Parliament for power to create additional shares will be unnecessary—a measure always expensive, and very objectionable where it can safely be avoided. The generally acknowledged excellence of our line—its opening prospects of extensive traffic with the manufacturing districts of Yorkshire and Lancashire, and also with the north by means of the Great North of England Railway, which will shortly be opened from Darlington to York—the half yearly interest at 5 per cent., (having priority to dividends amongst the proprietors) are considerations which there is every reason to believe cannot fail to bring forward parties who will deem the investment both undeniable as to security, and profitable as to remuneration.

"The proprietors are aware that since the last meeting three calls had been made, each of 5*l*. per share, viz., in the months of April, July and October, these calls have been so well responded to, that exclusive of the amount due thereon on account of forfeited shares, only 6895*l*. now remains unpaid, about 4520*l*. having been received since the 31st of December; (the greatest portion thereof, together with the interest, it is anticipated will very soon be paid.) During the progress of the works the Directors were anxious to afford every reasonable accommodation to proprietors in the payment of their calls, when they could do so without sacrificing the interest of the Company.

"The statement of the amount of traffic shows a balance of 5565*l*. 5s. 1d. in favour of the Company, after deducting the expenses connected therewith. The Directors therefore recommend that a dividend of 10s. per share shall be made to be payable on the 31st of March—the surplus to be carried to the credit of the account for the present half year. Although the amount of the dividend is small, the Directors thought that it would be satisfactory to the proprietors to receive what it is hoped may be considered as only the earnest of future and larger profits, and with reference to this subject the Directors have decided that as the line is now in full operation, a general meeting of the proprietors shall be held in the month of August, when it is hoped a further dividend will be made, and the accounts of the cost of the railway be also brought to a close .The final arrangement not having been yet made as to the amount to be paid by the postmaster general for con-

Digitized by Google

veying the mails, the exact sum due to the Company for this service is not yet ascertained.

"Notwithstanding the circumstances to which allusion has been made, the Directors have the pleasure of informing you that the *number* of persons who have travelled on the Hull and Selby Railway, during the last six months, considerably exceeded the calculation which was made when the Bill for making the railway was before Parliament. The following is a statement of the number of passengers of each class, viz.:—

First Class	24,514
Second Class	28,408
Third Class	57,056
Total	109,978

In the estimate referred to the number of passengers was 180,000 annually, but the above statement shows that the proportion for the half-year has been exceeded by nearly 20,000.

"In accordance with the urgent solicitations of many highly respectable tradesmen in the town, and of numerous individuals residing on the line of railway, your Directors consented to allow persons on the market days to come to, and return from Hull, in the second and third class carriages, on the payment of one fare only, and the regulation to apply to one train only each way;—the experiment thus far appears to have answered, and it is anticipated that a much greater number of persons than hitherto will avail themselves of the advantages thus presented.

"Although the winter has been more severe than usual and a considerable quantity of snow has fallen at different times, the Directors are happy in being able to state that it has very rarely happened that the trains on this line have been detained much beyond the usual time, every effort having been made to keep clear the passage of the line, and the advantages resulting from a railway conveyance have thus been fully proved.

"Anxious as your Directors have been to reduce the entire cost of working the line to the lowest possible amount, their attention has been especially directed to the consumption of coke by the locomotive engines, which forms a very material item in railway expenditure, and they can inform the proprietors that there is every prospect of the quantity used per mile being smaller than upon any other railway in the kingdom, in consequence of the improvements in the locomotive engines made by Mr. Gray, the superintendent of that department.

"A meeting of parties connected with railways was lately convened at Birmingham, which was attended by gentlemen for all the principal lines in the kingdom. The deputy-Chairman and Secretary of this Company were also present, and various resolutions were passed, which, with the regulations suggested, will it is hoped help materially to make travelling by railway, even to a greater extent than ever, the safest mode yet adopted, the accidents to passengers travelling by railway being incomparably fewer than any other conveyance. At the meeting referred to, a committee of three gentlemen, resident in London, was appointed to attend specially to Bills before Parliament, and business generally relating to railways; and it is hoped that very great benefit will be derived from the committee thus appointed.

"It would have been gratifying to your Directors could they have stated that the dispute with Mr. Wm. Bell, as to the extent of the wharf to be made for him, had been finally settled—this however is not the case, and the Company have paid the sum of 3000*l.* into the Court of Exchequer as security for the erection of such a wharf as the Lord Chancellor may decree that he is intitled to.

"The Directors have to regret the decease of their late highly respected colleague, J. C. Parker, Esq., who had ably filled for some time the office of deputy-Chairman of the Company, and ever evinced great interest in its concerns; in pursuance of the powers delegated by the Act, Mr. Edward Spence was elected a Director in his stead; and Mr. Pim of Liverpool having sold his shares in the undertaking, Mr. Joseph Gee was chosen his successor, but finding his engagements in business would not allow him to attend to the duties of the office, he reluctantly resigned it, and Mr. Robert Kirk was elected in his place.

"The Directors who retire in rotation are Mr. Liddell, Mr. Richmond, Mr. Henwood, Mr. Whitaker, and Mr. Spence, who are all eligible for re-election.

"A number of by-laws have been prepared, to which sanction is necessary in order to their being presented to the Board of Trade for their approval.

"In concluding their Report, your Directors beg to express their confidence in the beneficial results of the undertaking, both with reference to the proprietors and the community at large. It will be their zealous endeavour to promote its success by all fair and honourable means, and they trust that when they next meet the proprietors, this success will be evinced by your then being enabled to make a further and satisfactory dividend."

Mr. LOCKING next read the financial Report, showing a balance in favour of the Company of 5,565*l.* 5*s.* 1*d.* He also read the Reports of Mr. Timperley, Engineer, and Mr. Gray, Resident Engineer, both of which were highly satisfactory.

Mr. WILSON, who rose to move the adoption of the Report, said he had much pleasure in doing so, and also that it be printed and circulated at the discretion of the Directors, as he considered it to be very satisfactory. He had not expected so favourable a dividend, when he reflected on the severity of the weather, and the serious accident that happened soon after the opening of the line. He had travelled on many railways, but he did not know one equally well-conducted in the working department with that of the Hull and Selby. (Applause.) Whether this praise could be extended throughout, he was not prepared to say; but he did not think they worked so well with the lines in connexion, as might be effected with a little exertion. The facilities of passing between towns, not far distant from each other, were not so great as they had a right to expect. Travellers, for instance, who left Sheffield at half-past two o'clock, did not reach Hull until nine in the evening; and the same might be the case with regard to other places. He thought, that by some better arrangements with the other lines, an improvement might be effected in this respect. (Cheers.) He thought it strange that the York and North Midland Company should have acted as they had done. Had a similar opposition been instituted on this line, it would have been designated and unprincipled, and justly so, when the mutual dependence of the two lines was taken into consideration. The tug system, he felt assured, could not be carried on with any profit, and was satisfied that in the end, the mischief which its promoters intended to inflict would recoil on their own heads. He regretted to hear of a necessity for borrowing more money, but as it appeared to be requisite, he had no doubt the proposition would be adopted. Before sitting down, he begged leave to enquire the proposed amount of the dividend.

Mr. LOCKING replied, the sum of 4,000*l.*

Mr. CAMMELL seconded the adoption of the report, which was agreed to with the exception of five or six dissentients.

Mr. T. CARLILL then said, having objected to the Report, that he was astonished to hear of 50,000*l.* being required in addition to the sum already expended, especially when it was considered how few cuttings or embankments there were on the line. He wished to see the Company prosper, but did not think they would do so by getting further into debt. He did not wish to throw a damp upon the concern, but he thought that the Directors should be very cautious before they asked for more money. These remarks he offered unpremeditatedly, they were the result of the moment, and he should be sorry if any of them were calculated to cause an unpleasant feeling.

Mr. HUNT inquired if the affairs of the Company were *bona fide* in a condition to authorize the payment of the proposed dividend; and added his opinion that the Directors in declaring one were holding out a prospect which could not be realised.

The CHAIRMAN replied the Directors considered that the amount could be paid out of the profits, or they would not have recommended a dividend.

Mr. JALLAND inquired if the amount remained after the payment of interest. To which an explanatory reply was given by the CHAIRMAN.

Mr. BUCKTON then proposed the thanks of the Company to Henry Broadley, Esq., M. P., their Chairman, Richard Tottie, Esq. the Deputy-Chairman, and the rest of the Directors.

Mr. T. WATSON seconded the proposition, which was unanimously adopted.

A proprietor then enquired the amount paid to the Directors for each attendance.

Mr. LOCKING replied that they had at first received a sovereign for each meeting, when they remained during the whole period of its continuance. Latterly the meetings had been weekly, and the payment had been half a sovereign; the average time of attendance being from four to five hours. The aggregate amount of payments was 450*l.* 10*s.*

Mr. JOSEPH RICHARDSON, of Leeds, expressed a wish that some arrangement should be made for giving the shareholders an opportunity of considering beforehand, the propositions to be submitted to them at the annual meeting. And with a view to that purpose, he would move that, in future, the report should be printed and circulated ten days prior to the general meeting.

Mr. JALLAND seconded Mr. Richardson's motion for a previous circulation of the report, and suggested that it should be accompanied by a list of the retiring Directors, and the names of those eligible to be chosen in their stead.

Mr. JOHN SMITH and Mr. LIDDELL having offered some observations on the motion, it was agreed to unanimously.

Mr. RICHARDSON next enquired, whether the York and North Midland Company had made any offer to the Directors.

Mr. LOCKING replied that no offer had been made.

Mr. HENWOOD said he hoped the York and North Midland Company were not so ignorant of the spirit of Hull as to presume on making any proposal. (Loud applause.)

Mr. SMITH remarked that the observation just made was strong, and hoped that Mr. Henwood would explain the nature of the offer alluded to.

Mr. HENWOOD in reply, said it would be a severe censure upon the people and the town of Hull, should the North Midland, or any other Company, presume that they wished to sell their property. (Loud cheers.)

Mr. SMITH expressed satisfaction that the nature of the offer alluded to had been elicited.

Mr. KING then moved that Mr. Liddell, Mr. Henwood, Mr. Whitaker, Mr. Spence and Mr. Richmond, be re-elected as Directors.

Mr. WADE objected to the election in the mode proposed, and

Mr. H. LEVETT, after an inquiry relative to the eligibility to vote under particular circumstances, referred to a resolution at the time of the railway coming into operation, which he thought ought to be adhered to for making the election of Directors individual, and by ballot.

The CHAIRMAN stated, that it was competent in the body of proprietors to elect in whatever mode they thought proper. For himself and the other Directors, he would say they were quite satisfied that the mode of election should be at the pleasure of the meeting.

Mr. WADE and Mr. JALLAND recommended the system of voting papers used at the Town Council.

Mr. LOCKING replied, he was prepared with nomination lists and voting papers.

Mr. WADE then moved as an amendment, that five qualified proprietors be elected.

Mr. SMITH supported the proposition, and objected to the original motion as partaking of a close borough system. It was also remarked that the interests of the proprietary had suffered from the clashing interests of proprietors who were in other Directions.

Mr. LIDDELL expressed a wish to retire, although he never would forsake any public duty in Hull so long as he might be required to fulfil it. He had been among the earliest subscribers to the Railway, and felt conscious of having been but a feeble Director. He therefore quite accorded with the amendment, and had no doubt that the meeting would select such gentlemen as were competent to rendering the railway a real benefit to the town.

Mr. HENWOOD expressed similar sentiments.

Mr. GRESHAM said, the retiring Directors had themselves expressed a wish that such a departure from the rule should be adopted; but it had been considered that it would be invidious to recommend it.

The CHAIRMAN bore testimony to the efficiency of the retiring Directors, when

Mr. WADE explained that he had made the proposition without any feeling towards those gentlemen, whom he believed to be actuated by the strictest honour and integrity. Yet, if any of the gentlemen retiring were members in the direction of other companies, he must consider that none could serve two masters.

The CHAIRMAN here said he thought it proper to state with reference to a committee appointed at the last meeting, for the purpose of conferring with the Dock Company, on the wharfage clause in the late Bill, that the members of that committee were elected from amongst those proprietors who were connected with the Dock Company.

Mr. HENWOOD said that his course had been to impress upon the Dock Company that their interests were the same as those of the railway; and he, in fact, had been considered by them as the advocate of the railway.

Mr. LOCKING then read the resolution appointing a committee to meet the Dock Company for the purpose of obtaining a modification of the late Bill before Parliament, when it appeared the members were Mr. Tottie, Mr. Richmond, and Mr. Cooper.

Digitized by Google

The resolution for choosing the Directors by means of voting papers was adopted; and the CHAIRMAN proposed that the other business should be proceeded with.

Mr. GRESHAM moved that a dividend of 10s. should be made payable on the 31st of March, and said that he was happy to answer the question whether it was *bona fide* a dividend or not? In some cases dividends had been made on fictitious capitals—in their case, however, it was not so. He could assure the meeting that the Directors had not ordered a dividend until they were fully satisfied that they could make one; and he was sorry that they could not make it larger, but which might be attributed to the paralysing effects of the first unfortunate accident. He however calculated on the opening of the Manchester, and the completion of the Great North of England lines, as events leading to the future success of the Company. Referring to remarks on their being about to borrow 50,000*l.*, he said he thought it a better way of paying their debts than by going to Parliament to create fresh shares. He then mentioned the purchase of lands and additional premises adjoining the terminus, which he hoped soon to see surrounded by activity, industry, and enterprize; and concluded by expressing his sense of having the honour to propose the first dividend.

The motion was seconded by Mr. COOKMAN, and carried unanimously.

Mr. RICHARDSON made an inquiry relative to the proportion of expense which the working-line would in future be likely to bear towards the receipts?

The CHAIRMAN explained the difficulties at present attending the question; and Mr. Liddell deprecated its being put at so early a stage.

Mr. LOCKING answered, that the expenses had hitherto amounted to 50 per cent., but the first half year had involved expenditure, which it was not expected would be so large in future, and it was expected that they would be considerably less. He further explained that the establishment must be maintained, whatever the traffic might be, they however anticipated a considerable increase, and then it would be carried on without any addition.

Mr. TOTTIE proposed a resolution for adopting a number of bye-laws on the line, which having been read by Mr. Locking, and seconded by Mr. Henwood, were unanimously agreed to.

Mr. FOSTER enquired if any further arrangements were intended respecting Sunday travelling. Some friends whose proxies he held, considered that two trains instead of one should proceed before service in the morning, and two in the evening.

The CHAIRMAN replied, that the Directors had no intention of making any alteration, and added that the present Sunday trains did not pay.

Mr. CRAVEN then moved that a sum of 50,000*l.* be borrowed, a priority of payment of interest being given to the dividends.

Mr. SPENCE seconded the motion, which was carried.

The CHAIRMAN, in answer to a question by Mr. Levett, said sums as low as 200*l.* would be received at 5*l.* per cent. interest.

Mr. CARLILL said he thought the adoption of the report had carried the question of borrowing the money. He still regretted that the cost of the line had so far exceeded the estimate. He really expected that the Company had something in hand, and was sorry to find they had become land jobbers.

Mr. HENWOOD said he should be sorry to see it go forth that they were land jobbers, they might as properly be called pig jobbers, for there was plenty of those cattle to be found on their line. He would only say there was no disposition to go beyond what was requisite to establish the undertaking in permanent prosperity.

Mr. S. H. EGGINTON proposed that the next meeting of the Company should be held in August; the day to be fixed by the Directors.

Mr. VALLANCE seconded the motion, which was carried.

On the motion of Mr. Wade, seconded by Mr. Carlill, Messrs. Farthing, and W. H. Dikes were appointed auditors.

Mr. PEASE moved a vote of thanks to Mr. Walker, the engineer, for his valuable services on many important occasions.

The CHAIRMAN, referring to what had been said about inconvenience experienced on the route from Sheffield, &c., said that no gentleman unconnected with railways could conceive the difficulties which arose from alterations of time and the opening of new lines. The Company had more than once been prevented from issuing time tables by these difficulties, but now that the Manchester line was to be opened, he trusted that the irregularities would be corrected, especially to Sheffield. The Chairman then repeated his statement relative to the Sunday trains, and said there was nothing further to do in the fulfilment of his pledge of taking the chair, than to acknowledge the kind attention of the meeting. (Applause.)

Mr. LIDDELL recommended the proprietors to raise the 50,000*l.* amongst themselves, in preference to going to Parliament for the creation of new shares, adding his intention of advancing 1,000*l.* (Applause.)

Mr. HENWOOD expressed a similar opinion, and regretted that they had not raised the previous sum amongst themselves. The firm to which he belonged were ready to increase their subscription by another 1,000*l.* (Applause.)

Mr. PEASE having taken the chair,

The Rev. W. R. GILBY moved a vote of thanks to the chairman for his great and uniform diligence manifested on all occasions when required in the service of the Company. He also enquired if it were intended there should be more than one continuous line from Hull to London daily.

Mr. LOCKING replied there were two already.

Mr. LIDDELL seconded the vote of thanks, coinciding warmly in the complimentary notice of the Honourable Chairman, and remarking on his assiduity, having been on the preceding morning in his place in Parliament; and then present in the performance of an essential duty amongst themselves. (Acclamation.)

The CHAIRMAN, in reply, said he wished he could return thanks in a manner worthy of their kind acknowledgment. Referring to his arrival from London, he said it was at one time doubtful, a Bill being in the House of Commons which affected their interests; but finding that it was only to be read *pro forma* on that day, he was enabled to fulfil his pledge. (Cheers.)

Messrs. Richardson and Cammell were appointed scrutators, and the meeting then proceeded to elect the Directors, when Mr. Liddell, Mr. Richmond, Mr. Henwood, Mr. Spence, and Mr. Whitaker, were re-elected by a very large majority.

Four thousand seven hundred pounds was subscribed at the meeting towards the proposed loan.

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

(From the *Bristol Gazette*—Second Edition.)

THE Ninth Half-Yearly Meeting of the Proprietors of this Company was held on Thursday at the White Lion, Broad-street. The attendance was not so numerous as on former occasions, but highly respectable.

At twelve o'clock the Chairman of the Board of Directors, FREDERICK RICKETTS, Esq., took the Chair; and the Secretary, J. B. BADHAM, Esq., having read the notice convening the meeting,

The CHAIRMAN addressed the meeting to the following effect:—Gentlemen, the Directors' Report, that of the Engineer, and the statement of receipts and expenditure, have in conformity with your wish been laid on the table, and preclude the necessity of my troubling you with many observations; but I cannot forego the pleasure of congratulating you upon the great improvement which those documents show in the circumstances of your undertaking. When I had last the honour of occupying this chair, there were some among you who entertained a doubt of the soundness of the policy of granting a lease to the Great Western Company, but if I may judge from the language of letters which have been received, and from the testimony of several with whom I have lately spoken on the subject, there must be at present a very small number who do not entirely concur with the Board on that question. At the period of our last meeting there was a great degree of uncertainty whether you could reach the borrowing point without another call, but I have now the satisfaction of stating that some thousands above the sum of 750,000*l.* required by your Act of Parliament have been received, and the promptitude with which above 50,000*l.* have been paid on account of the allotted shares, gives me a confident expectation that the remainder will be received within a few days of this time. (Loud cheers.) The security which your debentures offer has already induced parties to send tenders from various parts of the country; this does not at all surprise me when I consider that we are on the eve of opening to Bridgewater; that the fixed rental on that portion of the line is more than sufficient to cover the interest upon all the money that we shall have occasion to borrow; and this additional security under the lease will be rapidly increasing by the opening of further portions of the line to Taunton, Wellington, and Exeter. If tenders for loans continue to come in with the same rapidity as hitherto, you will have means to finish a large proportion of the line without further call. One other circumstance is too important and gratifying for me to leave unnoticed. Upon the principle of allotment of forfeited shares, I believe upon a former occasion there was almost an universal sentiment of approbation; but there were many who thought that a considerable number of those shares would be unclaimed, and that a second allotment would be necessary. Now, gentlemen, very far from this being the case, the Report will show you that every share has either been taken up by the party to whom it was allotted, or disposed of with advantage to the Company; and it will be an additional satisfaction to know, that by the sale of these surplus shares to highly respectable purchasers in London and other places, at a distance from Bristol, several new and excellent names have been added to the Register. It is now six months since you had nearly 4000 unproductive shares—this day, I believe, you have not one—(cheers)—and I do hope at no very distant period we shall have the pleasure of announcing a good dividend. In the mean time we must be satisfied with the 4 per cent. on paid-up Calls. Gentlemen, you must allow me to advert to one other contrast between your position at the last meeting and the present; then you had about 20,000*l.* in your Banker's hands; now, after paying your contractors up to Friday last, your balances in your banker's hands amount to upwards of 100,000*l.* (Applause.) I do not hesitate to declare my firm and deep conviction, that this great transition in the circumstances of your undertaking is almost exclusively attributable to your Allowance of Interest on paid-up Calls, the Lease to the Great Western Company, and the Allotment of forfeited shares. (Cheers.) There are still two subjects upon which it is my duty to touch. The first is Mr. Labouchere's intended bill for the better "Regulation of Railways," some of the clauses of which are of an arbitrary nature, and would be injurious to the interests of this Company. Every exertion is at present being made by the Railway Committee in London, to oppose its passing into a law, unless Mr. Labouchere will consent to withdraw, or greatly modify, the obnoxious clauses. In conclusion, I feel it would be an act of injustice not to allude to the conduct of your Secretary, whose unwearied zeal and energy have been successfully directed to the best interests of this great undertaking. (Applause.)

The SECRETARY then read the following Report of the Directors:—

REPORT.

"Your Directors have on this occasion the pleasure of submitting to you a Report, by which you will find that all the present circumstances of your undertaking are prosperous and encouraging.

"The Engineer's Report, which contains a detailed statement of work now remaining to be executed between Bristol and Bridgewater, will show you that your Directors were fully justified in the reliance which they placed in the accuracy of his calculations, and in fixing the 1st of June next as the latest period for opening these 34 miles of the line.

"In the Summer of next year you may confidently expect it to be open to Taunton. The contracts for these 11 miles are advertised to be taken on the 19th instant, and the Directors anticipate that there will be numerous competitors for these works.

"There is no question, from the sudden and simultaneous demands for labour in different parts of the kingdom, most of the railways recently constructed have been compelled to pay very high prices; but as that state of things is now much altered, it may be reasonably expected, that the unfinished lines, and your own among the number, will participate in the benefit of the change.

"The Engineer has been instructed to prepare the property plans of the whole line between Taunton and Exeter as soon as possible, and when these are completed, further portions of the work will be offered for contract.

"As the tunnel and contiguous works about three miles to the westward of Wellington will require more time than any other part between that town and Exeter, it has been determined to commence its execution without delay. The lease to the Great Western Company, drawn in conformity with the terms approved by you on the 29th and 30th of September last, has been sealed by both Companies.

"Some of the results of the three leading measures which have successively occupied your deliberation, namely, the allowance of interest on paid-up calls, the lease to the Great Western Company, and the allotment of forfeited shares, are, that a large addition has been made to the number of permanent holders, that all the shares are now, for the first time, in responsible names, that considerably more than 750,000*l.* have been paid up, and you are consequently in a condition to borrow on debenture under the authority of your Act of Parliament, without any further call.

Digitized by Google

"The fixed rental under the lease, amounting, for the first portion of the line, besides your share of the rates and tolls, to 30,000*l.* a-year, and increasing as farther portions are opened to Taunton, Wellington, and Exeter, without taking into account the 600,000*l.* which are yet due on the shares?and applicable to the works on the line, offers such complete security to the capitalist, that there is every reason to expect the early receipt of the loan of 500,000*l.*, which will enable you to finish a large portion of the remaining distance, without the necessity of any farther call for a considerable time to come.

"The plan adopted for the disposal of the forfeited shares has been completely successful.

"Of the 3885 shares forfeited, 3551 have been allotted to and accepted by shareholders, who had paid the 10th call on their own shares; and the remaining 314 have been sold to highly respectable parties on satisfactory terms.

"Besides these shares, a farther number of 187, on which a considerable sum has been received for calls, but which at the period of your last meeting were not deemed hopeless, have since been forfeited; and their forfeiture will in due time be submitted to you for confirmation.

"Under the arrangements which have been made, these shares will be rendered immediately available to your funds, and thus every doubtful share will pass to the name of a solid and responsible proprietor.

"Upwards of 70,000*l.* have already been received for allotted and forfeited shares, including a sum of more than 7,000*l.* which has been saved for the Company by thus disposing of the surplus or forfeited shares, instead of re-allotting them.

"In the room of Mr. James Brown, of whose resignation you are already aware, the Directors have elected Mr. Francis Parker, of Manchester, a gentleman strongly recommended by all the large and influential shareholders in that district, and whose views on the main points of railway construction and economy are in unison with those of your other Directors.

"Mr. William Beadon, jun., of Taunton, having also resigned, the Directors have availed themselves of this opportunity of inviting to a seat in the Board, Edward Divett, Esq., M.P., for Exeter, whose interest in the undertaking, and whose long-tried zeal for its welfare, will make him a great acquisition; but being one of the four Directors who retire by rotation, it will be for you to ratify the choice which has been made.

"The four who retire are Dr. Miller, of Exeter, Mr. Samuel Lucas, Mr. Charles B. Fripp, and Mr. Divett, who offer themselves for re-election.

"Should any future vacancies arise from resignation or other causes, the subject of a reduction of the number of Directors, under the provisions of your last Act of Parliament, will have the most attentive consideration.

"It has been found necessary to apply to Parliament for an Act to extend the time for the purchase of land; to which your sanction will be required to-day.

"The registered proprietors of several shares, sold by them, (but which the purchasers have neglected to register) having requested their forfeiture, subject to an undertaking that the arrears thereon shall be forthwith paid, a list of such shares will be submitted to you for confirmation of their forfeiture.

"The determination of the Government in favour of the establishment of the West India Packet Station at a western port, cannot fail of being satisfactory and ultimately very beneficial to this Company. Your Directors have also noticed with much pleasure, that strenuous efforts are now being made to extend the advantages of railway communication to the district below Exeter, and they trust the time is not very distant when your line will receive a great accession of traffic from the construction of a main line of railway, that will bring the most western harbours of the island into direct connection through Bristol with the metropolis, and the midland and eastern parts of the kingdom.

"The account of the receipts and expenditure to the 31st of December last will show a balance of 27,036*l.* 17s. in the hands of the Company's bankers; and the Directors have the satisfaction of stating that it now amounts to upwards of 100,000*l.*

"FREDERICK RICKETTS, Chairman."

[We are unavoidably obliged to postpone Mr. Brunel's Report and Balance-sheet till our next.]

The Report, which was received throughout with much cheering, appeared to give universal satisfaction to the Proprietors.

On the motion of FREDERICK RICKETTS, Esq., seconded by JAMES GIBBS, Esq., it was then resolved—"That the corporate seal of this Company be affixed to the register of proprietors now produced."

F. P. BARLOW, Esq., said—This is the first time I have had the honour of addressing the proprietors in this undertaking, and I cannot but express my great satisfaction at the very favourable report which has just been read. I believe all our difficulties are now overcome—(cheers.) The sun now shines upon us. Our affairs have been entrusted to hands which ensured the success which has followed. I am confident that that steadiness, discretion and ability, which the Directors have hitherto exercised, and which has already produced so cheering a result, will be still exercised with a persevering fidelity till the whole undertaking is brought to a prosperous end. (Cheers.) It is a subject of much congratulation that this line when completed will be without its equal; it will be the ambition of the world. There is no line in the country which will be able to compete with that from London to Exeter. (Cheers.) It is also matter of gratification to the shareholders in this undertaking, that Government has selected Dartmouth as the port for the Packet Station. It cannot fail to be beneficial to this line, and will add a fresh stimulus to our exertions to complete the line throughout, so as for us to derive all the benefit we possibly can. I must again allude to the favourable nature of the Report, and I now beg to move,

"That the Report of the Directors now read, be received and adopted, and that they be requested to send a copy thereof to each proprietor."

J. WINWOOD, Esq. said, he had much pleasure in seconding the motion, which was then put to the meeting, and carried unanimously.

V. J. HOVENDEN, Esq. said:—Gentlemen, the Directors have presented us with so satisfactory a Report, not only as regards the early completion of the line to Bridgewater, but as to the state of our finances—no small matter in itself—that I anticipate your unanimous concurrence in the resolution I am about to propose, namely, the re-election of the four retiring Directors. When I read the names, I am sure but one opinion will prevail of the propriety of continuing services which have already proved so valuable. I move, Sir,

"That Dr. Miller, Samuel Lucas, Chas. B. Fripp, and Edward Divett, M.P., Esqrs., be re-elected Directors of this Company."

J. TALBOT, Esq. seconded the motion, which was carried unanimously.

Dr. MILLER rose and said, I beg to return the best thanks of my colleagues and myself for the honor you have just conferred upon us; and I have to express our firm determination to carry out the objects of this undertaking with all the ability in our power. (Cheers.) The state of the line of late, as must have been known to most gentlemen present, had occasioned to the Directors considerable uneasiness and anxiety. But their knowledge or the intrinsic merits of the line ever caused them to look to its ultimate success with perfect confidence. (Cheers.) They never even considered it in danger, much less did they ever despair of success. They see now not only that that success is ensured, but that it will be realised at a much earlier period than heretofore there was any reasonable ground to hope, and the Directors look forward to a speedy and glorious completion to their labours. (Loud cheers.)

JAMES HARFORD, Esq., said:—I beg to propose "that the notices of forfeiture issued by order of the Directors, as to 109 shares in this Company, specified in the list of Members now read, be confirmed, and that the same are accordingly forfeited to this Company."

JOHN TOMLINSON, Esq. seconded the motion; and the Secretary having read the list, the resolution was unanimously passed.

The SECRETARY then said,—I am desired by the Chairman to state, that these forfeited shares consist of small portions of shares sold to parties who have neglected to register, and the forfeiture is now made at the request of the proprietors of the shares; they engaging to pay up all arrears. (Hear.)

Dr. MILLER then moved—"That the Directors be authorised to apply to Parliament for an Act to extend the time for purchasing land, and to amend and enlarge the former Acts."

F. PARKER, Esq., of Manchester, seconded the motion.

A PROPRIETOR wished to know what were the provisions of the new Act?

Mr. OSBORNE.—They are confined entirely to the objects specified in the resolution. The draft of the bill is not finally settled, and therefore it could not be brought here to-day.

The PROPRIETOR—What is the extension of the time now asked for?

Mr. OSBORNE—Three years.

Mr. C. B. FRIPP—It is not at all probable that any such time as that will be required, but still it was judged right to take as much as we can.

The PROPRIETOR suggested five years should be taken.

Mr. OSBORNE—Parliament would not grant it.

The PROPRIETOR—Is there power in the Act to raise more money?

The SECRETARY—I am desired to state two reasons why no such power is asked. First, that it is too late now to give the necessary notices for a money bill; and secondly, that the Directors do not anticipate there will be any necessity for raising further money. (Cheers.)

The gentleman who had put the question then expressed himself satisfied, and said that his only object was to diminish the law expenses. (Cheers.)

Mr. CARLISLE—I am not acquainted with the new standing orders, but I know last year when we sought for an extension of time for the Taff Railway we found great difficulty in getting three years. The usual time given by Parliament is two years.

Mr. OSBORNE—It is not probable that Parliament will grant more than two years. Lord Shaftesbury will not allow it. At the same time it is best to apply for the greatest time that Parliament will give.

The CHAIRMAN—Our solicitors will get the longest time they can.

JOHN TOMLINSON, Esq., moved "That the best thanks of the proprietors be given to the Directors for their able and zealous management of the affairs of this Company."

WILLIAM CROSS, Esq., seconded the motion, which was passed with much applause.

The CHAIRMAN—On behalf of my colleagues and myself I beg to return our united thanks for the honor conferred upon us, and to assure you that our best exertion, as indeed hitherto in practice, shall be continued for the interest of the Company, and we are glad in having been able to present to you so favourable a Report. (Cheers.)

The CHAIRMAN then left the Chair, and the same having been taken by J. GIBBS, Esq., the thanks of the meeting were moved to F. Ricketts, Esq., for his able and judicious conduct in presiding.

The motion was then passed by acclamation, and Mr. Rickets having briefly expressed his acknowledgments, the meeting broke up.

In concluding our Report we think it right to remark, that on no former meeting did the whole of the proceedings appear so perfectly satisfactory to the shareholders, whom we cannot but congratulate on the favourable position in which their line is now placed.

SUNDAY TRAVELLING—BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—As a Special General Meeting will be held in Birmingham on the 23rd instant, for the purpose of deciding whether any or what trains, should run on Sundays, exclusive of the mail trains, I would submit through your valuable paper, for the consideration of the Birmingham and Gloucester Shareholders, the propriety of allowing three additional trains to run on that day, and at such hours that would interfere but little with those employed in the Company's service; for instance, two trains in the morning, one from Birmingham and the other from Gloucester, leaving each station at eight o'clock, and by half-past ten o'clock both trains would arrive at their respective termini. In the evening a train from Birmingham at seven o'clock, together with the mail trains from Gloucester, at a quarter past seven o'clock and nine o'clock, would give to the public the means of travelling each way morning and evening, and rendering them that accommodation which I think they have a right to expect, and take up but little extra time of the Company's servants.

The mail trains which leave Birmingham at the unseasonable hours of one o'clock and three o'clock in the morning, I think cannot with fairness be taken into account, as affording any accommodation on the Sunday. Yours, &c.

A WELL WISHER TO THE BIRMINGHAM AND GLOUCESTER RAILWAY.

The Hastings mail coach was overturned on Wednesday night, on its way to London, between Tunbridge Wells and Tunbridge. One passenger was injured, but not severely.—*Globe.*

TO CORRESPONDENTS.

London and Manchester Direct Scheme.—*We believe the statement of* Expositor, *with regard to the furnishing of the "Company's" offices in Cornhill, to be in the main correct, but for the present we spare the particulars. The idea of one of them being represented as a gentleman of great property in the East Indies, is particularly good.*

A Subscriber (Llangollen) *is quite right, but the instalment referred to are due, and may therefore for the purposes of a dividend, be considered as paid.*

We are requested to correct a mistake in the report of the observations made by Mr. Rastrick at the late meeting at Yarmouth. Instead of "he had been applied to by the North Midland Railway Company," *&c. &c.*, his words were *that* "he had had a conversation with a gentleman belonging to the North Midland Railway Company," *&c. &c.*

The Apology for Engine-drivers *inserted in our last number, was omitted to be quoted as from our promising contemporary, the* Railroad Quarterly Journal.

G. W. R. *declined.*

We are sorry to be again obliged to postpone Q. in the Corner's *last communication.*

A Heavy Holder of Railway Shares—Mr. Williams—Alpha—A Shareholder in more Lines than One—Inquisitor—F. A. D.—Economicus—*received.*

The Manchester and Leeds *meeting, the Report of the* Glasgow and Ayr Company, *and a considerable number of Letters, are in type, but are unavoidably deferred.*

THE RAILWAY TIMES.

SATURDAY, MARCH 6, 1841.

Mr. LABOUCHERE'S new Bill "for the better regulation of Railways," as amended in Committee, has been laid before the House of Commons. It has received various verbal improvements, but they have in general very little to do with the principle involved, and as this principle has already been favourably spoken of by us and well received by the principal Companies, it is not to be supposed that either they or we are dissatisfied with the version of the Bill now issued.

The only *new* clause in the amended Bill is that which relates to a return of railway accidents attended with personal injury, and in this respect the proposed alteration seems to us to be an improvement. We are of opinion, however, that much too little time is afforded to the Companies for making a return of the accidents upon their several lines, inasmuch as "three days" leave scarcely space enough for a thorough investigation of the circumstances which may have led to catastrophes of so comprehensive a character. We dare say that the limitation of "three days" has, in this instance, been fixed in order that the Companies should submit to the Government inspectors a full statement of their position in regard to such occurrences previous to the holding of any Coroner's inquest. The clause is as follows:—

"And be it enacted, That every Railway Company shall, within three days after the occurrence upon the Railway belonging to such Company of any accident attended with personal injury to the public using the same, give notice thereof to the Lords of the said Committee, in such form and manner as the Lords of the said Committee shall from time to time direct; and if such notice shall not be given as aforesaid, every such Company shall forfeit to her Majesty the sum of five pounds for every day during which such Company shall neglect to give the same, and every such penalty may be recovered in any of her Majesty's Courts of Record."

The principal alterations in the other clauses are these:—

In clause 4, respecting notice of opening new railways, the words which we print in *Italics* have been introduced. No opening, it is propoed, shall take place until ten days after notice in writing shall have been given by the Company to the Board of Trade, "when the said railway *will be in their opinion* sufficiently completed for the safe conveyance of passengers, and ready for inspection." In the clause as it stood originally, the words were, "IS *sufficiently completed.*" The alteration will enable the Companies to give the notice ten days before the works are likely to be finished.

In clause 6 it is provided that if the "*officer or officers appointed by* the Lords of the said Committee [the Board of Trade] *to inspect such railway*" shall be of opinion that the opening of the line will be attended with danger to the public, such line shall not be opened under a penalty. The words in *Italics* have been inserted in Committee.

A very good proviso is now for the first time attached to the same clause. After fixing the penalty for opening contrary to the order of the Lords of the Committee, the amended Bill adds:—"*Provided always that no such order as aforesaid shall be binding upon any Railway Company, unless therewith shall be delivered to the said Company a copy of the Report of the officer or officers, on which such order shall be founded.*" This proviso will, to a great extent, guard against the indulgence of any whim or caprice on the part of a Government Inspector.

In clause 8 (formerly clause 7) the time allowed to the Companies for making certain returns of accidents, is extended from seven days to fourteen, after such returns shall have been required.

The clause relative to the general powers of the Board of Trade has been very considerably improved. For the purpose of comparison, we here reprint the clause.

Originally it stood thus:—

"And be it enacted, That it shat it shall be lawful for the Lords of the said Committee to issue from time to time such regulations as they shall deem necessary for the prevention of accidents upon railways: Provided always, That such regulations shall not prescribe anything of an experimental nature, nor interfere with the number of trains, nor with the times of starting trains, nor with the speed of travelling on any railway further than is necessary for the purpose of preserving an interval of not more than fifteen minutes between succeeding trains: Provided also, That no such regulation as aforesaid shall be binding upon any Railway Company, unless the Lords of the said Committee shall have given to such Company twenty-one days' notice of their intention to issue the same."

It now stands thus:—

"And be it enacted, That it shall be lawful for the Lords of the said Committee to issue from time to time such regulations as they shall deem necessary for the prevention of accidents upon railways: Provided always, That such regulations shall not prescribe anything of an experimental nature, nor interfere with the number of trains, nor with the times of starting, *nor with the stoppage of trains*, nor with the speed of travelling on any railway further than may be necessary for the purpose of preserving an interval of not more than fifteen minutes between succeeding trains: *Provided also, That any such regulation shall be, as nearly as circumstances may render it expedient, the same upon all railways:* Provided also, That no such regulation shall be in force after the first issue thereof for a longer period than six months, unless at the end of such six months the Lords of the said Committee shall direct its further continuance: Provided also, That no such regulation as aforesaid shall be binding upon any Railway Company, unless the Lords of the said Committee shall have given to such Company one calendar month's notice in writing of their intention to issue the same, *in which notice the precise nature of such intended regulation shall be specifically stated, and if it be intended to apply to particular railways, or in a different manner to different railways, the reasons for such special application shall also be stated:* and any Company shall be at liberty to memorialise the Lords of the said Committee against such intended regulation, which memorial shall be filed by the said Lords in their proper office for such purpose, and submitted to Parliament as hereinafter mentioned."

Here again, it will be seen an additional check is put upon an arbitrary exercise of the Board's powers, as does also the amendment to the next clause, which requires that all memorials against the Board's decisions as to the opening of new lines, shall be laid before Parliament, along with the Board's minute, specifying the grounds of such decision.

The time at which the provisions of the Act, so far as the licensing of drivers is concerned, are to come into operation is fixed at *Three calendar months* from the date of the Royal Assent. The place of examination for licenses is to be "at some station" of the Company whose nominees the candidates may be. We regret that Mr. Bell's amendment, to which we alluded last week, having in view to throw the examination open to all parties who may wish to be candidates, has *not* been introduced.

A register "of all suspensions, revocations, and renewals" of licences, as well as of the original grants, is to be kept in the office of the Board of Trade.

Such are the principal alterations which have yet been effected in Committee. They are not, on the whole of any very great importance. Probably the measure will be still farther modified.

The Bill was further proceeded with in Committee last night, but the details we must for the present postpone.

WE observed in our last that the charge brought by this journal against the Directors of the Eastern Counties' Railway Company of grossly and wilfully misrepresenting the results of their carrying business, and which is to form, it seems, the burden of their threatened legal proceedings against us, "is not as the Directors would have it believed a *recent* charge, but one of six months date." But upon a more careful retrospect of our pages, we now find that the charge may be traced to even twelve months back—to the very date indeed of the first traffic account they ever laid before their constituents. And further, we find on examining their latest traffic account—that exhibited to the meeting held last week—that the same system of mis-

Digitized by Google

representation with which they commenced, is still most unjustifiably continued.

1. To begin with the beginning — At the general meeting held on the 26th February, 1840, the Directors reported that their traffic receipts from the 20th June, 1839, (when the line was first partially opened) to the 4th January, 1840, amounted to 8,124*l.* 13s. 9d., and their disbursements on account of traffic to 4,447*l.* 5s. 8d., leaving a net balance of 3,977*l.* 8s. 1d., which they pretended they had laid out at interest.

On this we remarked (*Railway Times*, 14 March) :—

"There are many things which must be added to the debtor side of the traffic account before a true balance can be struck—such as interest on the cost of stock, proportion of advertising account, proportion of the salaries and allowances of Directors, Manager and Engineer's staff, parish rates, &c. If what *ought* to be added under all these heads *were* added, we are convinced that it would be found that the receipts from the portion of the line opened have not more than defrayed the expenses."

2. At the general meeting of the 27th of August, 1840, the Directors represented that their traffic receipts for the half-year, from the 4th January to 4th July, 1840, had amounted to 7,784*l.* 8s. 1d., but that their pretended net balance in hand had been reduced to 3,948*l.* 12s. 10d.!

We remarked on this (*Railway Times*, 5th September) :—

"At the general meeting they represented that they had on hand a net traffic profit of 3,977*l.* 8s. 1d. We said at the time, that this was a false and deceptive balance, and their general half-year's balance sheet proves this beyond all question. They have been six months longer at work, and have opened seven miles more of the line, and yet the balance they have now on hand is only 3,948*l.* 12s. 10d., *being less by* 28*l.* 15s. 3d. *than they had six months ago!* * * * * It is idle, however, to talk of there being a profit on either half-year's traffic. *The Company have been all along, and are now, working at a loss.* The way in which it is made to appear as if they were making a handsome profit, is simply by having recourse to the somewhat stale trick of charging the capital account with the greater portion of the expenditure incurred on the traffic account."

We then pointed out various items which had been shifted from the traffic to the capital account of an amount "sufficient to swallow up twice over all the profit they (the Directors) pretended to have realised."

3. So matters stood on the 13th February last, the date of the article of which the Directors at present more particularly complain. We then re-published from the *Chelmsford Chronicle*, a report of a case adjudicated at the Romford petty sessions, of the Eastern Counties' Company, Appellants against a rate assessed upon them for the poor of the parish of Romford, in which report we met rather unexpectedly with the following *official* proofs of the correctness of all our preceding statements :—

"Mr. Gadsden (*for the Company*) produced an account, from which it appeared that the

"Gross receipts of the Company for six months, ending 5th January, 1840, amounted to.....	£7,784	0	0
"Expenditure for the same period exclusive of any tenants' profits	8000	0	0
"Loss to the Company	£716	0	0

"Also an account commencing 12th July, 1840, and ending 2nd January last, by which it appeared that the

"Gross receipts of the Company during that period were	15,402	0	0
"Payments during same period ..	14,500	0	0
"Balance in favour of the Company	£902	0	0

"Mr. Gadsden then called Mr. Sydney Braithwaite, who stated that he was *sub-engineer to the Eastern Counties' Railway*, and that * * * * the *actual cost of the maintenance of this line is* 416*l. a mile, independent of various labourers wages.*

"Nathaniel Davis, *Accountant to the Company*, stated that their takings and expenses amounted to the sums mentioned by Mr. Gadsden."

4. We come now to the general meeting of last week, the accounts presented to which, bring down the traffic business to the 4th Jan., 1841. We have just seen that the accounts exhibited by Mr. GADSDEN to the Justices at Romford, and sworn to by Mr. DAVIS, the Company's accountant, showed that for the period between 12th July, 1840, and 2d Jan., 1841, the Company had cleared only 902*l.* (having previously been considerable losers); but the accounts for the same period—at least from the 5th July, 1840, to 4th January, 1841, (the difference in the dates being we presume a mere clerical discrepancy)—presented to the shareholders, and through them to the public, shewed the Company to have made a profit during that time of 4803*l.* 12s. 8d.!!! and to have in hand as the total result of their carrying business for twenty months, a net sum of 8,752*l.* 5s. 6d. !!!

Neither set of statements, however, can we accept of as exhibiting the true state of the case. When Mr. DAVIS, the Company's Accountant, swears that "the takings and expenses amounted to the sums mentioned by Mr. GADSDEN," he must, of course, be understood to include only such expenses as his masters had directed him to charge to the account of traffic, and not those which by the same authority, he had carried to that of capital stock. It remains, however, for those who are desirous of knowing what the real state of matters is, and for us especially, who are interested in proving that we have not misrepresented them, to inquire whether the Directors have caused any thing to be placed to the capital account, that has no business there.

First, then, we charge them with wilfully shifting from the traffic account certain large sums expended for Maintenance of Way, with which the traffic account alone is chargeable. In the Report of 26th February, 1839, they stated that they had omitted "of course," "including *during the first year* the *maintenance of way* and depreciation of stock"; but though we by no means see why this should be a thing "of course"—at least to the extent of omitting *the whole* of the outgoings under these heads, for there must be a tear and wear arising from traffic, quite distinct from that incidental to the settlement and consolidation of new works—we shall allow them the full benefit of their 12 months' exemption, in order that there may be no dispute about the succeeding months. At the 4th January last, ten miles and more had been opened for more than eighteen months; and the cost of maintaining these ten miles for the last six months ought "of course" to have been charged (though it is not) against the traffic receipts. According to Mr. SYDNEY BRAITHWAITE'S evidence, this cost amounts to "416*l.* a mile, independent of various labourers' wages"; so that we have on this account to strike off at once 2,080*l.* from the pretended profits in hand (to say nothing of the "various labourers' wages" over and above).

Second, We charge them with carrying to the charge of capital stock, the whole of their current expenditure for repairs of engines and carriages (quite a different thing, the reader will observe, from that general depreciation of value included under the item of "reserve account for wear and tear of engines and carriages"), and these for twenty months upon a stock of twenty engines and we know not how many carriages (except that they are twice as many as they have any occasion for), cannot, we are sure, have amounted to less than 5,000*l.*

Third. We charge them with saddling the capital stock with all they have paid during the twenty months for lives destroyed, limbs broken, carriages smashed, &c., through the numerous accidents which have happened on this line—caused, as the Government Commissioners have reported, in part by "defective arrangements," and in part by misconduct of engine-drivers (bad servants of—not very good masters)—and with which capital stock has no more to do, than with the cantrips of the man of the moon. The payments on this score have been smuggled into their last balance sheet under the head of "casualty account," and are stated to have amounted at 4th January last to 621*l.* 16s. 11d. To 621*l.* 16s. 11d. only!!! Why, the deodand in the case of the Brentwood slaughter alone, and the various attendant expenses, must of themselves amount to at least three times that sum. The 621*l.* 16s. 11d. may include all that the Directors had *paid* on this account at the end of last year—but does it include all that was *due*? The whole of the doctors' bills—*undertakers'* bills—tavern bills—lawyers' bills—carriage builders' bills—sufferers' claim for compensation, &c. The Directors know full well it does not. Let the actual losses incurred through their "defective arrangements" and ill-disciplined servants, during the twenty months be only fairly cast up, and lucky the shareholders may consider themselves if they amount to less than another 5,000*l.*

Fourth. We charge the Directors with transferring to the capital stock, all that has been paid, 1st, to themselves; 2nd, to their Manager, and 3rd, to the Engineer and his numerous staff (ridiculously numerous) for the *management*, or rather *mis-management*, of the traffic during the twenty months. The pay of all *inferior* officers they do place to the account of the traffic; but the pay of their *superiors* they carry to Capital Stock! How can such a difference of appropriation be possibly justified? Either the Directors, Manager, and Engineer and staff, have rendered *no service* to the traffic department, in which case they must have been scandalously overpaid for any service they can have rendered (during the last twelve months especially) to Capital Stock for the construction of the railway; or they have rendered some *good service* to the Traffic department, in which case they should be paid for such service, and as much as has been paid to them for it, ought to be charged against the Traffic receipts. But perhaps the *amount* may have startled them? No doubt it has. The charge for a half year's pay to "salaries, Superintendent and Inspectors, wages to policemen, clothing and accoutrements," amounts to only 1,480*l.* 2s. 1d., and is therefore carried without hesitation to the debit of the traffic; but the charge for *salaries and allowances on the Traffic account to Directors, Manager, Engineer and staff* (including, too, only travelling expenses, and feeding and lodging money, without a shilling for "clothing and accoutrements") could not be put at a less figure than 2,500*l.*, and *therefore* the whole is posted—

Digitized by Google

with no hesitation whatever, but doubtless a good deal of haste—to that grand recipient or sepulchre for Board-room enormities, Capital Stock!

Fifth. We charge them with imputing to Capital Stock the entire expense of advertising the Company's carrying business. The amount cannot be large — not more, probably, than 500*l.*, but the instance is especially worth notice, as evincing, perhaps, beyond any item yet mentioned the utter want of scruple with which the out-goings of this Company are ascribed to the one account or the other, just as may suit best any shuffling, or stock-jobbing, or underhand, or simply cowardly purpose, which the Directors may have to serve.

And, *sixth.* We charge them with diverting from the Capital Stock, or from the funds raised by way of loan, the whole of the money they have expended on their carrying establishment, amounting, it appears, at 4th Jan. last, to 32,742*l.* 6s. 3d., and yet forgetting to charge that carrying establishment with one shilling of interest for the accommodation. Were the interest due on this account fairly stated, it could hardly be less than equal in amount to one year's interest on the entire sum—say, 32,000*l.*—which at the rate of 5 per cent., would amount to 1,600*l.*

We could easily show grounds for further additions to the debit side of the account, but having by the six omitted heads of expenditure which we have specified, more than substantiated our position that the Company, instead of making any profit by their carrying business, have been and are conducting it at a decided loss—we forbear.

The total amount of the *pretended* profit at 4th January, 1841, is.....	£8,752	5	6
The estimated amount of the six omitted items of charge, is	16,680	0	0
Estimated excess of loss	£7,927	14	6

Neither can it be said that we have pressed into our service any items of charge which it is customary with other Railway establishments to carry to capital stock. If our readers will do us the favour to refer to the North Midland Revenue Account for the last half year (*Railway Times*, 29th February), they will there see included on the debtor side every item which we say should be placed to the debtor side of the Eastern Counties' Traffic Account—not only so, but that *the whole* of the Directors' allowances and office charges are debited to the current receipts of the concern. And so it is with most other Companies.

But the case is even worse than we have yet shown it to be. For to come at the actual cost of the present working of the Eastern Counties' line we must deduct from the Company's receipts the 150*l.* weekly that they receive from the Northern and Eastern, for the use of three miles of the line, less a corresponding proportion of the expense of maintenance of way. The Northern and Eastern line was opened to Broxbourne on the 15th of September, 1840, so that at the 4th January last it cannot have yielded less to the Eastern Counties' Company than 2,100*l.* But for this fortunate help, therefore, the loss on the Company's *own* carrying operations would have been encreased from 7,927*l.* 14s. 6d. to upwards of 10,000*l.*

Indeed, it is manifest that the best thing the Eastern Counties' Company could now do—seeing that both their partial openings, first to Romford and then to Brentwood, have proved such utter failures—would be to close the line altogether for the present, and until it is completed to Cudmsford, and rest content with receiving such tribute as the Northern and Eastern Company may bring them. They might then get rid of the whole of their present expensive carrying establishment—make a clear gain of at least 150*l.* a-week without the least risk or trouble to themselves—and have at the end of the year as much *actual* profit in hand as would go a great way to save them the necessity of drawing upon capital stock, for the interest that will be coming due on their debentures.

As long as things continue as they are, every week's working of the line will be attended with a loss which can only be defrayed out of capital, and that to the delay and prejudice of the works for the execution of which that capital was provided. But when there is no more capital to manœuvre with (which we opine will be the case long before even Chelmsford is reached)—what then? Where is the money to come from that will be required to make up for the deficiency in the traffic receipts? Where the money to pay Managers' and Engineers' salaries, Directors' allowances, &c.? *Where the money to pay the creditors of the Company the interest on their loans.*' Echo answers—Where?

The Directors in their wrath at our free exposure of their misrepresentations, seem to forget that neither they nor their constituents are the only parties to be cared for in this matter. There are those who may want to *get out* of the concern with as little loss as possible (including, we should not wonder, some of those Directors themselves), and whom we would willingly serve in any way we honestly could; but there are also those who might be *drawn into it* to their serious injury, by false and delusive statements of the actual state of the Company's affairs, and whom it is our bounden duty to warn and save if we can. Nobody who is not a miserable knave as well as a miserable shareholder, can *find fault* with us for making known the truth; and we should think infinitely worse of human nature than it deserves, if we did not feel persuaded, that for every malediction of that class of persons, we shall have a tenfold measure of thanks and support from the just and good.

One word more. The Directors of the Eastern Counties' Railway will be pleased to recollect that it was *at their own earnest solicitation* we commenced the practice of publishing their weekly Traffic Returns. Why was this, but that they might avail themselves of our extensive circulation, to spread abroad a notion that they were in an exceedingly thriving state, and possessed of an ample revenue out of which to pay interest on any sums of money which people might be disposed to lend them? And if they did not desire that these weekly Returns should have a *deceptive* effect, why should they be so incensed at our pointing out the weekly expenditure, which ought in all fairness to be set against them?

We hope no one will suppose that it is from any apprehension of the consequences of the legal proceedings threatened (*but yet to be taken*) by the Directors of this Company, that we have entered into these explanations. We have never been moved by any of their threats, (and not one week has passed for these two years which has not been rife of them,) and we are not now. But we are anxious—this we candidly acknowledge—that none of our many kind friends and supporters should suppose for one moment, that these Directors have any *just* cause for their last prodigious burst of fury against us. We have a good deal more to say respecting them and their doings, but for the present we fear we have more than exhausted the patience of our readers.

Mr. Booth, the intelligent Secretary of the Liverpool and Manchester Railway, in the concluding portion of the pamphlet from which we gave a long extract last week, strenuously opposes the graduated scale of railway taxation expounded to Parliament by Captain Laws, of the Manchester and Leeds Company, and recommended by the Select Committee of last session. Mr. Booth's object appears principally to be, to expose and denounce the injury which would be inflicted upon particular Companies by the adoption of Captain Laws's scale; and as we have repeatedly shown that even the modification of that scale brought forward by the Parliamentary Committee would be grossly unjust to many Companies—that, in point of fact, it would only be relieving one class of Companies at the expense of another class—we need not at present enter more minutely into this part of the question. Mr. Booth seems, however, to object to the *principle* of graduation, but, as it appears to us, upon no very valid grounds.

"It would [he says] bring into activity a new and vicious principle of taxation, subverting its legitimate objects by turning a measure of finance into a bill of pains and penalties, contrived especially to coerce a particular class of the community. By such an unfair attempt, you excite the feelings of that class against the legislature; and the public sympathy will be on their side in every attempt to evade the operation of a partial and oppressive law. The whole scheme sets out with the fallacy, that you can lower fares by a cleverly devised system of taxation. The tendency of all taxation is to raise fares, and the higher the tax, the more likely that such tendency will be carried out into its effects. Captain Laws supposes, in the case of the London and Birmingham Company, that if there be a tax of 10 per cent. on a 22s. fare, and 5 per cent. on a 20s. fare, the 22s. fare will be lowered to 20s., to escape the higher duty. But why should this be the case? More probably the 22s. fare will be raised to 23s., to cover the higher tax! It is possible, that in some particular conjunctures of fares and duty, in a complicated scale, you may prevent an advance, or even cause a reduction of fares; but it is also possible, that in so doing, you may commit an act of positive injustice—that you may prevent a charge that was perfectly warranted by the circumstances of the case."

Now, it appears to us that however strong may be the objections to any particular scale hitherto pointed out—whether that of Captain Laws, that of the Select Committee, or one which we shall presently notice—there can be no reasonable objection to any scheme which has a tendency to relieve parties placed in those "particular conjunctures" to which Mr. Booth, in the concluding sentence of the above extract, alludes—*provided always* that no injustice be thereby inflicted in cases of more general occurrence. Mr. Booth admits that the present operation of the tax is unequal and oppressive, and very properly deprecates the substitution of one species of injustice for another (although there is this to be said in favour of even an unequal and oppressive graduation scale, that the inequality and oppression would fall upon parties better able to resist or bear it than those who are at present subjected to it), but we do not think that he considers the existing grievance as being nearly so great as in many cases it has practically proved to be. "Seriously," says Mr. Booth, "it is a difficult problem to solve, how the

Digitized by Google

poor weaver who is content to travel standing up in a crowded waggon, exposed to the four winds of heaven, can be benefitted by taxing exorbitantly the merchant who is able to pay for the luxury of cushions and elbow-room, and expects to be sheltered from the elements by curtains and plate glass." With all deference, we think this is not stating the question fairly. It is admitted on all hands that the aggregate amount of the State revenue from railway locomotion cannot at present be diminished, but it appears to be pretty generally admitted that if the present gross amount could be secured, there would be fair grounds for an experiment which some persons are confident would ultimately bring a large addition to the Treasury, and which certainly *might* have that effect. Now, suppose a Company to pay at present the sum of 10*l.* a day in respect of the tax levied upon all three classes of passengers alike, and that each class is equally numerous; and suppose further, that by any scheme of graduation the first and second classes could be made to contribute jointly 8*l.* out of the 10*l.*, there is no "difficult problem" in elucidating the result that the third class passengers would be benefitted to the extent of the difference between the 2*l.* which they would *then* have to pay, and the 3*l.* 6s. 8d. which they *now* pay. If the tax were still more exorbitantly severe upon the luxury-loving merchant, the benefit to the poor weaver would be proportionately increased. We do not, of course, advocate exorbitant taxation upon *any* class, but Mr. BOOTH, we think, weakens his case by broaching a proposition which in the abstract is so untenable as that upon which we are commenting. If he means simply that in this particular case no sensible relief would be afforded by any reduction of tax to the poorer passengers, which even an exorbitant tax upon wealthier travellers would compensate—and such from other parts of his argument would appear to be his opinion—we would remind him that when as on some of the Scotch lines the fares are or were about three farthings, or *six-eighths of a penny* per mile, the deduction of *one-eighth of a penny per mile*, as a tax to the State, forms no trifling diminution of the Companies' profits, in other words, is a very serious additional expense to the public, and that an increase of less than 5 per cent. upon the 3¼d. or 3½d. fares of some of the English lines would enable Government to reduce the impost upon these Scotch lines at least 50 per cent., without entailing any loss whatever upon the revenue, supposing the number of passengers to remain the same. We say again, that we do not counsel such addition, but merely notice the point, for the purpose of illustrating the fallacy of Mr. BOOTH's argument.

Mr. BOOTH seems to suppose that a modification of the tax would not sensibly benefit the public, inasmuch as the great motive to the economy now daily developing itself, is not that the fares may be reduced, but that the dividends may be increased. It may be so—indeed it *ought to be* so, for unless dividends prove to a certain extent satisfactory, fares cannot be kept even so low as they at present are—but would it not be a very legitimate argument in favour of a graduated scale of taxation that it might possibly help out the Companies' dividends, always assuming that one Company is not to be helped at the expense of another? Some of the Scotch railways, above referred to, pay to Government from 10 to 15 per cent. upon their gross receipts; and supposing that the public were not in the smallest degree benefitted by a reduction of this impost to the extent of one half its present amount, surely it would be no undesirable thing that the Companies' coffers should receive the 5 or 7 per cent. thus taken off, rather than that it should pass into the coffers of the Stamp-office.

Mr. BOOTH would appear to be in favour of a fixed and uniform per centage upon the gross passenger receipts. This arrangement would certainly possess the merit of great simplicity; but whether it would upon the whole be an improvement upon the present mode, or upon the graduation scheme, is somewhat doubtful. It is alluded to in a petition from the Edinburgh and Dalkeith Railway Company, who have suffered more perhaps than most Companies from the unequal pressure of the existing plan, and from which we extract the following very pertinent statements. The petition—

"Sheweth,—That in the sessions of Parliament for 1839 and 1840, the petitioners presented petitions to your Honourable House, representing that the mileage tax on railway travelling, as established by law, is so unequal in operation as to form a discouragement to low fares and a bounty on high fares, being on this and some other railways where the fares are low 12½ per cent. on the gross receipts, while on some other railways it is only about 4 per cent. Further, that this railway being worked by horses, the assessed taxes to which the carriages, horses, and servants employed in the conveyance of passengers are subject, make about 5 per cent. additional, or above 17 per cent. in all.

"That from the circumstance of a Bill for regulating railways being at present introduced by her Majesty's Government, the petitioners once more address your Honourable House, praying that clauses may be introduced into the said Bill, for the purpose of repealing all the existing taxes affecting the passengers on railways, and the carriages, servants, and horses, employed in conveying them; and imposing in lieu thereof a fair and equal tax; or, if unequal, a tax whose unequal incidence may serve the public.

"That if the tax of a uniform per centage on the gross receipts from passengers, (which has the advantage of being perfectly equal, and therefore not open to fair objection from any party,) be not preferred; but a graduated scale of taxation, as proposed in the Fourth Report of the select Committee on Railways be adopted, the petitioners would propose to your Honourable House the following method of forming such graduated scale, instead of having reference to the maximum fares authorised by each Railway Act, or to any other accidental data, which might chance to favour individual parties, and produce results not less unfair and injurious to the public than those of the present laws of taxation.

"The graduated scale of taxation proposed by the petitioners, is formed on the principle that, as the fares drawn from passengers increase arithmetically, the taxes on those fares shall increase geometrically; in other words, that the increase of the tax shall be as the square of the increase of the fare, *a half-penny per mile being taken as the unit of increase of the fare, and a half per cent. that of the increase of the tax*, for example —

Not exceeding 1d.	per mile, per passenger,	2¼ per cent.
Exceeding 1d.	and not exceeding 1½d.	3 ,,
Exceeding 1½d.	and not exceeding 2d.	4½ ,,
Exceeding 2d.	and not exceeding 2½d.	7 ,,
Exceeding 2½d.	and not exceeding 3d.	10½ ,,
Exceeding 3d.	and not exceeding 3½d.	15 ,,
Exceeding 3½d.	and not exceeding 4d.	20½ ,,
Exceeding 4d.	and not exceeding 4½d.	27 ,,

and so on. Such per centages being rated upon the gross amount of fare of each kind, and paid half-yearly, according to the states and tables of traffic published at general meetings of Companies, subject to investigation by the officers of the Board of Taxes, to whom every book and document might be open at all times.

"That the petitioners deprecate any interference by Act of Parliament with the method of checking traffic receipts, and keeping accounts adopted by Railway Companies.

"That the most improved system of tickets, if adopted for passengers on this railway, would cause a delay quite disproportioned to the length of the trips: that the drawing of the fare is done during the journey, and the passengers are counted by the check-clerk, who has nothing to do with the money, in the time that he takes to walk along the train. That it is a fallacy to suppose that tickets can afford increased security against fraud and evasion: they can be forged even by those who issue them; and it only requires a combination of two individuals in a railway establishment to render the issue of tickets a fertile source of peculation. As to their worthlessness to check evasion of taxes, the evidence of the Superintendent of the Manchester and Leeds Railway is conclusive. The present mode of taxation had been evaded by issuing one first-class ticket to pass three third-class passengers (the money being equal). It is evident that the converse of that method of evasion could be practised with equal success, if a graduated scale of taxation should make it an object to do so.

"May it therefore please your Honourable House to take this petition into your consideration, and to do as shall appear to you to be just and expedient in altering the laws of taxation on railway travelling. And in the view of protecting the public revenue from loss by evasion, rather to give the chief officers of the Board of Taxes a discretionary power respecting the method of keeping accounts and making returns, than to fix any method by Act of Parliament."

With respect to the particular scale of graduation proposed in the above (and we believe that the merit of originating both schemes alluded to is due to Mr. RANKINE, the very efficient Manager of this Company,) it is manifestly open to the same serious objection as that of Captain LAWS, namely, that it would impose upon many of the Companies a far higher tax than they pay at present; and we hold that any *ex-post facto* legislation of this kind to the injury of a particular interest, must necessarily be impolitic and unjust. Take for example the case of the London and Birmingham Railway. Upon the highest class fare (of about 3¼d. or 3½d. per mile) the duty at present scarcely reaches 4 per cent., whereas by the proposed plan it would range from 15 to 20 per cent. Surely no greater injustice could be committed than the passing of any law which should subject a Company to so enormous an addition to their present burdens!

As regards Railway taxation generally, a petition presented by the Edinburgh and Dalkeith Company a session or two ago is well calculated to dispel some very erroneous notions upon this point which are generally prevalent:—

"Although," says the petitioners "the mileage dnty on railway travelling may be at *a lower rate per mile* than upon stage-coach travelling, it is at a much *higher rate in proportion to the money drawn from the public*. Hence the fairest tax upon travelling would be a proportion or per centage of the gross proceeds, in lieu of all other taxes, as being the least vexatious and oppressive to the trade, and the easiest to be ascertained and collected. The taxes on all kinds of travelling being thus in exact proportion to the fares drawn from the public, would give encouragement to ingenuity, economy, and low charges: and it would be fairly left to the ingenuity and economy of the furnishers of travelling conveyance to make their trade profitable to themselves.

"In comparing the rate of taxation upon railway travelling and stage-coach travelling, it should be kept in view that stage-coach proprietors do not make common roads, and therefore require interest or profit only on the capital invested in their coaches and horses; but that railway proprietors must have such a return as will not only pay interest on their

Digitized by Google

coaches and horses, but maintain their road, and pay interest on the large capital sunk in its formation.

"The advantage which railway coach proprietors have over stage-coach proprietors is owing to the superiority of their peculiar machinery and road; and the railway proprietors and the public are entitled to reap the full benefit of that advantage; which affords no just ground for carrying off in taxes a large proportion of railway coach returns than of stage-coach returns."

This subject is become every day of more pressing interest, and deserves to be kept constantly before all parties concerned.

THE Bill which the South-Western Company have now before Parliament, is the subject of a very earnest warning to the shareholders, inserted in our number of to-day, from our esteemed correspondent "A Railway Shareholder." The great acuteness, and zealous honesty of purpose, which distinguishes all our friend's lucubrations, will doubtless command for the present the respectful attention of those to whom it is addressed; but for ourselves we cannot help saying that we are, in this instance, more startled by the vehemence of his declamation, than convinced by his facts and reasonings. We see no *proof* that the Directors entertain the ambitious and all-grasping views ascribed to them. We cannot, certainly, approve of the *per saltum* style in which the assent of the late general meeting was obtained to the Bill, but that is so much after a common though most reprehensible fashion, that the Bill may, for all that, be a very good Bill. We cannot forget the statement made by the Chairman of the Company, that there is to be inserted in this Bill "a clause rendering it imperative on the Directors to publish in full time—probably at the same time as the notices convening the meeting—*the names of all candidates for a seat at the Board who might be proposed by the Directors, so as to afford due space for an investigation of their merits.*" Certainly, this does not look as if "clique" interests only were consulted by the framers of the Bill. Indeed, there is so much virtue in the principle of the proposed clause, and it is of so much importance that that principle should have a distinct Parliamentary recognition, that we should be disposed to put up with a good many faults in the Bill for the sake of it. Were the practice of publishing the names of Director-candidates a sufficient time before the day of election, to enable shareholders to canvass their qualifications, once sanctioned and prescribed by an Act of Parliament, in the case of the South-Western Company, it would not be long before most other Boards, however cliquishly inclined, would be forced to adopt it. We should not then be likely to witness a repetition of such disgraceful conduct as that exhibited the other day by the Eastern Counties' Directors, who at the very moment the South-Western Board were conciliating general approbation, by the introduction into their Bill of the clause in question, were plotting the repeal of an existing bye-law of their Company to the same identical effect, in order to accomplish a present purpose of the rankest cliquery imaginable. We expressed a week or two ago a great curiosity to know who the worthy gentleman might be who had undertaken to propose so imprudent a measure as the repeal alluded to, and what he could possibly say in its behalf; and now that our curiosity has been gratified, it has but given place to extreme wonder and disgust. The motion for the repeal was made by Mr. DUNCAN,—the *Solicitor* of the Company—done *to order*, as he might do anythink else in the way of business, from soliciting a Bill for a Railway "bubble," (*vide* the sayings of his worthy and respectable friend the Deputy Chairman,) down to issuing a writ of *scandalum magnatum*, for publishing the most certain truth in the world; and reason for repealing the bye law he gave none, save that it "had been found inconvenient in practice"—though *in what way*, and *by whom*, he left his hearers to guess. And very businesslike in him, it was to be sparing of reasons where there were none wanted; for of such pliable stuff were his hearers made, that without more to do—without a single why or wherefore for what they were doing—they voted as unanimously for the repeal of the bye-law, as they had of old voted for its enactment. Oh, most thinking, most sensible, most high-minded shareholders! How much you deserve that you should have your rights and interests watched over, asserted, and vindicated by an honest and independent press!

WE have seldom had to record a railway meeting of a more cheerful and satisfactory character than that of the Bristol and Exeter, held on Tuesday last. All was rejoicing and congratulation. Whether it be owing to the allowance of interest on paid-up calls (of the efficacy of which particular expedient, as our readers are aware, we differ from its promoters), or to the lease taken by the Great Western Company, or to the allotment of the forfeited shares to the adhering proprietors, and the alacrity with which they were taken up, or to the combined influence of all these causes, acting and re-acting one upon the other, certain it is that the Company has at last forced its way through many difficulties, to an eminence where all around, and as far as one can see, seems bright and clear. The Company's finances—once at so low an ebb—are now in a most flourishing condition; and the works in such a state of forwardness, that the thirty-four miles between Bristol and Bridgewater are certain to be opened next summer. The shareholders of this railway are fortunate in having to boast of a very efficient executive—for measures, however good, can be of but small avail, without able hands to work them out; and we are happy to observe that their meritorious services did not pass unacknowledged by the meeting. The compliment paid by the Chairman to the Secretary, Mr. Badham, for "his unwearied zeal and energy," must have been felt by all present to be especially well merited.

EVERY well-wisher to that excellent undertaking the Edinburgh and Glasgow Railway, must observe with extreme regret the differences which have arisen among the Directors—threatening as they do not only an odious and expensive Parliamentary contest, but much serious obstruction to the completion of the works. The affairs of the Company are at present managed, agreeably to certain provisions in their Act of Parliament, by two Committees, one sitting at Edinburgh and the other at Glasgow, but both subject to the control of a General Board, of which Glasgow is the appointed head-quarters; and hitherto this divided system of management is stated to have worked well. But now that the railway is on the eve of being completed and opened, the Glasgow Directors, with the Chairman of the Company, Mr. LEADBETTER at their head, have been led to think that it can only be effectively worked—that is to say, in the best manner for the public and in the cheapest for the shareholders—by a concentration of the whole Directorial power in Glasgow; and the proprietary, as will be seen from the report of their proceedings given elsewhere, have decided by a very large majority that Mr. LEADBETTER and his party are in the right. The Edinburgh Directors, however, say that the majority is chiefly made up of proxies which Mr. LEADBETTER had obtained by going to Liverpool and Manchester (all unknown to the Edinburgh Directors), calling meetings of the shareholders in these places, propounding to them his own one-sided views only of the subject—aided and abetted in these underhand doings by that distinguished man of all-work, Mr. RATHBONE, who happens to have a seat at the Edinburgh and Glasgow Board; and they have therefore resolved to fall back on the protection which the Act of Parliament affords to the existing state of things, and to oppose tooth and nail any attempt to alter it by a new Act.

We are favourable to the system of concentration, and think that the circumstance of Glasgow having been the place appointed by the Company's Act for the sittings of the present General Board, determines *where* that concentration should be. But at the same time we must say, that we cannot conceive a course of proceeding, more directly calculated, to defeat a project good in itself than that adopted by Mr. LEADBETTER. It was most disrespectful and unfair towards his Edinburgh colleagues, and quite certain to give great offence, where it was of the utmost importance to the success of the plan that no offence should be provoked. Every person acquainted with Scotland must be aware of the feelings of jealous rivalry which have existed from time immemorial between the cities of Edinburgh and Glasgow; it is the grand foible of each place to think itself "bigger and brawer" than its neighbour. And cognizant as Mr. Leadbetter must have been of this circumstance, it was the height of folly in him, to attempt in any other than by the most courteous and honourable courses to gain the consent of the Edinburgh people, to the surrender of influence and importance required of them in the present instance. We shall not be surprised if what is now but a "decent" sort of quarrel between the two boards, become, before many days, a point of honour between the Two Cities; and in any event we can but anticipate a great deal of mischief to every substantial interest involved in the success of the undertaking.

IN the House of Commons on Tuesday, the following members were appointed as a Select Committee, "to consider whether any or what improvement can be adopted in the mode of conducting private business:"—Sir George Grey, Mr. Labouchere, Sir Robert Peel, Lord Stanley, Mr. Hume, Mr. Loch, Lord Granville Somerset, Mr. Aglionby, Mr. Greene, Mr. Bernal, Sir John Yarde Buller, Sir James Graham, Mr. Freshfield, Mr. Ellice, and Mr. Estcourt:—Power to send for persons, papers, and records; five to be the quorum:—Power to report observations and opinion from time to time.

—o—

THE *Hull Times*, in illustration of the facilities afforded by railways, states that large quantities of fish are daily forwarded by railway from Hull, as far inland as Birmingham.

—o—

MESSRS. Cadbury and Southall, who took so active a part in the discussion at the late Birmingham meeting, have issued a notice requesting all who dissent from the erection of the church at Wolverton to contribute their quota of the 1,000*l.* towards the supply of copies of the Scriptures for the use o the Company's servants at that spot.

RAILWAY OFFENCES AND OFFENDERS.

THE almost unaccountable leniency exhibited towards railway offenders by provincial dispensers of *justice* is scarcely less remarkable than the contrariety of their decisions in cases which appear all but identical. Take as an illustration an instance or two from the country journals, received during the present week.

The *Derbyshire Chronicle* says:—

"On Saturday, the 20th instant, Daniel Dickinson, a plate-layer [on the North Midland Railway], was taken before the magistrates at Rotherham, charged with having left a lever, with which he was lifting the permanent way, in such a position, during the passage of a train, as to occasion the risk of accident. *He was fined* 10*l.*, *and, in default of payment, was committed to the house of correction for two months.*"

This was a most proper conviction, but observe what the *Northampton Mercury* says of a case heard on the very same day at the Lutterworth petty sessions:—

"John Withers, inspector of police on the Midland Counties' Railway, charged John Sutton with placing an impediment on the rails.—Defendant was employed as a labourer on the line, and had, with culpable neglect, left his pickaxe on the rails; a train shortly afterwards came along the road, and passed over it, fortunately without any further injury than destroying the instrument.—The Chairman thought too much caution could not be enforced, *and forthwith convicted defendant in a penalty of* 1*l. or in default to be committed for one month to hard labour.*"

Could it be possible to find two cases in which the offences proved against two prisoners were so precisely the same as in the instances above detailed, and yet the one offender is fined just one-tenth part of the penalty inflicted on the other!

These, however, are not solitary instances. We alluded in our last, to a case of trespass on the Birmingham and Gloucester Railway, and we find it thus noticed in the *Birmingham Gazette*:—

"At the Pershore petty sessions on Tuesday, Mr. R. Boulter, farmer of Defford, was summoned before the magistrates by Mr. Such, Inspector, for wilfully trespassing upon the Birmingham and Gloucester Railway at Eckington, and refusing to quit the same when requested. As this was considered an aggravated case, Mr. Such pressed upon the attention of the magistrates the necessity that existed for inflicting a heavy fine, that it might prove a warning to others who seemed to regard the railway as a public highway, on which persons might proceed on foot when and where they wished. The magistrates, taking this view of the case, *inflicted a penalty of* 3*l.*, with a remark, that in all future cases they should feel it an imperative duty to convict for the full amount."

So far so good. Now take the counterpart from the *Gloucester Chronicle*, in reference to the same line:—

"On Monday, Thomas Mann was summoned before the magistrates [at Cheltenham], under Lord Seymour's Act, for trespassing on the Birmingham and Gloucester Railway. It appeared that *after repeated remonstrances* he still persisted in carrying thorns across the line, although there was a thoroughfare leading to his field only fifty yards from the spot where the trespass was committed. He had also *frequently* carried milk and other articles along the line. *The magistrates severely reproved Mann, and fined him* 10*s. with expences.*"

Here again the two parties seem to have been much on a par in respect of culpability, and yet the one is fined only 10*s.*, while the less fortunate delinquent has to pay 3*l.* We do not know whether the severe reproof from the Bench, which is said to have accompanied the minor infliction, is to be considered as fairly entitling the defendant to a deduction of 2*l.* 10*s.* from the amount of the penalty; but for our own parts we would much prefer seeing some more *impressive* caution administered to offenders, than any rebuke of a magisterial quorum, however dignified. Really these discrepancies in the amount of punishment for the same offence are somewhat startling.

At a petty sessions held at Hessle on Friday, the 26th ultimo, before Joseph Smyth Egginton and Thomas Bentley Locke, Esquires, William Wallis, jun., a boy between 13 and 14 years of age, was charged by Jonathan Harrod, a policeman in the service of the Hull and Selby Railway Company, with trespassing on the railway. It appeared from the evidence that on Tuesday afternoon, the 16th ultimo, a party of boys, of whom Wallis was the ringleader, were on the railway; that Wallis shot with a pipe stock gun at the watchman's box and broke the windows of it; that they then proceeded towards the cutting at the Hessle cliff, at the western end of which a green flag had been put up by the railway police as a signal of caution to the engine drivers, to prevent the trains coming too rapidly upon a gang of workmen employed in the cutting—that Wallis pulled up the flag, and broke the staff of it, and threw it over the fence into a paddock adjoining the railway, and the boys then all ran away. The magistrates convicted Wallis in a penalty of 40*s.* and costs. The Railway Company have given their moiety of the penalty, which was paid by the father of the boy, to the Hull General Infirmary.

THE EASTERN COUNTIES' MEETING.

Liverpool, 3rd March, 1841.

SIR,—Mr. Swift read to the general meeting of the Eastern Counties' Company, held last week, an address of thanks to the eight Lancashire Directors, which he stated had been signed by 55 magistrates, bankers and merchants, of Liverpool, holding 10,975 shares of the Company's stock.

In order to show how little value deserves to be attached to this address, it is only necessary to state that the number of shares held in Liverpool, and its vicinity, is upwards of *forty thousand*, and the number of holders above *five hundred*.

From the fact that only one-tenth of the proprietors in this neighbourhood, and the holders of but one-fourth of the shares, have subscribed the document, the proper inference to be drawn is, that the majority, both in number and value, do *not* approve of the conduct of the eight Directors in question.

Mr. Swift should have told the meeting how many had refused to sign, as well as how many had signed. I could help him to more than two or three names of as much weight, I will venture to say, as any annexed to the paper.

The attempt to bolster up the damaged character of the Directors of this Company by such a hole-and-corner proceeding as this, is generally viewed here with extreme disgust. What is wanted to reanimate the fast-sinking confidence of the *bona fide* shareholders, (a very different class, let me observe, from the speculating jobbers of Lord-street,) is neither high-sounding testimonials, in vague and general terms, nor yet bold-faced silence under serious accusations, but distinct and plain statements of facts, in answer to the distinct and plain charges of misrepresentation, and *something worse*, which have been brought against the Mangement of this Company. Soliciting a place for these remarks in your next week's publication,

I remain, Sir, your constant reader,
NESTOR.

SIR,—In an official account of the proceedings of the last Eastern Counties' meeting, which I have just received from the Secretary, it is stated that "upon the motion of William Burgess, Esq., seconded by James Beadel, Esq.," it was "Resolved, that Henry Bosanquet, Esq., Charles Hood, Esq., *Joseph Christopher Ewart*, Cornelius Butler, Esq., William Collings Wells, Esq., and Robert Harrison, Esq., be elected Directors of the Company." Now, Sir, having been myself present at the meeting, I must say that I never read anything with more surprise in all my life than this. The name of *Joseph Christopher Ewart* was never once mentioned in my hearing, nor I believe in the hearing of any one else. The statement given by your reporter of what took place on the occasion is perfectly correct. "Some conversation took place as to whether the Directors *named in the Report* (*i. e.* the six retiring Directors, Messrs. Bosanquet, Butler, Hood, Wells, Wyllie, and Robert Harrison,) should be proposed for re-election separately or together, but it was agreed, that *as there was no opposition*, they should be put up altogether. Mr. Burgess accordingly *proposed their re-election*. Mr. Beadel seconded the motion," and after some talk about the number of Liverpool Directors, it was declared to be "carried unanimously." Yes, unanimously; but what was carried unanimously, was the motion, to which there was found to be "no opposition," for the RE-ELECTION of Messrs. Bosanquet, Butler, Hood, Wells, *Wyllie*, and Robert Harrison—not for the substitution of *Joseph Christopher Ewart*, or anybody else, in place of *Mr. Wyllie*. If such an *ex post facto* substitution of one person for another is to be permitted, the next thing we may expect, to hear of will be, the substitution by the Board of a whole batch of new Directors in place of those elected by the shareholders. As well half-a-dozen as one; the principle is the same. Who and what is this Mr. Joseph Christopher Ewart who is thus sought to be thrust, *nolens volens*, upon the proprietary? And *whereabouts* does he reside? If he has the standing or feelings of a gentleman he will scorn to be thus jobbed into the seat of another—a seat which he cannot hold for one moment without equally violating the rights of its only legal owner, and the rights of the shareholders who elected HIM, *and none other*, to it.

I am, Sir, your obedient servant,
AN ESSEX PROPRIETOR.

4th March, 1841.

[We have received three other letters to the same effect as the preceding. One of them states that "Mr. Wyllie had given offence to the Liverpool clique, and that therefore it was he was dropped out of the list," in the way described by "An Essex Proprietor." If Mr. Wyllie submit to such usage, we can only say that he will richly deserve it.—ED. R. T.]

EASTERN COUNTIES' RAILWAY MEETING.

SIR,—Permit me to avail myself of your columns for the purpose of correcting a mis-statement which appears in the last Report of the Engineer of the Eastern Counties' Railway, wherein contrasting, by way of apology for the cost of the line, the amount (nearly 700,000*l.*) paid for land and compensation, with similar charges on the London and Birmingham, Mr. Braithwaite states, "that a distance of little more than 51 miles has cost nearly double the amount for these items, paid by the London and Birmingham Company over more than double the distance, namely, 112 miles." If that statement were correct, it would follow that the London and Birmingham Company had only expended about 350,000*l.* for land, &c., whereas the sum actually paid exceeds 721,000*l.*, as will be seen by reference to the last Report which was in circulation nearly a fortnight, when the Eastern Counties' meeting took place. Besides, the previous Report of August last had stated the amount then paid to have been upwards of 706,000*l.*

Some of the members of the Eastern Counties' Board are also Directors of the London and Birmingham Company, and it is extraordinary that such a mis-statement should have been made public under their authority.

I remain, Sir,
Your obedient servant,
INSPECTOR.

London, March 3, 1841.

SIR,—I see that at the Eastern Counties' meeting, 25th ult., Mr. Duncan, the Company's Solicitor, is reported to have stated, that "as to the Bill (meaning the Bill now in its progress through Parliament), it was NOT YET DRAWN, *and therefore nothing had been settled* as to the debenture question." I beg, Sir, to say that *three days before* the 25th I saw a *print* of the Bill, which Mr. Duncan, it appears, alleged was "NOT YET DRAWN"

Digitized by Google

on the 25th, and that I have now that print in my possession.

I am, Sir, yours obediently,
A PARLIAMENTARY AGENT.

Westminster, March 5, 1841.

THE EASTERN COUNTIES' DIRECTORS AND THE GENTLEMEN OF NORFOLK.

To the Editor of the Railway Times.

SIR.—In the Report of the proceedings of the General Meeting of the Eastern Counties' Railway proprietors, inserted in your journal of last week, Mr. Beadell is stated to have called upon the Chairman to read a letter which had been addressed on behalf of the Company to Lord Sondes, as the Chairman of a Committee of Landowners of the County of Norfolk, appointed to inquire into the best means of obtaining a railway from the metropolis to the latter county; and your report adds, that a question was proposed demanding if any answer had been returned to that letter, which question was answered in the negative, and in such terms as to impress your readers that a want of courtesy had been exhibited towards the Company.

Permit me to direct attention to the advertisement of the Norfolk Committee announcing the object of their appointment, and calling on all persons anxious to afford information as to the means of procuring railway communication with Norfolk, to furnish statements of their views, or otherwise to attend the meeting of that Committee at Norwich, which places the letter of the Eastern Counties' Company on the footing of a tender to compete with other lines to effect the object on which the Committe sought information. This admitted, the usual course was adopted, namely, the selection of the tender best calculated to carry out the views of the county, and the consequent rejection of all others, the answer to whom may be found in the report of the Committee, selecting the line *via* Cambridge and Stortford, as advertised by them in the Norfolk papers.

That the Committee exercised a sound discretion in their selection cannot be doubted, when it is considered that the line to Stortford is already occupied by the Northern and Eastern Company. That the line by Cambridge, projected by Mr. Rastrick, at once opens to Norfolk a communication with the metropolis and the north of England. That it can be completed at a much less cost than any other of the same length hitherto projected; and that the high character and sterling integrity of the engineer afford the safest assurance that reliance may be placed upon his estimates.

Much less can it be matter of surprise, that a body of educated and sensible gentlemen should have refused to have been gulled by the fallacies put forward in the letter referred to, backed by the astounding estimate of Mr. Braithwaite, that 600,000*l.* would *complete* a line from Kelvedon to Bury, a distance of 30 miles or thereabout, in the teeth of that gentleman's evidence last year, that 650,000*l.* had been *actually expended* in the purchase of *land alone* on the line from Brentwood to Colchester, a distance of about the same extent.

This explanation will, I trust, relieve the Norfolk Committee, and particularly their noble Chairman from the charge of that want of courtesy so foreign to his lordship's habits and feelings, which the Eastern Counties' Company in their Report would wish to convey, and its insertion in your next number will oblige,

Sir, your obedient servant,
A NORFOLK YEOMAN.

Swanton Morley, March 2, 1841.

LONDON AND CROYDON RAILWAY COMPANY.—FARES AND TOLLS.

To the Editor of the Railway Times.

SIR,—In your leading article of last Saturday there occurs a very sensible observation upon the present mode of levying the Government duty upon railways; but as the same observation implies a slight misapprehension of the cause of a certain action of the Directors upon the fares chargeable on this railway, I am directed by the Board to draw your attention thereto, lest an erroneous impression should be made upon the public mind. The passage is as follows:—

"A fixed invariable duty payable alike upon maximum and minimum fares—upon the 2½d. and 3d. per mile of some of our great English Companies, and the less than 1d. per mile of many of the Scotch lines—must inevitably discourage farther reductions, if it do not even lead to increased charges. The experience of the Croydon Company during the last few months well illustrates the effect of the passenger tax. While that Company carried the public at low fares (lower, we mean, than the present charges, which are still comparatively low) the duty accruing to Government was very considerably greater with a less net income to the Company than it is now that the number of passengers has been diminished, through the late addition to the fare, and that the Company's revenue had improved. Had a certain per centage upon the gross receipts of the Company been levied in both cases, Government would not have suffered, and the Directors need not have altered their scale of charges—at least, the other reason which they assign for the charge (the fixed poll-tax payable to the Greenwich Company on a principle precisely similar to that of the state tax) would in that case probably not have had sufficient weight to lead to so undesirable a step as a raising of fares."

The misapprehension consists in the supposition that it was the Government duty, amounting to less than 1d. per passenger upon the whole distance travelled, and not the "Greenwich poll tax" levied on "a principle precisely similar to that of the state tax," and amounting to *three-pence per passenger*, which caused the Directors of the Croydon Company to raise their fares. There is no doubt that the *Government duty* operates prejudicially upon low fares, but as the Greenwich toll presses with a *three-fold* weight upon this point, it is clear that the latter and not the former must have been the chief motive to the raising of the fares, the consequence of which has been that, comparing the six months ending January 1841, with the six months ending January 1840, this Company has received from passengers 304*l.* more, and paid to Government as duty 159*l.*, and to the Greenwich Company as toll 507*l.*, less, in the former than in the latter, and the difference in favour of this Company has been 970*l.*

"Had a certain per-centage upon the gross receipts of the Company been levied in both cases, Government" and the Greenwich Company "would not have suffered, and the Directors need not have altered their scale of charges."

To this I may had, that in all probability both the one and the other—the Government and the Greenwich Company—would have benefited exceedingly, as the traffic upon the Croydon line was rapidly increasing when it was checked by the raising of the fares.

I am, Sir, your most obedient servant,
R. S. YOUNG, Secretary.

25th Feb., 1841.

[We regret that we were last week compelled to omit the above letter from want of space. We have very little to say in reference to it. We do not think that our remarks were at all liable to the inference that the Government duty rather than the Greenwich poll-tax had been the cause of the raising of fares on the Croydon Railway. It is not the *comparative* amount of the two charges in themselves that is to be considered; but surely the principle of both presses more severely upon the low fares of the Croydon Company, in the case of the Government tax, than in the case of the Greenwich tolls, inasmuch as in the latter instance the Company have value received, and in the former they have not. The same, or nearly the same toll must be paid, whether the Croydon fares be high or low; for such toll is the representative of the sum expended in the construction of this portion of the Greenwich works, but the Government tax is of totally different character, and has nothing to do with the fluctuating charge for conveyance.—ED. R. T.]

SOUTH WESTERN RAILWAY.

To the Shareholders—Immediate and pressing.

GENTLEMEN,—The subject of this letter comprises the question, whether the persons you have appointed as your agents, are to be irresponsible to and independent of you, whether they are to be obedient to your will and to your order, or are to be placed, by legislative enactment, in a position to beard, defy, and laugh at you, when expressing your wishes as to the administration of your capital of 2,500,000*l.*

A full week ago, I intended to address you in the course of the present month, but a report has reached my ear to-day, which hastens that resolution—there is no time to lose.

The way in which the raising further capital was brought before you—a hurried reading being considered all the attention you were entitled to—without a moment left you for consideration—though, as the Directors must have known, three months ago, that more money would be wanted, there was ample time to have forwarded to you their plan, weeks before the meeting—may well excite suspicion of decent conduct being accorded to you in future; and this, coupled with the domineering spirit—illegal as discourteous—evinced towards some of you at the Office, when soliciting information which in law, equity, and honour, is your right, should urge you into action.

The last resolution of the scheme for the fresh capital, says, "*and to apply for and obtain from Parliament such additional powers as they may deem expedient for carrying these resolutions into effect.*" Why, what a farce is this! They are treating you, Gentlemen, as a child uses a pasteboard man that has a string to each joint, which is ridiculously contorted each time his little master chooses to pull—you are puppets in their hands, and you will remain so, until you resolve to cut the cord that forces you into such unseemly antics. At the moment these resolutions were read to you, the petition for the proposed Bill was presented, and the Bill itself before Parliament—then why was not a draft of it laid on the table at the meeting? If the report I have heard be true, I will tell you why. Directors are endeavouring at enlarged, extraordinary, unprecedented powers—powers, in all probability fatal to all control by you—that will take from you the right to demand information—that will bind you hand and foot—that will hand over the sole regulation of your capital to 15 persons, absolutely and in perpetuity.

Directors will not deny, that to give effect to the Act, it must have your sanction. When is this to be asked of you?—when the Act is passed?—when the clauses are made law? Are you to deliberate upon it when it has received the Royal Assent? "*Oh! no, you are not to deliberate upon it at all—your opinion is not wanted—we best know what is fit for you—confirm it, and that is all you have to do with it.*" This is what Directors mean, if they do not say it; and faith! it is what they will do too, if you will let them.

The draft of the Act ought to have been submitted to you before the petition was presented—it was gross indelicacy in the Directors not to do so, but good may result from it, as it may induce you to watch closer future proceedings. The thing you have to do now, to prevent mischief, is to call on these Directors to hold a special general meeting for the purpose of discussing this Act from end to end, and until such meeting is held to desire them to have a copy of the Act kept on the Secretary's table for proprietors' inspection. If in a fortnight from the publication of this letter, a special meeting is not called by Directors, then under clause 89 of your Act, call a meeting yourselves and thoroughly investigate this new Act.

A pernicious practice has crept into some companies against which I beg to guard you. The Chairman holding up a mass of paper says, "Gen-

Digitized by Google

tlemen, this Act extends through —— folios, it will take up much of your *valuable* time to read it, perhaps you will consider it read,"—hear! hear! roar the Board's men of all work,—and the thing is passed, the "contented creatures" walking away knowing no more of the matter for which they have made themselves liable, or of the powers with which they have armed their agents against themselves, than they know of the Chinese law. In your case, have the clauses read—having previously perused them at the office—from first to last, and debate them seriatim, deliberately, cautiously, vigorously, or from what I hear, you will hereafter (I am obliged to go to our Transatlantic brethren for a phrase sufficiently terse to do honour to the subject) you will be "in a considerable fix."

A RAILWAY SHAREHOLDER.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Those of your correspondents who have been as sceptical to the future prosperity of this gigantic undertaking will now, I hope, be satisfied from the last report of the Directors that their doubts have been altogether groundless. "Facts are stubborn things;" and now that we have sufficient of them, as regards the Great Western Railway, it would be folly indeed for those correspondents, who have figured in your columns from time to time, to persist any longer in their erroneous ideas of this line.

I find from this report that during the six months ending 31st Dec. 645,481 passengers have been carried, making according to the mileage an average of 1064 passengers each day who have travelled the whole distance; and this before the line is opened throughout.

Now from the last report of the Birmingham Railway Company, it appears that 394,688 passengers were conveyed during the half year to Dec. 31st, 1840, making an average of 1258 travelling the whole distance! but during the corresponding half-year of 1839, the average number amounted only to 1081—although the line had been for a considerable period open throughout. What reply can the *disparagers* of the Great Western say to this?

Though the expenses of the Birmingham Railway are much lower than our's (as 35 to 47 per cent.), I see no reason to doubt a nearer correspondence in this respect, when the Great Western shall have been opened as long as the Northern line.

It would be of great service to the proprietors of all railways, if the Directors could agree upon one fixed system of drawing up their accounts, so that we might be enabled to compare the expenses of every item, by the excellent plan of computing the per centage, which is likely to be universally adopted.

I am, your obedient servant,
A PROPRIETOR.

London, 26th Feb. 1841.

GREAT WESTERN RAILWAY.—MODE OF APPORTIONING DIVIDENDS.

To the Editor of the Railway Times.

SIR,—The principle which the Directors of the Great Western Railway have adopted in the division of the profits of the line under their management, must, in case large dividends are ever obtained, involve the Company in litigation. So long indeed as the dividend is below 5 per cent. the mode adopted may pass *sub silentio*, as it passed at the late meeting; but assume a profit of 8*l.* per cent., as on the Birmingham line, and is to be expected that the original shareholders will allow the half shares to be paid 4*l.*, and rest contented themselves with 5*l.* 4s., or 8*l.* per cent. on 65*l.* paid up? Did the property of the Company consist of stock instead of shares the case would be different; but the holder of each whole share is manifestly entitled to $\frac{1}{45000}$th part of the net annual profits, nor can any resolutions of Directors or Proprietors invalidate his right. He may fairly be charged with the interest which the Company pays on the 35*l.* in abeyance; but every subtraction from the dividend beyond this, is confiscation. As before, assume the profits of the line at 8*l.* per share, and give the whole share but 5*l.* 4s., is not the obvious effect, that the Company trades with the money belonging to the original shareholders, and gives the profit to others? In August the Directors said, "the value of the shares proposed to be created, with the prospect of a deferred payment, will be an immediate benefit to the shareholders;" meaning contrary to the grammatical construction of the sentence, that the "deferred payment" would be a benefit; but should the 16*l.* unpaid remain at 5 per cent., and the line prove capable of realising 3 or 4 per cent. beyond this, and should this extra profit be divided equally with the half shares, then the "deferred payment" is *pro tanto* an immediate loss.

Your liberality, sir, in allowing a free discussion of all railway questions in your influential pages, induces me to hope, that you will either yourself elucidate this point, or submit this letter to the notice of your readers. I commenced with saying, that the mode of dividing the profits, if persisted in, would lead to litigation; for myself I do not hesitate to say, that I would willingly co-operate by word and deed, in enforcing by any means the adoption of a more equitable principle.

I have the honour to be, your obedient servant, (an old reader and subscriber,)

ARISTIDES.

March 2, 1841.

BIRMINGHAM & DERBY JUNCTION RAILWAY COMPANY—GENERAL MEETING.

(From the *Midland Counties Herald.*)

THE Half-yearly General Meeting of the Proprietors of this Company was held at Dee's Royal Hotel, Birmingham, on Thursday the 25th of February, at which HENRY SMYTH, Esq., the Chairman of the Board of Directors, presided. The notice calling the meeting having been read by the Secretary,

The CHAIRMAN said, before proceeding to read the minutes of the last General Meeting, he could not avoid saying, that although it much gratified him to see present so respectable a body of Proprietors, still, knowing as he did that by far the largest portion of the property of the Company was held by Proprietors resident in London, he confessed that it would have been a source of great satisfaction had he seen personally represented a larger amount of that important interest. Whilst he felt honoured by, and freely acknowledged, the confidence which the Proprietors had so long reposed in the Directors, the continuance of which was confirmed by the proxies he held in his hand, he could assure them that the Directors would feel greater satisfaction, and derive greater support, from the personal attendance of the Proprietors at these periodical meetings, which had been appointed solely with the view of enabling them to investigate matters affecting their own interests.

The SECRETARY having read the minutes of the last half yearly meeting, and also those of the special general meeting held on the 31st of December last, the common seal of the Company was affixed to the registry of proprietors.

The CHAIRMAN then read the following Report of the Directors for the last half year:—

THE REPORT.

"In the report made to the proprietors of this Company in August, 1840, the Directors stated that an Act of Parliament had been obtained for a direct line of Railway to Birmingham, in lieu of the Stychford branch; the capital of the Company being increased by the additional sum of 170,000*l.*, with power to raise a further loan of 56,666*l.* The Directors have now to report that the whole of the additional capital has been subscribed for, and all the new loan borrowed, except about 14,000*l.*, for a large portion of which they are in treaty.

"The works on the new line, and the building of the station at Birmingham, have been undertaken on terms of a satisfactory nature, by experienced contractors. The operations will be actively commenced in the course of the ensuing week, and a direct communication from the north to Birmingham will be opened in the course of the next autumn.

"The Directors have great satisfaction in repeating their former favourable reports as to the state of the line from Derby to Hampton. The works have stood well, and have not suffered from the unusual floods and severe weather of the past winter.

"Since the opening of the Railway, 263,770 passengers have been carried; and though the Directors have now to regret the occurrence of an accident occasioned by the culpable negligence of two of the contractor's servants, they believe that the arrangements for conducting the public traffic have given general satisfaction.

"In laying before the meeting a statement of the receipts from traffic during the last six months of 1840, the Directors recal to the attention of the proprietors the main purpose for which this railway was projected. And they have peculiar satisfaction in reporting the regular increase of that portion of the traffic on which the success of the undertaking depends. By referring to the table at the end of this Report, it will be seen that the average weekly receipt from the opening to Christmas, 1839, for local passengers and merchandise, was 606*l.* 5s. 9d.; that from Christmas, 1839, to Midsummer, 1840, it was 690*l.* 5s. 8d.; and that from Midsummer, 1840, to Christmas last, it was 979*l.* 14s. 4d.; being an increase in the second half year of 14 per cent., and in that which has just closed of 42 per cent., each upon the half year immediately preceding. In addition to this, it may be stated that the average of the weekly returns from Christmas last to the present time from the local trade, as compared with that for the same period in 1840, is equally satisfactory, an increase of 52 per cent. having taken place. By the same table it will also appear that the average weekly receipts for through (or London) traffic was for the first term 196*l.* 3s. 10d.; for the second, 327*l.* 13s. 6d.; while for the last (another route to London having been opened) it was only 141*l.* 16s. 3d.

"Constantly sensible as the Directors are of the inconveniences which attend the transmission of the local trade, especially in merchandise, for want of the direct line to Birmingham, and of an independent terminus, they have the fullest confidence that the rate of increase on that trade, considerable as it has already been, will be still greater when those impediments are removed.

"The Directors would again remind the proprietors, that it is only on the final completion of many other lines of railway, that the contemplated result of this undertaking can be attained. Those other lines are at least nine in number, forming the main communication from north-east to south-west, and of them three only were wholly open for passengers at Christmas last, two partly, and four not at all; for merchandise, four partly, and five not at all. The increase which has already taken place in the local and direct traffic of this line, has manifestly been in proportion only to the progress made in the completion of the others of which, as has been stated, so much remains to be done.

"The Directors are also strongly of opinion, that the expectations which have been entertained as to the carriage of minerals, will be fully realised. The carriage of coal has been considerable; and with additional facilities which the demand has already required, will much increase. With regard to the coke from north Derbyshire, it is now fully proved by experience to be well suited for locomotive engines; a demand has in consequence arisen for the railways south of this line, and there is no doubt it will become a considerable article of traffic. To this may be added lime; for which the applications have been so numerous, that stations for it at several points on the railway are preparing.

"Though the returns of traffic for the last half year are satisfactory as data for estimating ultimate results, the receipts compared with the necessary expenses, were not such as to leave much disposable surplus. Bearing in mind, that as the local trade increases, the payment of the London and Birmingham Company advances in a ratio very disproportionate to the whole receipt, it will be seen that the payment to that Company in the last half year has exceeded by 1,000*l.* that for the previous six months; this will be corrected by the direct line to Birmingham. Another cause of deficiency has been the carriage of the mail, which, owing to the requisitions of the post office, instead of being a source of profit, has been productive of serious loss. Against those requisitions an appeal has been made—the question has been referred to arbitration, and an equitable arrangement will doubtless take place. With the view of meeting the requirements of the public to the greatest extent, the number of trains worked was greater than experience has shown to be necessary—a different and less expensive system has therefore been adopted, which has been much facilitated by mutual arrangements with the North Midland and Midland Counties' Railway Companies.

"The accounts of capital and revenue are subjoined, and by the revenue account it will be seen that a balance remains in favour of the Company of 6,632*l.* 4s. 6d. And, referring to the resolution adopted at the

Digitized by Google

last general meeting of proprietors relative to the new third shares, the Directors recommend that a dividend of fifteen shillings on each original share of 100*l*., and of five shillings on each new share of 33*l*. 6s. 8d. in this undertaking, be now declared payable on the 10th day of March next."

[The accounts we shall give next week.]

This, the CHAIRMAN observed, was the Report which the Directors had to lay before the proprietors, and he did not know that there was anything which it could be necessary for him to say in addition, inasmuch as in drawing up this document the Directors had endeavoured to lay before the proprietors, as clearly as they possibly could, and without ambiguity, what had been the result of the undertaking for the last six months; also, its present position, and their anticipations for the future. Of course individual Directors could speak for themselves; but for his own part, he would say, and that not as a Director, but as a proprietor, that notwithstanding the smallness of their present traffic, his confidence as to what the future results would be was not in the slightest degree shaken. Any questions which gentlemen might wish to put in reference to the Report or Statement of Accounts, he would feel happy to answer as far as he might be able, and to afford every information to the proprietors. [After the lapse of some time the Chairman continued.] In the position which he occupied as Chairman of the Company, he felt that there was one subject upon which it was his duty to make a few remarks, merely for the sake of bringing under the notice of the proprietors a matter, which, in his opinion, might at some future time seriously affect their interest as railway proprietors. They would no doubt anticipate that he referred to the second attempt which was now being made by her Majesty's Government to interfere, by legislative enactments, with the management and control of railway property. He was fully aware that any remarks that he might feel it to be his duty to make on this question would have but little weight. He felt strongly that after the pertinacity with which public opinion had been directed by the press, as well as by individuals, against the conduct and motives of Directors of railways, everything which fell from him in that capacity would be viewed with distrust and suspicion. He also felt that his personal opinions must have little weight, because he knew the view he took of the subject was in opposition to that expressed by gentlemen most eminent in the various situations which they occupied, whether as members of the Legislature, bankers, merchants, railway Directors, or railway proprietors; therefore he did not expect to produce any other effect than that of calling attention to what he conceived would be the effect of the measure on their interests, as proprietors of a particular railway. By the Bill introduced into Parliament by Mr. Labouchere, a most unjust and vicious system of legislation was being attempted, the operation of which on railway interests, though it might not be immediately foreseen, would ultimately, in his opinion, prove most injurious. He might here state that the object of the measure was twofold; the first being to obtain statistical information, and the second a power of restrictive interference over the management of railways; which interference was said to be founded on an appeal from the public for protection, but by which he humbly conceived it was attempted to introduce a system of legislation not justified by the circumstances of the case, and which might at any future time be most prejudicially applied. With respect to that portion of the measure which related to the collection of statistical details, he had nothing to say. He believed that the collection of such facts by the legislature was important, because on information of this kind ought to be founded any judicious system of future legislation; but he thought it might be a question whether the expense of collecting and arranging this information ought not to be borne by the public, and not by the railway companies, into whose calculations such an expense had never entered. With respect, however, to those clauses in the proposed Act, by which Government attempted to take power to make "REGULATIONS" for the management of railways, he confessed that he viewed them with great dissatisfaction. Except as the introduction of a vicious principle, he did not think that it was a question which very closely affected the *great* railways, such, for instance, as the London and Birmingham, the Grand Junction, the Liverpool and Manchester, and those others on which the traffic was so great that the amount of expenditure became of comparatively little importance: but he was sure that the power which the Government sought to take by this Act would enable them, if they should choose, to impose on small undertakings like that which he represented, where every 100*l*. was a matter of importance, in relation to the dividend which might be expected, an expense, which he had no hesitation in saying, would materially interfere with the value of their property, and be, at the same time, a direct infraction of their vested interests. The Government sought for a power to make *regulations* for the public safety, but those regulations were not defined. They said, in effect, that they did not know what they required, or what power they intended to take. A special committee had been sitting two years without informing the government specifically what control they ought to possess, and therefore they asked permission to do just as they liked, just as they thought expedient as circumstances might arise or as their judgments or their fancies might suggest or dictate. Whether such a principle of legislation were sound and wholesome, he would leave to a meeting like the present to determine; but for his own part, he considered it to be most dangerous. Again, while they contended that the power they applied for was rendered necessary, in order to provide for the public safety, he maintained that they could not show that there had ever been a public expression of opinion on the subject. He believed he might safely say that not a single petition had been presented to Parliament asking for the slightest interference on the part of Government in the management of railways; he might also say that the sentiments and feelings of the people, as shown by the progressive increase of traffic on every railway in the kingdom, gave a practical contradiction to the statement made by the Government, to which, he believed, might be added the Report of the Government Commissioners themselves, that the system of railway travelling was much safer than that which it had superseded; and yet, as it would appear, on the representation of the public press alone, backed by adverse interests, Government asked for a power undefined, and unknown in commercial legislation. Ought a power of this kind to be vested in a changing political officer? He apprehended not. With regard to the present commissioners, he would freely acknowledge them to be a most honourable, enlightened, and unprejudiced body of men, but others might be substituted who would not be influenced by motives so pure and disinterested. Applying the unlimited, undefined, power of this Act, Government would be enabled at any time, at the instigation of interested parties, and under the disguise of a regard for public safety, so to curtail the profits of Railway Companies by the infliction of arbitrary expenses, as by removing all great prizes from the lottery of speculation, effectually to paralyse commercial enterprise and activity. Thus, as it appeared to him, is an insidious attack about to be made upon property, on the supposed inviolability of which millions had been invested. He knew it would be said that such a case of interference would be highly improbable; but he would appeal to any intelligent man if the admission of a principle so vicious into legislation ought not to be protested against. Having thus adverted generally to what appeared to him the obnoxious principle of this bill, the CHAIRMAN said, that he had hoped to find some redeeming clauses; most particularly had he hoped to find some power of appeal established for the settlement of differences between Companies, at the same time desirable for the public, and protective of the interests of the minor Railway Companies. He felt that he should be supported by the conviction, founded on facts, of gentlemen present, when he said that the appointment of a Court of Appeal for the decision of matters of difference between Railway Companies, would be generally necessary for the interests of the Companies, and for the protection of the public from the arbitrary arrangements adopted on the great lines of railway. (Hear, hear.) With no such clause, and without the abandonment of the undefined, unlimited power which the act in its present form would confer, and by which the security of investments would be affected, it certainly appeared to him that a vast accession of force protective of monopolies would be added to that created by the existing standing orders of Parliament, by which the only real safeguard for the public, the promotion of competition, was very effectually impeded. The CHAIRMAN concluded his observations by saying that, apart from his position as a Railway Proprietor or Director, and considering the question as a member of the manufacturing and commercial portion of the community, he could not but look at the introduction of this Bill with the greatest anxiety and alarm. The present investments in Railways could be but little less than one hundred millions sterling. The ultimate profit from this capital, if left to itself would be ten millions annually, to produce which thirty millions must be every year collected, of which twenty millions would be annually expended in the country in mechanical and manual labour. Knowing well, as he did, the extent to which all the manufacturing and commercial interests of the county, together with those of the working classes generally were sacrificed, by the introduction of vicious and spurious legislation, he fearlessly asserted that it became the special duty of every representative of these important interests most carefully to protect from injury and interference an engine of productive industry, so gigantic even in its infancy, as was exhibited in the formation of railways. So far as the interests of this Company were concerned, the Directors had endeavoured to do their duty. And as a committee had been appointed at the recent Railway Conference, to sit in London, and watch the progress of the Bills before Parliament, with a view to the protection of Railway interests, they had stated their opinion that the most strenuous opposition should be given to the introduction of any such principle of legislation as this contains. After some further observations, the Chairman concluded by moving a resolution for the adoption of the Report.

A PROPRIETOR, after expressing his concurrence in the observations which had fallen from the Chairman with reference to the Railway Bill before Parliament, thought the Directors were not proceeding on a sound principle in granting dividends without reserving any fund for the depreciation of stock, which fund they would be compelled some time or another to provide. He believed they would have stood better with the public if they had not made so large a dividend at first, and placed something to the account of depreciation of stock. He was anxious to know what amount the Company had received for the carriage of coke; he had been informed the other day, at Gloucester, and also by a stoker on the London and Birmingham Railway, that the Derbyshire coke was not at all equal to that brought from London. He mentioned this fact, conceiving it to be important that every information should be given, and because he believed much evil arose from people being too sanguine. He believed it had been stated at the last meeting that the new line to Birmingham would be ready for opening in July next, and he now learned from the Report that it would not be opened before autumn. He wished to know whether any unusual difficulty had arisen, as he presumed that there must be some cause for the delay.

JOSEPH WALKER, Esq., replied, that the honourable proprietor would be glad to learn that in a conversation which he had with one of the officers connected with the locomotive department of the London and Birmingham Railway, who ought to have the best means of forming a correct estimate of the nature of coke, that the time was fast approaching when the Derbyshire coke would answer their purpose quite as well as their own. The supply was limited at present; and he knew that the London and Birmingham Company had not received anything like the quantity they would willingly take.

W. BAKER, Esq., was of opinion that their line was not sufficiently advertised by means of cards, &c., in the various inns and hotels. He had met with persons who did not know that there was such a line carrying passengers between London and Derby.

The CHAIRMAN said, that this subject had not been overlooked. That their line had not been extensively advertised as a carrying line between London and Derby arose from an anxiety on the part of the Directors not to be parties to misleading the public. The frequent unavoidable alterations of trains, consequent on the opening of adjacent railways, and the changes made by the London Company, prevented them making arrangements on the continuance of which they could depend. (Hear.) They were, however, now adopting measures for making the arrivals and departures of the trains more extensively known. (Cheers.) With respect to the observations which had been made in reference to a reserve fund, he could only say that in carrying at present nothing to a depreciation account, they had done so advisedly. Whilst railways were in so unfinished a state as their own, and the trade was so little developed, the Directors felt that to keep the engines in repair, would be a fair charge on the revenue; and that, on the completion of the railway, and the acquisition of all its resources, the then depreciation of the stock would be a balance fairly due

from new proprietors to those who, without return, had supported the undertaking from the commencement. With respect to the quality of their coke, he had only to say that they had two descriptions. That which was the best was not at present obtained from Mr. Stephenson, but from other parties. Mr. Stephenson had, however, taken another colliery, for the sole purpose of making it; and he had the satisfaction of stating that the London and Birmingham, and other companies, were most anxious to obtain it. Its quality was also fully tested by its adoption on this, the North Midland, and Midland Counties Railways. As to the extension of the time for the opening of the new line, the delay had arisen from a variety of circumstances, but chiefly from the difficulty experienced in obtaining possession of the land. Most of these obstacles were now surmounted, and he was not aware of any further obstructions which the Act of Parliament did not give them the power to overcome.

The resolution for the adoption of the report was then put to the meeting, and unanimously adopted, as was also a resolution declaring a dividend of 15*s.* per share on the original shares, and 5*s.* per share on the new shares.

Votes of thanks were afterwards passed to the chairman and Directors, and the meeting separated.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

This important undertaking is fast drawing to a close. The Bishopton tunnel, a work of immense magnitude, is on the point of being finished. On visiting it in the early part of the week, we found that the rails were laid double nearly the whole length of the tunnel, and that a little clearing away at the east and west entrance was all that was required to complete it. Parts of the approaches, both to the east and west of the tunnel, were still to clear out; but there are on these parts about four hundred men very busily employed, in the hope of having one line clear for the passage of an engine with the Directors, on Monday next. The workmen seemed confident that the double line would be open to the public about the first week in April. The magnitude of the works at this point may be judged of from the following particulars. The length of the tunnel, counting it as one, is 760 yards, all of which is through a very hard whin rock, while the approaches to it, through the same hard material, extend to 2300 yards more. But the tunnel is not into one; it is divided into two, by what is called an "eye," which is an opening 100 yards long, and which, from the summit of the ground to the level of the rails, is 70 feet deep, presenting a chasm that almost makes the head giddy to look down. By this opening, what would have been one long tunnel, becomes two short ones, the east one being 320, and the west one 340 yards long. The whole of the passage through the tunnels is curved, so that the eye cannot see from end to end, but from the middle of each, light can be seen from the end and from the "eye." Shortly after emerging from the west end of the tunnel, the spectator obtains an ample view of the Clyde, with the shores of Dumbarton and Argyllshire, and this splendid scenery is kept in view during the greater part of the passage to Greenock. The part of the railway from the tunnel to Greenock, has been run on by the engines for several months past, and both lines between Paisley and the tunnel are very nearly completed. The road over the mossy part between Baraugry Hill and Gryffe has stood much better than was anticipated. Part of it had been kept somewhat higher than was intended, to make allowance for settling, but it has settled so little, that it became necessary to lower it to near the proper level. The delay which the tunnel has occasioned, has been the means of getting all the other parts of the line into a much better state than if the passage had been opened sooner throughout. The completion of this railway, besides bringing a good increase to the joint line traffic, will form a much more close connexion between the central parts of the county and its principal seaport, than as heretofore existed, and will thus create work for itself. The passage from Paisley to Greenock will only take about three quarters of an hour.—*Paisley Advertiser of Saturday.*

In referring to the above paragraph the *Greenock Advertiser* says:—We understand that the above is very correct in all its details. We learn, however, that the line will be ready earlier than the writer anticipates. We have been informed that the Directors are determined to have the road thoroughly finished before throwing it open to the public. It is mentioned above that the tunnels are on the curve, and we may add, that so accurate was the mode adopted for securing their correctness, that, when the shifts met, the utmost deviation from the correct line was two inches. We have also the pleasure of assuring our readers that the Government Commissioner was so satisfied with his inspection of the line, that the Board of Trade has given authority to the Directors to open the line without any further examination.

Accident on the Great Western Railway.—An accident of a fatal nature, arising from excessive carelessness on the part of the unfortunate deceased, occurred at the Steventon station, to a man upwards of sixty years of age, on the afternoon of Thursday last, who was knocked down (as he was incautiously crossing the line) by the half-past four o'clock train from Wootton Bassett to Paddington. The poor fellow, who got his living by selling fruit, was struck by a projecting portion of the engine on the head, and his death must have been instantaneous; for, upon his receiving immediate assistance, life was found to be extinct, arising from a severe wound on his head. But very few drops of blood oozed from the wound. It should be observed that there is a footpath which crosses the lines at the place where the accident occurred, where the Company's men are stationed to endeavour to prevent accidents occurring through the carelessness of the public.—*Daily Papers*, of Tuesday.

STOREKEEPER'S ASSISTANT.—WANTED by a PUBLIC COMPANY, an active intelligent person as Storekeeper's Assistant, who is acquainted with the quality of Stores in general use, and able to keep the Books connected with the department by double entry. The Salary will be from £100 to £150 per annum, according to the qualifications of the party.

Address (post paid), on or before the 15th instant, stating full particulars of last employment, to C. D., care of Mr. Barker, Advertising Agent, Birchin-lane, Lombard-street, London.

TO RAILWAY COMPANIES.—Public Security, Efficiency, and Economy in FENCE for RAILWAYS. J. PORTER begs to state, that he has within the last month introduced a new description of iron fence for railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public institutions, and exportation.

82, Upper Thames-street, and the Grove Iron and Wire Fence Manufactory, Southwark.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the Blackwall Railway, where it answers every exectation. It has been used n Shipping Five Years.

TO MERCHANTS, IRONMONGERS, RAILWAY COMPANIES, &c.—JOSEPH WARDEN, jun., Wholesale Ironmonger, respectfully informs his friends and the public, that he is manufacturing at his works, Railway, Gig, and Carriage Springs, Buffer Rods, Collinge's and Mail Axles, patent and improved Van Arms, improved Screw Jacks, Wind-up Jacks, Cheese and Cider Press Screws, Pully Blocks, Anvils, Vices, Spades, Shovels, Hames, Chains, &c.

Sole manufacturer of Chalklen and Bonham's Patent Vices. 2 and 3, St. Martin's-lane, Birmingham.

AT THE ANNUAL GENERAL MEETING of the HULL AND SELBY RAILWAY COMPANY, held pursuant to the Act of Parliament incorporating the Company, at the Town-Hall, in the Borough of Kingston-upon-Hull, on Saturday, the 27th day of February, 1841, Henry Broadley, Esq., M.P., in the Chair, the following Resolutions were passed:—

1. Moved by Mr. Thomas Wilson; Seconded by Mr. George Cammell, jun.—

That the Report now read be received and adopted, and printed and circulated at the discretion of the Directors.

2. Moved by Mr. George Buckton; Seconded by Mr. Thomas Watson—

That the thanks of this meeting be presented to Henry Broadley, Esq., M.P., the Chairman of the Directors; to Richard Tottie, Esq., the Deputy Chairman, and to the other Directors, for their great attention to the business of this undertaking.

3. Moved by Mr. Joseph Richardson; Seconded by B. M. Jalland, Esq.—

That the future intended Reports of the Directors be circulated amongst the proprietors seven or ten days before the General Meeting, and that the names of the retiring Directors, and also those of Proprietors who are eligible to serve as Directors, be appended to such Report,

4. Moved by Mr. John Wade; seconded by John Smith, Esq.—

That five qualified Proprietors be now elected, by Ballot, in the place of the five retiring Directors.

The Scrutators having examined the voting papers, declared the five retiring Directors, viz., Mr. Liddell, Mr. Richmond, Mr. Henwood, Mr. Spence, and Mr. Whittaker, to be re-elected by a large majority of votes.

5. Moved by Mr. John Gresham; seconded by George Cookman, Esq.—

That in accordance with the recommendation contained in the Report of the Directors now read, a Dividend of Ten Shillings upon each Share in the Capital Stock of this Company be now declared; and that the same be payable (subject to the directions of the Act of Incorporation) on or at any time after the 31st day of March next.

6. Moved by Richard Tottie, Esq.; seconded by James Henwood, Esq.,—

That in pursuance of the powers vested in this Company by their Act of Incorporation, the Rules and Orders for the regulation of travellers on the said Railway now read, be made and declared Bye-laws of this Company, and that such Bye-laws, Rules and Orders, shall be in force, and take effect from this day.

7. Moved by R. M. Craven, Esq.; seconded by Edward Spence, Esq.—

That the sum borrowed in pursuance of the fourth Resolution of the General Meeting of this Company, held on the 1st day of February, 1839, having been found insufficient to defray the whole of the expenses of completing the Railway, and of the works, buildings, and purchases of property connected therewith; the Directors of this Company be, and they are hereby empowered to borrow and take up at interest on Bonds of this Company, under its common seal, any further sum or sums of money not exceeding altogether £50,000, the interest on such Bonds to be payable half-yearly, after the rate of £5 per cent. per annum, and to have priority of payment over dividends on the stock of the Company.

8. Moved by S. H. Egginton, Esq.; seconded by Mr. J. H. Vallance,—

That a General Meeting of the shareholders in this Company be held in the month of August next, on such day in that month, and at such place as the Directors shall appoint.

9. Moved by Mr. John Wade; and seconded by Mr. Thomas Carlill,—

That Mr. Wm. Farthing and Mr. Wm. Hey Dikes be requested to audit the accounts.

10. Moved by Joseph Robinson Pease, Esq.; seconded by Richard Tottie, Esq.,—

That the thanks of the proprietors be given to James Walker, Esq., the Engineer, for the valuable services he has rendered to this Company, not merely professionally, but on various other important occasions.

HENRY BROADLEY, Chairman.

The Chairman having left the chair, it was taken by Joseph R. Pease, Esq., when it was

Moved by the Rev. W. R. Gilby, Esq., of Beverley; seconded by George Liddell, Esq., and carried unanimously,—

That the thanks of this meeting are especially due to Henry Broadley, Esq., M.P., for coming from London purposely to preside at this meeting, and for his able conduct in the Chair.

VAN BUTCHELL ON FISTULA, &c.

Fourth edition, just published, in 8vo., cloth boards, price 7*s.* 6*d.*, enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No. 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

Leeds to Sowerby Bridge, meeting Trains from Derby, Chesterfield, and Sheffield.	Leeds to Manchester.	Leeds to Manchester, in time for the Liverpool and Bolton Trains.	Leeds to Manchester, meeting Trains from London, Leicester, Derby, Chesterfield, and Sheffield.

Above and below each of the Train Columns are given the places on other lines, to and from which Passengers may proceed by Railway.

FARES.

First-class passengers, 3d. per mile; second-class, 2d. per mile. Children, under seven years of age, in first-class carriage, charged second-class fare; and in second-class, waggon fare; and in waggon, without any deduction. Infants in arms not charged.

Gentleman's carriage, with four wheels, 6d. per mile; and parties riding in their own carriage, 2d. per mile each; servants riding outside, and children, waggon fare.

A single horse, two-wheel carriage, or pony phaeton, 4½d. per mile. Any larger number of horses, if one property, 3d. per mile each. One ox, cow, or other neat cattle, mule, or ass, going in an open waggon, 3d. per mile each; any larger number, being the same property, 2d. per mile each. Sheep, 4d. per score per mile, or 8d. per single waggon, and 1s. 4d. per double waggon, per mile. Pigs, according to size, from 4d. to 1d. per mile each. Any distance, under six miles, charged as six miles in all cases. The Manchester 6. 30. morning train is the only one by which passengers can go through to London in waggons; but they may proceed to Rugby by every London train.

Every train will have first and second class carriages, and most of them, for the convenience of the working classes, open waggons, without seats, at fares proportionably low.

Luggage, to the following extent, may be taken free of charge:—First-class passengers, 112 lb.; second-class, 80 lb.; waggon, 40 lb.—Any excess charged for any distance under 30 miles, ¼d. per pound; and over 30 miles, ½d. per pound, extra.

The Company's servants are not allowed to porter for waggon passengers.

Waggon passengers must be at the booking-office ten minutes before the time of departure, or they cannot be booked for that description of vehicle. Gentlemen's carriages and horses must be at the Station a quarter of an hour before the departure of the train; and if horses are to be sent from the intermediate Stations, it is advisable to give previous notice.

The Company do not hold themselves responsible for any luggage, matters, or thing, unless booked, and paid for accordingly.

Passengers are particularly requested to see their luggage in and out of the carriages.

Parcels can be forwarded to all parts of the kingdom, from 9, Brown-street, Manchester; Albion Hotel, Oldham; Reed Hotel, Rochdale; Swan Inn, Halifax; Railway Office, Bradford; Swan Railway Office, Huddersfield; Royal Hotel, Dewsbury; Bennett's Office, Wakefield; and from the respective Stations of the Manchester and Leeds Railway Company.

Gratuities are not allowed to be taken by any of the Company's servants. Smoking is strictly prohibited on any of the Company's premises.

Passengers, &c. may be booked through at the Manchester Station to the following places:—

	First-class.	Second-class.	Third-class.
Rugby	£1 3 0	£0 18 0	£0 11 0
Derby	1 2 0	0 16 0	0 9 0
York	1 0 0	0 13 0	0 9 6
Selby	0 18 0	0 12 0	0 8 6

	First-class.	Second-class.	Third-class.
London	£2 10 0	£1 12 0	£1 1 0
Nottingham	1 2 0	0 16 0	0 9 0
Sheffield	0 12 0	0 7 6	0 6 0
Hull	1 3 0	0 15 6	0 11 0

Passengers may also be booked through from every Station.

Gentlemen's carriages to London, by 6. 30, morning train, £3 5s.

Passengers wishing to come from London by way of Derby to Manchester, or to any Station on the Manchester and Leeds Railway, must book for Rugby.

*** In addition to the above trains, there will be an extra one from Rochdale to Manchester at nine o'clock morning, and one from Manchester to Rochdale at three o'clock in the afternoon, stopping at all the intermediate Stations, on week days only.

STOL AND EXETER RAILWAY COMPANY.—Ninth Half-Yearly Meeting. At the Half-y General Meeting of this Company, held at the White Hotel, in the City of Bristol, on Thursday the 4th of arch, 1841,

FREDERICK RICKETTS, Esq, in the Chair.

It was unanimously resolved—

Moved by the Chairman, Frederick Ricketts, Esq., seconded by the Deputy Chairman, James Gibbs, Esq.,

1. That the Corporate Seal of this Company be affixed to the Register of Proprietors now produced.

Moved by F. P. Barlow, Esq., seconded by John Winwood, Esq.,

2. That the Report of the Directors, now read, be received and adopted, and that they be requested to send a copy thereof to every Proprietor.

Moved by V. F. Hovenden, Esq., seconded by Joseph Talbot, Esq.,

3. That Dr. Miller, Messrs. Samuel Lucas and Charles B. Fripp, and Edward Divett, Esq., M.P., be re-elected Directors of this Company.

Moved by James Harford, Esq., seconded by John Tomlinson, Esq.,

4. That the notices of forfeiture issued by order of the Directors, as to 109 shares in this Company, specified in the list of numbers now read, be confirmed; and the same are accordingly forfeited to this Company.

Moved by Dr. Miller, seconded by Francis Parker, Esq.,

5. That the Directors be authorized to apply to Parliament for an Act to extend the time for purchasing land, and to amend and enlarge the former Acts.

Moved by John Tomlinson, Esq., seconded by William Cross, Esq.,

6. That the best thanks of the Proprietors be given to the Directors, for their able and zealous management of the affairs of this Company.

FREDERICK RICKETTS, Chairman.

The Chairman having quitted the Chair, it was resolved by acclamation,

That the cordial thanks of this meeting be given to Frederick Ricketts, Esq., for his able and judicious conduct in the Chair.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

NORTHERN AND EASTERN RAILWAY.—The public are respectfully informed, that on and after MONDAY next the 8th March, the trains will run as follows, viz.—

FROM SHOREDITCH TO BROXBOURNE.

Morning	8 o'clock.
"	30 min. past 10.
Afternoon	30 min. past 1.
"	30 min. past 3.
"	30 min. past 4.
"	30 min. past 5.
"	30 min. past 7.
* "	30 min. past 8.

FROM BROXBOURNE TO SHOREDITCH.

Morning	¼ past 8 o'clock.
"	9 o'clock.
"	10 "
"	12 "
Afternoon	3 "
"	5 "
"	7 "
* "	8 "

* To start on and after the 1st May.

WM. BOURNE, Secretary.

London, Shoreditch, March 3, 1841.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200., upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of five per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1845.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Halifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament, of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

EXTENSIVE SALE OF VALUABLE HORSES.—To be Sold by AUCTION, (Messrs. SOTHERAN, Auctioneers,) on Tuesday, the 16th day of March, 1841, at Greatham, near Stockton-on-Tees, in the county of Durham, Fifty very excellent HORSES, the property of Mr. Thomas Hutchinson, Contractor for the Stockton and Hartlepool Railway, and are now offered for sale in consequence of the completion of that undertaking.

The above Stock being of a first-rate description, and in high and healthy condition, are suitable for Gig, Carriage, Draught, or Saddle purposes, and well worth the attention of Railway Contractors, Colliery Owners, Coach Proprietors, Farmers, Brewers, Carriers, &c.

Also, a large quantity of Trapping of various descriptions.

The Sale to commence at Ten o'clock.

Also for sale by private contract, 150 Railway Waggons, used for excavating; about 400 tons of malleable Iron Rails, from 36 to 42lbs. per yard; a large quantity of Timber, used for centres, &c.; two good portable Cranes, Winches, Piling Engines, and various other articles used in the making of Railways, the property of the above Mr. T. Hutchinson.

Greatham, March 3, 1841.

TO TIMBER MERCHANTS, RAILWAY CONTRACTORS, SHIPBUILDERS, and OTHERS.—Valuable and Extensive Woods for Sale.—The valuable and extensive Woods of Aboyne and Glentanner, belonging to the sequestrated estate of the Marquis of Huntly, are now for sale.

The Woods of Aboyne, now for sale, comprehend about 900 acres, and consist of some of the most valuable Scots Firs and Larches that are to be found in the north of Scotland, all ripe and fit for immediate use; and the Forest of Glentanner contains a considerable extent of Scots Fir, of natural growth, and of very superior quality.

The Woods are situated in the parishes of Aboyne and Birse and county of Aberdeen, and are distant from the city and sea-port of Aberdeen about thirty miles, having an excellent floating river (the Dee) intersecting them.

The quality of the Timber is admirably adapted for railway Sleepers, street paving, shipbuilding, and for country purposes.

Taking into view their proximity to a large river, their extent, age, and quality, these woods are particularly deserving of the attention of men of capital.

Offers for the whole, or for such lots as may suit intending purchasers, will be received by Donald Lindsay, accountant, No. 56, George-street, Edinburgh, trustee on the sequestrated estate of the Marquis of Huntly, until the 7th day of April next.

Lithographed plans, showing the relative situation of the respective plantations to the river, with particulars of the age, quantity, and quality of the wood, and other requisite information, are in course of preparation, and may be had on application to the said Donald Lindsay, to Walter Duthie, W. S., Edinburgh; Messrs. Spottiswoode and Robertson, solicitors, 27, Great George street, Westminster; David Walker, land-surveyor in Aberdeen; or Thomas and Newell Burnett, advocates in Aberdeen. William Smith, overseer at Aboyne Castle, will show the woods upon the ground.

Edinburgh, 19th February, 1841.

CARLYLE'S LECTURES ON HEROES—Price 10s. 6d., is now ready. Also, a new edition of his SARTOR RESARTUS.

James Fraser, Regent-street, London.

THE THAMES TUNNEL is open every day (except Sundays), from nine o'clock in the Morning until dark. Admittance, 1s. each. Entrance on the Surrey Side of the River, close to Rotherhithe Church. The Tunnel is brilliantly lighted with Gas. Visitors can now walk under the entire breadth of the River, and approach the Shield, which is advanced to within the limits of High Water Mark at Wapping.

J. CHARLIER, Clerk to the Company.

Company's Office, Walbrook Buildings, Walbrook,
March, 1841.

TO CONTRACTORS AND OTHERS.—CENTERING FOR TUNNELS FOR SALE.—20 Ribs of Tunnel Centering, for Tunnel 24 feet wide, of approved construction, with strong iron-bound ships, trollies, and other apparatus for tunnelling.

Also, 200 tons of excellent parallel Rails and Chairs; Rails, 32lbs. to the yard.

Apply to Mr. Betts, Leicester.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of soft and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, and manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
ditto, ditto, with reserve of leads	1	14	0

December, 1840.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

BRITISH IRON COMPANY.—THE HOLDERS of more than a million of Capital, particularly those who have not paid the last or any of the previous Calls, and others whose shares have been Forfeited, are deeply interested in attending a MEETING to be held at the LONDON TAVERN, on Thursday next, the 11th of March, at Twelve for One o'Clock, precisely, to consider the best steps that can be adopted, in accordance with the opinion of the highest legal authorities, to put an end to liabilities and losses, before it be too late to save the Company, and many of the shareholders, from impending ruin.

The Circular from the Directors, of the 2nd instant, will be duly considered at this meeting, and Reporters will be admitted.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, March 6, 1841.

SUPPLEMENT TO THE RAILWAY TIMES.

No. 166. Vol. IV.—No. 10.] SATURDAY, MARCH 6, 1841. [GRATIS.

GRAND JUNCTION RAILWAY COMPANY AND MESSRS. PICKFORD AND COMPANY.

The Carriers Question considered with reference to Railways.

THE DIRECTORS OF THE GRAND JUNCTION RAILWAY publish the following affidavits (as supplementary to their Chairman's published on the 21st inst.) without one word of comment; believing that the public, as they have been appealed to, will be better satisfied to found their judgment upon affidavits, than upon mere observations of any interested party.

As the subject is before the Directors in connection with Messrs. Pickford & Co.'s letter of the 19th instant, to the Editor of the *Railway Times*, the Directors take the opportunity of distinctly contradicting, upon the authority of Messrs. Clay and Swift, the Company's legal advisers, the statement contained in that letter to the effect that something has been done or attempted on the part of the Company, which "disappointed" "the expectation" of Messrs. Pickford and Co. "of bringing to trial at the present sittings in London, an action commenced by them against the Company.

So far as the Directors, or the Company's legal advisers know, there was not the slightest reason whatever why Messrs. Pickford and Co.'s action should not have been tried, and *that* within the next few weeks or perhaps days, if they had chosen to proceed with it in ordinary course, instead of discontinuing it and paying the Company's costs.

Liverpool, 24th Feb. 1841.

IN THE QUEEN'S BENCH.

Affidavits on behalf of the Company.

John Rutter Chorley and Edward John Cleather, both of Liverpool in the county of Lancaster, gentlemen, severally make oath and say, and first this deponent John Rutter Chorley for himself maketh oath and saith, that he is and from the time of the incorporation of the said Company hath been the Treasurer, Secretary, and principal Manager of the affairs of the said Company, and that he is and has been thoroughly acquainted therewith. That he hath read the respective affidavits of Joseph Baxendale, John Rubens Bulmer, Joseph Hayward, and William Harnett, filed in this case, that before the opening of the entire line of railway from Birmingham to London, the Grand Junction Railway Company carried goods only upon the Grand Junction Railway, between Birmingham and Lancashire, and not further or otherwise, and that they have continued to carry goods thereupon to the present time. That when the London and Birmingham Railway was opened throughout for the carriage of goods, the control of such traffic upon it was placed exclusively in the hands of the firm of Pickford and Co., and others of the original common carriers, the said London and Birmingham Railway Company declining themselves to undertake the carriage of goods. That several London carriers thus established on the said London and Birmingham Railway, and amongst others the said firm of Pickford and Co. applied to the said Grand Junction Railway Company in 1838 to allow them, as carriers, the use of the Grand Junction Railway, which the Company consented to on the terms amongst others that the said carriers should undertake upon it certain risks of a carrier as well as porterage, and the supply of sheets and coverings for the trucks or waggons, leaving the Company only to furnish trucks or waggons and locomotive power, and that the said Company was induced to make this arrangement after discussion by representations of advantage from the carriers and promises of fair dealing upon their part towards the said Company and the public. That the said Company also consented as part of this agreement to allow their waggons to go loaded with such carriers goods on to and along the London and Birmingham Railway, but only provided that an equal number of waggons from the London and Birmingham Railway were brought by such carriers in return for the use of the Grand Junction Railway Company, and that except in connection with this proviso the said Grand Junction Railway Company never did and never would, nor could they be reasonably expected to furnish or provide or agree to furnish or agree to furnish or provide for the said firm of Pickford and Company, or for any party or person or persons whomsoever, any waggons or trucks for use by them upon the London and Birmingham Railway as mentioned in the said affidavit of the said Joseph Baxendale. That the said Grand Junction Railway Company also by the said agreements agreed to make to the said carriers considerable allowances or abatements from the rates charged for the carriage of goods along the said railway partly in consideration of the carriers undertaking the aforesaid risks, and partly also in the nature of a bonus for their good will and upon their promise to encourage the traffic by railway, and to give the public the benefit of railway conveyance, and also to deal fairly with the railway Company, that the said Grand Junction Railway Company had fulfilled their part of the said special agreements faithfully for a period of more than two years, when they determined the same, because and solely because they found that such agreements were used as a means of taxing the public unduly, and of injuring the railway Company by keeping goods from the railway; the high rates levied by the carriers on the London and Birmingham portion of the line having deterred the senders of goods from Lancashire to London from using this means of conveyance extensively. That the carriers did not duly fulfil their part of the said agreements as to returning the trucks or waggons, or replacing them, and the said Grand Junction Railway Company were frequently called upon to supply for the traffic *towards* London double the number of the trucks or waggons brought to them in exchange, for the same whereby a serious loss was incurred by the said Grand Junction Railway Company. That the charge for the carriage of goods throughout from Lancashire to London was (during the subsistence of such agreements) kept unreasonably high by means of the carriers charging excessively for that part of the journey which lay between Birmingham and London. That there was no competition established by the London and Birmingham Railway Company, and that the carriers consequently were uncontrolled in their charges. That between Birmingham and Lancashire they could not levy excessive rates because the Grand Junction Railway Company were themselves also carriers and at moderate charges, and so compelled the other carriers to make like moderate charges, as between Birmingham and Lancashire the termini of the Grand Junction Railway. That the carriers levied their rates arbitrarily and unequally as regards amount, and thereby brought odium upon the railway, and that by means of exorbitant charges and other practices on the part of the said carriers in respect of so much of their business as was carried on upon the London and Birmingham Railway, many senders of goods from London to Lancashire were, as this deponent verily believes, deterred from using the railway for that purpose; and moreover the said common carriers, and particularly the said firm of Pickford and Co., in various instances obtaining possession of goods expressly ordered to be sent by railway and nevertheless forwarded them by canal, and by such means kept goods off the railway, that this deponent received on or about the 22nd day of December, 1839, the letter from Richard Earle, Esq., which is set forth in the affidavit of John Moss, Esq., hereto annexed and about the same time and afterwards divers similar cases were discovered by the agents of the said Company to have been practised by the said common carriers, and especially the said firm of Pickford and Co. That in this manner, and by imperfect and inaccurate declarations of the quantity or quality of their goods delivered for carriage, and in various other ways the carriers with whom such agreement as aforesaid had been entered into, and especially the said firm of Pickford and Co., violated the good faith on which such agreements were founded, and in consideration of which a part of the allowance or abatement secured to them thereby was granted to them, and it became evident to the Directors and officers of the said Grand Junction Railway Company that both the Company and the public were sufferers by reason of these agreements, and of the facilities and advantages thereby secured to the said common carriers. That it was represented to the London and Birmingham Railway Company, on behalf of the Grand Junction Railway Company, and this deponent believes it was true, that the carriers over the said London and Birmingham Railway were making exorbitant profits at the public cost, and without any advantage to the said London and Birmingham Railway Company, for whilst they paid less than 30s. per ton to the said London and Birmingham Railway Company for the carriage of goods over the said London and Birmingham Railway, yet they charged to the public at least 60s. per ton, including porterage and deliveries in London, and that as the expense of the latter items could not exceed from 10s. to 15s. per ton, they the said carriers thereby made a profit equal at least to 15s. per ton, although 2s. 6d. per ton has been usually regarded as a fair carriers' profit; and this was not only an unjust tax on the public, but also had the effect of keeping goods away from both the said railways, and so of injuring both of the said Railway Companies. That the London and Birmingham Railway Company nevertheless did not think proper to become carriers on their own line, and the Grand Junction Railway Company therefore, in order as far as possible to remedy the mischief complained of, did themselves become, in June, 1840, carriers over the London and Birmingham Railway, and they appointed Messrs. Chaplin and Horne to undertake their agency in London, and to unload and deliver at London all goods from the Grand Junction line carried by the Grand Junction Railway Company, as also the collecting loading, invoicing and porterage, on as many goods as they could collect in London for the Grand Junction line, and the performance of certain other services as agents of the said Company. That the said Grand Junction Railway Company thereupon offered to carry goods throughout between London and Lancashire on the same moderate terms as had been long in use on the Grand Junction line, under the conviction that such moderate charges by increasing and encouraging business would be more profitable to the Company than the higher charges theretofore exacted by Pickford and Co., and the said other common carriers. That the immediate effect of this arrangement on the part of the said Grand Junction Railway Company was to cause a general reduction of charges on the part of the said other common carriers, also from an average charge to the receiver of the goods in London, and including deliveries of from 90s. to 100s. per ton, to about 70s. per ton for the same service (as this deponent has been informed, and has every reason to believe, and does believe). That when this arrange-

Digitized by Google

ment had been concluded, the Grand Junction Railway Company gave notice to the said firm of Pickford and Co., and to the other carriers with whom the agreements above mentioned were then subsisting, that after a day named such agreements would be determined, informing them that their goods would from the expiration of such notice be conveyed by the said Grand Junction Railway Company, in the same manner and on the same terms in all respects as those of the public generally, and that the allowances and privileges hitherto conceded to such carriers would be no longer granted. That on the receipt of this notice, all the carriers, with the exception of Pickford and Co., aquiesced in the termination of the agreements. That the said firm of Pickford and Co. continued to carry upon the railways between Birmingham and London, and on the expiration of the agreement above mentioned gave the Grand Junction Company notice that they meant still to use their railway, consigning their goods from Liverpool and Manchester to their own agent at Birmingham, and bringing to the said Company at Birmingham their (the said firm's) goods for Liverpool and Manchester, consigned in like manner to their own agents at those places, and the said Grand Junction Railway Company thereupon informed the said firm that their goods would be received and dealt with in the same manner in all respects as those of the public at large, and that the said Company have since acted in conformity therewith. That the said firm of Pickford and Co. inquired of this deponent, through their clerk, the said Joseph Hayward, if the Company's waggons, loaded with goods of the said firm, would be permitted to go forward on and along the London and Birmingham line, without unloading at Birmingham, or without charge for the use of the same, and that the said firm, and the said Joseph Hayward, were informed in reply, that if the Company received tonnage on the goods as far as Birmingham only, they would only undertake to deliver them (in the usual manner and according to such consignment) at Birmingham, it being not usual or reasonable to allow goods consigned to Birmingham only to go onward in their waggons to another place without any compensation being made to the Company for the wear, tear, and use of such waggons, and it was stated by the said deponent to the said Joseph Hayward that the Company were now carriers of goods as far as London also, and that if the said firm of Pickford and Co. were willing to pay to the said Company what the said Company received from all other parties who consigned goods by them through to London, the goods of the said firm would for such charge be delivered there by the Company to any consignee they the said firm might name, (like the goods of any other of the public), and the said firm of Pickford and Co. were afterwards informed that if this plan was not approved by the said firm, the said Company would, if required, allow them to take onwards over and along the said London and Birmingham Railway, the waggons of this (the Grand Junction Railway) Company, loaded with goods of the said firm which had been consigned from Lancashire to Birmingham only, provided that the said firm would agree to pay to the said Grand Junction Railway Company reasonable hire (which was fixed by the Directors) for the use of the same, but that the Company did not undertake to furnish waggons gratis to other carriers or parties on railways not belonging to the Company, and did not so furnish them to any party whatsoever. And the said firm of Pickford and Co. were further informed that Chaplin and Horne were solely the Company's agents in London, and that the Company were the carriers of the goods in the waggons sent to the charge of Chaplin and Horne in London, and responsible for the risk of the goods until that delivery, and received the freight for those services. That in the rate charged by the Grand Junction Railway Company for the carriage of goods between Lancashire and London, provision was specially made for the wear and tear of the waggons on the London and Birmingham line, and that the effect of granting to the said firm of Pickford and Co. what they demanded, (viz. the use of the Grand Junction waggons over the London and Birmingham Railway free of charge,) must have been that on all the waggons so lent to them free of charge there would have been a loss to the Grand Junction Railway Company of the hire of the said waggons for 224 miles of each journey to London and back, which the Company are not subjected to in any other part of their merchandise business howsoever or by whomsoever conducted. That the said Pickford and Co. refused to pay to the said Grand Junction Railway Company anything for the hire and use by them of the said Company's waggons on and over the London and Birmingham Railway, or to pay for the goods beyond Birmingham, and the Company therefore had no alternative but to unload and deliver the goods at Birmingham pursuant to the consignment thereof by the said firm, and that they have accordingly continued to do so, and that is precisely and in all respects the course of dealing adopted by the said Company with the goods of all other customers consigned to Birmingham. That to the best of his knowledge and belief the Company was never distinctly applied to by the said firm of Pickford and Co. to say whether they would make an allowance for the goods if delivered at Camden-town instead of in London, but that he indeed remembers such a question casually asked by the said Joseph Hayward, to which he, this deponent, replied in a casual way, that he did not know what course the Directors would pursue in case such an application was made to them, but that he rather thought that if the Company carried the goods as far as Camden-town they would wish to complete the delivery, inasmuch as a main object of the Company in becoming carriers on the London and Birmingham line was to put an end to the exorbitant charge made by the other carriers for deliveries in London which had been a thing complained of by the consignors, and that therefore it was doubtful if the Grand Junction Company would contribute any assistence which might enable Pickford and Co. to continue such exorbitant charges for delivery of goods from Camden-town to different parts of London. That no further application or inquiry of the kind resulted from this casual conversation, nor was any communication in writing, or to the best of deponent's belief any communication at all save the casual question by the said Joseph Hayward hereinbefore mentioned ever made thereupon by Pickford and Co. to this deponent, or to the said Directors of the said Grand Junction Railway Company, or any of the officers of the said Company, nor was this deponent or any other officer of the said Company, as he believes, ever desired to make any proposal thereupon to the said Company or the Directors thereof, or to do any other act whereby the said Directors or this deponent could take the least notice officially of any wish or desire of the said firm of Pickford and Co. on the subject, and that this deponent believes that it is utterly untrue to assert that the said Grand Junction Railway Company have ever refused to make an allowance to the said firm in consideration of their receiving their goods from the said Company at Camden-town aforesaid. That there is no carrier whatever admitted on the Grand Junction line on any other terms than those which as aforesaid have been granted to the said firm of Pickford and Co., nor do the Grand Junction Railway Company furnish waggons beyond their own line, except solely for the business which they themselves conduct and charge for as carriers on the London and Birmingham line (such their charge, including a charge for the wear and tear of such waggons.) That the said Grand Junction Railway Company do not furnish waggons gratis to any Company or person or persons whomsoever over the London and Birmingham line. That they have agreed to pay to the London and Birmingham Company a mileage for the use of any of the London and Birmingham Company's waggons sent over the Grand Junction line, and that the London and Birmingham Company have in like manner agreed to allow them a similar mileage for the use of the Grand Junction waggons used by the London and Birmingham Company. That Chaplin and Horne are not carriers on the Grand Junction line or any part thereof, nor do they bring goods down to Birmingham for places on or beyond the Grand Junction line, otherwise than as agents of the Grand Junction Company as aforesaid, that the effect of conceding to the said firm of Pickford and Co. what they now seek would be to place them with reference to the said Company in a better position for the carrying on of the business common to both than the said Company as carriers themselves or than any other persons or parties whomsoever.

And this deponent further saith, that no such arrangement as is in that behalf stated by the said Joseph Baxendale in his said affidavit had been made or was subsisting between the said Grand Junction Railway Company and the said London and Birmingham Railway Company during the subsistence of the agreement between the said Grand Junction Railway Company and the said firm of Pickford and Co.

And this deponent further saith, that there is no identity or similarity of circumstances whatever between the two cases of the goods carried by the said Grand Junction Railway Company directly for their employers throughout from Lancashire to London, and the goods of the said firm of Pickford and Co. carried for them by the said Grand Junction Railway Company over the Grand Junction line only; and that as regards the goods of the said firm, they are required by the said firm to be and are in fact treated by the said Grand Junction Railway Company as Birmingham goods and not as London goods, and that as such the said firm are dealt with in all respects, and as well in regard to trucks and waggons as otherwise, as all other persons employing the said Grand Junction Railway Company in like manner or for the like services; and that in no case do the Grand Junction Railway Company provide waggons or trucks free of charge over the London and Birmingham line to any person or persons whomsoever whose goods are conveyed by the said Grand Junction Railway Company over the Grand Junction line, only but in all cases all the goods of all persons carried by the said Grand Junction Railway Company over their own railway only, but destined for any place beyond the terminus thereof, are unloaded at Birmingham and reloaded there, and forwarded thence by the consignee there at his own cost and charge in all respects, and in trucks, waggons, or other conveyances provided by such consignee.

And this deponent further saith, that it is not true, as represented by the said Joseph Baxendale in his said affidavit, that at or about the time therein mentioned, or at any other time, the said Grand Junction Railway Company entered into an agreement with Messrs. Chaplin and Horne for the carriage of goods by the said railways between London, Liverpool, and Manchester, and other parts in the north of England, for that the said Company have not entered into any agreement with Messrs. Chaplin and Horne for the carriage of goods by any railway or railways, but that the said Company did at or about the time mentioned in the said affidavit of the said Joseph Baxendale, and for the purpose stated in the advertisement, in that behalf set forth in the said affidavit of the said Joseph Baxendale, (that is to say) in order to insure to the London trade the same advantage of moderate and uniform charges for the carriage of merchandize as was then already afforded by the said Grand Junction line between Birmingham, Liverpool, and Manchester, make an arrangement in conjunction with Messrs. Chaplin and Horne, whereby the public would obtain (and whereby the public have in fact obtained) a considerable reduction in the rates of carriage, and would avoid (and have in fact avoided) uncertain or extra charges as theretofore made by the said firm of Pickford and Co. and other common carriers, under the name of cartage and porterage, on the delivery of the goods in London or the forwarding of the goods from thence, and that the fact is, that the said Messrs. Chaplin and Horne were and are merely the London agents of the said Company, and that as is the fact, and as in the said

Digitized by Google

advertizement is clearly set forth, the said Company are themselves the carriers and are responsible as such.

And this deponent further saith, that it is not true (as represented by the said Joseph Baxendale in his said affidavit) that "the said firm of Chaplin and Horne, as common carriers, collect and receive goods in London to be carried to Birmingham, Liverpool, and Manchester, and other places in the north of England, and that such goods are conveyed to Birmingham by the London and Birmingham Railway, and are there received and taken charge of by the said Grand Junction Railway Company, and conveyed by them to their place of destination," for that, as is before stated, the said firm of Chaplin and Horne do not, as common carriers, but only as agents of the said Grand Junction Railway Company, collect and receive any goods whatsoever destined for any place or places upon or beyond the Grand Junction Railway, or which the said Grand Junction Railway Company anywhere receive and take charge of, or have any connection with, for conveyance to any such place or places; and that the said Grand Junction Railway Company do not, otherwise than as principals of the said firm of Chaplin and Horne, receive or take charge of any goods, if any such there be, sent by Messrs. Chaplin and Horne to any place or places beyond or upon the said Grand Junction line, and do not carry or supply any power for Messrs. Chaplin and Horne along any portion of that line.

And this deponent further saith, that goods received and collected by the said Grand Junction Railway Company at Liverpool, Manchester, Birmingham, and other places, to be conveyed to London, are not consigned to the said firm of Chaplin and Horne as common carriers, as would seem to be the meaning of the said Joseph Baxendale in his affidavit, but are merely delivered at the said terminus of the said London and Birmingham Railway at Camden-town, to the said firm, as the agents of the said Grand Junction Railway Company, for the purpose of being delivered by the said firm as such agents to the respective consignees of the goods. That although it is true, as represented in the said affidavit of the said Joseph Baxendale, that in the conveyance of the goods collected and received by Chaplin and Horne, waggons or trucks are employed and pass indiscriminately along both the said railways; and although it is true that no charge has been made or is made upon the said firm of Chaplin and Horne, by either of the said Companies, for the use of such waggons or trucks, yet in fact the said firm of Chaplin and Horne have no concern with the said waggons or trucks, or the use of them, except as agents of the said Grand Junction Railway Company, and the employing and passing indiscriminately of such waggons and trucks along both the said railways has been provided for by virtue of an agreement between the said London and Birmingham and Grand Junction Railway Companies, affixing a payment by the one to the other of such Companies of a reasonable hire or reward therefor.

And this deponent further saith, that although it is true, as represented in the said affidavit, of the said Joseph Baxendale, that the total charge for the carriage of the goods consigned by the said Grand Junction Railway Company, to the said firm of Chaplin and Horne, as explained above by this deponent, is received by them, yet such receipt by them is only as the agents of the said Company to whom they regularly account for the same as agents to their principals; and that it is true that the said Company pay their said agents for receiving, forwarding, and delivering their goods, but that the sums paid to, and received by, the said firm are not paid to or received by them as principals, or as partners of the said Grand Junction Railway Company, but only as agents of that Company; and this deponent further saith that the rate of charge specified in the said advertisement in the said affidavit of the said Joseph Baxendale, set forth is compo-ed of the charges and expenses of agents, and otherwise attending the collecting, receiving, carrying, and delivering goods consigned to the said Company, or to their said agents for carriage, and of a reasonable amount of gain or profit in respect thereof, and that the total amount of such charge is very considerably less than what the said firm of Pickford and Co. had been in the habit of charging to the public before the said advertisement wss published, although they could have had no greater or other expenses to incur than as those so included in the said charge of the said Company. And this deponent further saith, that the arrangements whatever they were, which are alluded to in the said letter, of the said firm of Pickford and Co., of the 29th of September last, and set forth in the said affidavit of the said Joseph Baxendale, were arrangements made between the said firm and the Liverpool and Manchester Railway Company, and that the said Grand Junction Railway Company never at any time or in any manner had any interest whatsoever therein, or any thing whatsoever to do therewith, as must have been perfectly well known by the said Joseph Baxendale, before and at the time of his making his said affidavit for that, as this deponent believes, the said Joseph Baxendale himself made the arrangement whatever it was with the said Liverpool and Manchester Railway Company, he having been previously informed on behalf of the said Grand Junction Railway Company, that they had no power to make any such arrangements at all, or any arrangement whatever affecting the said Liverpool and Manchester Railway, or the statutes thereof, and that the said Grand Junction Railway Company had nothing more to do with the said Liverpool and Manchester Railway, or the stations thereof, than the said firm of Pickford and Co. And this deponent, John Rutter Chorley, further saith, and this deponent, Edward John Cleather, for himself maketh oath and saith, that it is not true as stated by the said Joseph Baxendale, and by the said Joseph Hayward, in their said affidavits that this deponent, the said John Rutter Chorley, upon the occasion of the interview in the said affidavit mentioned in that behalf (and this deponent, John Rutter Chorley further saith, that it is not true that he at any other time) stated what is on that behalf alleged in the said respective affidavits; and this deponent, the said Edward John Cleather, for himself saith, that it is not true that he on the occasion of the interview in the said affidavits mentioned in that behalf, or at any other time stated what is in that behalf alleged in the said respective affidavits, but this deponent the said Edward John Cleather, having no authority to give an answer in the matter, did as stated by the said Joseph Hayward, say to him something to the same effect, as is alleged by the said Joseph Hayward in his said affidavit—namely, that he would communicate with the Directors of the said Company on the subject of the said Joseph Hayward's inquiries, and this deponent, the said John Rutter Chorley further saith, that he believes, and this deponent the said Edward John Cleather saith that he also believes that the conversation which did take place between him the said John Rutter Chorley and the said Joseph Hayward, was to the following effect, and no other, namely—that as regarded goods of the said firm of Pickford and Co., whether consigned to Birmingham or to London, the said Grand Junction Railway Company would receive and carry such goods on the same terms as the goods of all other parties, and on no other terms, and that since they the said Company did not (as the fact was and is) allow any consignors of goods only to Birmingham to take on the said Grand Junction Railway Company's waggons on trucks beyond Birmingham, so neither would they without reasonable reward allow the said firm of Pickford and Co., if they consigned goods only to Birmingham to take on the said Grand Junction Railway Company's waggons or trucks, beyond Birmingham and —, since as the fact was, and is, the said Company's charge as respects goods consigned by other parties to London was a charge inclusive of a reasonable sum for the delivery of such goods and the necessary proceedings preliminary to such delivery, wheresoever such delivery should take place, the said Company would not agree to make one charge to the said firm of Pickford and Co., and another to the rest of the public, the object of the said Company being to secure uniformity of charg (including delivery) to the public, and to discourage and prevent the contrary practice of the said firm of Pickford and Co., and of the other original common carriers, but that the said Company would in this as in all other respects insist upon dealing with the goods of the said firm on precisely the same terms and in all respects as with the goods of the public generally, it being in the option of the said firm either to employ the said Grand Junction Railway Company on those terms or to employ the London and Birmingham Railway Company instead of the said Grand Junction Railway Company. And these deponents, John Rutter Chorley, and Edward John Cleather, further severally say that the said Company's charge for delivering goods in London, is a reasonable charge, and that if they abetted such charge wholly or practically in favour of the said firm of Pickford and Co., as required by them in respect of their goods it would be incurring a loss for the benefit of the said firm to the extent of such abatement, and that it is, and has for a long time been the usual and well known practice of common carriers to charge a sum which included the delivery as well as the carriage of goods.

And this deponent, the said John Rutter Chorley further saith, that it is not true as represented by the said Joseph Baxendale, in his said affidavit, that the object of the said Grand Junction Railway Company in requiring the trucks upon which the goods or the said firm of Pickford and Co., were loaded to be exchanged at Birmingham, was to prevent the said goods being forwarded in due course with the goods of the said Grand Junction Railway Company, and the said firm of Chaplin and Horne, so as thereby to induce the customers of the said firm of Pickford and Co., to withdraw their business from them, and to employ the said Grand Junction Railway Company, and the said Chaplin and Horne; and this deponent John Rutter Chorley further saith, that it is not true as represented by the said Joseph Baxendale, in his said affidavit that he and his copartner, the said firm of Pickford and Co., and the said firm of Chaplin and Horne, use the same portion of the said Grand Junction Railway, under the same circumstances, nor is it true that the said firm of Chaplin and Horne use or have any connection with the said Grand Junction Railway or any part thereof, at all or under any circumstances whatsoever, save as aforesaid.

And this deponent further saith, that he verily believes that the said Joseph Baxendale, before and at the time when he made his said affidavit, knew the facts last aforesaid, and knew that the said Chaplin and Horne were not in any way connected with the said Grand Junction Railway, or the said Grand Junction Railway Company, otherwise than as agents of the said Company as aforesaid, for that he this deponent on behalf of the said Company wrote and sent on the 9th day of October last past a letter to the said firm of Pickford and Co., wherein he expressly informed them of such fact in these words' namely, "I have also to acknowledge your letter of the 8th, addressed to myself, in reply to which it is only necessary to state, that you are quite in error in supposing that the Company now deliver goods to any carrier at Birmingham sending their waggons beyond that point, the only waggons now sent through, being loaded with the Company's goods for London, at which point Messrs. Chaplin and Horne are solely agents for the Company."

And this deponent, the said John Rutter Chorley, further saith, that on the seventh day of October last, he on behalf of the said Company wrote and sent a letter to the said firm of Pickford and Co., whereof the following is a copy—"Gentlemen, I have to acknowledge the receipt of your letter of the 5th, in which you decline making any payment to this Company for the use of their waggons when sent with your goods beyond this line, in cases when they are received by the Company for delivery at Birmingham only, and the charge paid only for the carriage to that point. Under these circumstances, the Directors before whom your letter has been laid cannot undertake to allow the waggons to go beyond the point at which their delivery ceases.

Digitized by Google

With respect to the previous arrangement for sending waggons throughout, your statement requires some correction, both as regards the London Company's charge, and as to the former exchange by this Company of waggons at Birmingham. It is expressly stated by the London Company that their charges to the carriers include the supply of waggons as well as toll and locomotive power, and the Grand Junction Company have in consequence applied for an allowance with respect to the goods consigned to Messrs. Chaplin and Horne on the ground of the waggons being supplied by them on the London line for this business. During the existence of the special agreement made with you the permission to send the waggons on without charge was granted on the condition of an equal number being brought of the London Company's in exchange for these at Birmingham, and although this was not practically the case it was overlooked by this Company from their unwillingness to be over strict, although the agreement would have authorised them to insist on a regular exchange. The circumstances under which the arrangement in question was made, however, no longer exist, and the practical effect of such concession as you now require would be that this Company would have to supply without charge at least two-thirds of the waggons used in the business of the London line which the Directors are not prepared to undertake and are satisfied they ought not to be expected to do without some compensation for the wear and tear of their stock.—I am, &c., J. R. CHORLEY."

And this deponent, the said John Rutter Chorley, further saith, that his said last mentioned letter was written and sent on behalf of the said Company in reply to the letter of the said firm of Pickford and Co. of the 5th day of October, 1840, set forth in the said affidavit of the said Joseph Baxendale, although the said Joseph Baxendale doth not in his said affidavit state the said reply either in terms or in substance.

And this deponent further saith, that it is not true as represented by the said Joseph Baxendale in his said affidavit, that ever since the 1st day of October last the said Grand Junction Railway Company have insisted that the goods of the said deponent, Joseph Baxendale, and his said partner (the said firm of Pickford and Co.) in their transit from Liverpool and Manchester to London, should be unloaded at Birmingham from the trucks of the said Grand Junction Railway Company, and reloaded upon the trucks of the said London and Birmingham Railway Company, save under the circumstances and to the extent, and solely for the purpose and in the manner hereinbefore set forth and not in order to carry into effect any such intention, or directly or indirectly to advance the charge against the said firm of Pickford and Co., or to reduce the same in favour of the said firm of Chaplin and Horne, as suggested by the said Joseph Baxendale in his affidavit, and that the reason why the said Grand Junction Railway Company have objected to allow waggons from London loaded with goods of the said Joseph Baxendale and his said partner (the said firm of Pickford & Co.) to proceed to Lancashire without being unloaded at Birmingham, was that the proceedings of the said firm rendered it necessary to examine the contents of such waggons, with a view to ascertain and fix the proper charges due in respect thereof, and the said firm having given to the said Company in some cases untrue, and in others insufficient and imperfect declarations of the quantity or quality of goods delivered by them to the said Company for carriage, and having offered goods which by the known and published list of rates, were subject to a high charge as goods which by the said list were only made subject to a lower charge.

And this deponent further saith, that although he believes it to be true (as represented by the said Joseph Baxendale in his said affidavit), that the London and Birmingham Railway Company are ready and willing to allow their trucks loaded with the goods of the said deponent and his said partners (the said firm of Pickford and Co.) to pass along the said Grand Junction Railway, and that the trucks of the said last mentioned Company should pass along the said London and Birmingham Railway. Yet he, this deponent, believes it not to be true, as the said Joseph Baxendale in his said affidavit leaves it be inferred, from the statement last mentioned, that the said London and Birmingham Railway Company, either do or did ever furnish, or are ready or willing to furnish, either to the said firm of Pickford and Co., or to the said Grand Junction Railway Company, or to any other Company or person or persons any trucks or waggons, either over their own railway, or over the Grand Junction Railway, except upon the terms and conditions that they the said London and Birmingham Railway Company shall be paid a reasonable charge for the use and hire of such waggons by the Company or person so using them, or except (what is tantamount thereto) upon the terms and conditions that such Company or person so using them (the said London and Birmingham Railway Company's), trucks or waggons over the said Grand Junction Railway, shall furnish (free of charge to the London and Birmingham Railway Company) a corresponding number of such trucks or waggons for use by them over the London and Birmingham Railway for the purposes of their own traffic.

And this deponent further saith, that it is not true, as represented by the said Joseph Baxendale in his said affidavit, that the charge made by the said Grand Junction Railway Company to the said firm of Chaplin and Horne, for the conveyance of their goods from Liverpool and Manchester to Camden town aforesaid, is less than the charge which the said Grand Junction Railway Company have intimated would be made to the said Joseph Baxendale and his said partner, for their goods as aforesaid, by the sum of 10s. per ton, for that the said Company do not carry, and have not carried, or been applied to carry any goods whatever to Camden Town aforesaid, for the said firm of Chaplin and Horne, nor save as aforesaid even for the said Joseph Baxendale and his said co-partner. And this deponent, the said John Rutter Chorley, further saith, that it is not true (as stated by the said Joseph Baxendale) that the said Grand Junction Railway Company pay or allow to the said Chaplin and Horne the sum of 10s. per ton, or any other sum, solely for the collection of such goods, and for the carriage of them, to the terminus at Camden Town, and for taking charge of such goods at Camden Town, and delivering them to their respective consignees, but that the remuneration made by the said Company to the said Chaplin and Horne as their agents as aforesaid, is in respect of divers other services as such agents, besides the services aforesaid. And in reference to the statements made by the said deponent, William Harnett, this deponent the said John Rutter Chorley, further saith, that Mr. Morris of the firm of Morris, Herbert, and Co., the employers of the said William Harnett, gave to this deponent as their reason for giving up the business of carriers along the Grand Junction Railway, so soon as the special agreement which had previously been made with them, was determined that the rates established by the said Grand Junction Railway Company becoming carriers on the London line were so low, that they had no longer any sufficient pecuniary inducement to continue the business over either line.

And each of these deponents, the said John Rutter Chorley, and Edward John Cleather for himself, saith, that he hath read over the affidavit of John Moss, Esquire, hereunto annexed, and that according to the best of his knowledge, information, and belief, the same is true, wholly, and in every part thereof.

And each of them, the said John Rutter Chorley and Edward John Cleather for himself, further saith, that according to the best of his belief, he must have known if it had been the fact, and that he doth not know or believe that since the passing of the said Act of the third year of the reign of her present Majesty, any contract or agreement or arrangement whatsoever hath been made or entered into by the said Grand Junction Railway Company with the said Messrs. Chaplin and Horne, or with any company or companies, person or persons whomsoever, whereby or with the object that the said Grand Junction Railway Company charged, or received or agreed to charge, or receive or might charge or receive, or attempt to charge or receive, nor does he know or believe that the said Company have since the period aforesaid, charged or agreed, or attempted or intended to charge or receive, or agreed to receive, or that they intend to charge or receive, or to agree to charge or receive, otherwise than equally at all times the charges authorised to be made by them for the carriage of any passengers, goods, animals, or other matters or things conveyed by the said Company, or for the use of any steam power or carriage supplied by the said Company, or otherwise than after the same rate per mile, or per ton per mile in respect of all passengers, and of all goods, animals, or carriages of a like description conveyed or propelled by a like engine or carriage passing on the same portion of the line of the said railway, only and under the same circumstances, and that according to the best of his belief, he must have known if it had been the fact, and that he doth not know or believe that since the passing of the said last mentioned Act of Parliament, any contract or agreement or arrangement whatsoever hath been made or entered into by the said Grand Junction Railway Company with the said Messrs. Chaplin and Horne, or with any company or companies person, or persons whomsoever, whereby the said Company have directly or indirectly advanced or reduced, or agreed to advance or reduce, nor that the said Company have since the period aforesaid directly or indirectly advanced or reduced or agreed to advance or reduce, or that they intend directly or indirectly to advance or reduce the same charges or any of them, or the charges for conveyance by the said Company, or for the use of locomotive or steam power to be supplied by them in favour of or against any particular Company or person travelling upon or using the same portion of the said railway under the same circumstances as aforesaid. And each of these deponents, the said John Rutter Chorley and Edward John Cleather for himself, saith, that to the best of his belief he must have known if it had been the fact, and that he doth not know or believe that the said Grand Junction Railway Company, or the Directors thereof, ever or at any time or upon any occasion to the said firm of Pickford and Co., or to any company or companies, person or persons, whomsoever, and that neither of these deponents ever on behalf of the said Company or otherwise refused or declined or expressed any disinclination, or that in fact they ever were or are disinclined to comply with or abide by and obey the provisions of the said last-mentioned Act of Parliament, or any of them in any manner howsoever, or acted from the motives and with the objects imputed to them in the affidavits filed in support of this motion.

JOHN R. CHORLEY.
E. J. CLEATHER.

The said deponents, John Rutter Chorley and Edward John Cleather, were severally sworn at Liverpool, aforesaid, this 9th day of January, 1841, before me,

WM. WOOD, a Commissioner.

Hardman Earle, of Liverpool, in the county of Lancaster, broker, maketh oath and saith, that he was one of the 15 Directors of the Grand Junction Railway Company for some time prior and up to the 10th day of August last, when he went out of office by rotation, pursuant to the Act of Parliament incorporating the said Company. And that from the first to the last discussion amongst the Directors thereof as to the expediency of affording facilities, encouragements, and privileges to Messrs. Pickford and Co., and the other original common carriers, to induce them to use the said railway, this deponent was decidedly opposed thereto, from the belief that such facilities, encouragements, and privileges would be abused, and that by means of them the said common carriers would be enabled to prevent that free and full competition between the railways and canals which would greatly promote

Digitized by Google

the interest of the public, and benefit, as this deponent considered, the Railway Companies.

And this deponent further saith, that in point of fact the result which he thus apprehended soon followed, and has continued to follow, the adoption of the course which he, as a Director of the said railway, endeavoured to prevent the adoption of.

And this deponent further saith, that although he has no recollection of the fact stated (upon the alleged information of another person) by John Rubens Bulmer, in his affidavit in support of the motion for the rule granted in this case, and sworn on the 16th day of November last past, and has no recollection of having ever spoken to or been in the presence of William Watts therein mentioned, yet he this deponent has expressed it as his opinion to various parties (and it certainly always was and still is his opinion) that in all cases where, as in the case of the Grand Junction Railway Company, the Railway Company were themselves carriers, they would (by reason of their deep interest in the railway itself, independently of and besides their interest in respect of their investments in carrying establishments of engines and waggons, and otherwise in connection with it) have at all times and under all circumstances every inducement to serve the public as cheaply and as well as possible, in order to attract the goods from the canals, and that it would therefore be unnecessary for the interests of the public, and would be disadvantageous to them as well as to the Railway Companies, to have the business on the railway divided between the Railway Company and several small parties, each of whom must have a profit and must incur certain fixed charges, and that the aggregate amount of profits and charges respectively so paid by the public would very greatly exceed the amount of profit and charge which the Railway Company could and would have every reason to afford to be satisfied with if they had the whole of the business concentrated in their own hands. But this deponent further saith, that it is not true (as represented by the said John Rubens Bulmer in his said affidavit) that he this deponent at any time, publicly or otherwise, stated in the presence of the Chairman of the said Company, or elsewhere, that the object of the said Company was to drive all carriers from the railway, such never having been, to the knowledge and belief of this deponent, the object of the said Company, or of a majority of the Directors thereof.

And this deponent further saith, that he hath been credibly informed and verily believes that William Watts, mentioned in the said affidavit of the said John Rubens Bulmer as the party upon whose information the said John Rubens Bulmer made the statement aforesaid regarding this deponent, is now alive, and well and able to make an affidavit, and was so on and before the 16th day of November last.

HARDMAN EARLE.

Sworn at Liverpool aforesaid, this 9th day of January, 1841, before me,

WM. MYERS, jun., a Commissioner, &c.

Affidavits on behalf of Messrs. Pickford and Co.

Joseph Baxendale, of the City Basin, City Road, Middlesex, common carrier, one of the prosecutors, saith, that deponent hath for many years past, and doth now carry on the business of a common carrier, in co-partnership with the prosecutor Thos. Pickford, under the firm of Pickford and Co., and that the principal part of the business of deponent and his said co-partner, is the carrying and delivering of goods to and from London, Birmingham, Manchester, Liverpool, and other places in the north of England, that such business is of a very extensive nature, and that deponent and said Thomas Pickford have a very large capital employed in it.

Saith, that by a certain Act made and passed in the 3rd year of the reign of his late Majesty, it was amongst other things enacted, that certain persons, bodies politic and corporate, in the said Act mentioned or referred to, should be united into a Company, for making and maintaining a railway from the Warrington and Newton Railway at Warrington, in the county of Lancaster, to Birmingham in the county of Warwick, and other works by that Act authorised, and for other the purposes therein declared, according to the provisions and restrictions thereinafter mentioned, and for that purpose should be one body corporate, by the name and style of "The Grand Junction Railway Company." And by the said Act it was also enacted, that it should be lawful for the said Company to demand, receive, and recover, for the use of the said Company, for the tonnage of all articles, matters, and things which should be carried or conveyed upon or along the said railway, any rates or tolls not exceeding the rates and tolls in the said Act mentioned. And that all persons should have free liberty to pass along and upon, and to use the said railway, with carriages properly constructed as by that Act directed, upon payment of such rates or tolls as should be demanded by the Company, not exceeding the respective rates or tolls by that Act authorised, and subject to the provision of that Act, and to the rules and regulations which should from time to time be made by the said Company or the Directors thereof, and by virtue of the powers to them thereby respectively given. And by the said Act the said Company were authorised, if they should think proper, to use and employ locomotive engines or other moving powers, and in carriages or waggons propelled thereby, to carry upon the said railway all such goods, matters, and things, as should be offered to them for that purpose, and to make such reasonable charges for such carriage and conveyance as they might from time to time determine upon, in addition to the several tonnages and tolls thereinbefore authorised to be received. And by the said Act the said Company were authorised to provide locomotive engines or other power, for the drawing or propelling of any articles, matters, or things, upon the said railway, and to demand such sums for the use of such engines or other power, as the said Company should think proper, in addition to the several other rates, tolls, or sums by that Act authorised to be taken. And it was further enacted by the said Act, that the aforesaid tonnage rates and tolls to be taken by virtue of that Act should at all times be charged equally and after the same rate in respect of the same description of articles, and that no reduction or advance in the said tonnage rates or tolls, should either directly or indirectly be made partially or in favour of or against particular person or persons, company or companies.

Saith, that by a certain other act made and passed in the 4th year of the reign of his late Majesty entitled, an Act to enable the Grand Junction Railway Company to alter and extend the line of such railway, and to make a branch therefrom to Wolverhamton, in the county of Stafford, and for other purposes relating thereunto. It was among other things enacted, that it should be lawful for the said Company to use and employ locomotive and other engines, or other moving power, and on carriages or waggons drawn or propelled thereby to carry as well upon the said railway as upon and along any other railway or railways, all such goods, matters, and things as should be offered to them for that purpose, and to make such reasonable charges for such carriages or conveyance as they might determine on, and by the said last mentioned Act after reciting that it would tend much to the convenience of the public if railway Companies were empowered to enter into mutual arrangements so as to avoid the necessity of a change of carriages and other delays arising from a diversity of interest, it was enacted that it should be lawful for the said Grand Junction Railway Company, and they were thereby empowered from time to time to enter into any agreement with any other railway Company, and which agreement all other railway Companies were thereby authorised to enter into, either for the division or apportionment of toll, rates, and duties, or for the passage over or along the said Grand Junction Railway, of any engines, coaches, waggons, or other carriages of or belonging to any other railway Company, or which should pass over or along any other line of railway, or for the passage over or along any other line of railway, of any engines, coaches, waggons, or other carriages which should belong to said Grand Junction Railway Company, or which should pass over or along their line of railway, upon payment of such tolls, rates, and duties, and under such conditions and restrictions as might be deemed advisable and be mutually agreed upon; and also to make and enter into any other contract with any other railway Company that might be deemed advisable. Provided always that no such contract should in any manner alter, affect, increase, or diminish any of the rates, tolls, or duties which the respective Companies, parties to such contracts, should for the time being be respectively authorised to have, demand, recover, and receive of or from any person or any other Company, but that all other persons and companies should, notwithstanding any such contract, be entitled to the use and benefit of any of the said railways upon the same terms and conditions, and on payment of the same tolls, rates, and duties as they would have been in case no such contract had been entered into.

That by a certain other Act made and passed in the 5th year of the reign of his late Majesty, a certain railway called the "Warrington and Newton Railway," was incorporated with the said Grand Junction Railway, whereby the line of said last mentioned railway was extended from Warrington to and joined a certain other railway communicating between Liverpool and Manchester, and called the Liverpool and Manchester Railway at Newton, in the county of Lancaster.

That by a certain other Act made and passed in the 3rd year of the reign of her present Majesty, entitled "An Act for incorporating the Chester and Crewe Railway with the Grand Junction Railway, and for extending to the said first mentioned railway the provisions of the several Acts of Parliament relating to the said last mentioned railway, and for other purposes," after reciting among other things the several Acts before mentioned or referred to; it was enacted, that the charges of the said recited Acts or either of them authorised to be made for the carriage of any passengers, goods, animals, or other matters or things to be conveyed by the said Company, or for the use of any steam power or carriage to be supplied by the said Company should be at all times charged equally, and after the same rate per mile, or per ton per mile in respect of all passengers, and of all goods, animals, or carriages of a like description conveyed or propelled by a like carriage or engine passing on the same portion of the line only, and under the same circumstances, and that no reduction or advance in any charge for conveyance to the said Company, or for the use of any locomotive power to be supplied by them, shall be made either directly or indirectly in favour of or against any particular Company or person travelling upon or using the same portion of the said railway under the same circumstances as aforesaid.

Saith, that by a certain Act made and passed in the 3rd year of the reign of his late Majesty, certain persons in the said Act mentioned were incorporated by the name and style of "The London and Birmingham Railway Company," for the purpose of making a railway from London to Birmingham.

Saith, that the said Grand Junction Railway Company under and by virtue of the powers and authorities conferred by said Acts, or some or one of them have for some time past, and do now carry on the business of common carriers to and from London, Birmingham, Liverpool, and Manchester, and other places, and do use and employ locomotive engines, and on carriages or waggons propelled thereby, carry upon the said railway, and upon divers other railways, all such goods, matters, or things, as are offered to them for that purpose, that is to say, the said Company can b[illegible] aforesaid carry goods between [illegible] mingham aforesaid by a[illegible] London and Birmingham aforesaid [illegible] said Grand Junction

Digitized by Google

aforesaid, and Liverpool and Manchester aforesaid, by a certain other railway called the Liverpool and Manchester Railway.

Saith, that a certain agreement was entered into between them and the London and Birmingham Railway Company to avoid the necessity of a change of carriages at Birmingham aforesaid, one of the termini of both the said railways, and that by virtue of such agreement the waggons and other carriages of the said Grand Junction Railway Company have liberty to pass over and along the said London and Birmingham Railway, and the waggons and other carriages of said London and Birmingham Railway have liberty to pass over and along the said Grand Junction Railway, and that the said Grand Junction Railway Company for each of their waggons or trucks passing over the said railway of the London and Birmingham Railway Company receive from the said last mentioned Company the sum of 3s. 6d., and for each of the waggons or trucks of the said London and Birmingham Railway Company the passing over the railway of the said Grand Junction Railway Company the said London and Birmingham Railway Company receive from the said Grand Junction Railway Company the sum of 3s.

Saith, he has been informed, and which information he believes to be true, that said agreement is now subsisting between said Companies.

Saith, that said London and Birmingham Railway Company are not common carriers, but under and by virtue of the provisions contained in the said Act of 3rd William IV. provide locomotive engines and carriages to all persons who are desirous of using the said London and Birmingham Railway, and the London terminus of the said last mentioned railway for goods is at Camden Town in the county of Middlesex.

Saith, that the provisions contained in said Act of the third year of the reign of his late Majesty, that all persons should have free liberty to pass along and upon the said Grand Junction Railway with carriages is altogether ineffectual, there being no available means of supplying the locomotive engines of any persons desirous of so using the said railway with fuel and water, such means being in the exclusive possession and under the sole control of the said Grand Junction Railway Company, who, if they choose to withhold the same, can prevent the locomotive engines of any other person or Company from passing along the said railway.

Saith, that in the month of December, 1838, this deponent and his said co-partner entered into a certain agreement with said Grand Junction Railway Company, for the carriage of goods collected and received by this deponent and his said co-partner in their said business of common carriers from Manchester and Liverpool as aforesaid to Birmingham aforesaid, and from the latter place to Liverpool and Manchester aforesaid, and that such agreement was determined by the said Company as and from the 30th day of September now last.

Saith, that agreements of a like nature were entered into by said Railway Company with other persons carrying on the business of common carriers,

Saith, that during the continuance of said agreement between deponent and his said co-partner and said Grand Junction Railway Company, the waggons and trucks of said Grand Junction Railway Company, upon which the goods of deponent and his said co-partner were loaded at Manchester and Liverpool to be carried to London, passed from the [illegible] Railway to and along the London [illegible] Railway to their destination; and [illegible] trucks or waggons of said London [illegible] Railway Company, upon which [illegible] of deponent and his said co-partner were [illegible] to be carried to Liverpool and [illegible] from said London and Birmingham [illegible] along said Grand Junction [illegible] without interruption, [illegible] made to deponent [illegible] use of such trucks [illegible], and that goods of other carriers were conveyed in like manner and without any charge for the use of such trucks being made to them by either of said Companies.

Saith, that said arrangement between said Companies, by which a change of carriages at Birmingham was avoided, is of very great convenience and advantage to the public, as well in preventing delay as damage to the goods.

Saith, that at or about the time the said Grand Junction Railway Company determined said agreement between them and this deponent and his said co-partner, said Grand Junction Railway Company entered into an agreement with certain persons carrying on business as coach proprietors, under the firm of Chaplin and Horne, for the carriage of goods by the said railway between London and Liverpool and Manchester, and other parts in the north of England, and that the fact of such an arrangement having been entered into has been made public by said Grand Junction Railway Company, as deponent believes, by an advertisement in the newspapers in the words and figures following :—

"*Grand Junction Railway Company.—Carriage of Goods to and from London.*

"The Grand Junction Railway Company inform the public, that in order to insure the London trade the same advantage of moderate and uniform charges for the carriage of merchandize as is now afforded by the Grand Junction line between Birmingham and Liverpool and Manchester, they have, in conjunction with Messrs. Chaplin and Horne of London, made an arrangement whereby the public who may be disposed to avail themselves of the conveyance will obtain a considerable reduction in the rate, and avoid all uncertain or extra charges under the head cartage and porterage on the delivery of the goods in London, or the forwarding of goods from thence.

"The rates fixed will include all charges of delivery to the receiver of the goods in London, if resident within the limits of the London Porterage Act, as also the cartage and porterage in London on all goods forwarded, with the exception of the booking, when required, of goods forwarded from London.

"The scale of rates will be as follows, including delivery, &c. in London :—

	Per ton.
"For iron and other metals, castings, raw sugar, tallow, lead and other coarse goods	61s. 8d.
For packs drapery, trusses, hardware packed, butter, general groceries, provisions, oils, &c.	64 8
For glass in crates, indigo loose, hides, spirits, wines, &c., tea, manufactured tobacco, woollens, yarns, &c.	69 8
For plate and Crown glass in cases, luggage, poultry (dead), raw and manufactured silk, wool in packs, &c.	79 8

"Light and hazardous articles, such as hats, furniture, pictures, light glass, shades, &c., and single articles weighing less than 1 cwt. will be charged at proportionably higher rates.

"Further particulars may be learnt on application to the Company's agent at Wapping station, Liverpool, or at the Merchandise station Liverpool-road, Manchester, or at Vauxhall, Birmingham, as also at the following offices and receiving houses of Messrs. Chaplin and Horne, in London.

"Swan with Two Necks .... Lad-lane.
Spread Eagle ..... Gracechurch-street.
Cross Keys ..... Wood-street.
George and Blue Boar .... Holborn.
Golden Cross ..... Charing-cross.
Universal Office ..... Regent-circus, Piccadilly.
Griffin's Green Man & Still, Oxford-street.

"In order to prevent misconception, it is proper to state that the Company undertake, with respect to all goods forwarded by them as carriers, all the responsibility customarily undertaken by other carriers, and that all communications on the subject of the merchandise business will be promptly attended to by the agents at the offices above mentioned.

"The business on the terms now advertised will commence on the 8th of June instant, on and after which time the goods will be forwarded at the rates in question, from Liverpool, Manchester, and London, as also at proportionably lower rates from the Company's merchandise stations at Warrington, Stafford, and Wolverhampton to London, or from London to the said stations.

"By order of the Directors.

"Liverpool, May 30th, 1840."

Saith, that said firm of Chaplin and Horne have with the privity and concurrence of the said Grand Junction Railway Company, as deponent verily believes inserted in the newspapers the following advertisement of the fact :—

"Goods per Railway.—Messrs. Chaplin and Horne, finding that their business of coach proprietors in which they have been so long engaged is declining, in consequence of the opening of railways, and feeling highly gratified for the support and patronage which they have for so many years received, are induced still to devote themselves to the promotion of the public accommodation, and have directed their attention to the establishing of an improved system of carriage for goods and merchandise of all descriptions, to every part of the kingdom.

"This system they have at length matured by making the necessary arrangements with influential Railway Companies, and are enabled to offer to the public all the advantages of expedition and economy which this new mode of conveyance alone possesses.

"With confidence in the great improvements which they contemplate in the conveyance of goods, to venture to found their claim for support on the following grounds.

"The charge for carriage will include every item —delivery, porterage, cartage, &c. &c., except two pence for booking outward parcels.

"There will be an uniform and fixed rate of charge for each particular class of goods, from which no deviation whatever will be made, this being general, all persons will participate in the economy which it will combine.

"Messrs. Chaplin and Horne also beg to state, that they are not in any way connected with canals, nor with any other of the former modes of tardy conveyance, and that full reliance may therefore be placed on all goods entrusted to their charge being forwarded by railway only.

"OFFICES.

"*City.*	"*West End.*
"Swan with Two Necks, Lad Lane.	"George & Blue Boar, Holborn.
"Spread Eagle, Gracechurch Street.	"Golden Cross, Charing Cross
"Cross Keys, Wood Street.	"Universal Office, Regent Circus.
	"Griffith's Green Man and Still, Oxford-street."

Saith, that said firm of Chaplin and Horne, as common carriers collect and receive goods in London to be carried to Birmingham, Liverpool, and Manchester, and other places in the North of England, and that such goods are conveyed to Birmingham by said London and Birmingham Railway, and are there entered and taken charge of by said Grand Junction Railway Company, and conveyed by them to their place of destination.

Saith, that said Grand Junction Railway Company as common carriers receive and collect goods, at Liverpool, Manchester, Birmingham, and other places to be conveyed to London, and that such goods are consigned to said firm of Chaplin and Horne, and are received and taken charge of by them at said terminus of the London and Birmingham Railway Company, at Camden Town aforesaid, and are delivered by said firm of Chaplin and Horne, to the respective consignees.

Saith, that in the conveyance of said goods so forwarded, and received by said firm of Chaplin and Horne, the waggons and trucks of said Grand Junction Railway Company are employed and pass indiscriminately along both said railways in the same manner as the trucks conveying the goods of deponent and his said copartner, and other carriers were used to pass during the existence of the agreements between them and said Grand Junction Railway Company, and that not charge has been made, or is made, upon said firm of Chaplin and Horne (as deponent has been informed, and verily believes) for the use of such waggons or trucks.

Saith, that he has been informed, and believes

Digitized by Google

the tolls and other charges payable to said London and Birmingham Railway for the use of said railway and the supply of locomotive engines in respect of the goods forwarded by, and consigned to, said firm of Chaplin and Horne, are paid by said firm of Chaplin and Horne, and that the total charge for the carriage of said goods forwarded by said firm of Chaplin and Horne, is received by said Grand Junction Railway Company, and the total charge for the carriage of said goods so consigned by said Grand Junction Railway Company to said firm of Chaplin and Horne as aforesaid, is received by said firm of Chaplin and Horne.

Saith, that he is not informed of the precise nature of the agreement between said Grand Junction Railway Company and said firm of Chaplin and Horne, but deponent is informed and believes out of the charge made for the carriage of the goods so forwarded by said firm of Chaplin and Horne; said firm of Chaplin and Horne receive the sum of 10s. per ton for the collection of such goods, and for carriage of them to said terminus at Camden-town, and that upon said goods so consigned to said firm of Chaplin and Horne said firm of Chaplin and Horne receive a like sum per ton for taking charge of such goods at Camden-town, and delivering them to their respective consignees.

Saith, that the rates of charge specified in said advertisement, published by said Grand Junction Railway Company, for the carriage and delivery of goods, are composed of the sum per ton so paid to said firm of Chaplin and Horne, the sum per ton paid to other Railway Companies, and of the charge made by said Grand Junction Railway.

Saith, that on the day before the day on which the agreement between deponent and his said co-partner and said Grand Junction Railway Company, terminated according to the notice given by said Company as aforesaid, this deponent gave directions to Joseph Hayward, a clerk in the employ of this deponent and his said co-partner, to proceed to the office of said Grand Junction Railway Company at Liverpool, and to inquire whether the trucks or waggons belonging to said Grand Junction Railway Company, on which the goods belonging to deponent and said co-partner should be loaded at Liverpool and Manchester, would by the said Grand Junction Railway Company be permitted to proceed to Camden-town without the necessity of a change of carriages at Birmingham, and in case he should understand from said Company that such trucks so loaded at Liverpool and Manchester as aforesaid, would not by the said Company be permitted to proceed to Camden-town without the necessity of such change of carriages aforesaid, in same manner and on the same terms as theretofore such trucks so loaded were used to be permitted by said Company during the continuance of said agreement so determined on 30th day of September as aforesaid, then to inquire what charge said Grand Junction Railway Company would make to this deponent and said co-partner, for the carriage of their goods by said Company as common carriers from Liverpool and Manchester direct to the terminus of said London and Birmingham Railway at Camden Town, instead of the terminus of said Grand Junction Railway Company at Birmingham; and deponent gave to said Joseph Hayward a letter, and directed said Joseph Hayward, in case he should be unable to conclude any satisfactory arrangement with said Company, to deliver same to said Company.

Saith, that he hath been informed by said Joseph Hayward and verily believes said Company refused to permit said trucks to proceed to Camden Town in manner and on the terms aforesaid, and said Joseph Hayward was unable to conclude any such satisfactory arrangement as aforesaid, but that, on the contrary, said Company insisted on combining with the charge to be made upon this deponent and said co-partner for carriage of their goods along said railway the remuneration reserved by said Company for cartage, porterage, collection and distribution of same, which remuneration said Joseph Hayward, on part of deponent and said copartner, contended should be kept distinct and separate. And this deponent and said copartner should be at liberty to require and pay for the aid of said Company in that behalf or otherwise at their own discretion and convenience.

Saith, that the letter which he so directed said Joseph Hayward to deliver to said Company was in the words and figures following, that is to say—

D 10, 814. "London, Sept. 29, 1840.

"Gentlemen,—We beg to acquaint you that we shall forward our goods from Manchester and Liverpool to Birmingham through you as usual, and we have to request you will deliver them to our warehouse at the London and Birmingham Railway station at Birmingham.

"We should also continue to forward our goods from Birmingham to Manchester and Liverpool by you as heretofore. We also beg to apprise you that we shall send our own carts for the removal of our goods upon their arrival at Manchester and Liverpool. Of course the charge which we have heretofore paid for loading and unloading to the Liverpool and Manchester Railway Company under the arrangement heretofore existing between us, and which you have determined we shall no longer pay.

"We are, gentlemen, your obedient servants,

(Signed) "PICKFORD AND Co.

"To the Grand Junction Railway Company, Liverpool."

Saith, that he hath been informed by the said Joseph Hayward, which information he believes to be true, that said Joseph Hayward did make of Captain E. J. Cleather, the manager of the said Railway Company, the enquiries he was so instructed to make as aforesaid, and did deliver said letter to said Captain E. J. Cleather; and that after said E. J. Cleather had consulted the Directors of said Company, said Joseph Hayward was again informed by J. R. Chorley, the Secretary of said Company, in the presence of said E. J. Cleather, that the charge for the carriage of the goods of deponent and his copartner from Liverpool and Manchester to Camden Town would be precisely the same whether the goods were received by deponent and his said copartner at Camden Town, or whether said Grand Junction Railway Company delivered them to the several consignees thereof. And further, that said Grand Junction Railway Company being carriers themselves would not allow their trucks loaded with the goods of deponent and his said co-partners to pass along the Birmingham and London Railway, nor the trucks of the latter Company, upon which his and said copartner's goods were loaded, to pass upon said Grand Junction Railway, but that said Grand Junction Railway Company should require deponent and his said copartner to unload at Birmingham all their goods from the trucks of the one Company and reload them upon the trucks of the other.

Saith, that he verily believes and has no doubt that the object of said Grand Junction Railway Company in requiring the trucks upon which deponent and his said partner's goods were landed to be exchanged at Birmingham was to prevent said goods being forwarded in due course with the goods of said Grand Junction Railway Company and said firm of Chaplin and Horne, and thereby to induce the customers of deponent and his said copartner to withdraw their business from them and to employ said Grand Junction Railway Company and said firm of Chaplin and Horne.

Saith, that in order to carry into effect said intention, and directly or indirectly to advance the charge for conveyance by the said Company, against deponent and his said copartners, and directly or indirectly to reduce the same in favor of the said firm of Chaplin and Horne, although deponent and his said copartner, and said firm of Chaplin and Horn, use the same portion of said Grand Junction Railway, under the same circumstances that said Grand Junction Railway Company have ever since the 1st day of October last, insisted upon all goods of deponent and his said partner, in their transit from London to Liverpool and Manchester, being unloaded at Birmingham from the trucks of the said London and Birmingham Railway Company, and reloaded upon the trucks of said Grand Junction Railway Company; and in like manner the goods of deponent and his said partner in their transit from Liverpool and Manchester to London, being unloaded at Birmingham from the trucks of the said Grand Junction Railway Company, and reloaded upon the trucks of the said London and Birmingham Railway Company.

Saith, that said agreement between said London and Birmingham Railway Company, and the said Grand Junction Railway is, as deponent has been informed and verily believes, still in force; and that said London and Birmingham Railway Company are ready and willing to allow their trucks, upon which deponent and his said partner's goods are loaded, to pass along said Grand Junction Railway, and that the trucks of said last mentioned Railway Company should pass along said London and Birmingham Railway.

Saith, that the goods of said firm of Chaplin and Horne are, in the ordinary course of business, loaded upon trucks as the goods of deponent and his said partner are, but that the goods of said firm of Chaplin and Horne are allowed by said Grand Junction Railway to pass from one Railway to the other, upon the same trucks upon which they were originally loaded.

Saith, that in order to ensure the due despatch of the goods of deponent and his said partner from Birmingham, deponent and his said partner have been obliged, at very considerable expense and inconvenience, to employ an additional number of servants to effect the unloading and reloading of their said goods at Birmingham.

Saith, that on 4th Oct. last, they received from said J. R. Chorley a letter in the words and figures following, that is to say—

"Grand Junction Railway, Liverpool, Oct. 3, 1840.

"Gentlemen,—An inquiry having been made here by some parties deputed by you, respecting the transmission of goods, in the same waggons, beyond Birmingham, when ordered for delivery by this Company, at that point. I have taken the instructions of the Directors on the subject I am now enabled to say, that the goods which you send by this Railway, consigned to your agent at Birmingham, will be delivered by the Company according to the consignment. Or if you wish to take forward the waggons in which they have arrived from Liverpool and Manchester; this may be done, provided you will pay the Company a charge for the use of the waggons carried beyond their line, which charge the Directors have fixed at 2*s*. 6*d*. per waggon per day, your being responsible for any breakage which may take place while the waggon is in your charge, and paying the hire, monthly, at Birmingham, where the account of the waggons sent will be kept.

"If you are desirous of acting on this proposal, I will thank you to let me know it in order that the needful orders may be issued.

"I am, Gentlemen, your obedient servant,

(Signed) "J. R. CHORLEY."

"To Messrs. Pickford and Co."

Saith that he and his said partner declined the offer of the said Grand Junction Railway Company, in the first place because the charge of 2s. 6d. per waggon and the repairs of waggons would amount to considerably more than the expense incurred by deponent and his said partner in the employment of additional servants, and especially because deponent and his said partner had been informed and believed that no such charge was made to the firm of Chaplin and Horne.

Saith, that in reply to the said letter of the said J. R. Chorley, he wrote and sent a letter in the words and figures following:—

"London, October 5th, 1840.

"Sir,—In reply to your letter of the 3rd instant, we beg to acquaint you we decline the use of your trucks upon the terms you mention, for the following reasons:—

"No charge is made by the London and Birmingham for the use of their trucks, and up to the present time the trucks of both Companies have been used for the whole journey, both up and down, without charge, and if we are not misinformed, goods consigned to Messrs. Chaplin and Horne are now as heretofore conveyed throughout the whole

Digitized by Google

line by your trucks, and the London and Birmingham indiscriminately, and without any charge being made for the use of them, and we conceive we are entitled to be placed upon the same footing as other parties.

"We are, Sir, your obedient servants,
(Signed) "PICKFORD AND Co."

"J. R. Chorley, Esq.,
"Grand Junction Railway, Liverpool."

Saith, that though the said J. R. Chorley did acknowledge the receipt of said letter, yet that neither the said Grand Junction Railway Company nor the said J. R. Chorley have ever contradicted the assertion that the said Grand Junction Railway Company do not make any charge whatever to the said firm of Chaplin and Horne for the use of the waggons or trucks upon which their goods are loaded as aforesaid.

Saith, that the charge made by the said Grand Junction Railway Company to the said firm of Chaplin and Horne for the conveyance of their goods from Liverpool and Manchester to Camden Town aforesaid, in less than the charge which the said Grand Junction Railway Company have intimated would be made to deponent and his said partner for their goods as aforesaid by the sum of 10s. per ton, which deponent has been informed and believes is received by the said firm of Chaplin and Horne for the delivery of their said goods from Camden Town aforesaid to the respective consignees thereof.

Saith, that the expense of delivering goods from Camden Town to parties resident in different parts of London averages from 6s. to 10s. per ton.

Believes, and has no doubt that the object of the said Grand Junction Railway Company in excluding deponent and his said co-partner from certain benefits or advantages that are by them afforded to the said firm of Chaplin and Horne, or by charging to deponent and his said co-partner a sum of money for a participation in such benefits or advantages beyond what the said firm of Chaplin and Horne pay for the same is directly or indirectly to advance the charge for conveyance by the said Grand Junction Railway Company against deponent and his said co-partner and directly or indirectly to reduce the same in favour of the said firm of Chaplin and Horne, although deponent and the said firm of Chaplin and Horne, although deponent and the said firm of Chaplin and Horne, use the same portion of the said railway under the same circumstances, and to prejudice deponent and his said co-partner in their said business, and to prevent a fair competition between deponent and his said co-partner and the persons using the said Grand Junction Railway for the carriage of goods (whether the said Company themselves or the said firm of Chaplin and Horne, or other persons), and to compel deponent and his said co-partner to give up their said trade or business, or to carry it on upon terms that will not remunerate them.

Saith, that he and his said co-partner are now the only remaining partnership or person (with the exception of the said Grand Junction Railway Company so carrying in conjunction with the said firm of Chaplin and Horne as aforesaid) using the said Grand Junction Railway as common carriers.

Joseph Hayward, of the City Basin, City Road, clerk to Thomas Pickford and Joseph Baxendale, affirms, that on the 30th day of September last, affirmant by the directions of the said Joseph Baxendale, proceeded to the office of the Grand Junction Railway Company at Liverpool, and inquired of Captain E. J. Cleather, the manager of the said Company, whether after that day the trucks or waggons of the said Grand Junction Railway Company, on which the goods of the said Thomas Pickford and Joseph Baxendale were loaded at Liverpool and Manchester to be conveyed to London would be allowed by the said Grand Junction Railway to pass from the Grand Junction Railway to the London and Birmingham Railway and proceed to Camden town without a change of trucks or waggons at Birmingham.

That he was informed by the said E. J. Cleather that the said Railway Company would not allow the trucks upon which the goods of the said Thomas Pickford and Joseph Baxendale were loaded to proceed direct to Camden Town without being changed at Birmingham, and thereupon this affirmant did, pursuant to the instructions he had received from the said Joseph Baxendale, further inquire what charge the said Railway Company as common carriers, would make to the said Thomas Pickford and Joseph Baxendale for the carriage of the goods of the said Thomas Pickford and Joseph Baxendale direct from Liverpool and Manchester to Camden Town, instead of the terminus of the said Grand Junction Railway at Birmingham, they, the said Thomas Pickford and Joseph Baxendale, receiving their goods at Camden-town and taking upon themselves the delivery of them to their respective consignees.

That he was informed by the said E. J. Cleather, that the charge the Company would make would be the same whether the goods were received by the said Thomas Pickford and Joseph Baxendale at Camden Town, or whether the said Railway Company delivered them to the consignees.

That according to the instructions he had received from the said Joseph Baxendale, he did then deliver to the said E. J. Cleather a letter addressed by the said Joseph Baxendale in the name of the said firm of Pickford and Co. to the said Grand Junction Railway Company, and which said letter was in the words and figures following, that is to say,

"D. 10. 814." "London, Sept. 29, 1840.

"Gentlemen,—We beg to acquaint you that we shall forward our goods from Manchester and Liverpool to Birmingham through you as usual, and we have to request you will deliver them to our warehouse at the London and Birmingham Railway Station, at Birmingham.

"We shall also continue to forward our goods from Birmingham to Manchester and Liverpool by you, as heretofore. We also beg to apprise you, that we shall send our own carts for the removal of our goods upon their arrival at Manchester and Liverpool. Of course the charge which we have heretofore paid for loading and unloading to the Liverpool and Manchester Railway Company, under the arrangement heretofore existing between us, and which you have determined, we shall no longer pay.

"We are, Gentlemen, your obedient servants,
"PICKFORD AND Co.

"To the Grand Junction Railway Company."

That after the said E. J. Cleather had read the said letter he told affirmant he should communicate it, and the inquiries affirmant had made, to the Directors of the said Company, and requested affirmant to call again.

That he did accordingly, on the said day, again call at the office of the said Railway Company, and on such last occasion he was distinctly told by J. R. Chorley, the Secretary of the said Company, in presence of the said E. J. Cleather, that the charge to be made by the said Grand Junction Railway Company to the said Thomas Pickford and Joseph Baxendale, for the conveyance of their goods from Manchester and Liverpool to Camden Town, would be, precisely the same whether such goods were there received by the said Thomas Pickford and Joseph Baxendale, and delivered by them to the respective consignees, or whether such goods were delivered to the consignees by the said Railway Company. And affirmant was further informed by the said J. R. Chorley, in the presence of the said E. J. Cleather, that the said Railway Company being themselves carriers would not allow the trucks of the said Grand Junction Railway Company, loaded with the goods of the said Thomas Pickford and Joseph Baxendale, to pass along the Birmingham and London Railway, nor the trucks of the latter Company, upon which the goods of the said Thomas Pickford and Joseph Baxendale were loaded, to pass along the said Grand Junction Railway, but that the said Grand Junction Railway Company would require the said Thomas Pickford and Joseph Baxendale to unload at Birmingham all their goods from the trucks of the one Company and reload them upon the trucks of the other.

William Harnett, of Moor-lane, in the City of London, agent to Messrs. Morris, Herbert, and Co., of the same place, common carriers, saith, that he hath the management of the business of the said firm of Morris, Herbert, and Co., in London, and that between the month of January, 1839, and the month of June, 1840, the said firm conveyed goods between Liverpool and Manchester and Birmingham by the Grand Junction Railway, and under an agreement which had been entered into between the said firm of Morris, Herbert and Co. and the said railway Company.

Saith, that the said agreement was determined by the said Grand Junction Railway Company and the said firm of Morris, Herbert and Co. thereupon abandoned their business as carriers of goods by railway between Birmingham and Liverpool and Manchester, as no remuneration could be derived from it under the terms and conditions required and imposed by the said Railway Company.

Saith, that it is and has been for some months past notoriously the object of the said Railway Company to drive off all common carriers from the said railway, and to secure to the said Company exclusively the conveyance of goods upon it.

Saith, that the firm of Pickford and Co. are the only common carriers by whom goods are conveyed upon the said railway, exclusive of the said Company, in conjunction with Messrs. Chaplin and Horne.

John Rubens Bulmer, of the City Basin, City Road, county of Middlesex, agent to Messrs. Crowley and Co., common carriers, saith, that for some months in the year 1839, and 1840, said Messrs. Crowley and Co., conveyed goods between Liverpool and Manchester, and Birmingham, by the Grand Junction Railway, under certain terms and conditions agreed upon with the said Railway Company, and that in or about the month of March last, the said Railway Company refused altogether to convey the goods of the said firm of Crowley and Co., by the said railway.

Saith, he has been informed by Wm. Watts, the agent of the said firm of Crowley and Co., at Birmingham, and which information he believes to be true, that Hardman Earle, of Liverpool, in the county of Lancaster, one of the Directors of the Company, publicly declared in the presence of the Chairman of the said Company, that the object of the said Company was to drive all carriers from the railway—that the Company were carriers themselves—and that no other carriers were wanted.

GRAND JUNCTION RAILWAY COMPANY AND MESSRS. PICKFORD AND COMPANY.

To the Editor of the Railway Times.

SIR,—In your last Saturday's paper there appears a letter signed "Pickford and Co.," containing charges in connection with my name, as agent of the Liverpool and Manchester Railway Company who do the Grand Junction Railway Company's goods business here.

In justice to myself and my employers, I beg you will allow me through the medium of your paper of next Saturday, to state that in that letter many things are entirely mis-stated, and some important facts concealed.

In the first place, it is not true that 69s. 8d. per ton charged by Chaplin and Horne, the Grand Junction Company's agents in London for Mr. Pooley's goods mentioned in Pickford and Co.'s letter as sent on the 7th of January last, was "12 per cent." (or even one farthing) "more than the then advertised rates of the Company;" for the then advertised rates, which anybody can refer to for confirmation of my statement, expressly mention 69s. 8d. per ton as the rate for "machines (weighing.") Now, Mr. Pooley's goods were weighing machines, and 69s. 8d. is what was charged.

Digitized by Google

Again, it is not true that the Grand Junction Company "compel Pickford and Co. to employ the Liverpool and Manchester Railway Company to manage "their business;" in fact, they do not employ that Company at all, either compulsorily or otherwise; they did so some time back, not, however, compulsorily then, but under a voluntary agreement made with me as the Company's agent, by Mr. Baxendale himself, and with which the Grand Junction Company had no more to do than you, Sir, as Messrs. Pickford and Co. well know.

As to the statement that it is my custom to act upon the carriage note sent to us with goods and kept by us, rather than upon any of the addresses written on the goods themselves, whenever there is a discrepancy between the two, I have the following reasons to give:—first, it is our custom, and the custom of many other carriers; next, it is needful for the carriers' protection, seeing that if he relies on the address upon the goods, he parts with the means of proving easily the delivery of the goods according to that address: *for he parts with the address along with the goods*; whereas if he, as is our custom, relies on the carriage note which he receives with the goods, *and never parts with*, he always has the means in his hands of proving that his delivery was *according to order*: and, lastly, any person who wishes to employ Pickford and Co. or any other particular agent to take charge of any goods at their destination, has nothing to do but to say so, in the carriage note which he gives with the goods, and we then deliver accordingly.

To revert to Pooley's goods, which Pickford and Co. say were especially "ordered by Pickford and Co.," I can only say, that I have their carriage note now before me, and that Pickford and Co.'s name is in no way mentioned in it. I was so surprised at Pickford and Co.'s statement, that one of our people "took upon himself to sign the receipt for these goods for 'Pickford and Co., J. Bostock,'" that I immediately sent to Mr. Pooley's to obtain a sight of it, when I found that Pickford and Co. had got possession of it. I can only therefore say, that Bostock denies the fact, and that I have no reason to disbelieve him. I do not charge any person with having written "for Pickford and Co.," above his name, for those words might have been there when he signed his name, without attracting his observation; but the mere possibility of any alteration of a document if it once gets out of our possession, convinces me still further of the importance of adhering to our custom of delivering goods according to the directions given us in the documents that do not go out of our possession.

I have only further to notice Pickford and Co.'s postscript, to the effect that Leaf, Coles and Co.'s buyer, is said to have complained (24th February last) "that their Scotch goods came by Chaplin and Horne from Liverpool — the last of 120 cases, notwithstanding each of them bore a red printed label *care of Pickford and Co.*" I will only say that I am *astonished* at this statement, because Leaf, Coles and Co.'s last lot, instead of being upwards of 120 cases, was only *one*, and all their lots put together since the 31st of December last amount only to 70 packages: and Pickford and Co. are not in any way whatever mentioned upon any one of the carriage notes delivered to us with the goods, all of which are now before me.

To these facts I pledge myself, although I am aware that they are directly opposed to Messrs. Pickford and Co.'s statement in the letter which I have thought it inconsistent with my duty to leave unnoticed.

I am, Sir, your obedient servant,
ANDREW COMBER.

Liverpool, March 1st, 1841.

REMARKS UPON MR. BOOTH'S VIEW OF THE "CARRYING QUESTION."

BY A CARRIER.

MR. BOOTH, the Treasurer of the Liverpool and Manchester Railway Company, has given the world the benefit of his opinion on the subject of the conveyance of goods by railway; and his opinion will, no doubt, carry some weight with it, as it ought; being that of a man of much experience in railway matters, and of considerable ability.

But as Mr. Booth cannot pretend to impartiality in the matter, any more than the writer of these lines, so it is presumed that that part of the public, not already too wearied with this "dull but important subject," to read any more about it, will not be inclined to consider his judgment as conclusive upon the point, but will attach just so much weight to it as the arguments by which it is supported may deserve.

If, therefore, it shall appear that Mr. Booth has shown a very superficial acquaintance with his subject; that, in fact, he has been writing upon matters about which he is almost wholly uninformed—the conclusion must follow, that as his arguments are unsound, so his opinion is valueless.

I shall strictly confine myself to this point:—If I were disposed to enter at large into the question, I could not expect that the opinions of an interested party would be respected or attended to; but I have no such intention. My object is merely to examine into the statements of Mr. Booth, about carrying, which are contained in his lately published pamphlet, and which appeared in the *Railway Times* of last week, and to see what quantity of truth they contain.

And first—Mr. Booth tells us, that the canal carriers have taken a distorted view of the carrying question, and have proceeded on the supposition that there was a parity of circumstances between a railway and a canal, "and that because numerous and unconnected individuals pursued the business of carriers on the canal, they might, on the same principle, become carriers on the railway." He adds, "Pickford and Bache, and others, are denominated Carriers on the London and Birmingham Railway; but are they so in fact?"

This statement is in truth the whole substance of Mr. Booth's view; and if he can support it, there is certainly an end of the matter. How, then, is it in fact supported? First, by the enumeration of seven distinct requirements for the carrying on of a goods' traffic, all of which Mr. Booth says are provided by the Companies, and which do, in fact (he says), comprise all that is wanted for that purpose, with very trifling exception.

How far does the railway practice differ from that of the canals? We will shortly state these seven points; they are—

1. The road, provided by canals also.
2. Maintenance of way, ditto.
3. Rates and taxes, ditto.
4. Trucks and waggons, not provided by canals.
5. Locomotive power, ditto.
6. Superintendence and management, provided by canals also.

The difference therefore is, that the engines and trucks—answering to horses and boats—are provided upon railways and not upon canals. But a system is now commencing, and will unquestionably prevail ultimately, by which the trucks will be the property of the carrier; so that the real difference is reduced to the one element of locomotive power, the control of which is and must be in the hands of the respective Companies. Now, asks Mr. Booth, what is left for the carriers to provide? and he answers, "Literally nothing, but the cords with which the goods are fastened to the waggons, and the oiled cloths with which they are covered."

Very little indeed does Mr. Booth know of a carrier's business. Giving him the full benefit of the seven requirements found by the Companies, which is more than he can claim, there is still left for the carrier, the general arrangement and management of his business, the carting in and delivery, the warehousing of goods, the loading and unloading from the trucks, the keeping of books and accounts, the responsibility, called usually carriers risks; all that part of his trade in short which brings him in contact with the public, and in which competition is necessary to insure punctuality and attention. Hence, Mr. Booth draws the conclusion that the railway Companies are *really*, the carriers, only *nominally*, carriers by railway. Has he established it?

The next position we have to examine is contained in the following paragraph:—

"It is declared in the evidence before the Parliamentary Committee, that the London and Birmingham Company are carriers of passengers and parcels, but not of goods. Let us examine whether there be any substantial difference between the two?" And then a parallel is drawn between the functions of a cab-driver who waits the train at Euston-square, and a railway carrier.

Is it possible that this is seriously meant for an argument?

Are passengers warehoused, loaded, or unloaded, damaged by wet, their contents broken or lost? Are they fetched in or delivered? There is no entering or checking off, no invoicing or weighing, no carting passengers, there is nothing to do but to open the door at each end and say, walk in or walk out; the journey commences and ends at the railway station, the passengers move and take care of themselves. If these things do not constitute a substantial difference, how shall we define one?

And then as to parcels;—the management of coach parcels has always been part of the management of coaching, and a very simple affair it is. Parcels are for the most part brought to the station or to the receiving houses, the carriage is always paid at the time, the delivery is always instantly on arrival; the weight of the entire business can be but small, the book-keeping trivial; there is no similarity whatever between the arrangements necessary for managing a carrier's business, and for the conveyance of coach parcels. Surely Mr. Booth must know this.

I have said quite sufficient before to show that there is a very substantial difference between carriers by railway, and the parcels delivery people, and I need not waste words upon the assertion that there exists no real distinction between them.

And so I come to Mr. Booth's next statement, viz., that 15 carriers, the number, he says, at present upon the London and Birmingham line, entail 15 different managements, and tend to cause additional expense and confusion to the public. There is so much fallacy in this statement, and it is absurd in so many ways, that one is rather embarrassed how best to handle it.

First, these 15 carriers carry over about 8 railways, therefore if the Companies choose to undertake the carriers' business, there must either be one Railway Company carriers over all the lines to the exclusion of the others, or else the theory of *one* instead of *fifteen* managements falls to the ground: and the plan proposed, instead of the London and Birmingham system, amounts just to this, that there should be one carrier on each railway (viz. the Company) who should make his profit on his own line, and that every package between London and York should pass through the hands of four carriers instead of one. Is there any *great* improvement? Do we seem to have *gained much* under the head of undivided management? It is *very* clear which system carries public favour with it.

Second, As to cheapness of delivery. Mr. Booth writes an amusing paragraph about 15 carriers, each with a waggon and team, going to a street in Pimlico, and delivering 15 packages at 15 doors. It is a great pity that the paragraph is not as accurate as it is amusing. But Mr. Booth knows very well that the principal carriers keep an establishment in *London* of 30, 40, 50, some upwards of 100 waggon horses, and that they do not keep more than they want, so that each of the 15 waggons goes out with as large a load as the "gallant team" can draw.

Now, the question is, has not the public a greater security for convenient dispatch of business from several such establishments competing with each other than from one Railway Company with the whole in its own hands, able to charge what price the Directors please with no competition at all to fear.

Taking into consideration, first, the notorious fact that public companies are never so economical in their arrangements as private traders, seeing that they have not the same inducement to be so; and, secondly, that though 10 horses cost more to keep per horse per annum than 100, yet the difference between 100 and 1,000 horses, if any at all exists, which is very doubtful, is certainly to be

Digitized by Google

calculated upon a wonderfully diminished ratio. But, lastly, if Mr. Booth's theory be true, let him carry it to its legitimate conclusion.

If it be better for the public to have one management than 15, it is better to have one Board of Directors, one Secretary, one *executive*, than 15.

By all means let the carriers go to the wall, if the public good requires it. But we must not stop here. Upon this principle unquestionably it would be better also that the whole chain of railway communication should be under one superintendence and control; that in short, the business of the Companies should be taken out of their hands and managed for them by the Government. Mr. Booth must not refuse either one or other of these hypotheses. His principle must be either right or wrong. Had he considered when he laid it down, how far it would carry him?

But Mr. Booth draws a parallel between railway Companies, and gas and water works, and he says that because gas and water companies "do not leave to the old lamp-lighters and watermen to provide the service pipes to carry the light and water into each individual house, paying the Companies a round sum for the use of their mains, and charging the inhabitants at large more or less at their discretion without any fixed rule, but as moved thereto by competition or otherwise amongst themselves as the case may be;" *therefore*, the Railway Companies ought to undertake the business of carriers upon their lines, and not to leave it in the hands of the trade; and he adds—"We apprehend the water and gas companies consider themselves entitled to all the profit which is to be derived from the supply of their commodity to the public, and that they cannot afford to divide the remuneration with third parties." Really this is too much. Why, what *is* a Railway Company?—Is it not a company for making and maintaining a public road, and levying tolls from the public for passing thereon? To which powers the Legislature has tacitly added the control of locomotive power, as necessary for the preservation of life. By what right then can the Companies claim—or rather can Mr. Booth claim for them—they do not claim for themselves—a monopoly of the business of carriers?—Or what parallel can *possibly* exist between them and the gas companies. So *obviously none*, that I would not notice the paragraph at all were it not for the purpose of calling attention to the latter half of it.

Mr. Booth should choose his ground, and adhere to it. If it be for the benefit of the public that a monopoly is claimed, there is at least a colourable pretext for the attempt. But if it is because the Companies *cannot afford to do without it*, I apprehend that it is entirely unnecessary to write a word on the subject, they have *no right* to it, and the public will not submit to the imposition.

And now for *competition*. Mr. Booth argues that in the present state of things there is no scope for competition in the carriage of goods by railway, seeing that the Railway Company furnish absolutely almost all the items of which a carrier's expenses are composed. I have disposed of this already. There is as much scope for competition on railways as on canals, excepting in the moving power—the locomotives—by this and this alone the field is narrowed.

I have detailed what the duties and responsibilities of a carrier are, and I have I hope succeeded in proving that there is a very ample scope for competition left. Would it be prudent then, because the field is not quite so wide as on canals, to throw aside entirely the old and acknowledged principle that has so long regulated inland trade, and to shut it up altogether? There are scarcely, I think, two impartial persons who will answer this question in the affirmative.

But Mr. Booth goes on to show the fallacy of depending upon competition, by setting forth the great reduction effected in railway carriage by the Grand Junction Company, when they commenced to carry throughout to London.

Mr. Booth cannot but be aware that there *never was any competition at all* by railway between Manchester and London. The carriers were from the first tied down hand and foot by the Grand Junction Company, and *never* enjoyed freedom of trade. The evidence given before the Committee on Railways proves this beyond all doubt. Can it be possible that Mr. Booth has overlooked it?

But let him turn his attention to some other point if he wishes to see the effect of competition. Let him see if he could set up a carrying establishment between Birmingham and London, or between Leeds and London, and reduce the rates *there*. I think I may assure him that he could not.

And so it would have been with the Grand Junction Company; but they took care that so it should not be. The rates *were* high, but the public must thank the Grand Junction Company for that, and not the carriers.*

And then Mr. Booth talks about coach proprietors, and says that their business was destroyed—why should not also the carriers?

Because from the difference in the nature of the business it was for the benefit of the public to destroy the one, and it is not for the benefit of the public to destroy the other. Because when a coach proprietor had found the coach and the horses, he had done all he had to do, while the carrier had not done half. But upon this I need not dilate. I have already shown what the difference between a coach proprietor and a carrier consists of. It is unnecessary to repeat it here. I never should attempt to argue the question at all if I were not firmly convinced that the interest of the carriers and the public are identical in this matter—that the latter would feel the effects of a monopoly as much as the former.

And now to Mr. Booth's conclusion—Here, for once, I do cordially agree with him, and would desire to protest as unequivocally as he does against the doctrine, "that Railway Companies are not to be at liberty to be carriers on their own lines, if they shall see fit, and generally to work their own concerns in such a way as shall best accomplish the great principle for which they were originally planned and established."

But I deny entirely, that any case whatever has been made out, establishing the right of a Railway Company to become exclusive carriers on their own line; and not only on their own line, but also on all other lines in connection with their own; or that such rights, if they existed, could be anything else than a great national injury.

* *Note*—I do not want to be misunderstood. If Railway Companies like to become carriers, by all means let them do so—only not *exclusive* carriers.

RAILWAYS IN GERMANY.

LETTER III.

Sir,—In my last letter I cautioned English capitalists to be on their guard, how they entered into German railway speculations. I must, with your permission, do so again; for I believe they are willing, and, indeed, desirous to assist the budding spirit of enterprise in this class of improvements in Germany; and I must add, that I rejoice exceedingly that they are desirous to do so, because I firmly believe that the establishment of main lines of railway through the length and breadth of Germany, will be found of vast advantage to the interests of England, as well as of the countries more immediately concerned. Indeed there would be no difficulty in proving this, but still I must warn my countrymen to be perfectly acquainted with all the circumstances attendant on the investment of their money in railway schemes in Germany, in order to avoid hereafter, if possible, the carping feelings of disappointment and vexation. I say this, because the present state of railway law in Prussia makes investments in these speculations unsafe, and also because it *may* be so altered, as to make such speculations not only safe but very desirable.

The law for the better regulation of railways in Prussia was promulgated on Nov. 3, 1838, and commences by observing, that it was only to be considered as provisional. This circumstance, coupled with the fact that the law was enacted at a time when the Prussian government had no experience in these matters, and that it was drawn up without consulting the existing railway companies, leads us fairly to the conclusion, that the present enlightened and liberal government of Prussia will readily amend those clauses and regulations, by the existence of which foreign pecuniary assistance is checked or averted. I am happy to say, that the importance of the great lines of railway from Hamburg to Berlin and Magdeburg is becoming strongly felt. It is, therefore, the duty of the promoters of those undertakings, to procure the enactment of such legislative regulations as shall make the investment of money, in those schemes, safe to the foreigner; for without British assistance those great lines cannot be made.

The most mischievous part of the present law is that, by which the post department is enabled to oblige the railway companies to carry, not only the mails, but also all the goods and passengers it may send, free of expense. (It must be understood, that at present all travelling is under the management of the post department.) This regulation is a most mischievous one, for by it the post is enabled to charge low fares to travellers, and then to oblige the railway companies to carry them gratis! So that, in fact, the government have it in their power to ruin any railway company; and yet the law states, that the railway companies must make up any deficiency in the revenues of the post department. The government have claimed a sum from the Berlin and Potsdam Railway Company, for such deficiency in the last year, amounting to 1½ per cent. on the whole capital of the company; this claim is disputed, and the cause is now being heard in the superior courts of law at Berlin; and I would really advise Englishmen to wait at least for the decision of those courts on the claim, before they venture to invest their money in a Hamburg and Berlin railway, or any other in Prussia. Let the promoters of such schemes procure a proper alteration in their railway law, and then they can come honestly before the British public and offer an investment for British capital, which I, for one, should consider unexceptionable. Other objections to the law are, that the "Police regulations" enter even into the interior management of the whole concern, giving the Government a power of interference, wholly inconsistent with the independance of the Company;—also that the profits are limited to 10 per cent. per annum, to which perhaps capitalists would not object, provided Government would guarantee them against loss, (as in Poland) which it will not do,—and that the "Expropriation" clause, by which the Company is empowered to purchase and possess the necessary lands, is not even so favourable as that for the Chaussees or mail roads.

In conclusion, I will add my hope that as our German friends have for some time exercised caution and deliberation, they will soon employ exertion and activity, and smooth a way without further procrastination, for the commencement of undertakings which will, when completed, be without their superior in any point of view in Europe—I mean the railways from Hamburg to Berlin and Magdeburg.

As I have my pen in my hand, I will mention that there is every prospect of my prophecy concerning the Altona and Kiel Railway scheme, proving true. The two committees have not been able to raise one-tenth of their capital yet, and have made no progress whatever; indeed the project may be said to be defunct. I am not surprised at this; for as Hamburg and Lubec did not support the scheme, it could not prosper. There is a good Chaussee between those two free towns, and as the distance is but little more than three-fifths of that from Altona to Kiel, the establishment of a good line of coaches would enable Hamburg and Lubec to compete with Altona and Kiel in point of *cost* of transit, and almost in point of time. So good night to the Altona and Kiel Railway!

I remain, Sir, your obedient servant,

W. N.

London, March 3rd, 1841.

EDINBURGH AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

THE half yearly meeting of the shareholders of the Edinburgh and Glasgow Railway was held in the Railway Office, Upper Queen Street, on Monday last—JOHN LEADBETTER, Esq., in the Chair.

The Report of the Directors having been read by Mr. H. G. Wright, the Secretary. (See below.)

Mr. LEADBETTER said he had great pleasure in meeting so many shareholders, this being certainly the largest meeting they had had since the passing of the Act. He felt this to be the more gratifying, inasmuch as they were approaching to an interesting point in the history of the railway, the opening of that undertaking. They had heard, from the report of the Directors and of the engineer, that there was almost a moral certainty of the line being opened by the month of August. He had had considerable misgivings about this matter for some time back; but having conversed with Mr. Miller on the subject, and made a variety of inquiries, he was satisfied that there was every prospect, unless some unforseen occurrence took place, of the line being opened at the time specified. The Directors had felt it their duty to push on the work with the utmost possible vigour, as it was felt that the Company would be subjected to a great loss if they were deprived of the autumn traffic, in consequence of the line not being ready. To that point all their efforts had been directed; and it was with much pleasure that they had now the almost certain prospect of attaining their object. There was, nevertheless, a great deal yet to do, both on the part of the Directors and the engineer, but from the general zeal and activity which pervaded the Directors, he was confident that every effort would be made to secure the opening by the time promised. It was, however, not the less necessary to be careful in preserving unanimity among the Directors, and that such measures should be adopted as would secure the efficiency of the management, and tend to accelerate the progress of the works. He would advert to this subject again; and in the meantime he had merely made these observations as introductory to the adoption of the report just read, which would be moved no doubt by some gentlemen in the meeting.

Mr. J. G. HAMILTON moved the first resolution; and observed that he felt it unnecessary to detain them further than to direct their attention to the satisfactory nature of the Report, and to express the acknowledgments of the Company to the Directors for their exertions.—(For resolutions see advertisement.)

Mr. M'KENZIE KIRKLAND seconded the motion, which was carried unanimously.

Mr. E. D. SANDFORD said, so far as they could judge from the Report, they found that the principal delay in the works would be at this end of the line. Now, he wished to know if it might not be possible to open as much of the line as might be completed, before the whole was finished?—for instance, to open from the east as far as Falkirk.

The CHAIRMAN said that point had been very fully considered; but it was found that the heavy parts of the work were spread over the whole line, as well beyond Falkirk as upon this side of it, and, therefore, the suggestion could not be easily carried into effect. It would be of great importance, however, if a few miles could be opened, so as to make the servants acquainted with the duties. If any portion could be opened sooner than another, it would be the portion next Edinburgh; but he was afraid it would take the whole time already stated to have any part of it opened.

Mr. DALMAHOY, W.S., asked if any estimate had been made of the total probable expense of the Railway?

The CHAIRMAN said he had endeavoured to keep a narrow look upon the general expenditure, and had from time to time attempted to estimate the cost; but he had always found so many contingencies on which he could not form any estimate, that the result was altogether uncertain. All he could say was, that he did not consider it was likely greatly to exceed the Parliamentary amount.

The LORD PROVOST of Glasgow proposed the next resolution; which related to the election of Directors.

Mr. LEARMONTH of Edinburgh seconded the resolution, which was carried.

The CHAIRMAN begged to say, that Provost Campbell, who had been hitherto a Director of the Company, had, in consequence of the many other public duties he had to perform, declined to allow his name to be proposed as a Director on the present occasion; and Mr. Bain had, in consequence, been put in his place. (Hear.)

Mr. BROUGH, of Paisley, moved the next resolution, which had a reference to the forfeiture of shares,

Mr. HUGH MILLER seconded the resolution, and it was unanimously adopted.

Mr. LUMSDEN, after a few words of congratulation on the progress which the works had made, moved the next resolution, which expressed gratification, at the fact, and moved a vote of thanks to the Directors.

The motion was seconded by Mr. ROBERT DYKES, and also unanimously agreed to.

The CHAIRMAN said the next matter was one of very great importance to the future success of the undertaking, and one which he felt very great diffidence in bringing before the meeting. They were aware, from a statement which had been circulated among the shareholders, of the points of difference which existed among the Directors as to the future management of the line. Hitherto the operations had gone on without much jarring, because the two portions of the line had been proceeded with separately by the committees at each end, with an occasional meeting together to consider questions connected with the works generally. But as the period approached for opening the line, it became necessary to take steps in good time for making those arrangements which were necessary for working the entire line of communication. When they approached that subject they found that the Board divided itself into two sections, one conceiving that the one should be divided in the management, and the other that it ought to be concentrated in one place, and under one direction. The subject was considered at one or two of the Board meetings, and at last it was agreed that a sub-committee should be appointed of three Edinburgh and three Glasgow gentlemen, with a view, if possible, to narrow the grounds of difference, and to try to bring about an arrangement of the matter without appealing to the shareholders. This committee met and exchanged opinions, but he was sorry to say that up to this time there was not the most remote chance of their coming to any understanding on the subject. Knowing well the knowledge and experience of the Lancashire shareholders in such matters, he went there and met them both at Manchester and Liverpool—forty shareholders having attended at Liverpool, and seventy at Manchester, and at both places resolutions were adopted in favour of the concentration scheme, which he proposed. The result of the application to the shareholders had been attended with an expression of opinion almost universal, when the great number of shareholders was considered. He had a list in his hands, from which he found that, with the proxies and the gentlemen present, who had expressed their opinion on the subject, not fewer than 10,000 shareholders out of 14,430 were in favour of the scheme of management which he now brought under their consideration. (Hear.) It was not for him to say what constituted the duties of a chairman, but he knew the amount of duties that had been imposed upon him, and he knew also the degree of labour which he had encountered; and he could confidently say, that he had regarded everything only as it tended to promote the interests of the Company. He felt that, in bringing forward this business, he might be exposed to severe animadversions; but he was sustained by a conscientious conviction that his entire object was the welfare of the Company, and that the measure he proposed was best calculated to promote its prosperity. As matters stood at present it was not to be minced that they were divided, and that such a division was fraught with danger to the Company. Every day the opening of the railway was postponed was equivalent to a loss of interest upon 1,200,000*l*. He hoped, therefore, that the measure he proposed would secure that co-operation which was so essential among the Directors, and tend to facilitate the preliminary points necessary to the opening of the line. Mr. L then read certain resolutions he meant to propose for the consideration of the Directors in Glasgow, and the reduction of the number of Directors. He would now close with making one or two observations. The first was, that looking at the experience of other lines, they found that, where attempts had been made at dividing the management between extreme ends of a line, the plan was found not to answer. It was a remarkable fact that the London and Birmingham Railway, under its first Act, got appointed 24 Directors—10 within 20 miles of London, and 10 within 20 miles of Birmingham—and they appointed two Committees of 12 each, one to sit in London and the other in Birmingham. Their second Act, however, repealed the qualifications as to residence, and did away with the two London and Birmingham Committees, and authorised the reduction of the number of Directors to 12. It would be a pity to throw away the experience of other Companies in such matters as these, as experience was undoubtedly their best guide in this as in every other concern of life. The Liverpool and Manchester Company had removed all their works to Liverpool, and the London and Birmingham Company were removing all their works from Birmingham to Crew. As men who ought to take a practical view of any subject, they should not proceed with any experiment, when they saw how badly it had wrought under similar circumstances elsewhere.

Mr. L. then moved his resolutions.

Major MONTEITH seconded the resolutions.

Mr. E. D. SANDFORD wished to know, 1st—whether the subject had been under the consideration of the General Board? 2ndly—whether at the Liverpool and Manchester meetings there were any individuals of a different opinion from Mr. Leadbetter?

The CHAIRMAN said the subject had been before the General Board, but they were divided and did not agree upon the matter. With respect to the second question, he did not remember of any person being present at the Liverpool and Manchester meeting who entertained views in favour of a divided management.

Mr. SANDFORD said he wished to know if any one stated at the meetings in question the views of those who were opposed to Mr. Leadbetter's scheme?

The CHAIRMAN said he had stated fairly the views of his opponents; and he might state that all the gentlemen present who spoke did so from their practical knowledge of the subject.

Mr. LEARMONTH said he felt considerable diffidence in rising to explain the views and motives which had influenced the Edinburgh Directors, or rather the Directors who agreed with him, without reference to their place of abode; but he did not doubt he should show, to the satisfaction of the meeting, that they had conducted themselves with perfect fairness and candour, and with a desire to carry out the statute with a view to the best interests of the proprietors. He complained of Mr. Leadbetter's having, unknown to his brother Directors, gone off to Lancashire, and met the shareholders in Manchester and Liverpool; when no counter-statement being made, the shareholders there of course agreed with him in all that he advanced. The Edinburgh gentlemen, it appeared, knew nothing at all about business; the whole concentrated wisdom of the Board was in Glasgow—and the whole centered, perhaps in himself (Mr. Leadbetter)—for here were his views of the matter as if they had emanated from the Board—bearing no mark whatever that the document came from his hand. It would be a pretty story, truly, if the whole twenty-four Directors were to spread themselves over the land getting people to agree in the statements they might make, and then coming down upon them with proxies; for anything he knew their Chairman might have 10,000 of them in his pocket obtained in this way. They were all for concentration—there was not one of them who did not want concentration. It was, indeed, prescribed by the act. There were twenty-four Directors, as a General Board; and the gentlemen in Edinburgh had always come, from time to time, to Glasgow to this Board, to ascertain what were their wishes, and when their opinion was given, to act upon it; and he asked if their orders had ever been in even one case counteracted? The Edinburgh people had never been actuated by factious motives; they might occasionally differ in some points with the Glasgow people, but it was very possible that even they might sometimes err. Mr. Leadbetter had talked about collision; but he knew of no collision; there had been differences of opinion, but no collision. If it was proposed that all the Directors should come there, and hear what Mr. Leadbetter said, and if they did not at once assent to it, this might be called collision, but he called it a mere difference of opinion. Mr. Learmonth then proceeded to some matters about which a difference of opinion had existed in the Board, as for instance, about the breadth of the gauge, the wheels &c., for the purpose of showing, that though they differed upon those points, there was nothing like a collision in reference to them. He then proceeded to observe that there were two propositions before them: the one was that emanating from the three Edinburgh gentlemen, viz: that the central power should be in Glasgow, but that the two committees should exist as at present, and that they should exercise the functions deputed to them by the Board; that was the plan of the Edinburgh gentlemen, which they recommended as strictly in conformity with the statute. The Glasgow plan was, that the central power should be located in the Glasgow Board; that this Board should meet once a week; that they should appoint Committees out of the Board,—10 for this purpose, and 7 for that purpose, as the case might be; that this Board should also have the power to make three, four, or five a quorum, just as they might determine. These Committees were all

Digitized by Google

to sit in Glasgow—in other words, they were to put an end to the functions and vitality of 12 of the Directors. If, for instance, a Committee of seven should be appointed for a particular purpose, three would be a quorum, and these three would have all the power of the seven; but they were only to meet in Glasgow, and thus the whole power of the Committee was virtually given to three gentlemen in Glasgow—so that the power of the Edinburgh people was completely done away with. Now, he liked the honest statement which had been made to-day, that they were to apply to Parliament for powers to do all this; and he supposed the preamble of the new Act, would run in this way, "whereas, it is expedient, that in consequence of all the wisdom being concentrated in Glasgow, the whole power should be vested in the Directors living in that city—and, whereas, all the power should be concentrated in a single individual, &c." Now, he thought, the more they studied their present Act, they would find that it tended to the prosperity of the shareholders, that they should go on with it as it stood. He had no hesitation in saying, that unless there was a grasping at power in Glasgow, and a wish to put an end to the functions of the Edinburgh gentlemen, the Act would be found to work for the advantage of the Company. He could not refrain from observing that it was a most unaccountable thing in their Chairman coming there that day with a new proposition, that there were too many Directors. He maintained that he was bound to have stated to him, and to every other individual, his intention to bring forward that question. He had not acted with that fairness to the gentlemen from Edinburgh, which they were entitled to expect; they had always treated him with respect, and he ought, in justice, to have communicated to them his intentions. It was, besides, at variance with the spirit of the Act, as well as those rights which belonged to them as Directors. Had these views been propounded at the outset, they would never have seen the Edinburgh and Glasgow Railway. The Edinburgh people were nearly as three to two of the shareholders; but, take it with a deduction, and they would be found to be more than one half. It was really too much to come forward in this way. He believed they might just as well try to get a bill to move all Edinburgh to Glasgow as to get such a bill as was proposed, for to a certainty it would be resisted. He hoped they would rather try to conciliate matters; he was sure there was too much proper feeling among them to disregard the labours and services of the Edinburgh Directors. He had done his duty as honestly as Mr. Leadbetter—he had been as anxious as he could be for the prosperity of the railway, and he certainly did not expect this from him. He had a resolution to propose, though he had no hope of carrying it against the Chairman's pocketful of proxies.—Mr. Learmonth then read his amendment as follows.—

"That the fundamental principle on which this Railway was commenced, and which was embodied in the provisions of the Company's Act of Parliament, was, that it should be the joint undertaking of the two great cities at its termini, and that the management, although concentrated in, and superintended by one General Board, should, as regards the execution of its details, be equally divided betwixt the two Committees directed by the Act to be appointed by the Board, viz., the Edinburgh and Glasgow Committees.

"That this principle of management was agreed to at the second general meeting of the shareholders, held on the 22d of March, 1836, and, in conformity therewith, the Act of Parliament was prepared, applied for, and passed. That this principle has hitherto been acted upon in the management of the Company's affairs with great advantage to the interest of the shareholders. That it is quite consistent with the efficient control of a concentrated legislating power, and that it must be continued, if any effect is to be given to the terms and spirit of the Act."

Mr. EAGLE HENDERSON seconded the amendment.

Mr. CHRISTISON, Advocate, of Edinburgh, spoke in favour of delay as a middle course between the two propositions now before the meeting. He deprecated all differences of this kind as inimical to the interests of the Company. He contended that the shareholders generally were not informed as to the subject under dispute. He contended that the Act was opposed to the measure proposed by Mr. Leadbetter, and that they had no power to appoint any board which would supersede either the Edinburgh or Glasgow committees. Having gone over the clauses in the Act at some length, to show that the alteration would be illegal, he observed that if the proposed measure was taken, legal steps would to a certainty be adopted to prevent its being carried into effect. In the course of his remarks, he founded much upon the minute agreed to at a meeting in March, 1836, by which it was arranged that, after obtaining an Act, the management of the undertaking at the other end of the line, should be entrusted to a committee, subject to the control of the general committee. Mr. Christison concluded by proposing the following amendment—

"Moved,—That as the question of the future management of the railway is one of vital importance to the interests of the proprietors, and as the resolutions now proposed are considered by many of them to be contrary to the spirit and meaning of the Act of Incorporation, and to the unanimous resolution of the Company, expressed at their meeting of the 22d March, 1836, embodied in the Act; and as the question at issue has not been considered by the General Board of Directors, nor any authorised statements been yet laid before the proprietors of the plan of management proposed, or of the views held either by the Board of Directors or the respective Committees, the consideration of the resolutions should be adjourned until the day of , in order that such statements may be considered by the proprietors before any final determination is come to upon the subject.—Mr. Christison afterwards limited the period of adjournment to three weeks.

Mr. CADDEL, of Cockenzie, seconded the amendment.

Mr. J. G. HAMILTON said, he came there totally ignorant of the subject, and he had listened with great attention, but had not heard one argument against the proposed concentration. Mr. Learmonth said he was in favour of concentration, but his appeared to be a divided concentration; and their Edinburgh friends complained that the matter was not confined to the General Board, but they were the only parties who were to blame, for they refused to accede to that proposal when formerly made.

Mr. E. D. SANDFORD, Advocate, supported the resolution of Mr. Christison, He observed that by adopting Mr. Leadbetter's resolution they would be inevitably involved in legal proceedings, and the depreciation of their stock would, as a matter of course, follow. He dwelt strongly upon the arrangement made in March, 1836, by which the eastern part of the line was left to the management of the Edinburgh Committee. He had paid every attention in his power to the plan laid down by Mr. Leadbetter, whose opinion was certainly entitled to great weight; but they had also the opinion of Mr. Learmonth, whose views were likewise worthy of the most careful consideration. The plan of the Edinburgh gentlemen was as follows:—"It is intended that the supreme power shall continue vested in the General Board, who shall meet from time to time, and lay down general rules for the guidance of the Edinburgh and Glasgow committees; and also act as a court of appeal from them, in cases of collision—that the line shall be divided into two parts, and that the active superintendence of each part shall be entrusted to the Edinburgh and Glasgow Committees respectively, along with the paid officers of the Company;—that each of the committees shall appoint, out of their own number, a set of standing sub-committees—on finance, plans and works, engines and carriages, passengers and goods; the one set sitting in Edinburgh, and acting on all matters which may arise on the east portion, and the other sitting in Glasgow, and acting on all matters which may arise on the west portion, of the line;—that the patronage belonging to the Directors shall be, so far as possible, divided;—that there shall be two secretaries and two offices—one in Edinburgh, and one in Glasgow;—and that some portion of the work-shops shall be built at Edinburgh, and given in charge to the committee there." The learned gentleman then proceeded to support this plan at some length, both on the ground of its legality and expediency. It was at any rate of consequence, before they came to a decision, that the proprietors should be well informed on the subject, and hence the necessity for delay. Could a *pro re nata* meeting not be called for the purpose of considering the question? Mr. Sandford was proceeding, when

Mr. WM. CONNAL rose, and said he thought they had had good practical proof of the working of the Edinburgh committees. Here they had been sitting for three hours, and these Edinburgh gentlemen had occupied nearly the whole of that time with their speeches.

Mr. SANDFORD did not see any necessity for this warmth on the part of any gentleman.

Mr. CONNAL—We are plain practical men here, and our time is valuable—we want to get through with our business. (These Edinburgh gentlemen seem to be speaking against time.

Mr. SANDFORD really did not see the use of such warmth on the subject. He very likely differed from the gentleman who had just spoken, but he saw no occasion for exhibiting heat in the matter.

Mr. DALMAHOY spoke in favour of delay.

The CHAIRMAN, before making a few observations in reply, requested that the opinion of the law agent should be had with reference to the legal points.

Mr. BANNATYNE accordingly directed the attention of the meeting to various portions of the Act, and gave it as his opinion that the measure proposed by Mr. Leadbetter was fully within its scope and tendency.

Mr. LEADBETTER explained. He did not see what was to be acquired by a delay of three or four weeks; and he would ask the Edinburgh gentlemen if such a delay would in the least alter the state of matters, and if it would not have a strong tendency to do injury to the works on the line? It was alleged that the greatest number of shares were held in Edinburgh; and he had ascertained that the number of shares in favour of Edinburgh was 100; but in the direction there was double the number of shares belonging to Glasgow as compared with Edinburgh. It had been alleged that injury would be done to the affairs of that Company by the difference of opinion which had been manifested; but he did not think that it would at all affect the public estimation of the Company. He had no fears that the shareholders would withdraw their confidence in consequence of anything that had occurred. As to the legality of the measure which he had submitted to them, they had heard the opinion of Mr. Bannatyne upon that point, that it was in perfect conformity with the Act. Seeing the unfortunate position in which they were placed—for, though Mr. Learmonth had endeavoured to make the differences among them appear trivial, yet he felt that things in this respect were daily getting worse—it was better to put an end to it at once. Men of common sense must see that where there were so many details to attend to, there was a great need of caution, and that the business could not go on satisfactorily with two committees. The Edinburgh plan was that the line should be divided, and be worked by two committees. He asked if it was possible such a plan could be carried out? It was clear that there must be one power to regulate, and to which all references must be made. Unless that principle was conceded by their Edinburgh friends, they could not come to an arrangement that would satisfy the shareholders. He had had personal intercourse with so many of the shareholders, and had made so much inquiry, that he felt satisfied no delay would alter their decision.

Mr. LEARMONTH spoke in favour of delay.

The CHAIRMAN said, he would not oppose the delay if the meeting wished it; but he desired to know if in the event of delay, the Edinburgh gentlemen would agree to acquiesce in the decision of a future meeting?

Mr. GILBERT FINLAY said, they could only give the pledge on which they had hitherto acted,—they had never refused to obey the orders of the general Committee, or of the shareholders. Let a delay take place, and they would just act then as they had always done.

The CHAIRMAN said, his question was this: if the present meeting was adjourned, say to that day three weeks, and if the decision then should be in favour of the plan of management as laid down in the resolution he had moved, would the Edinburgh gentleman acquiesce in that decision, and cordially go along with them in carrying it into effect?

Mr. FINLAY said, if it was a fair and legal decision of a competent authority they would submit to it, but if it was a decision contrary to the Act of Parliament, they could not submit to it.

The CHAIRMAN said, unless the Edinburgh gentlemen gave an affirmative answer to the question he had put, it was needless to adjourn.

Mr. SLIGO said they were willing to agree to any proposition that was legal.

Mr. BANNATYNE asked if the gentlemen who dissented just now would, in the event of a general meeting called in three weeks, agree to this—that if they had not the power to make the proposed alteration, they would join in obtaining from Parliament the necessary powers for that purpose?

Mr. LEARMONTH did not think it was fair to put such a question. He was not prepared to jump to that conclusion.

The CHAIRMAN said it was clear, then, that they must proceed to take the vote, as, unless the Edinburgh gentlemen agreed to acquiesce in the decision of a future meeting, it was needless to adjourn.

There appeared for Mr. Leadbetter's resolutions—

A protest against this decision was then lodged by the Edinburgh gentlemen; and the Meeting separated, after a vote of thanks, moved by Mr. Learmonth, had been given to the Chairman.

REPORT.

In meeting the proprietors on the present occasion, your Directors have much pleasure in being able to report favourably of the progress of the undertaking during the last six months. Although the late severe and long protracted frost put an entire stop for nearly two months to every department of the masonry, to the delivery of rails, to the laying of the permanent way, and to other portions of the work, the Directors do not anticipate that this will materially affect the finishing of the line within the time formerly pointed out by them. Indeed, it will be seen from the Report by Mr. Miller, that with good weather the opening of the railway may be looked forward to in August. As every day now becomes of importance as the season advances, your Directors will watch narrowly the progress of the contractors, and exert themselves to support Mr. Miller by all the means in their power. The sum expended on the works from last June to December (194 17*s*l 7*s*., will enable the shareholders to judge of the amount of work performed during that period.

Your Directors stated at the last meeting, that from the rapidity with which the works were proceeding, they were turning their attention to the subject of locomotive engines and carriages. For the sake of uniformity and simplicity, they were desirous of adopting, if possible, only one form of engine: but on approaching the subject, they met with such conflicting opinions respecting the relative merits of Bury's, or the four-wheeled, and Stephenson's, or the six-wheeled engine, that they deemed it the more prudent course to send a small deputation, consisting of the Chairman and Deputy-Chairman, accompanied by their Engineer, Mr Miller, to visit the principal railways in England, and report to the Board. After the most careful investigation, the result was, that the Directors found it extremely difficult to decide between the two. They therefore resolved, after mature deliberation, to make trial of both kinds, and decide as to their relative merits from their own experience. With this view they have ordered ten four-wheeled engines from Mr. Bury, and ten six-wheeled from Messrs. Hawthorn of Newcastle; and this number will, they anticipate, be sufficient to enable them to open and work the line until next Spring. It may be noticed, that owing to the admirable gradients of the line the Directors will have an opportunity of testing the advantages which are held out by the advocates of the lighter engine.

Your Directors have also ordered 48 first class, and a similar number of second class carriages. The latter, from being constructed on the same length of frame as the first class, will contain a coupé, whereby one-seventh of the number of carriages otherwise required will be saved. It is also intended immediately to order 36 third-class carriages, with a proportionate number of waggons, trucks, and horse boxes, &c.

The fixed engines at the head of the inclined plane at the Glasgow terminus, have been ordered for some time; and your Directors have entered into contracts for the erection of the booking offices and business chambers there. They are also about to contract for the building of the various stations along the line. And it may here be stated, that in all these erections, the utmost regard to economy has been observed; the great object of the Directors being to obtain simple and substantial work, without any unnecessary ornament.

As formerly stated, your Directors are anxious to complete and bring the present line, as authorised by their Act, into full operation, before entering upon the formation of any branches. In order, however, to give the Company the power to apply to Parliament in 1842, or subsequently, if they shall think fit so to do (the question as to this being still reserved,) your Directors have caused the usual preliminary notices to be given with reference to the proposed formation of a branch to Kirkintilloch (about 1¼ mile in length,) and to an extension of the main line, as originally contemplated, to the North Bridge of Edinburgh; where, it is not improbable, that other lines of railway may have their terminus.

With regard to the formation of a branch from Stirling to fall into this line, a meeting of the landed proprietors of that important county, and of others interested in this matter (as well as in the ultimate extension of the line northwards,) was recently held for the purpose of promoting the measure, and of learning the intention of this Company on the subject. With this view, a deputation of influential gentlemen of the county, appointed by the meeting, had an interview with your Directors, who stated that, until the main line was opened, the Company was unwilling to allow its attention to be diverted to the subject of this branch; but, that the Directors would be happy to communicate with the county gentlemen on any plan for the execution of so important a branch. Since the date of the above interview, the Directors observe that a survey has been undertaken by parties interested in the county; and also that a Committee has been appointed by the county of Perth, to consider the extension of the Stirling branch into that county. And further, your Directors have observed that considerable progress has been made in the preliminary steps towards the formation of a line through the county of Fife, thus holding out the prospect, at no distant period, of the main traffic of the line being considerably promoted by railway feeders.

A Bill has been introduced into Parliament this session to amend Lord Seymour's Act. It relates chiefly to two points—the notices to be given before a line is opened to the public for traffic, and to the qualifications and appointment of engine-drivers. With regard to the first Bill empowers the Board of Trade to prevent, under certain penalties, the opening of a line, until satisfied of its being sufficiently completed for the safe conveyance of passengers; and this is an additional reason why your Directors should press forward every department of the works by all the means in their power. And with respect to the second point, it appears to your Directors that the raising of the standard of the qualifications of engine-drivers, cannot fail to be beneficial, in a peculiar degree, to the undertaking under their charge. Upon the whole, if the power proposed to be vested in the Board of Trade be used with discretion, it may perhaps be beneficially conferred; though, in the present stage of the Bill, it would be premature to express any decided opinion upon the subject.

From the annexed balance sheet of income and expenditure from 30th June to 31st December last, it will be perceived, that during that period, the Directors have taken up on loans upwards of 156,000*l*. Since the latter date, they have received further, 16,300*l*.; leaving 127,700*l*. still to be taken up. The Directors are happy to say, that they have found no difficulty in obtaining the loans; which have come in quite as rapidly as was desirable, and without any commission or brokerage being allowed.

Your Directors have pleasure in reporting that they have brought the share list into a favourable state. They have found it necessary to declare 621 shares forfeited; and they now beg leave to submit the declaration of forfeiture to the meeting, for confirmation, in terms of the Act of Incorporation. On some of these 20*l*. per share has been paid; and on a large portion, 5*l*. or upwards; so that there is no doubt these will soon be disposed of. The whole of the shares formerly forfeited, on which 5*l*. were paid, have been sold without any further loss than the interest due on the calls.

Under the provisions of the Act of Incorporation, the following gentlemen, being one-fourth of the Directors, go out of office at this period, viz.—[see Advertisement.] These gentlemen are, however, re-eligible to office.

The favourable state of their finances has enabled the Directors to carry forward the works without pressing upon the shareholders for any calls since the last general meeting; but, as the Board are straining every nerve to finish and open the line for traffic next Autumn, and as the season is at hand for pushing on the works with renewed vigour, they must of course look forward to an increased expenditure, and have therefore resolved to make an eighth call of 5*l*. per share, to become payable on the 25th proximo; and they would beg to impress on the shareholders, that it is only by their cordial co-operation in paying up the calls promptly, that the Directors can bring their efforts to a successful termination at an early period. It will afford them the highest gratification if they shall be enabled to accomplish this before the next half-yearly meeting.

Balance Sheet of Income and Expenditure, to 31st December, 1840.

INCOME.

To amount received, per last statement....				£462,931	11	3
The following sums since received:—						
Arrears of equalising call on 138 shares.....	354	0	0			
Do. second call on 632 shares.....	3,160	0	0			
Do. third call on 763 shares.....	3 815	0	0			
Do. fourth call on 1,229 shares.....	6,145	0	0			
Do. fifth call on 1,564 shares.....	7,820	0	0			
Do. sixth call on 3,020 shares.....	15,110	0	0			
	36,404	0	0			
Amount of seventh call on 12,363 shares.....	64,266	17	6			
Cash in anticipation of eighth, ninth, and tenth calls.....	4,530	0	0			
Amount of loans.....	156 670	0	0			
Dirt; interest on calls	289	7	3

JOHN LEADBETTER,
ARCH. SMITH,
ALEX. DRYSDALE, } Directors.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the Proprietors of this Company, was held at the Bell Hotel, Gloucester, on Tuesday week, and was very numerously attended. Captain C. R. Moorsom, R.N., who has recently accepted the office of Chairman of the Board of Directors, presided.

The notice calling the meeting having been read by W. Burgess, Esq., the secretary, as also the minutes of the last general meeting, the latter were confirmed as a correct record of the proceedings. The common seal of the Company was afterwards, in accordance with a resolution to that effect, affixed to the register of Proprietors.

The Secretary then proceeded to read the following Report of the Directors:—

REPORT.

The Directors are gratified in meeting the Proprietors with the Line of Railway in complete operation between Birmingham and Gloucester.

The railway was opened in June last, between Bromsgrove and Cheltenham, a distance of thirty-one miles; a further distance of five miles to Cofton, was opened in September; the part between Cheltenham and Gloucester in November, and the entire line to Camp-hill, Birmingham, on the 17th December last.

The works on the extension running into the London and Birmingham Railway, are in a very forward state, and the junction is expected to be effected in three or four months.

The season of the year at which the complete opening took place, has operated much against the passenger traffic. The experience of all other Railway Companies has shown, that it requires time to develope the resources of these undertakings, and the Directors see no reason to alter the views they have hitherto conveyed in the revised estimates, as to the probable passenger traffic on this line.

The arrangements of the Company have not yet allowed of their conveying goods, except to a very limited extent; but applications have been received from the principal carriers, and they are prepared to commence using the railway whenever the Company can accommodate them. The arrangements for this purpose are near completion, and the Directors believe that in this branch of business the receipts will be large.

The Post Master General having required two night trains each way, for the conveyance of the Mails, they commenced running on the 6th instant, but owing to the unseasonableness of the hours, the number of passengers conveyed by these trains has been very small.

The account of revenue and expenditure appended to the Report, will show the amount of receipts for traffic to the 25th of December last, with the expenses which have been incurred. The latter have necessarily been heavy, in consequence of the circumstances attendant on the partial openings of the line.

The Proprietors will participate in the satisfaction felt by the Directors, that more than 120,000 individuals have been conveyed along the railway since it was opened, without the slightest accident to a single passenger. The earnest attention of the Directors has been devoted to the adoption and enforcement of regulations for the continued safety of travellers.

In the last Report the Directors stated that they had taken possession of the line between Cheltenham and Gloucester, under the arrangements subsisting between this Company and the Cheltenham and Great Western Union Railway Company, as settled by their respective Acts of Parliament; and that notwithstanding the extra expenditure caused by this circumstance, their calculations then led them to expect that the sum

Digitized by Google

which they were authorized to raise by the Act incorporating the Company, would be sufficient to provide the necessary funds for that purpose, as well as to complete the original works of this Company. They regret that these expectations will not be realized. The sum thus appropriated to the line between Cheltenham and Gloucester, makes a deficiency in the funds which were intended to be applied to the completion of the stations, together with the locomotive and carriage stock.

Should the Cheltenham and Great Western Union Railway Company, redeem, in the year 1845, their interest in the line between Cheltenham and Gloucester, a large sum will be repaid to this Company; but to meet the deficiency above-mentioned, the Directors recommend that this meeting should authorize them to borrow 60,000*l.* upon the loan notes of the Company, or in such other way as may appear to them most expedient.

The Directors have to regret the retirement from the Board, of Mr. Walker, and Mr. E. T. Moore, whose zealous and efficient services have been devoted to the interests of the Company, from the commencement of the undertaking, and they have also received within the last fortnight, the resignation of Mr. Garnett, who has found his residence at a distance incompatible with due attention to his duties; two of these vacancies the Directors do not think it necessary at present to fill up, but the Proprietors will be happy to learn that Captian C. R. Moorsom, R.N., has consented to take a seat on the direction, and has become chairman of the Board.

When Captain Moorsom was invited to join the direction, he deemed it right before he accepted the invitation, to communicate to the Board his views on railway management, suggesting that if the number of Directors was reduced to three, or five, each taking a particular department, and making himself responsible for the discharge of its duties, the system would be much improved both in energy and economy. In these views the Board concurred, and in consequence, four of the Directors have undertaken the care of different departments, with Captain Moorsom's assistance. They will act as a Committee, with the full power of the Board itself. This arrangement must be considered an experiment: should it prove successful, as the Directors confidently believe it will, the Proprietors may consider it expedient at some future time, to make a permanent reduction in the number of the Board.

Referring to the paragraph on the subject of Sunday travelling, in the last report, the Directors have to suggest to the Proprietors, that a Special General Meeting be held at Birmingham, on a convenient day, for the purpose of deciding whether any or what trains should run on Sundays, over and above the four now carrying the mails, under the orders of the Post Master General.

The CHAIRMAN rose and said, before he put the question as to the adoption of the Report, there was one subject referred to in it, upon which he wished to make a few observations. In the last paragraph but one, he was introduced to them as holding, at the present moment, a very responsible position, inasmuch as he had recommended an alteration in the mode of management, which had been acquiesced in by the Board, and upon which they were now about to act. So important a change certainly ought not to be attempted without the fullest explanation to the Proprietors upon the subject. It was not at all contemplated to ask for their collective opinion upon it now: but, of course, it would be open to every individual present to express his sentiments in reference to the alteration, and, if he thought fit, to ask the opinion of the meeting upon the subject; but the Directors did not require them to do so. It was expressly stated to be a trial—an experiment; and, at the end of six months, they would be able to speak more decidedly about it. But perhaps they would indulge him with a little more time, in order that he might explain to them the grounds on which he recommended this change; and he could not, he thought, do it better than by reading to them some letters which he had addressed to the Board upon the subject, and which would explain to them what he meant, and the manner in which he intended to carry out a plan, which the Board were unanimously of opinion, had, at least, fair grounds of trial. The letter which he held in his hand was dated the 14th of January, and was addressed to the Deputy Chairman and the Directors. It was as follows:—

To Samuel Bowly, Esq., Deputy-Chairman, and the Directors of the Birmingham and Gloucester Railway.

Gentlemen—The resolution conveyed to me by your deputation, (a copy of which I have since received) by which I am elected a member of your Board, requires on my part a respectful consideration; and I beg you to believe that I properly appreciate such a mark of your good opinion.

I had made up my mind, and had so expressed myself, that I would not become a member of another Railway Board under their present constitution, because I have found by experience that there is neither satisfaction to the public and the proprietors, nor credit to one's self, to be gained by being one of so numerous and irresponsible a body as Railway Boards are.

I have, however, been given to understand that my views of what railway management ought to be, may not be entirely repugnant to yours, and still more, that they may perhaps be found to be in accordance with the views of the proprietors of the Birmingham and Gloucester Railway.

I therefore told your deputation that I would put in writing, for your consideration, an outline of my ideas of a system of responsible management, in order to ascertain how far we may agree; for I should be doing more harm than good to accept a seat at the Board, unless with a reasonable prospect of the concurrence of my colleagues in the principles on which I have always acted, and by which I mean to abide.

I might have hesitated to take office in a Company in which a near relative holds so important a situation as that of Chief Engineer, if the approaching completion of the works in his charge did not remove the objection.

I have a fair stake in the Birmingham and Gloucester Railway, and a considerable pecuniary interest in railway stock generally; and I feel it to be a matter of the highest importance, both to the public and to proprietors, that railways should be managed on a system which shall make every man holding office responsible for his acts, which is by no means the case at present.

In such a communication as this, I must necessarily be very concise, otherwise I should have as much to say as would make a pamphlet.

I begin with Railway Boards. They are composed of too many members, very few of whom are able to give sufficient time and attention to details, and consequently they are too dependent on their officers. Responsibility is so divided, that an individual feels none at all. A large Board is either so confiding that it trusts one man with everything, or it is so jealous that it will trust nothing to any one. I do not know which produces the worst results; but both are productive of evil.

Again—A large Board is often led by a small party which gains the ascendancy, or it is constantly agitated by the struggle of parties for that ascendancy. In the first instance, the clique exercises large power, with no responsibility, and does things that otherwise would not be attempted. In the next instance, the course of the Board is marked by a want of consistency, which utterly precludes the adoption, by the executives, of a system of order and regularity, on which so much depends.

After much consideration, with ten years of experience in railway affairs, I do not see any useful purpose that can be answered by more than five Directors, and I would even prefer three, but I find opinions opposed to so small a number as three.

Supposing a Board of five Directors, I would divide the business into four branches, viz., coaching and carrying, locomotive power, maintenance of way and works, and finance; and assign to each Director the duty of making himself so far acquainted with the details of one branch as to be able to furnish the Board with all necessary information on the various questions that arise.

To the Chairman I would give a general superintendence, not with executory powers, but to know all that is going on.

Under such a system no highly paid officers could find place. The Directors would be masters of their own business, and would only require ordinary and steady men, as heads of departments, who would work contentedly for moderate remuneration.

I wish to avoid details, but I must just touch upon one or two points.

There is no part of the business of a railway that requires the vigilant control of the Directors more than the finance.

The spending of the money, and the accounting for it, should never be confided to the same persons.

The auditing of accounts should also be in hands independent of every authority but the Board.

In the supply and expenditure of stores, a very wide door is open to extravagance and waste, to say nothing of fraud, and it is obvious that the payments should not be entrusted to the same parties who order the articles. I find that my ideas as to a sound system for the check of abuses are generally admitted in private conversation, but that it is the most difficult thing in the world to get such a system carried into effect.

The looseness of management, the want of a due sense of personal responsibility, and the apparent indifference to the interests of the Company, which continually meet my eye, are to my mind the certain indications of defect in the superior authority. Many able and honest men are employed as treasurers, secretaries, and superintendents, and in other offices in railways, but it is little that an individual can effect in such situations against the prevailing current, and he at last finds himself quietly drifting with the stream.

The management of the locomotive engines, and the arrangement of their loads, is a subject requiring the greatest attention, in order to produce economical results.

From the investigation I have hitherto been able to make, I am led to the conclusion, that on the principal passenger lines, a saving of from 30 to 40 per cent. might be effected in the cost of locomotive power, as applied to passenger trains. But this depends quite as much upon the Directors as on their officers.

By this hasty sketch it will be perceived that I would call on the Directors to give more of their time and attention to the Company's business than is now generally practised, and I do not see how a really responsible system is to be carried on without it.

My impression is, moreover, that unless a direct individual responsibility be laid upon the Directors, the frightful injury to persons, and the loss of life, which have characterised the extension of railways, will not be prevented in future, and that they must be followed by an interference on the part of the legislature, which it is desirable not to provoke.

I am, indeed, of opinion that Parliament might, by laying down general regulations, and bringing all the railways under a uniform system as to principles, be of the greatest service to the Companies, as well as to the public, but I should by no means wish to see Parliamentary interference proceed the length of superseding the authority of the Directors on their respective lines, although I am favourable to the idea of a general surveillance and control.

I think I have now said enough to put you in possession of my views generally; and my acceptance of the office to which you have elected me, must depend upon two things:—

First,—Your being disposed to concur with me in giving effect to these views, so far as circumstances admit, and allowing a fair latitude for difference of opinion in details.

Secondly,—Whether a sufficient body of proprietors are disposed to call for my services, without which I should not be willing to make the sacrifice which the duties of the office would entail upon me.

I am, of course, aware that, to carry my views into complete effect, an amendment of the Act of Incorporation would be necessary, and that it must rest with the proprietors to decide on the expediency of such a measure.

If I am not misinformed, however, your Board appears to be more favourably circumstanced than any I know for adopting at once some such arrangement, inasmuch as the Directors resident in Birmingham, where the business is transacted, do not much exceed the number I have named.

The most material point is not, however, the specific number of five Directors, but the Directors should take upon themselves, and establish on all below them, a distinct, defined, individual responsibility, and arrange the business of the Company on a system which shall give that responsibility full play.

I am, Gentlemen, yours, very faithfully,
(Signed) C. R. MOORSOM.

Highfield, 14th January, 1841.

Of course, (continued the Chairman,) such a paper could not but raise many questions as to how the plan was to be carried into effect, and it accordingly led to two other letters, the first of which was dated the 25th of January, from which, however, he would merely read an extract.

I have no idea of Directors becoming executive officers, and no one is more decidedly opposed than I am to their giving any orders in their individual capacity, which is a practice that destroys the responsibility of the proper executives, and is entirely opposed to the division of duties I wish to see carried into effect.

My plan would, therefore, always comprehend a general executive officer, but then he must be strictly and properly executive, and not administrative, in his functions; and he must not comprise under his jurisdiction offiers which are intended as checks upon one another, for this would vitiate the principle of a check, and render it of no practical use.

Again: I do not expect the proprietors to be called upon to pay more to Directors than they now do, and I think if the sum now divided among a dozen or more, were allotted to five, it might be sufficient, with the other inducements, (viz., a man's own share in the concern, and the credit attaching to successful management, &c.,) to obtain from the five as much time and attention as are necessary."

The third communication was dated the 29th of January, and was as follows:—

I have supposed the business of a railway to be divided into four branches, viz., coaching and carrying, locomotive power, way and works, and finance.

I must now suppose that the Board would meet once a week, and that they would have before them such reports and returns from the several departments as would enable them to judge by results how matters are going on. The reports and returns would be casual or occasional and periodical, and they should be so made up as to give time for careful examination before the Board meets.

For example, there would be from the respective departments, weekly reports of casualties, and of injury to carriages, waggons, &c., to engines, &c., to tunnels, bridges, or culverts, excavations and embankments, rails, chairs, &c.; pay bills for wages, and general bills; monthly returns of carriages, waggons, &c., of engines, &c., under and wanting repair; of miles run by each carriage, waggon, &c., by each engine, &c., distinguishing whether with passengers, goods, or ballast trains; quarterly returns of repairs received by carriages, waggons, &c., by engines, &c., and an abstract of expenditure. From the coaching and carrying would be required also a weekly abstract of passengers, horses, goods, &c., conveyed by each train, and the average mileage; a comparison of tickets collected with the passengers, horses, &c., booked; and an abstract of the guards' time book. From the locomotive, a monthly return of coke and other materials used by each engine, and a weekly abstract of the engine-drivers' time book. From the way and works, a monthly return of their general state. From the finance, an attestation of the examination of the pay bills and gene-

Digitized by Google

tal bills, with their vouchers; an abstract of the checks to be drawn; vouchers showing how checks previously drawn have been disposed of; an abstract of the earnings of each train; a comparison of passengers, &c. booked, with the receipts; an abstract of accounts with each department; and a general abstract of receipts and expenditure. From the police, a return daily of the arrival of the trains at the several stations, and their departure therefrom; reports of occurrences and offences; and a weekly return of punishments.

I am only adducing these examples for the purpose of illustration, and not as comprising the whole business of the railway. Many persons may laugh at the idea of conducting business by reports and returns, and I should join with them at any one who proposes to confine the functions of administration to the examination and collation of documents only; but I do not exactly perceive how the affairs of a railway can be understood and conducted by Directors without the help of reports and returns. My idea of the duties of Directors is this: that they should know what is wanted, consider what ought to be done, give the proper orders, let the Executive carry them into effect, and then ascertain the results. With respect to the duties of the Executive, they can, in my opinion, be efficiently performed only by the parties undertaking them giving their whole time and services, and being subject to the Directors' supervision, or by such duties being the subject of contract under pecuniary penalties.

To the system of contracts I look as that under which railways will ultimately and most economically be worked, and then the duties of Directors will not be very burthensome. In the mean time, however, the Executive, to be responsible, must be under superintendence and control.

I suppose, then, the Board assembled—every member bent upon doing business, not getting over it—with the usual reports and returns on the table, besides a variety of other matter in the Secretary's agenda. The most convenient course would be, to assign to each member a particular subject for examination, and to hear his report on it, and then to deliberate and pass the necessary orders; and as men do best what they are most used to, it would be advantageous for the same parties weekly to recur to the same subject. Thus we should get each Director identified with a specific branch of the Company's affairs. It would interest him even as a mental occupation, and he would not confine his services to the Board room; he would not be satisfied without seeing and understanding somewhat of the things about which he has to read in the reports and returns, and on which his colleagues look to him for clear and precise ideas and matured opinions.

For example, the coaching and carrying Director would soon see by the returns what average number of passengers each carriage conveyed in each train, and he would thus judge whether due vigilance was exercised in limiting the trains to the number actually wanted, or whether empties were dragged about unnecessarily; he would also see by the miles run, whether the various vehicles were fairly worked, and by comparing the repairs received with the miles run and the average weight carried, he would judge of the relative construction of the carriages, waggons, &c.

In the same way the locomotive Director would, by the returns, trace each engine through its work, and at length obtaining, by means of the aggregate, an average of the whole, he could most conclusively pronounce, not merely on the good or bad management of the locomotive department, but on the general arrangements, whose results ought to be the giving to each engine of its appropriate load and work. Again, also, by comparison with other railways, he would get a tolerable notion whether on his the fittest engines were used.

I need not, I think, illustrate further the procedure of the Directors taking oversight of the way and works, and the finance.

I do not wish to contrast such a system as this with what I have seen and known; but I ask any man of sense whether he would trust his private affairs to five men thus acting, or to a dozen or two acting as he knows they do act?

You will observe I have introduced returns from the police, which I have not enumerated as a department. My reason for not classing the police as a branch of the business, because it is usually incorporated with the coaching department; I think, however, that it should be separate, and I prefer stating verbally my reason to writing them.

To the Chairman I would assign the oversight of the police, as well as to know generally the business of each department.

And now, as to the time and attention that would be required of a Director under this system. I think you can judge as well as myself; something would depend on a man's habits of business, and on his mental and moral qualities.

You will not fail to perceive that this plan not only does not involve any interference of individual Directors with the executive affairs, but that it provides for their obtaining information in the most unexceptionable manner, and by the most accurate method, and therefore allows no excuse for those indirect and very questionable means by which very active and very busy men of details, unacquainted with general principles, sometimes seek to inform themselves; on the other hand, it assigns to the executive officers their appropriate duties and proper sphere of action.

I am, dear Sir, yours, very truly,

C. R. MOORSOM.

S. Bowly, Esq.

The CHAIRMAN proceeded to say, that perhaps he ought to conclude here; but if it did not take up too much of their time, he should like to explain some points referred to in the paper dated the 14th January. But, in the first place, he would remark, that a requisition having been placed in his hands, signed by 48 proprietors, holding a large proportion of the shares of the Company, he felt it his duty to come forward and take the responsible post which he now occupied. He would now proceed to explain the manner in which he proposed to carry out the system, the outlines of which he had placed before them. The constitution of railway Boards appeared to him to be derived from the canal Acts, a vast number of Directors, varying from eight to twenty-nine, having to look after the interests of the proprietors; and in this respect they differed very materially from canal boards, the business of which (not being themselves carriers) was almost exclusively confined to receiving tolls, and accounting for the money to the proprietors. The average number of Directors upon the various railways, as far as he had been enabled to collect, was 15. There were upwards of 70 Railway Companies in Great Britain and Ireland, of which above 50 used locomotive engines, and there were upwards of 30 on which passengers formed the chief source of traffic. Now, these numerous companies were governed very differently, but so sensible were they all of the inconveniences arising from the number of Directors, that they resorted to every expedient to simplify the management; for example, on some, the treasurer, so called, was appointed by the proprietors, and not by the Directors; again, a general manager was often appointed by the Directors; and they found other Boards breaking themselves up into committees. Then again, these managers were sometimes secretaries, sometimes engineers, and, in two or three instances, men holding large establishments in other places were made principal managers of the railways. (Hear.) He need not particularise any of the evils which he had himself known and experienced from these different modes of management; all he would say was, that he conceived in the great requisites of management they more or less failed; that is, they did not provide for consistency of explanation, unity of action, or responsibility of execution. (Hear.) He had stated that the locomotive power on railways might be reduced very considerably in expense, (say from 30 to 40 per cent.,) as respected passenger trains; and in order that they might not suppose this to be a vague assertion, he would refer to a case in point, which had been made public since his letter had been written. The Liverpool and Manchester Railway, which was open about ten years, had effected in the last six months a saving of 32 per cent.; and the expense of locomotive power on the Grand Junction line had also been reduced 20 per cent. during the same period. He did not know from what source either of these companies accomplished this saving. The Liverpool and Manchester Company had tried the system of working engines expansively; to what extent it had succeeded he did not know; but if this system alone was adopted, he believed an important item of saving would be effected. (Hear, hear.) His own views were just these; from enquiries which had been instituted on the principal passenger lines, it had been ascertained that the engines were only drawing from two-fifths to three-fifths of those loads which they were capable of doing. He did not mean their theoretical capability, but that they were literally only drawing the proportions which he had stated, looking to the gradients, and all the other circumstances of the lines in question. Now the mean of these two-fifths and three-fifths was one-half; and if they contrived fully to load the engines, only one-half the number would be required, and the expense per mile was lessened in the like proportion. Now, taking into account the countervailing effects resulting from engines having full loads, and which admitted of great difference of opinion, ranging between 8 and 16 per cent., it would still leave a saving of 38 per cent., by giving them full loads instead of allowing them to go with one-half. For his own part, he did not see why this was not practical on most of the lines, but perhaps it might be disputed. It might be said that this was not the fact with respect to engines generally; in reply to which he would observe, that his calculations were founded on returns made to Parliament. But he would refer to an admirable work lately published, namely, "Whishaw's Railways of Great Britain and Ireland," in which the author specified, on a number of railways over which he travelled, the loads which the engines drew. He (the Chairman) believed Mr. Whishaw gave too much weight to the engines, and he differed with him in some cases to the extent of one-fourth; but even on his showing, the engines were drawing very far short of their loads on all the railways which he had enumerated. In order, however to put this beyond the possibility of cavil or question, he thought it would be useful if the different Companies would exchange with each other certain results, by which each would see what the other was doing. He held in his hand an analytical table of results of the workings of railways with which he had been connected, and it showed him, amongst other things, the mean number of tons drawn by every engine, and the mean speed, both with respect to passengers and goods. It showed also the quantity of coke consumed, and the exact expense of locomotive power for every article conveyed, together with the total expense and receipts, and of course the profits on each item of traffic. Perhaps it might be urged that the exposure of such things would prove disadvantageous to railway property. He could not think it. In the first place, these details could be got at approximatively by a more laborious process, and they would find something of the sort attempted in Paunbour's last edition of his work; but he conceived that it would be better at once to give them correct. The Chairman afterwards proceeded to observe, that it was questioned whether cattle or sheep would pay at the prices which drivers were willing to give, but the table to which he referred placed the matter beyond dispute. Some, too, might have seen a statement to the effect that it cost the Railway Company 18s. to convey a passenger between London and Birmingham, and elaborate statements had been gone into to show that such was the case; but the analysis which he held in his hand proved that passengers were carried for little more than half the cost. (Hear, hear.) There was one other point, which he knew was a delicate thing to touch upon—he alluded to the Bill before Parliament for the regulation of railways. No one who had read the report of the officers of the Board of Trade, could dispute the opinion which he would venture to give—namely, that they had made out a case against the Railway Companies. Thirty-five accidents in five months, of which 21 were attributable, amongst other causes, to defective arrangements, and 18 to the negligence of servants. He (the Chairman) would fearlessly say, as a Director, that if he had felt himself placed in that situation of individual responsibility which he was contending for, he should have felt ashamed of such a record; but he could not take, nor did he think any director could take, individually, the blame, because he considered it was the system, not the men, which was in fault. He had years ago expressed his opinion to many who now probably heard him, that Parliament would interfere, by stringent enactments, to prevent the recurrence of such lamentable casualties. He thought the present Bill went quite far enough in this respect; but if the same loose system went on, might they not expect that on other points Parliament would also find it necessary to interfere. Therefore, his observations were directed to this; as far as the Birmingham and Gloucester Company were concerned, they should endeavour to adopt a system of management which would leave the legislature no excuse for interference; and in his opinion, that system would be found in something like the plan which he now proposed. [The observations of the Chairman were very cordially received by the meeting.]

Mr. GREENE hoped it would not be considered improper to put a question as to the four Directors who had undertaken the management of the proposed plan?

The CHAIRMAN did not see any objection to giving them. They were Messrs. Daniels, Sturge, Gibbins, and Tymbs.

Mr. JOSEPH STURGE thought it would be interesting to the proprietors to know what was the total capital absorbed and actually expended.

The CHAIRMAN stated, in reply, that the sum already absorbed was 1,266,666*l.*

Mr. STURGE—And it is proposed to raise 60,000*l.* on loan. He wished the proprietors to understand that these two sums constituted the capital invested in the concern.

The adoption of the Report having been moved and seconded,

W. M. TARTT, Esq., of Cheltenham, rose to propose an amendment; and in order to prevent any misconception as to its object he would at once read it, and then as briefly as possible state his reasons for submitting it for their consideration. The hon. proprietor here read his amendment, to the effect that the Report and statement of accounts be printed and circulated amongst the proprietors, and that the said accounts, together with all matters of calculation brought before the meeting, be referred to a committee of auditors, who should examine into the same, and report the result of their investigations to the next general meeting. He was aware it had been said, that the very circumstance of proposing the appointment of auditors showed a want of confidence in the Directors; but this he could not admit. There was a wide distinction between a reasonable confidence in those who were entrusted with the management of their affairs, and a total indifference as to their proceedings; and unfortunately the latter was an extreme which railway proprietors had too frequently run into. That his motion involved no want of confidence in the Directors,

Digitized by Google

was shown by the example of many of the most prosperous railways, and of the most important corporations and societies of the metropolis. In fact, the necessity for auditors arose from the generally allowed fallibility of human nature. With the very best Directions possible, errors might and did arise in matters of calculation, and differences of opinion in matters of expenditure, which it was desirable to bring under some system of revision and correction. Neither was the principle of appointing auditors contrary to the constitution of the Company's charter, for by the 164th section of their Act it was provided, that if the accounts laid before the half-yearly meeting did not prove satisfactory, that meeting had power to appoint a Committee for their investigation. But this would be an invidious mode of proceeding, and he felt it due no less to himself than to the Directors to state, that his intention was not to cast doubt on the accuracy of the accounts submitted to them, but to show that from their very nature they required investigation. (Hear, hear.) At the first meeting which he attended, (in February, 1839,) it was stated, that upon a careful revision of the traffic a return of 12½ per cent. might be anticipated; and although the receipts were so small when the partial opening of the line was made, he was not disappointed, presuming that the Directors had good ground for what they then stated. But when at the meeting last August it was stated in their Report that the traffic on this partial opening "exceeded their most sanguine expectations," he began to suspect that there must be something wrong; and upon making inquiries upon the subject from the secretary, he found that the estimate had been founded upon a gross revenue of 130,000*l.* per annum. Now, taking this upon an original capital of 950,000*l.*, and deducting about 33 per cent. for expenses of working, it yielded very little more than 9 per cent.; and upon 1,400,000*l.* it would be little more than 6 per cent. He believed that he would have little difficulty in making his case much stronger, but it might seem unfavourable to the ultimate prosperity of the railway; and anything unfavourable would falsify his own convictions, for he felt satisfied that their undertaking was placed in such advantageous circumstances, that with proper management it would, at no distant day, yield the proprietors a dividend of from 8 to 10 per cent. (Hear, hear.) Again, as regarded the probable cost of the line, he had been officially informed at the first meeting that, including stations, it would not exceed 950,000*l.*; and upon reverting to the same subject the year following, he was told by the Chairman he was quite safe in saying that the works of every kind connected with the whole establishment would be kept 150,000*l.* within the powers given by Parliament. This was exclusive of the additional half of the line between Cheltenham and Gloucester, and without this would have made the whole cost something less than 1,117,000*l.* Six months after the chairman informed the meeting at Birmingham, that when closely pressed at a previous meeting he had stated there would be a surplus of 100,000*l.*, but it now appeared that (including the line from Cheltenham to Gloucester), the whole 1,266,666. would be absorbed, and they had just been informed in the Report that 60,000*l.* more would be required. (Hear.) He did not believe that the Directors had any intention of misleading the proprietors upon the subject; he was willing to admit that the information had been given in error, and that the board had been themselves deceived; but this only served, in his opinion, as an additional argument in favour of the measure which he suggested. Mr. Tartt here referred at length to the practice adopted by the Directors of the Grand Junction Company, two of whom were appointed to audit the accounts; and he called upon the meeting, as men of business and integrity, to whom the absent proprietors looked for the protection of their interests, to support him on the present occasion. The honourable gentleman, in conclusion, begged to assure the Directors that in bringing forward his motion he was actuated by no such paltry suspicion as to imagine that there was one single farthing in the accounts that had not been duly paid.

KINGSTON BAKER, Esq., of Cheltenham, seconded the amendment.

The CHAIRMAN said, that all must admit that the subject was a most important one, and he would be happy to hear the opinions of the proprietors in reference to the question. Having been but recently elected to the office which he had then the honour to fill, he was not of course prepared to go into the matters referred to by the mover of the amendment, but he had no doubt they would admit of satisfactory explanation.

Mr. TARTT replied, that what he found fault with was, that the statements noticed by him had been made so recently, within two years of the completion of the line, when it might be expected that the Directors would have been able to arrive at a more accurate approximation as to the actual cost of the works.

SAMUEL BOWLY, Esq., (Deputy Chairman,) observed that Mr. Tartt was in error in attributing the calculation of 12½ per cent. profit on the traffic to the Directors. That calculation had been made by parties appointed by the proprietors themselves, and did not emanate from the Board. It was almost impossible to tell what the cost of works of such magnitude would be, until they had been completed. As to the auditing of the accounts, he was quite prepared to support the resolution, because he believed the Directors ought to lay themselves open to the fullest investigation. All he feared was, that the system would not have the effect intended. The examination of accounts would not prevent the expenditure of money, the improper outlay of which he wished the proprietors to have full power to check. He hoped, however, that Capt. Moorsom's plan would go a great way to meet the difficulty.

Mr. WEEDON, one of the solicitors of the Company, wished to set Mr. Tartt right on one material point, namely, that the accounts were always audited by three of the Directors appointed for that purpose; therefore the Grand Junction Company were not singular in the adoption of the plan to which he had referred.

Mr. TARTT did not think it right to have the accounts audited by the Directors themselves and was anxious to have a permanent Board of Auditors appointed for that purpose, or in other words a Board of Control.

The DEPUTY CHAIRMAN thought there might be great advantage in the proprietors appointing their own Auditors; at the same time the matter should be limited, so that it might not be made vexatious to the Directors.

The CHAIRMAN, notwithstanding the disavowal of the mover of the amendment, threw out for his consideration, whether the proposition might not be considered tantamount to an expression of want of confidence in the Board. Being so recently elected, he did not, of course, feel a personal interest in the matter one way or the other.

Mr. TARTT, regretted if he had failed, in the observations which had fallen from him, to convince the Directors that he was actuated in the course he had adopted by no such feeling.

The motion was then put from the chair, and negatived; the numbers being—

For the amendment..... 16
Against it..... 28

The original motion was afterwards put to the Meeting, and carried unanimously.

A PROPRIETOR complimented Mr. Tartt on the very courteous and gentlemanly manner in which he had brought forward the subject, which, he assured him, had made such an impression on the meeting as would ensure a more general support should he bring the question before them on any future occasion.

Mr. TARTT felt persuaded of the advantages of which would result from the adoption of the course he had suggested, while he at the same time acknowledged that the admirable system they were about to adopt would render it less necessary.

JOHN HOMER, Esq., proposed a resolution for the raising of 60,000*l.* in the manner recommended in the Report. In reference to the expenditure, Mr. Homer observed that, if he was not mistaken, the first estimate did not include the expense of carrying the line from Camphill to the London and Birmingham Station; and if this were the case, as he believed it to be, it would account for the excess of capital, of which so much had been said.

Mr. HAINES seconded the resolution.

JOSEPH STURGE, Esq., also bore testimony to the handsome manner in which Mr. Tartt had brought forward his resolution, which, had he been a Director, he would have cheerfully supported. He believed if railways were to be useful to the proprietors, it must be by small boards such as Captain Moorsom proposed.

Mr. BAKER inquired whether the 60,000*l.* proposed to be raised on loan included the cost of the branch line to Worcester, the terminus at Gloucester, and also the terminus at Birmingham.

The CHAIRMAN replied, that all the Directors could say was, that 60,000*l.* was about the sum they should require. The branch line to Worcester the Company had no power to make; the additional capital was required for the stations and erections at both ends of the line. It was well known, however, that, as they advanced, things unfolded themselves which they could not foresee, and which, of course, formed no part of their calculations.

A PROPRIETOR wished to know whether the American locomotives came equally cheap with those manufactured in this country, and if not, what was the difference in the cost?

The SECRETARY replied that the cost of the American locomotives was considerably more than those made in England; but the company had engaged to take a certain number of the engines, on condition of their performing a certain amount of work on the inclined plane at Bromsgrove.

The DEPUTY CHAIRMAN added, that they did not intend to order any more of the engines, as they could have them made as well in England, and as cheap as the locomotives used on other lines.

The resolution having been carried, a desultory conversation ensued in reference to the question of Sunday travelling, when it was resolved that a special meeting should be held at Birmingham, on Tuesday the 23rd of March, to consider the subject.

JOSEPH GIBBINS, Esq., was then called to the chair, and the thanks of the meeting were presented to Capt. Moorsom, for the able and courteous manner in which he had presided over the business of the day.

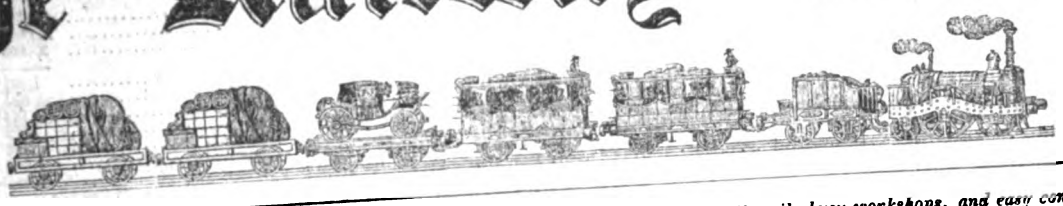
Capt. MOORSOM, in acknowledging the compliment, assured the meeting of his entire devotion to their interests, and expressed a hope that they would soon see the Birmingham and Gloucester Railway what he believed it had the means of becoming—a profitable concern.

NORTHERN AND EASTERN RAILWAY.—THE FLOODS.

AT a meeting of the Commissioners of Sewers for the Half-hundred of Becontree, at the Angel Inn, Ilford, on Saturday last, Mr. Bosanquet, Chairman, Mr. Sterry read a letter, signed by Messrs. Burges and Walker, surveyors to the Commissioners, from which it appeared that, in consequence of several complaints forwarded to Sir John Pelly, Chairman for that division of the county, of the obstruction to the usual flowing of the waters in the Walthamstow and Layton Levels, by the embankments of the Northern and Eastern Railway, an inquiry and investigation took place, by which it was ascertained that the railway embankments so headed the waters as to cause them to be 18 inches deeper on one side of the line than another; and the consequence was, a considerable degree of damage to the property so deeply inundated. The letter further went on to state, that a verbal application had been made to Mr. Stephenson, the Company's principal Engineer, on the subject, and concluded by requesting Mr. Sterry would adopt such measures as the urgency of the case required, as the Railway Company could at present remedy the evil at a much less expense than they could at a future period.

Mr. BURGES said, he was present when the application was made to Mr. Stephenson on the subject, and that gentleman said he knew nothing about it himself, but would make inquiries as to it.

The CHAIRMAN observed, that by a clause inserted in the Company's own Act, and which had been so inserted through the exertions of Mr. Bramston, one of the members for the county, the Commissioners of Sewers had the power, on information of the fact being laid before them, to inflict a penalty of 100*l.*, he thought it was an hour, for every inch of water found higher on one side of the railway than on the other.



Mr. STERRY said, he had not the Act of Parliament with him; but, as far as he could recollect, the penalty was 5*l.* an inch per hour.

A COMMISSIONER remarked, that even by the lesser sum, the penalties, if enforced, would be enormous; and after a lengthened discussion it was decided that Mr. Sterry, as clerk to the Commissioners, should at once write to the Secretary to the Company, apprising him of what had been brought under the notice of the court, and requesting that he, or some authorised officer of the Company, would attend before the Commissioners at their next meeting, when they would go into the whole particulars as to the obstruction, &c.—*Essex Mercury.*

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.

—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841.

BRISTOL AND EXETER RAILWAY.—CONTRACT FOR WORKS.

—Notice is hereby given, that the Directors will receive, at their Office in Broad-street, Bristol, on or before Friday, March the 19th, at Twelve o'Clock, TENDERS for the execution of the several works comprised in Seven Contracts, extending from the station at Bridgewater, to the proposed station at Taunton, a distance of eleven miles 35 chains. These Contracts comprehend the entire completion of the Works, including the Ballasting, but exclusive of the laying the permanent rails.

Drawings and Specifications will be exhibited on and after Monday, February 15th, at the Resident Engineer's Office, Coronation-road, Bristol.

Printed Forms of Tender may be had at the same place, and at the Company's Offices, Broad-street, Bristol.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office in Broad street, Bristol, at Twelve o'Clock on the said 19th day of March.

J. B. BADHAM, Secretary.

Bristol and Exeter Railway-office, 30, Broad-street, 5th Feb., 1841.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.

—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the rates and tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford on Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the
SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

DIRECTORS.

Major Adair, H. E. J. C. S.	Henry Philip Hope, Esq.
F. Roubilliac Conder, Esq.	P. J. Mc Dougall, Esq.
Andrew Drummond, Esq.	George Mackintosh, Esq.
A. Earle, Esq., R. A.	P. Morrison, Esq.
Alex. Galloway, Esq., C.E.	C. Norris, Esq.
John Hamilton, Esq.	William Shaw, Esq.

Solicitor—Edward M. Elderton, Esq., Queen-square, Bloomsbury.

Honorary Manager and Parliamentary Agent—W. S. Northhouse, Esq., 4, Parliament-street.

Provisional Secretary—Lieut. Buckler, R.N.

The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the preemption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

LOCOMOTIVE ENGINES.—FOR SALE, THREE LOCOMOTIVE ENGINES and TENDERS, most substantially made and highly finished. Cylinders 12 inch diameter, with 5 feet driving wheels, adapted to the usual gauge.

Apply to Mr. Humphreys, 6, Holland-street, Blackfriars.

EDINBURGH AND GLASGOW RAILWAY.—EIGHTH CALL OF £5 PER SHARE.

—Notice is hereby given, that in pursuance of a Resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further Instalment of £5 per Share (making £40 per Share paid up) on or before Tuesday, the 23rd day of March next, to any of the under-mentioned Bankers:—

Glasgow ..... The Glasgow Union Banking Company.
Edinburgh .... The National Bank of Scotland.
Do. .... The Western Bank of Scotland.
Liverpool ..... The Bank of Liverpool.
Manchester .... Messrs. Wm. Jones, Loyds, & Co.
London ..... Messrs. Glyn, Halifax, Mills, & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
7, North Queen Street,
Glasgow, 27th February, 1841.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.

—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

RAILWAYS.

—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

WATERPROOF LUGGAGE COVERS.

—Manufactured by JOHN EMES, (late Milton and Co.), Cut Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Cornfactors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roofs. Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Coverings. Rick Cloths, Poles, Blocks, Cordage, &c.

LONDON AND CROYDON RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Proprietors of this Company was held on Tuesday, at the London Tavern, Bishopsgate-street; WILLIAM ARTHUR WILKINSON, Esq., in the Chair.

The advertisement calling the meeting having been read, it was resolved unanimously, that the common seal of the Company be affixed to the register of proprietors, which was done accordingly, in presence of the meeting.

The SECRETARY (R. S. Young, Esq.), then read the Report of the Directors as follows, a printed copy having been given to each proprietor on entering the room:—

REPORT.

GENTLEMEN,—In presenting the accounts of receipts and expenditure of your Railway for the past half-year, your Directors have for the first time made the traffic chargeable with the whole amount of maintenance of way, which item of expense has necessarily been heavy on account of the new state of the earthwork. They have on the other hand been induced to transfer, for the present, to the capital account, the whole of the interest on the bonded debt; and as this charge will be met in future by tolls, and by funds to be received from the Brighton and Dover Companies, in respect of the remainder of the money due for the purchase of the joint station at London Bridge, it is presumed no inconvenience will arise from adopting this course.

The working of the Railway is thus exhibited simply without any reference to interest upon capital expended, and the result is a trifling profit upon the half year, after deducting all other charges. A certain sum for depreciation of stock will have to be reckoned against the accumulation of the traffic fund thus relieved from the charge for interest of debt, with which it was formerly encumbered.

Upon a comparison of these accounts with those of the corresponding half year, ending January 1840, it will be observed, that there has been a slight increase of all the items of receipt, together with a saving of duty to the Government, and toll to the Greenwich Company—

That while the receipts from passengers have been greater by	£353 12 2
The toll to the Greenwich Company has been less by	507 4 10
And the duty to the Government has been less by	159 13 5
And that the Company has, consequently, benefitted to the extent of	£10,20 10 5
Add to this increase of receipts for goods	10,46 13 8
And increase from arrears of rebts, &c.	346 19 9
In all, gross increase of receipts, and savings of toll and duty	£2,414 3 10*

On the other hand the expenditure, even without reckoning the maintenance of way, and principally irrespective of the larger receipts, has been in a slightly greater proportion, but it must be considered that a comparison of the third half year's expenses, when repairs and refits become extensively due, with those of the first half-year, when all is new and freshly furnished, cannot be justly instituted. For example, we find that clothing for the men, (provided originally in the outfit)—repairs of engines and of carriages, advertisements, the greater part of rates and taxes, expenses of Direction, &c. are items which, although likely to form permanent half-yearly charges, have little or no place in the first half-year's accounts. Those expenses, however, having now in all probability, nearly reached their maximum, are not likely to be much increased when the traffic upon the line shall be doubled or even trebled.

Taking this view of your affairs and bearing in mind that as respects ultimate profits, your line can only be considered as a part of other and longer lines, your Directors see nothing but encouragement in your prospects for the future; nor do they believe that the first ten miles of any long line has ever been opened with better results or more promising anticipations.

At the same time it is to be hoped, and perhaps expected, that the Croydon traffic alone should do something more than pay its own expenses. Your Directors do not think that such diminution of the accommodation at present afforded to the public, as must be the consequence of any considerable reduction of your expenditure, would be productive of a larger net return; on the contrary, they adhere to the opinions expressed in their late report to the Special General Meeting of December last, that increased facilities, and reduction of fares, are the means most likely to lead to a remunerating revenue. But as the same obstacles to a full trial of this experiment continue to exist, your Directors have determined, so soon as the season shall be sufficiently advanced, to attempt an increase of traffic by a reduction of fares upon that part of your line which is in great measure independent of the Greenwich Railway, and should these anticipations be realised, it may become a question whether they should not recommend to the proprietors to render their traffic still less dependent, by endeavouring to obtain a good road from Corbett's lane to the Bricklayers' Arms in the Kent Road, which would materially lessen the distance to the western parts of London.

In reference to the toll question, your Directors feel bound to notice the following paragraph in the late Report of the Greenwich Directors:—"But your Directors considered the scale of tolls offered as too low, in proportion to the fares and they think no stronger proof of this could be required, than the fact that the Croydon Board were unwilling to allow the use of their line from Corbet's-lane to New Cross on the scale they had themselves suggested; and they even refused to allow the use of it at the same rate per mile as they now pay this Company—a toll which the Croydon Directors consider too high."

Now this is meant to imply that the Directors of the Croydon Company, sought to obtain from the Greenwich Company, the acceptance of a toll, which, under similar circumstances, they refused to grant. In proof that this implication is incorrect—your Directors need only refer to the following paragraph which occurs at page 25 of the correspondence which they have already published:—"should the Greenwich Directors, however, in order to remedy this inconvenience, be disposed to run their trains throughout to Croydon, the Directors of this Company will be perfectly ready to facilitate such an arrangement, by the acceptance of tolls for the use of their railway, graduated upon precisely the same scale as that which they proposed to the Greenwich Directors, for the use of the Greenwich Railway."

It will be seen from this paragraph, and indeed from the whole tenor of the correspondence, that the inference of the Greenwich Directors is at variance with the fact, and that the Croydon Board have never "refused to allow the use" of their line, or any part of it, upon terms consistent with their object, which was, and is, to establish a low rate of fares between London Bridge and Croydon, and to divide the net proceeds thereof between the two Companies, in proportion to the length of line appertaining to each, in respect of which such fares are charged.

Your Directors have received, in due course, from the Brighton and South Eastern Companies, the first instalment of the purchase money for their portion of the London Bridge station, and by this means have been enabled to liquidate the greater part of the outstanding claims of contractors and others, employed in the original construction of the railway, and this result has been thus accomplished without any further call upon the proprietors, as was partly anticipated in the Report of last March.

The earthwork upon your line still continues in an unsettled state, but upon this subject and that of the materiel of the railway generally, we have thought it best to call for a Report from your Resident Engineer, which is submitted herewith.

The Directors who go out by rotation agreeably to the Company's Act of Parliament, are Frederick Roberts, and John Lawrie, Esquires, who are proposed as Candidates for re-election.

Thomas Goldsworthy, Esq., one of your auditors, having disqualified, Charles Sedgfield Crowley, Esq., of Croydon, has been nominated by two proprietors to fill the vacant office.

WILLIAM ARTHUR WILKINSON, Chairman.

* As prepaid and annual tickets are included in this statement, some deduction should be made for duty and toll on their account.

ENGINEER'S REPORT.

Engineer's Office, New Cross, March, 1841.

To the Directors of the London and Croydon Railway.

Gentlemen,—I have much pleasure in reporting to you the generally efficient condition of your works and establishment.

The bad weather during the half-year has demanded the most careful attention to the maintenance of the permanent way; a large proportion of the expenditure in this department is due to the continual subsidence of the Black Ditch Embankment, and to the extensive slips which have occurred in several parts of the cutting, between New Cross and Forest Hill, which, besides the cost of removing earth, have considerably increased the necessary drainage, righting, and ballasting for the whole length of the cutting.

The wear and tear of the locomotive engines has required a greater outlay in wages and materials than was incurred by them when new. No effort has been spared to keep the engines and carriages in complete working order, and rapidity, safety, and regularity, have by this means been attained.

I have the honour to be, Gentlemen,

Your most obedient servant,

CHARLES HUTTON GREGORY,
Resident Engineer.

Statement showing the Capital of the London and Croydon Railway Company, under the powers of their several Acts, to January 31, 1841.

Examined
WILLIAM BOLD,
HENRY TUDOR, } Auditors.

The CHAIRMAN said, in rising to move that the Report be received, adopted, and as usual printed for circulation among the proprietors, he would not detain the meeting by more than a very few remarks. In the first place with respect to the accounts, he hoped it would be considered that they were very fully rendered, but if any further explanation were required, the Directors would feel much satisfaction in giving it. There was one item in the capital account which he wished to notice, namely, the item of 43,000*l.* for "shares not raised." He begged to say, that no vote of the proprietors had as yet been taken as to these shares, and of course they could not be issued without such vote. He hoped that it would never be necessary to issue them, although it had been deemed desirable when they were before Parliament that power should be taken for that purpose. With respect to the expenditure of the Company, it certainly was large. The Croydon Railway was naturally and necessarily a very expensive line. There was an inclined plane for one-third of its entire length, and no fewer than five stopping places, rendering the employment of a larger number of clerks and servants necessary than if the stations were less numerous, and involving a greater expenditure of fuel, and an increased wear and tear of machinery. The Directors believed, that the only way in which the expensive character of the line could be fairly met was by bringing a large traffic upon it, for although at present the earlier and later trains were well filled, the intermediate trains were *not*, although the expenses were in either case pretty much the same. His own opinion was very decided, that the way to attract a large traffic to the line, was by low fares. At present the charges by the Croydon railway were very nearly the same as by the conveyances on the common road; but if they were at liberty, which they were not, to reduce them as low as they ought to be reduced, he had little doubt that the railway might be made to pay from its own traffic alone, without respect to that which would be derived from the long lines in connection with it. All experience was in favour of the principle of low charges, more especially in such localities as that of the Croydon Railway. The public in travelling to Birmingham by the highway, expected to pay at the rate of 3d. per mile, but if to Croydon at the rate of 2d., or taking any of the suburban omnibusses at a rate even as low as 1½d. The reason of this was obvious. It was not that horses were cheaper in London or Croydon than in Birmingham, or that the expense of keeping them was less, but because in the one case the population who might be reckoned upon as certain to avail themselves of travelling facilities, was so much greater than in the other. It, therefore, the principle of large numbers with small individual charges were found to answer with horse coaches and omnibuses (and if it did not answer it would not be persisted in) where a double traffic involved to a great degree a double expenditure, much more was it applicable to railways, where the cost of working remained almost the same whether the number of persons con-

Digitized by Google

veyed were large or small. In this case they had, as it were, London at their back, and it was necessary only that the capabilities of the line should be developed. On the subject of low charges, he begged to call the attention of the meeting to an article which appeared in a recent number of the *Railway Times* with respect to a reduction of the toll on Waterloo Bridge. The honourable gentleman here read as follows :—

"On Monday last it was determined at a meeting of the proprietors and inhabitants of the Waterloo Bridge Company, that the tolls to foot passengers over that noble structure, shall, on and after Monday next, be reduced from a penny per passenger to a half-penny. The alteration is adopted avowedly as an experiment, for the purpose of ascertaining whether greater profits will not accrue to the Company from a larger number of passengers at a reduced price than from a smaller number at a higher rate. The matter does not fall directly within our sphere, but as an illustration of the results of high and low charges, the following facts, brought forward at the meeting, may be interesting to those who, like ourselves, are advocates of low fares on railways:—

"When a charge is reduced unreasonably (like the postage to Ireland) it diminishes the revenue; but when it is reduced about one-half (as in the range of the late twopenny post) it adds greatly thereunto.

"Forty times more letters pass through the offices of Stroud and Nailsworth, since the postage was reduced from 4d. to 1d.

"The reduction of duty on spirituous liquors has added greatly to the revenue.

"There are 140,000*l.* weekly papers at 1d. or 2d. each, but there were not 1,000 when each cost a shilling.

"The railway charge from Ghent to Brussels was lowered half, which increased the revenue threefold.

"The visitors to the Tower are ten times more now the charge is only 6d.

"The omnibuses at 6d. carry a hundred times more persons now than while charging 1s.

"The toll-bridge at Rouen pays 6 per cent. on its outlay, besides an annual sum for its repairing fund; and through between two free bridges, it has three times more passengers than both of them together, although they are only 400 yards off; and it is solely because the work-people can afford to pay a centime.

"When the penny toll at Richmond Bridge was lowered the revenue doubled immediately, and quadrupled in three years. Thus a half-penny toll brought eight times more people than a penny toll."

From these facts, it seemed clearly proved that a reduction of charge was extremely politic; but unfortunately in the case of the Croydon Railway, there were obstacles in the way of fully carrying out so desirable an arrangement. One of these obstacles was the Government tax, and another was the Greenwich toll. He hoped that Government was too enlightened long to continue an impost which pressed so hardly upon some of the Companies, and which as was shown by the experience of the Croydon Company, led to a loss on the part of the State. He trusted, therefore, that they would soon see some alteration effected in the mode of raising the railway duty. He wished he could say that the same enlightened views were likely to guide the other parties. The Directors of the Greenwich Company appeared to have taken up an opinion that a toll of 4½d. was 50 per cent. better than a toll of 3d., but nothing could be farther from the truth; and the Croydon Company had shown that the Greenwich had incurred a loss of 1,000*l.* a-year by insisting upon such a charge per passenger as compelled the raising of the Croydon fares. The number of passengers carried over the Croydon line during the last six months had exceeded 200,000, which was nevertheless 50,000 less than during the corresponding period of last year, when the fares were lower; and surely it would have been much better for the Greenwich Company to have lost say one half-penny upon each of these 200,000 passengers, than to have lost 3d. upon each of the 50,000, even supposing that the number of passengers had not increased this year, as there was every reason to believe would have been the case had the fares remained unaltered. He believed the Greenwich Directors had committed themselves to the principle of a high toll by going to Parliament for power to charge 4½d. for the new lines, and that they did not like, therefore, to adopt any modification of the existing arrangement. It was true that at last they had given their consent to a principle of graduation, but it was founded upon the assumption that because the Greenwich line had cost more than the Croydon, the Greenwich Company ought therefore to receive a larger proportion of the receipts—in fact, 25 per cent. more than the Croydon Company—a demand which entirely prevented the Directors of the Croydon Company from carrying the matter further. The Croydon Board were of opinion that the railway having been made and paid for, the only consideration ought to be how it could be rendered most profitable, and that this could not be done except by enticing large numbers upon it. That the Greenwich Company had a right to a large revenue from their line they did not attempt to gainsay, but they thought that the way to do this was to adopt some such course as was then pointed out.

Mr. BOLD said, the public had nothing whatever to do with the first cost of a railway.

The CHAIRMAN said, it was precisely so. The great cost of a line might be a sufficient reason why it ought never to have been constructed, but having once been constructed, the original expenditure became no element in the calculation as to the charges which would be most remunerative.

Mr. BOLD observed, that the public would only pay for being carried a mile, without considering or caring how much that mile might have cost.

The CHAIRMAN concurred in this view of the case, and then adverted to the misapprehension, or rather he would call it the mis-statement, which appeared in the Report of the Greenwich Directors as alluded to in the Report which had just been read. The Greenwich Directors had wished to persuade the Croydon Board to carry the public from Croydon to New Cross at low fares, so as to enable the Greenwich Company to charge a high rate for conveying them from New Cross to London Bridge. He had nothing further to add, except to echo the opinion contained in the Report that the Company's prospects were good. They might perhaps be better if the sole control of the rates of charge were vested in themselves. He had no doubt that if it were attempted by the Greenwich Company to levy the 4½d. toll when the new line came into operation, a great part of the long traffic would be stopped at New Cross, and it might then become a question for this Company whether they ought not to co-operate in the making of a new road from Corbett's-lane—he said Corbett's-lane in preference to New Cross, as being nearer to the west end of town, and at the same time bringing another mile of the railway into use. (Hear, hear, hear.)

Mr. BAILEY inquired whether by a new road was meant a railway or a carriage road.

The CHAIRMAN could not precisely say, but he supposed a carriage road would be sufficient.

In answer to questions it was stated that there was no house property upon the proposed line of road, and that the property belonged almost exclusively to one individual whose interests would be greatly promoted by the proposed improvement.

Mr. MAUBERT, in seconding the adoption of the Report, said he differed very much from the Chairman as to the policy of low fares. He thought the principle of low fares might be carried too far. (Hear, hear.) He was of opinion that nothing could increase the productiveness of the line but a larger population in the district through which it passed, and he had no doubt that this would soon take place. The state of the money market had of late been most unfavourable to building speculations, but ere long he hoped to see an alteration in this respect, and then the Croydon traffic would pay of itself. At present they must depend upon the distant traffic, and he hoped that when they met in October next they would be able to form some idea of their probable receipts from one branch of such traffic. In a year and a half the Dover traffic would be available, and the result he had no doubt would be all they could desire. (Hear, hear.)

Mr. LEVY said he was somewhat conversant with the effect of tolls and fares, and his opinion was, that if the charges had been lowered upon the Croydon Railway during the months of December, January, and February, the number of additional passengers would not have produced 10*l.* (Hear, hear.) In summer it might do very well; but as nobody went to Croydon in winter except on business, he thought that a permanent lowering of fares would not produce so much money. (Hear, hear, hear.) He was sorry to find that the principal business at the meetings of the Croydon Company seemed to be to find fault with and abuse the Greenwich Directors. (Hear, hear.) He regretted to hear the Chairman sneer at their intelligence—

The CHAIRMAN begged pardon. He had said nothing about their intelligence. He had only expressed regret that they were not actuated by more enlightened views.

Mr. LEVY had no doubt that the Greenwich Directors meant well, and certainly it was not the way to bring them to better terms to abuse them. They were making the best bargain they could for their constituents, and ought not to be blamed. As to a road from Corbett's-lane, that would be a matter for future consideration. The Chairman had remarked that the line was an expensive one to work. He believed it was so, and as it appeared that two Directors were going out of office that day, the best thing they could do would be not to fill up the vacancies, and thus save something in expenses. (Hear, hear, and a laugh.) He thought they had a sufficient number of Directors without these two, and if any one would support him, he would move a resolution to that effect.

Mr. POLLARD said, the experience of the Greenwich Company who had taken 80,000 more passengers upon lowering their fares, and yet lost 100*l.*, did not say much for the policy of very low charges, and the experience of the Croydon Company itself was very similar. At any rate, they were making more profit now than they made when the charges were lower. It was the wish of all parties to render the undertaking as productive as possible, however they might differ as to the most efficient means. (Hear, hear, hear.) They had tried one scheme and not succeeded, and he thought it would be folly to return to it. It was quite clear that the Greenwich Company would never consent to have their revenue diminished.

The CHAIRMAN begged it might be clearly understood that the Croydon Board never wished the Greenwich Company to submit to a reduction in the aggregate amount of their income from tolls. They only wished that the charge should be so modified as to enable this Company to carry out their own views. They said to the Greenwich Directors—"We know that the plan which we propose is in some measure an experiment, but we are pretty confident of its success. We believe that it will benefit you as well as ourselves, but at any rate we will guarantee you against loss." (Hear, hear, hear.) They had endeavoured to induce the Greenwich Directors to consent to a modification which *might* have done them good, and *could not* have done them injury. When the Croydon fares were lower, the Greenwich toll used to be about 20 per cent. of the gross receipts; it was now about 17 per cent. The Board therefore said to the Greenwich Directors—"We have shown you that you cannot get more than 17 per cent. of our receipts, if we so choose; will you accept that proportion as the maximum, with what we conceive to be an excellent chance of bettering yourselves?" The Greenwich Directors, however, would not consent to the proposal, and therein, as he (the Chairman) believed they had overlooked their own true interests. The reason why this matter was so often brought before the half-yearly meetings was because it was a point of vital importance.

After some desultory conversation upon this subject,

Mr. POLLARD said, he perceived that the cost of working the Croydon line was nearly 100 per cent. on the gross receipts.

The CHAIRMAN regretted to say that such was the case, and *that* was the principal reason why he was so anxious for a reduction of fares. If they could double the present number of passengers, the cost of working would of course be reduced nearly 50 per cent., as the expenditure would not thereby be much increased.

[Mr. Adams here began to ask questions which gave rise to considerable confusion. It will be recollected that at the last meeting it was resolved that certain questions put by Mr. Adams should not be answered; and it seemed to be the opinion of

Digitized by Google

the Chairman and others that similar questions were now to be repeated. Some warm words therefore took place, the Chairman conceiving that imputations were cast upon the Directors, and Mr. Adams appearing to think that an attempt was made to put him down by clamour. Ultimately a better understanding was come to on both sides. The following are the principal points upon which information was elicited.]

Mr. Adams inquired if the item which he saw in the accounts of 3,705*l.* "for earthwork," had reference to new works or old.

The Chairman said, it was in payment of an old account, and had been included in the present balance sheet because made during the last half year.

Mr. Adams—Is the whole of it of that character?

The Chairman—The whole of it.

Mr. Adams called attention to the item of 504*l.* for "slips and drainage." Was that the whole of the sum expended under this head during the last six months?

The Chairman referred to Mr. Pulford, the Company's accountant, and that gentleman said it was.

Mr. Adams had been almost daily upon the line, and from the number of labourers employed he had conceived that the expenditure under this head had been much larger.

Some further questions were put by Mr. Adams, who then went on to say that the railway had been worked at a loss.

The Chairman said, the line had paid every expense except the interest on the borrowed capital and left a small balance in hand.

The motion for the adoption of the Report was then carried unanimously.

The Chairman said, he would propose the next resolution (for the re-election of Messrs. Roberts and Lawrie) in order that he might give some explanation as to his views on the subject of Railway Boards. He did not think that it was competent for the proprietors to omit filling up the two vacancies as an honourable gentleman had proposed, although he was ready to admit that the number of Directors in most, if not all, railways was too large. (Hear, hear, hear.) He had conversed on this subject with many members of Railway Boards, and the opinion seemed to be universal, that one of the greatest obstacles in the way of efficient Management was the numerical force of Directions. This subject would soon press itself upon the attention of railway bodies, as it had already done upon that of the Great Western Directors, who were, he understood, taking steps to reduce their number. In the Croydon Company, the evil was less felt than in some others, because, in the first place, the number was not so large, and, farther, the greatest harmony and unanimity characterized their proceedings. (Hear, hear, hear.) Most of the proprietors had, he supposed, seen in the *Railway Times* of last week, a notice of the meeting of the Birmingham and Gloucester Railway Company, and had read the statement put forth by Captain Moorsom upon this important subject. (Hear, hear.) He (the Chairman) had not had an opportunity of ascertaining what were the sentiments of his colleagues at the Croydon Board, in reference to the views developed by Captain Moorsom, but for his own part he concurred almost entirely in the sentiments of the gallant Captain, as explained in the letter laid before the meeting. (The honourable gentleman here read several extracts from the letter which will be found at length in our Supplement of last week.) As he had already said, there was little practical difficulty at present in the case of the Croydon Board, but if any considerable proportion of the present members were to retire, they might perhaps be succeeded by others who would not act so harmoniously in concert with their colleagues as the existing Board. It was not the allowance of 62*l.* 10*s.* a year which could tempt any of them to fill so arduous and so responsible an office; it was the pleasure and pride which were to be found in successfully managing an undertaking of this nature that were the grand incentives to labour. (Hear, hear, hear.) It was for the proprietors to judge in how far the Directors of this railway had been successful in their management of its affairs, but he had no hesitation in saying that what had been done had arisen from the circumstance that the plans of the active Managers had not been interfered with by a too numerous Board. If the proprietors thought that the number of Directors ought to be reduced, and obtained power to carry out their views, he (the Chairman) was quite willing to resign his seat, and so he was sure were his colleagues, but at present he feared that the vacancies must be filled up. As respected the individual gentlemen whom he now proposed for re-election, he was happy to say that there could not be more efficient members of a Railway Board than they had proved themselves to be. (Hear, hear.)

Mr. Bailey expressed a hope that in the general Railway Act now before Parliament, power would be granted to any Company to reduce the number of their Directors should they think fit to do so.

The Chairman concurred.

Mr. Bold seconded the motion for re-election, paying a compliment to Mr. Roberts's ability and zeal. The other candidate, he said, he did not know.

Mr. Pare (of Birmingham) enquired what there was in the Croydon Act which should prevent them from reducing the number of Directors, as in the case of the Birmingham and Gloucester Company.

The Chairman did not understand that the number of Directors in the Birmingham and Gloucester Company had been reduced, but that a certain number had been, so to speak, placed in abeyance to wait the result of the present experiment, and that if that experiment should succeed, a permanent reduction would take place under Parliamentary sanction.

Mr. Pare said it had been determined by the Directors of the London and Birmingham Company not to fill up certain vacancies at their Board, caused by the death or resignation of members, and he thought the same course might very properly be pursued in the present instance. To have eight Directors for only ten miles of railway certainly appeared too much. (Hear, hear.) He thought they ought to commence the work of reduction at once.

The Chairman thought it would be dangerous to leave out any two Directors at hap-hazard, as probably these two might be two of the most efficient men at the Board. (Hear, hear.) If the number must be reduced as he certainly thought it ought—it would, in his opinion, be better to leave to the Directors which of their number should retire.

Mr. Pollard said, it was very generally rumoured that some of the Directors did not attend the meetings of the Board. If it were so, and the present candidates or either of them came under that description, they or he ought to retire at once. (Hear, hear, hear.)

Mr. Pare would not press the subject if he were given to understand that the two gentlemen now nominated were pretty regular in their attendance at the Board. No blame might be justly attributable to them even if they absented themselves, but he thought that the name of any gentleman as a Railway Director who was so only nominally had a tendency to mislead the public and the proprietors, and ought to be withdrawn. (Hear, hear, hear.)

The Chairman said, it would be very invidious for him to state the number of attendances at the Board of individual members, but he might say thus much that one of the candidates (Mr. Roberts) was the highest but one, and that there were three Directors whose attendances had been less frequent than those of the other.

It was subsequently explained that Mr. Lawrie had attended the Board 24 times during the half year, the greatest number of attendances being 31.

Mr. J. L. Ricardo (a Director) said, it was useless to conceal the fact that he was one of those Directors whose attendances had been unfrequent; and although he did not think that attendance at Board meetings was the only means whereby a Director could promote the interests of a railway, he was quite willing to retire, and in fact would have done so long ago had no this colleagues pressed him to remain. He conceived that his attendance or non-attendance was an affair between him and his colleagues rather than between the Board and the proprietors at large. (Loud cries of "No, no.") He certainly thought that if the proprietors did not find fault with the measures of the Board—and that they did not do so in the present instance was proved by their unanimous adoption of the Report—they ought not to complain of the course pursued by individual members. He had every confidence in the course pursued by those of his colleagues who took an active part in the management of the undertaking, and having such confidence he did not see how his presence or absence on particular occasions could affect the Company. He always attended when his attendance was considered desirable. If he did not appear so frequently as others, his anxiety for the prosperity of the undertaking was not abated, nor probably his efforts in its behalf less sincere or zealous.

The Chairman said, they had had Bills before Parliament, and on these occasions the services of Mr. Ricardo and Mr. Holland had been most valuable. Eight Directors were unquestionably too many for so short a line, but until they obtained power to reduce the number, he did not see how the practical difficulty could be avoided so well as by having two or three members who had sufficient confidence in their colleagues not to interfere with or thwart them. (Hear, hear, hear.) It was not in Railway as in Insurance Companies, where one set of Directors could attend to-day, and another set to-morrow. Constant attention was requisite, and for his own part he could say that two successive days never passed in which he was not in some way or other engaged for the Company, and not a week that he did not personally visit the line. (Hear, hear.) Others might not have it in their power to give so much time to the affairs of the undertaking, but if there was to be any risk that the gentlemen who at present had confidence in the acts of their colleagues, should be replaced by others who might not possess such confidence, he could only say that the business would not be managed with that feeling of harmony, and with that consistency which he believed had marked their past progress. He did not say that the present plan was desirable in itself, but of two evils he thought it was the lesser.

Mr. Pare agreed with the Chairman that if the present number of Directors must be kept up, the plan now acted upon was perhaps as good a one as could be adopted, but he thought the earliest means ought to be taken to concentrate the responsibility of the Directors. (Hear, hear from the Chairman.)

A Proprietor complained of the principle of self-election which he said had been displayed in the appointment of three Directors to serve at the Joint Board [for the management of the station] these Directors receiving a farther salary from the Company's funds.

The Chairman went into this matter at some length, expressing his belief that nothing but an equal share in the management of the station at London-bridge would have tempted the Brighton and South Eastern Companies to attach themselves firmly to the Croydon Company, as they had done by the purchase of two-thirds of the property in that station. He said if the Croydon had been a large Company and the other two small Companies, the Croydon might, as had been done with the station at Derby, have insisted upon the sole management, but as it was, they were too happy to accede to the terms proposed. A new Board was necessarily created, and he did not think that any one would begrudge the payment of the money voted by the proprietors themselves for an office which assuredly was no sinecure.

The Proprietor would not enter into the particulars of the agreement referred to, but he wished to know if the same principle of self-election would hereafter be persisted in.

The Chairman could not see that there was any

Digitized by Google

principle of self-election involved. It was not likely that the same circumstances would recur, but he was bound to say, that if it were to do over again, he would counsel precisely the same course as had been adopted. (Hear, hear.)

Mr. POLLARD hoped not, for the principle was a very bad one.

Mr. LEVY, and other gentlemen, thought it useless to re-open matters which had already been settled at a meeting of proprietors, and after some further desultory talk, the subject was dropped.

Mr. BURCHELL (Solicitor to the Company) then (at the request of Mr. Pare) read the clauses in the Company's Act relative to Directors, and gave it as his opinion that the number could not legally be reduced.

Mr. ADAMS, and others, thought it would be a reflection upon the two gentlemen named, if any farther steps were taken in the matter at present.

It was distinctly stated on all hands, that there was no personal objection to either of the candidates.

Ultimately the motion for their re-election was carried unanimously, and Mr. Roberts returned thanks; Mr. Lawrie being absent in consequence of domestic affliction.

In answer to a question from Mr. Adams, the Chairman stated that the Company had no Bill before Parliament this session, the Chairman expressing a hope that they would never have occasion to apply for another Act.

The CHAIRMAN then brought forward the name of Mr. Crowley, as candidate for the vacant auditorship.

In answer to questions it was stated that Mr. Crowley had been proposed by Mr. Boulton and Mr. Barclay—that the appointment of auditors, going out otherwise than by rotation, was vested by the Act in the Directors, but that they had thought it best to leave the matter with the proprietors at large—and that there had been sufficient time for the nomination of other candidates, had it been thought desirable.

Mr. BAILEY did not see any necessity for auditors at all, so long as the proprietors had confidence in the Directors, and their Secretary. The Great Western and other large Companies had no auditors, although their property involved the expenditure of millions. At any rate, two auditors were quite sufficient, and he did not see why they should fill up the vacancy. He would move a resolution to that effect.

The Act of Parliament was here referred to, and it was considered by the solicitor that three auditors ought to be kept up.

Mr. ADAMS, Mr. PARE, and others, spoke strongly in favour of the principle of appointing auditors totally unconnected with, and independent of, those to whom the expenditure of the Company's funds was entrusted.

The CHAIRMAN expressed himself to the like effect, and stated that the appointment of auditors relieved the Board of much responsibility.

Mr. BAILEY's amendment was not seconded, and the original motion for the appointment of Mr. Crowley having been put, was carried unanimously.

Mr. CROWLEY made a suitable acknowledgment.

Some conversation, originated by Mr. Bold, ensued, as to the propriety of dispensing with the circular letters calling the half-yearly meetings. It was thought by some that advertisements in the public prints would suffice, and thus save some 10*l*. or 12*l*. On further consideration, however, it was deemed desirable that the present system (which it was stated had been adopted in compliance with the wishes of a public meeting) should be continued.

Mr. BOLD then suggested the policy of expending a sum of money in the erection of cottages for the servants of the Company.

The CHAIRMAN fully concurred in the desirableness of such an arrangement, as likely to contribute as well to the moral improvement of the men themselves as to the advantage of the Company, but for the present the Directors, who had not lost sight of the subject, had considered it better not to incur any additional expenditure that would not prove immediately beneficial.

The CHAIRMAN then referred to the cost of maintenance of way, and read a communication from Mr. Cubitt, the Company's Consulting Engineer, giving it as the opinion of that gentleman, that under the peculiar circumstances of this railway it would be better that repairs should be kept for the present in the Company's own hands.

Mr. LEVY, after a high eulogium, moved a vote of thanks to the Directors, and especially to the Chairman.

The motion was carried unanimously amid applause.

The Chairman made an appropriate acknowledgment, and the meeting, which was numerously attended, then broke up.

WEST LONDON (LATE BIRMINGHAM, BRISTOL, AND THAMES JUNCTION) RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the proprietors of this Company took place on Tuesday, at the offices of the Company in Abchurch-lane, City; WILLIAM MORGAN, Esq., Deputy-Chairman of the Company, presiding.

The CHAIRMAN expressed his regret to see so small a number of shareholders present. He regretted it the more, inasmuch as their proceedings were of a most important nature. Although the Directors had power to act in adopting any plan they thought proper for carrying out the objects of the Company, yet still they did not wish to do so contrary to the wishes of the shareholders. The Directors, he was sorry to say, were unfortunately not prepared or in a position to suggest to the proprietary that day any plan for the completion of the railway, and therefore it would be necessary that a special general meeting should be speedily convened for the purpose of considering some plan to be proposed. A plan had been proposed by the Directors before, at the suggestion of nearly one-third of the shareholders, but the general body of proprietors not having taken it up as it had been expected they would have done, the Directors had been under the necessity of endeavouring to propose some other scheme by which the undertaking might be beneficially carried out. During the last half-year, the time of the Directors had not been occupied in the most pleasant way, having had to contend with parties who were indebted to the Company, and to contest with creditors making claims of all kinds against the Company, some he must admit justly, and others most unjustly. It was therefore necessary that some plan should be adopted, as well for the benefit of the shareholders as the creditors. (Hear, hear.) He believed with a little exertion they might yet, and that speedily, attain in a measure their object. The works and land, he believed, connected with the extension, and he would say with all parts of the line, were as little expensive as any other line in the kingdom, and if they could only get some part of it into operation he had no doubt the whole would speedily progress. It was true the shares were so depressed that they could hardly find any price for them at all in the market; but if they could only raise money enough to complete the line down to the canal, it would immediately have the effect of increasing the value of the shares, and remove the depression which at present spread itself over the undertaking. It would then become a subject of consideration as to the plans which should be adopted to carry out the line to a further extent. He would now call upon the Secretary to read the Report.

The SECRETARY (JOHN THOMPSON, Esq.) then read the Report as follows;—

REPORT.

The Directors have to report that in pursuance of the Resolutions passed at the adjourned General Half-yearly Meeting of the Company held on the 7th of October, they took measures to issue to the proprietors the preferred shares created at that meeting, to enable them to raise the additional capital of 60,000*l*.

It is with much regret the Directors announce that the proprietors have not generally come forward to take these preferred shares, and although the Directors are as strongly as ever impressed with the importance of the proposed extensions, they are of opinion in the present state of the Company's affairs, and with the difficulty they have hitherto experienced in raising money, that the resolutions of the proprietors with reference to the preferred shares passed at the meeting above referred to should, as far as they have not been acted upon, be rescinded, and that the attention of the Company should be solely directed to the completion of the present line.

Several plans have been suggested to the Directors for raising the additional capital required to complete the works, but none are yet sufficiently matured to be brought before the proprietors. The Directors feel that any plan which may be adopted must be founded upon the principle of issuing of new shares at a much lower price than they had hitherto contemplated. The Directors will, however, agree upon a plan with the least possible delay, and will call a Special Meeting of the Proprietors to submit such plan to them for adoption, in order that the approaching season for the completion of the works may not be lost.

As regards the proposed extensions of the line the requisite notices were given by the Provisional Committee for an application to Parliament in the present Session for an Act to authorise their formation, but the amount of capital required by the Standing Orders of Parliament not having been subscribed, the notices have been renewed, and the Directors have made satisfaction in announcing that a strong feeling in favour of the extension lines has been expressed, and that arrangements with many of the principal landowners have been effected. The Directors are fully of opinion that these extensions will be formed by a separate and independent Company, and recommend the proprietors to give all the support and assistance in their power to that undertaking, on the success of which the prosperity of this Company mainly depends.

Since the last General Half-yearly Meeting three vacancies have occurred in the Direction by the resignation of Sir John Scott Lillie, Mr. Britton, and Mr. Wood, two of these vacancies, those occasioned by the resignations of the two first-named gentlemen, the Directors propose shall not at present be filled up. Two Directors, Mr. Macfarlane and Mr. Latham, also go out of office by rotation at the present meeting; both of them are eligible for re election, and offer themselves accordingly.

A statement of the receipts and disbursements of the Company for the half-year ending on the 31st of December last is subjoined, viz.—

RECEIPTS.

Receipts to 30th June, 1840		£116,755	8 3
Calls received to 31st December, 1840	£2,835 0 0		
Rents ditto ditto	288 15 11		
Kensington Canal tolls £212 14 0			
Less expenses . 73 12 11			
	139 1 1		
Balance of interest account	82 15 8		
Loan	350 0 0		
		3,695	12 8
Total		£120,451	0 11

EXPENDITURE.

Expenditure to 30th June, 1840		115,601	6 10
Land and compensation	£211 9 5		
Works	56 11 5		
Salaries in Secretary's department	164 7 0		
Advertisement	79 7 0		
Office expenses, including rent	155 9 9		
Directors	300 0 0		
Engineering and surveying	1,078 11 0		
Printing and stationery	12 17 6		
Debenture stamps	6 1 0		
Commission on amount of calls received by the Manchester Bank	7 17 6		
Miscellaneous expenses	133 0 2		
Solicitors, on account of bill	1,006 10 8		
		3,212	2 5
		£118,813	9 3
Balance		1,637	11 8
Total		£120,451	0 11

Mr. CRAUFURD said, there was one subject to which he wished to direct the attention of the proprietors, and that was the item of 300*l*. charged as a grant to the Directors for their services during the last half-year. He considered that such a grant was completely uncalled for, and he had mooted the subject in order that the sense of the proprietors generally might be taken upon it. In the Northern and Eastern Railway, and other Railway Companies far better situated than the West London Company, no such sums were asked for, and therefore he thought it not altogether proper that they should be asked for it here.

The CHAIRMAN was glad such a question had been mooted, as it afforded him the opportunity of explaining. With regard to himself he begged to say that, although he had been a Director for a year he had received nothing, nor did he hope to do so until the undertaking attained that position which

Digitized by Google

he anticipated and hoped it ultimately would do. (Hear, hear.) He believed he had worked nearly 100 days for the concern out of the 300 and odd, during the last year, and had not received anything. (Hear, hear.) The fact was this—the 300*l.* charged went to the old Directors, as a set off against calls which perhaps might not have been recovered, if actions had been commenced against them.

Mr. GUNTER said, as a Director he believed that none of his colleagues had received any money for the last year. He had not. On the contrary, the Company were indebted to him on another account 30*l.* or 40*l.*

The CHAIRMAN said, in point of fact none of the money in question went out of the concern, as a resolution had been passed to the effect, that any money due to the Directors should be invested by them in shares in the Extension lines, from which it was not possible they could take any money for some time to come.

Mr. MACFARLANE (another Director) observed that so far from having received any money for his services out of the funds of the Company, his coming from Manchester to attend their meetings at various times, had cost him out of his pocket a sum little short of 150*l.*

The CHAIRMAN said, with regard to the Manchester proprietors, they were much indebted to Mr. Macfarlane. Indeed the large amount of shares held by that portion of the proprietary rendered it essential that they should have a representative.

Mr. CRAUFURD said, he believed the Directors had the power to pay a Director's travelling expenses.

The CHAIRMAN—Yes, when we have the money to do it. (Laughter.) He had himself travelled up and down 80 miles to attend the meetings of the Board, without thinking of making any charge. (Hear, hear.)

Lord KENSINGTON said, the point raised was a very proper one, and having been answered so satisfactorily, he would now move the adoption of the Report. It was high time that some measures were adopted for bringing the plan of the undertaking into some efficient shape, and he believed that throughout the Directors had acted with assiduity and disinterestedness. As a considerable proprietor in this concern, he hoped that some plan would be adopted by which it would be speedily carried out, and that it would not be left to fall to the ground, which most assuredly would be the case unless some spirit and determination were manifested amongst the proprietary. For his own part he would be content not to press any claim he might have upon the Company, but he would even contribute further towards finishing the line as far as the Kensington Canal basin, in order that something like business might begin. (Hear, hear.) If such a course were pursued by the shareholders, he (Lord Kensington) had no doubt the creditors would do the same; otherwise he much feared they must make up their minds to lose the whole of their money. He hoped that the Directors would not fail as soon as possible to suggest some plan which would bring the thing to a final issue, and that other shareholders like himself would lend them their aid in so doing. (Hear, hear.)

The motion having been seconded,

Mr. GUNTER cordially concurred in all which had fallen from Lord Kensington. If they allowed the concern to remain in *statu quo*, they would not only lose part of the land through which the line was to pass, but the Great Western Railway Company would have the right to prevent the line crossing theirs. The only way, therefore, was for them to raise a sufficient amount and do the works as cheap as they possibly could. At present they were a mere laughing-stock, and if it was only one line, he (Mr. Gunter) thought it better that they should complete this line before they turned their attention to either of the extension lines. The reason of the depressed state of the shares was, that the plan proposed had not been set properly before the public, and if they could get but a single line down to the canal basin, the result would soon be found very different. They had every prospect of a good traffic, especially in the article of coals and goods, and unless the proprietors wished that the capital they had already embarked in the undertaking should be lost to them, they would come forward and support, by an advance of a little more, the carrying out of the project.

A PROPRIETOR wished to know if any estimate had been given of the probable expense of completing a single line to the point stated.

The CHAIRMAN said, a definite estimate had not been given but it had been computed at between 30,000*l.* and 40,000*l.*

Lord KENSINGTON understood that the estimate was considerably under 40,000*l.*

Mr. GODWIN, jun. said, no one could shut his eyes to the fact that the populous districts through which this line would pass would be to it a source of immense profit, to say nothing of its connection with two great lines. In their present position those Companies were fancying that one day or other the West London Railway would fall an easy prey into their hands. He would not wish the Directors by any means to abandon the extension lines, but he hoped the shareholders would support them in carrying out the present line first. He had attended private and public meetings in the populous districts of Brompton and Kensington, and he was convinced that the public were most anxious that the line should be speedily carried out. (Hear, hear.)

Mr. GUNTER said, it was intended that the Staines and Egham line of railway should pass a little to the south of the Extension lines of railway of this Company, and as a proof that public feeling was much in favour of the latter, he would adduce as a fact that at a public vestry meeting held at Kensington in order to consider the protection of their rights of way, the meeting expressed itself greatly in favour of this line, and considered it most beneficial, whereas on the contrary they considered the Staines and Egham line as most injurious, and expressed themselves much opposed to it. He adduced this fact in order to show that public opinion was really in its favour.

The CHAIRMAN said, the reason the Directors had not placed the undertaking so much before the public was, that they felt they were bound to see what the old shareholders would do before they ventured to offer the shares to the public, probably to the detriment of the original proprietors.

The Report was then put and adopted unanimously.

Mr. CRAUFURD moved that Messrs. Macfarlane and Latham, the two Directors who retired by rotation be re-elected.

Mr. MILES seconded the motion.

A PROPRIETOR said, he understood that it was not the intention of Mr. Latham to fill the office of Director again. He, however, had no official authority for stating such as a fact.

The CHAIRMAN observed, that Mr. Latham had the power of retiring after being re-elected, if he thought proper, and therefore as he was not present, he would put the question.

The motion was carried *nem. con.*

The CHAIRMAN said, he should now be glad to hear some suggestion as to the period when their special general meeting should be called upon the subject of at once raising sufficient money to carry out the line. It was essential that it should be as soon as possible in order that the works might be proceeded with during the ensuing season.

Mr. MACFARLANE suggested that it should not be delayed above a fortnight or three weeks.

The CHAIRMAN (after a short consultation with some of the Directors) said, he thought Monday, the 29th instant, would be the day, but due notice should be given to all the proprietors.

Mr. CRAUFURD hoped, that the importance of the meeting would be expressed in the circulars, and the proprietors urged strongly to attend, in order that they might not be so lax in their attendance as they had been that day.

Mr. BRITTEN desired to know whether any obstacles had been thrown in the way of carrying out the line by any Water Works Companies.

The CHAIRMAN said, they had not offered the slightest difficulty. It was true the Directors had some trouble with the Grand Junction and West Middlesex Water Companies at first, but on their consenting to deposit to each the sum of 2,000*l.* to cover the expenses of raising their mains, and as a guarantee for carrying out the works, those Companies were not at all opposed to them. In fact, it was not expected the expenses would be so great as the sum to be deposited, and the surplus was to be paid back to them.

Mr. BRITTEN was glad to hear this explanation, as it was generally asserted that the Company were in great difficulty with the Water Companies. No later than last evening he had heard it asserted that they owed these Companies the sum of 11,000*l.*

The SECRETARY said, such was not the fact. The only arrangement between them was that which had been stated by the Chairman.

The CHAIRMAN said, they had in the first instance to contend with these two powerful Water Companies, with whom they amicably arranged, and also with the Commissioners of the Metropolis Roads, but all these difficulties were surmounted. It had been rumoured, so he was just informed by a friend near him, that the Southampton Railway Company were anxiously looking forward to their getting their line down to the Thames, which circumstance in his (the Chairman's) opinion augured very favourably for it.

Mr. BRITTEN inquired how the shareholders, who had been declared defaulters, were paying up.

The CHAIRMAN.—We have proceeded against Mr. Locke and Mr. Playfair, and these cases were decided in our favour, but the latter is now reserved for the opinion of the Court upon points of law. We suspended proceeding in similar cases until the result of Locke's case was known. In some others we have succeeded, and others are still in abeyance.

This being the whole of the business of the day, thanks were passed to the Chairman, and the meeting separated.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

[From the *Manchester Courier.*]

THE General Half-yearly Meeting of the shareholders in this undertaking was held on Thursday, March 4, in the large room of the York Hotel, King-street, Manchester. The attendance was very numerous, near 100 gentlemen being present. Upon the walls of the room were exhibited coloured sections of the contracts on the part of the line between Stockport and Crewe, including the Castle-street, the Cheadle Hulme, the Wilmslow, the Peover, and the Sandbach contracts. In these sections the lengths and depths of the various cuttings and embankments, the several gradients and their extent and every other particular of the line, were clearly exhibited. On the opposite side of the room was suspended the design for the station in London-road, which has been selected from a number of others sent in for the approbation of the Directors. It is a very elegant and commodious building, occupying, with the necessary sheds and enclosures, a considerable space. A detailed description is unnecessary the design having been for a considerable time, exhibited at the Victoria Gallery.

MR. G. R. CHAPPELL begged to move that Mr. R. C. Sharpe should take the chair; but before doing so, as there were many gentlemen present who were interested in the Stafford and Rugby line, he had great pleasure in informing them that the Bill of that line had passed the standing orders of the House at full railway speed, and that there was every probability of the Bill being carried through the House. (Applause.)

Mr. SHARPE, in taking the chair, regretted the absence of Mr. Ashton, the Chairman of the Board of Directors, who had been summoned to London, as a witness in relation to the standing orders of the Stafford and Rugby line, and was not able to return to preside over that meeting. The Deputy Chairman also being absent, that was the reason why he had been called upon to preside. Having

Digitized by Google

read the advertisement, the Chairman said the first business was that of sealing the register.

Mr. G. SANDARS moved, and Mr. JOHN BRADSHAW seconded,—"That the seal of the Company be affixed to the register of proprietors now produced." The motion being carried, the seal was affixed by the Chairman.

Mr. M. LYON, one of the Directors, then read the Directors' Report. Mr. G. W. BUCK, the Engineer, read his Report. Both will be found in the advertisement.

The CHAIRMAN said it was necessary in the usual course of proceedings, that the adoption of the Report should be proposed and seconded, before any discussion took place on the Report. When this was done, the Directors would be most happy to listen to anything that might be said, and to answer it in the most open manner that it was in their power to do.

Mr. W. RAWSON moved—"That the Report of the Directors, now read be adopted; and that the same, with the Engineer's Report, and the statement of accounts now produced, be printed for circulation among the proprietors." One thing in the Engineer's Report had struck him as rather remarkable, and he should like to ask that gentleman as to the probable result. The excess over the estimates in the cost of the contracts was so very small as compared with what took place in most other works of this kind, that he should like to hear the assurance again from Mr. Buck that that excess would not be more than two per cent. It was so remarkable a case as contrasted with any other railway that he had to do with; for he was sorry to say that he had seen cases where the estimates had been exceeded by a very large amount, often as much as ten per cent.

Mr. BUCK, the engineer, said he believed this result was quite unprecedented, but he had therefore the greater pleasure in stating it; and he most unquestionably should not have stated it, had he not been quite confident of its correctness. As he had stated in his report, he had very carefully gone over the contracts to endeavour to estimate the amount of contingencies, as they were generally called, but contingencies was not the proper name; for, under that head was generally comprised additional works, of far greater amount than the mere contingencies, arising from the communication necessary for the proper occupation of the land severed by the railway, which had not been settled at the time that the works were let. In this case, it was known that they had had a great deal of time to prepare their lettings, and there was not a single communication with which he was not perfectly acquainted, and had not inserted in the contracts; in fact, some of the communications had been bought off for less money than it would have cost to make them. Having gone over the whole of the contracts, he was quite certain that no such contingencies could arise. The contingencies, properly so called, were such as those, where the nature of the foundation could not be tested until the ground was opened. But, as would be found from his report, the foundations were all in with one or two exceptions; and, even in those, there was hardly any excess on his estimate; on some there was a little excess, and on others a saving. Therefore, he was quite certain, unless something were ordered to be done which he did not know of at present, and which was not at all likely, that two per cent. would cover the whole of the contingencies from Stockport to Crewe. (Applause.) And he begged leave to say, that, after the addition of two per cent. on the lettings, that increased amount was, as he had stated, considerably within his estimate. (Applause.)

Mr. HOYLE seconded the adoption of the Report.

The CHAIRMAN—Now, gentlemen, we are quite ready to give you every information in our power upon any question that may arise.

After a pause of a few minutes, no questions being asked, the Chairman put the resolution, and it was unanimously adopted.

Mr. JAMES H. WANKLYN moved—"That the half-yearly accounts, up to the 31st January last, having been produced, as required by the Acts of Parliament, and being deemed satisfactory be, and the same are allowed and passed."

Mr. TAYLOR seconded the motion.

Mr. H. NEWBERY said, it was very painful to his feelings to be obliged to move the following resolution; but, as an act of justice to those shareholders who had paid up their calls, it was quite necessary that the Directors should proceed to the forfeiture of the shares named in the Report. He then moved a resolution confirming the forfeiture of 249 shares, and authorising the Directors to sell them at such times and in such manner as they should think fit.

Mr. PERSHOUSE seconded the motion.

Mr. RAWSON wished to ask, if the Directors had no objection to state, what amount had been paid up on those shares, and whether, if those shares were taken at their present value, any loss would accrue to the Company upon them, and how much. They might state the average of what had been paid.

The CHAIRMAN—Upon the average, better than 15*l.* has been paid.

Mr. RAWSON—So that there will be no loss, at the present market value, upon those shares.

The CHAIRMAN.—No loss.

Mr. RAWSON.—I am glad to hear that; I think that is a very important matter to go before the public.

The CHAIRMAN.—There has been 15*l.* each paid upon 239 of those shares, and 18*l.* upon 10 of them; making an aggregate of 3,765*l.* paid already upon those shares, the arrears being 6,125*l.* There, of course, has been rather more than 15*l.* per share paid upon the whole 249 shares.

Mr. RAWSON.—I think that will be very satisfactory to the meeting; they will see that there is no real loss, though these people have left us.

Mr. DAVISON.—I question very much, Mr. Chairman, whether these shares would obtain that price in the market if they were sold.

The CHAIRMAN.—I think very nearly so.

Mr. DAVISON.—They are at about 16 discount at present.

Mr. H. NEWBERY.—A higher price than that was given yesterday in London.

Mr. SLATER (the law-clerk)—Yes, 15*l.*

Mr. CHAPPELL.—I am already a shareholder to a considerable amount in this line; and I can only say that I should be very happy to take as many of those shares as the Directors will allow me at that price. (Applause.)

Mr. NEWBERY.—Besides, it would be very great folly in the Directors to offer these shares for sale at present. They take power in the resolution to dispose of them at such times, and in such manner as they may think fit; and of course they would not think of thrusting them upon the market in its present state.

Mr. SLATER.—I believe a gentleman in London yesterday made an offer of a higher price than this gentleman speaks of, and he bought fifty shares at a higher price.

Dr. LYON.—I suppose these shares, when sold, will be sold liable to the sums they are in arrear.

Mr. SLATER.—Oh, certainly; but the parties who are the original holders will still remain liable to the Company for any loss.

Mr. J. H. WANKLIN.—I presume Mr. Chairman the present proprietors of these shares are not released from their responsibility by the fact of their shares being forfeited?

Mr. SLATER.—No, the act expressly requires that they shall still remain liable to us; if there be a deficiency, they may still be called upon for the amount of the deficiency, whatever it be.

Mr. DAVISON.—After the forfeiture is confirmed?

Mr. SLATER.—Yes.

Mr. DAVISON.—But is it to be understood that these parties will have the option of buying up the shares themselves, after the forfeiture?

Mr. SLATER.—It is very possible, if an immediate offer were made to the Directors that they would take it into their favourable consideration; but there is no obligation on them to do it.

The CHAIRMAN put the motion, and then announced that the formal business of the meeting was at an end, but that they were still open to answer any questions the shareholders might wish to ask; they were extremely desirous to afford every information in their power.

Mr. J. P. WESTHEAD referred to the passage in the report respecting the passengers to be brought on the line by the Sheffield Railway Company, which he read, and observed that goods also might have been inserted; for at the time they were in Parliament for their Bill, it became evident to all parties that the cost of the viaduct from Chancery-lane to the station would be very heavy, and it was considered desirable that as the Sheffield and Manchester Company would enjoy the advantage of it, they should participate to a certain extent in the expense it would entail on this Company; and it appeared to them that the most convenient mode of doing this would be by making them pay a handsome toll for entering the town. There was a clause in their Act expressly for that purpose which he would read:—"And be it enacted that it shall be lawful for the Sheffield, Ashton-under-Lyne, and Manchester Railway Company to communicate with the said last mentioned Railway, at the nearest or most convenient point of approach, at or near Chancery-lane, in the township of Ardwick, in the said parish of Manchester, being about three quarters of a mile distant from the terminus of the Railway of the said last-mentioned Company, at Store-street, in the said parish of Manchester; provided always, that in all cases where any articles, matters, persons, or things, shall pass along the said last-mentioned Railway, to or from the said communication at or near Chancery-lane aforesaid to or from Store-street aforesaid, the said last-mentioned Company are hereby empowered to demand and receive the maximum rates or tolls hereby authorized to be taken for one mile only, exclusive of a reasonable charge for the expense of loading and unloading the same, in all cases where the loading or unloading thereof shall be done by the said last-mentioned Company, and which charge the said last-mentioned Company is hereby authorised to make."—So that the charge for passengers amounted to two-pence per head, and the charge upon manufactured goods to three-pence per ton, and a very considerable increase of income was expected to arise from those sources.

Mr. RAWSON said, he understood the probability was that the income from that mile would be nearly half as much as was yielded by the line to Stockport, taking the average of passengers at 6d.

Mr. WESTHEAD said, it had been calculated that they should derive an amount of profit from this source nearly equal to that which they derived from the Stockport traffic.

Mr. RIDGWAY (of the Potteries) said, that, being accidentally in Manchester at this time, he had availed himself of the opportunity of attending this, the first meeting of the kind that he had attended. He was extremely glad to hear the Report which had been read; it was one which was highly creditable to the Directors, cheering to the shareholders, and he would add satisfactory to the country at large, save and except one particular district, and that a district in which he was especially interested—the Staffordshire Potteries. He was exceedingly sorry to observe that no allusion had been made to that district, a district which was of some importance to this Company, and whose countenance and support had been very anxiously sought for by them, and had been honourably given. He must say he was surprised at seeing that no allusion was made to the Parliamentary line through that district, either in its original form or in a modified one. He did hope that a line so important to that district of the country, a line, he would venture to say, either immediately or remotely advantageous to this Company, would not have been thrown overboard, forgotten, and abandoned; and he should be exceedingly glad indeed to hear from that meeting some sort of confirmation or corroboration, or encouragement of the views that he had entertained, which would enable him on his return to say to his neighbours, that he had attended a meeting of the Man-

Digitized by Google

chester and Birmingham Railway—a highly respectable and most satisfactory meeting—and that he had learnt that the line which they proposed to take through the Staffordshire Potteries was not altogether forgotten. He could assure them that he was not wishful to embark them in the line as originally planned, which would be too expensive to pay them, and which, so far from encouragement, would have held out the most gloomy prospects to the shareholders. But he did think that something might be claimed from them as a company. He had assisted them in the Potteries, he had assisted them in London, he was assisting the Stafford and Rugby line, and he felt cordially attached to them. (Hear, hear.) He had fought their battles in the country, as many gentlemen there knew when they had been attacked most vehemently, and, he was now most sorry to say it, he thought too justly. Therefore he thought they had some claim upon the Company. They had been met by courtesy, and with kind encouraging words, but only words; they had had nothing they could build upon; they were still in that state of uncertainty which they had endured so long, and altogether they were extremely uncomfortable, and should be glad to be put right by this Company. They did not look to them for an outlay of money on a line which would be prejudicial to its promoters; but looking at the engagements which existed between them, the letters that had been received, and the manner, in which the Staffordshire people had continued to help out the Company to the end of the contest, he did think that the Company were bound to do something for them. If they could not do it themselves, they ought to contrive, in conjunction with the Grand Junction Company, and the Liverpool Company, who were all interested in that district to take up the district amongst them, and the expense would then be nothing. This at least was due to the Potteries, considering how attached they were to the Company, and the support which they had given and should continue to give it in every way, though they had not done much in the way of subscription; they had told the Company in the outset that the country would not allow of that. But the traffic of their district was of great weight and importance, and he was sure the Company would lose the opportunity of doing themselves as well as that district good, if they let it slip through. He should be happy to hear from any of the Directors what they really intended to do, for candour was always best in these things. He should be sorry if his remarks bore the aspect of reproach or opposition, or anything of that kind. He assured them that such was not his intention; he had come there almost by accident.

Mr. Rawson begged to ask how many shares were held altogether by the Potteries in this Company?

Mr. Ridgway said, that they had informed the Directors when they first came down, (and Mr. Chappell was his witness), that they were a young country, a poor country, but a rising country; that they would give the Company their most hearty support, but that they could not take many shares. He himself was a shareholder, of course, and more shares would have been held in the Potteries but for the competition that had occurred, the great difficulties, and the want of confidence.

Mr. G. R. Chappell said, he was very glad Mr. Ridgway had done them the honour of appearing in that meeting, and had given him an opportunity of furnishing explanations that he thought would remove the impression that Mr. R.'s eloquence had made on every one present. When they got an engineer who was honest enough to give them a right estimate of the expense that would attend the making of that line, they saw they could not do it without sacrificing the interest of every shareholder in the Company. They had abandoned the project with the greatest reluctance; they regretted it even to the present day: but the state of the times was such, and the expense was so enormous, that it was clear if the Company had proceeded to make that line, it would certainly have been the ruin of half of them. Therefore, from absolute necessity, and not from choice, they had been obliged to take another line. But he must be allowed to say that they had felt such an interest in the Potteries, and such a desire that the Potteries should be served, that they had waited on the Directors of the Grand Junction Company; and he was authorised by Mr. Moss himself to say that they were not only ready, but were actually waiting to make the best approach from that district that they possibly could make. He had communicated to Mr. Ridgway that very letter, and had recommended him to have an interview with Mr. Moss, and had promised that two or three of the Directors of this line should meet them there, and endeavour to make the best approach to the Potteries they could. (Applause.) He appealed to Mr. Ridgway, was that correct or was it not? They were in this position; eight-tenths of the transits from the Potteries went to Liverpool; therefore it was for the interest of the Liverpool people to make the line; but so far as the Directors of this Company could do it, without injuring the shareholders, there was every disposition to serve the Potteries. When the Stafford and Rugby line was carried, and there was no doubt it would be carried, their facilities would be greatly increased. It was admitted by Mr. Ridgway that they were a growing society; he (Mr. Chappell) thought that they were now grown, and he had no doubt they would be able to make for themselves a line, by which they might travel to London on the left, and to Liverpool on the right; "and (said Mr. C.) if you choose to visit us in Manchester, we will treat you to the best we have in the house." (Applause.)

Mr. Ridgway said it was perfectly true that the transits to Liverpool were the principal part of their traffic; but that fact was known to the gentlemen who came to solicit their support, and who gave them their pledge. If the line had not been properly surveyed, and the difficulties ascertained, it was not their fault, but the fault of the Engineer, he would not say of those who employed him. But still, situated as they were, with the promises of the Company fresh in their ears, and the expectations those promises were calculated to raise in their hearts, it would not exactly do to turn them over to the tender mercies of the Grand Junction Company. He held them (the Manchester and Birmingham Company) to be a party assenting and consenting to the formation of their line; therefore, if they would help the Potteries to make a good bargain with the Grand Junction, they (the Potteries) should be very glad to go with them both. He thought that was a right principle on which to proceed, and he submitted to the meeting if it was not right.

Mr. W. Rawson.—I think there is no Act of Parliament that will constrain men to spend money that cannot be raised. (Applause and laughter.) I think that is a good excuse for this Company's not making the Pottery line.

Mr. Ridgway—If the feeling which Mr. Chappell has expressed represents the feeling of the Directors generally, and of this meeting at large, namely that you are still disposed, in conjunction with the Grand Junction Company, to support us, we shall be very glad to avail ourselves of that; but you must know we don't want to have what I may call a right-angle line; we could have had that long ago, but we are so proud that we want a line to go through us. Let it go in at Crewe, or where you please, and out at Stafford, or where you please; and then we will be your humble servants, and we will give you all a dinner. (Applause and laughter.) I don't know that it would be proper in me to attempt to bring forward any resolution on a thing of this kind. I am sorry if I have at all trespassed on your attention; my only wish was to put you in possession of my sentiments, and of the sentiments that are so generally entertained in the Potteries. I have endeavoured to do this in perfect good temper; but candour is best in these matters, and I do say still, that we depend upon you for the redemption of the pledge held out to us.

The Chairman.—Perhaps something may be expected from me, as chairman, upon a subject of this nature. All I can say is this, that, on referring to the Report presented by the Directors on 5th March last, to a half-yearly meeting of shareholders, and approved of by them, I find the following paragraph:—"Acting upon the principle of combining with accommodation to the public an early return to the proprietors, the attention of the Directors is now anxiously given, as stated in the circular already referred to, to the completion of that part of the line beyond Stockport, which can be made most immediately available as an improved communication between Manchester, Chester, North Wales, the west of England, Birmingham, and London." This Report was adopted unanimously. Further than that, I do not think I can reply to Mr. Ridgway's observations.

The Chairman, after a pause, said if the shareholders had no more questions to ask the Directors, it would become his duty to declare that the business of the day was closed.

Mr. John Bradshaw having taken the chair,—

Mr. David Waddington said he should be sorry if the meeting were to dissolve, after the very flattering report which they had received from the Directors, and the excellent manner in which the Chairman had conducted the business, without expressing their confidence in those gentlemen, and publicly recording their thanks to them. He had great pleasure in moving a vote of thanks to the Directors and to the Chairman.

Mr. Mellor seconded the motion, and it was carried by acclamation. The meeting then separated.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY COMPANY.

Eighth Half-yearly General Meeting, Wednesday, 17th February, 1841.

(Further particulars).

REPORT OF THE DIRECTORS.

The railway has been open from Glasgow to Ayr since the 12th August, and your Directors are happy in being able to announce that, from the precautions taken, not a single accident has happened to any passenger, though the numbers from that period to 31st December amounted to 165,689 on the Ayr Line, and 247,849 from 12th July, on the Joint Line respectively.

During the month of January, 28,009 persons travelled on the Ayr Line, and 43,457 on the Joint Line. These, with 10,450 on the Ayr Railway, and 14,878 on the Joint Line, up to Saturday, the 13th inst., inclusive, make an aggregate of 510,332 persons who have been conveyed by locomotive power, on distances varying from 7 to 40 miles, without the slightest personal injury having been sustained by any one of them.

The trade on the line has hitherto been confined almost entirely to passengers, and the long continuance of the frost this winter has retarded the completion of the stations, so that the general traffic in goods will not commence before the month of May. In the meantime, however, a luggage train is despatched daily from each end of the line with light goods and parcels.

Some of the iron and coal works in course of erection near the railway, will be in full operation in a few months, and a large mineral trade may safely be reckoned on. It is intended that the proprietors of these works should provide their own trucks, according to a specification furnished by the Company's Engineer.

Your Directors annex a statement of the outlay incurred from the commencement in the formation of the line and stations, as well as in obtaining a considerable stock of engines, carriages, and waggons. They also give a detailed statement of the receipts and expenditure on the traffic account, showing a profit of 7,588*l.* 18s. 2d. available to the shareholders; and they therefore feel themselves warranted in recommending you to divide twelve shillings a share, payable on the 1st March.

The cost of working (as in all new lines) has hitherto been greater in proportion to the revenue than it may be calculated in future. A single instance may be alluded to in which a saving to a great extent will accrue, viz., coke. Owing to this necessary article having been at first imported from Liverpool, it has cost, including waste in carriage,

Digitized by Google

have now completed an arrangement by which a supply of the very best quality is insured for three years, at one guinea per ton, delivered on the line.

A considerable portion of the land required for the Kilmarnock branch has already been purchased. Your Directors having occasion to give notice for an amended Bill in the ensuing session of Parliament, have considered it advisable to include a provision for such additional capital as will enable them to complete the Kilmarnock branch early in

The proprietors of the *Fire King* steamer having disposed of that vessel to one of the large steam-packet companies, arrangements have been made with them to establish a regular communication between Ardrossan and England. The operations now going on for giving additional accommodation and convenience at that harbour, and the improvements on the Ardrossan Railway, afford the best guarantee for a great increase of that traffic, and for the expectation of your Directors that it will

favourite route.

Your Directors have only further to mention that in pursuance of the provisions of the Act of Incorporation, the following members of the Board go out of office at this meeting, and it rests with you to supply their place or re-elect them :—

Messrs. John Miller, of Muirshiel; John Mitchell, Glasgow; John Leadbetter, Glasgow; Henry Grazebrook, Liverpool; George Johnston, Redburn.

(Signed) JAMES M'CALL, Chairman.

PATRICK BOYLE MURE MACREDIE, Esq. moved that Messrs. John Miller, John Leadbetter, Henry Grazebrook, and George Johnston, be re-elected Directors of this Railway, and that James Douglas, Esq., Glasgow, be elected a Director in room of John Mitchell, Esq.

ARCHIBALD HARVIE, Esq., seconded the resolution, which was also unanimously agreed to.

Mr. GALBRAITH suggested a reduction of the number of Directors.

The suggestion was favourably received, and Mr. Galbraith gave notice that he would bring forward a motion on the subject, with a view to having the number reduced in the amended Bill.

Mr. LOGIE moved "that it shall be recommended to the Directors, by themselves or their Secretary, to forward to every shareholder of the Company, whose address shall be known to them, a printed copy or draft of the Report to be submitted by the Directors at each general half-yearly meeting of the Company, for the approval of the meeting, which copies or drafts shall be delivered to the parties, or put into the post-office to their known address, at least four days before the day of meeting; and the advertisments calling such general meeting shall contain an intimation that printed copies, or drafts of said Report, will lie at the office of the Company at least four days before the day of meeting, for behoof of any of the shareholders of the Company, whose address may be unknown to the Directors at the time."

After some conversation the motion was agreed to.

DUBLIN AND DROGHEDA RAILWAY COMPANY—GENERAL MEETING.

THE stated Half-yearly Meeting of the Proprietors of this Company took place on Thursday week, at the Northumberland-buildings, Dublin. GEORGE A. HAMILTON, Esq., in the Chair.

The CHAIRMAN said the meeting was called in pursuance of notice, for the purpose of receiving the Report of the Directors for the past half-year, and to elect six Directors in the room of those whose term of office had expired. It did not appear to him that it was necessary he should delay them by any introductory remarks on the present occasion. He could not, however, deny himself the pleasure of congratulating the Company on the improved condition in which they then stood, in comparison with that presented to them at former meetings. (Hear.) He was sure it would be a gratification to every proprietor to learn, also, that the contracts which had been already taken were all lower than the lowest estimate which the Engineer had made. (Hear, hear.)

Mr. ECKERSLEY, the Managing Director, then read the Report of the Board of Directors for the past half-year, which described the prospects of the Company, and the progress which their works were making, in a most flattering manner. The report, which was very voluminous, stated that the Company were in a position to make the alterations in the gradients of the line, as recommended by their Engineer, without any further application to the legislature. These alterations would be productive of a great diminution of the expence originally contemplated, and would obviate the necessity of much alteration in the surface of the country—an objection urged against the construction of railways in general. The works would henceforward be prosecuted vigorously, a large portion of them having been contracted for under very favourable circumstances. For that part of the line which commences at the Royal Canal, near Dublin, and extends to Raheny—a distance of four miles—a contract had been completed with eminent contractors for the sum of 41,000*l*. The contractors had commenced operations on that portion of the line in October last, and were carrying on the works as expeditiously as possible. The next portion contracted for was that which extends from Raheny to Donabate, a distance of six and a half miles, and the contract accepted for it amounted only to 43,000*l*. The greater cheapness of this contract, when compared with the former, arose from the favourable nature of the country through which that part of the line passed, and the absence of the deep cuttings which were necessary in the opening part. The report further congratulated the proprietary on the liberal manner in which the calls made had been paid up, and announced the intention of the Directors to call only for small amounts so long as monetary affairs continued in their present depressed condition.

Mr. DARLEY moved that the Report be adopted, and printed for distribution among the shareholders.

The motion was then put from the chair and carried.

The SECRETARY then read the statement of the accounts as audited for the last half year, from which it appeared that the total receipts within that period were 10,765*l*. 15s. 6d., and the expenditure 6,953*l*. 6s. 1d., leaving a balance on hand, under various heads, of 7,052*l*. 16s. 3d.

Mr. MOONEY then moved that the accounts, as read, should be received and printed with the Report.

Mr. DARLEY seconded the motion, which was carried.

Alderman HOYTE moved that the registry of proprietors then on the table be received, and sealed as the registry of the Company.

The motion was seconded by Mr. MOONEY, and carried.

Captain COTTINGHAM, in proposing the next resolution, passed a high eulogium on the exertions of the Board of Directors for the past year. He concluded by proposing that the following gentlemen should be selected Directors for the ensuing year:—George A. Hamilton, Hampton Hall; Lord Talbot de Malahide, Malahide Castle; William Henry, Abbey-street; Richard Wright, Ormond-quay; Peter Eckersley, Dublin; Richard Collins, Manchester.

The resolution was then carried.

It was then moved that H. B. Darley, and John Parks, Esqrs., be appointed auditors for the ensuing half-year.

A vote of thanks was then moved to Alexander Parkes, and James M'Cullagh, Esqrs., the auditors for the past half-year.

The CHAIRMAN, in putting the question, which was carried unanimously said, their duties as auditors involved a considerable portion of the time of these gentlemen, as they gave a strict scrutiny into the entire affairs of the Company.

A vote of thanks was also paid to the Directors.

Mr. BUCHANAN moved a vote of confidence in Mr. M'Neile, for the talents and ability which he showed in conducting their works.

The motion was carried unanimously.

Mr. M'NEILE returned thanks.

Captain COTTINGHAM moved a vote of entire confidence in Mr. Eckersley, for the excellent manner in which he conducted the affairs of the Company.

Mr. MOONEY cordially seconded the motion.

Mr. ECKERSLEY returned thanks, and said he had no hesitation in saying that, when the undertaking was better understood by the public, it would be one of the most prosperous ones yet projected.

Mr. DARLEY was then called to the chair, when a vote of thanks was given to Mr. Hamilton, for his exertions in the cause of the Company, and for his very proper conduct in the chair.

Mr. HAMILTON returned thanks.

The meeting then separated.—Abridged from the *Dublin Evening Mail*.

GREAT NORTH OF ENGLAND RAILWAY COMPANY—GENERAL MEETING.

THE tenth Half-yearly Meeting of this Railway Company was held at the Company's offices at Darlington, yesterday week. Mr. H. Stobart, of Etherley, took the chair, and stated that Mr. Storey had resigned his situation as engineer in chief, that the Board of Directors immediately agreed to secure the professional advice of Mr. Robert Stephenson, to report to them on the state and progress of the Company's works. He called upon Mr. Davidson, rectors and of Mr. Stephenson. The [illegible] that the total receipts and payments, up to the 31st of December last, were as follows:—

Receipts.—On calls, payments in advance, &c., 471,274*l*. 5s. 10d.; on debenture bonds, 327,433*l*. 12s. 3d.; notes discounted by the Treasurer, 25,000*l*.:—Total, 823,707*l*. 18s. 1d. Payments. —Parliamentary, engineering, law charges, arbitrations, printing, direction, salaries, land and compensation, &c., &c., 252,656*l*. 14s. 9d.; contract for works and materials, 512,733*l*. 13s. 8d.; interest on loans, engines and passenger carriages, 49,140*l*. 4s. 2d.; balance in Treasurer's hands, 31st. Dec, 1840, 9,177*l*. 5s. 6d.:—Total, 823,707*l*. 18s. 1d.

Mr. Stephenson's Report gave a detail of the whole line of Railway, commencing at York and proceeding on to Darlington, th the state and progress of the different stations in the line—and approved generally, with some trifling exceptions, of the design and construction of the Railway by his predecessor, Mr. Storey. It appeared from the Directors' Report that the line has cost about 21,000*l*. per mile, and the income already is between 400*l*. and 500*l*. per week, although the line is only open for the transit of coals and general merchandise, and that it will be opened for passengers on the 31st. inst.; and the Company have received notice from the Government that the mails will have to be conveyed on the line on the 6th of April next.

The six retiring Directors who went out by rotation, were re-elected, with the exception of Mr. Gresley, who was replaced by Mr. Smith.

The two Reports were then received and adopted.

Two other resolutions were also put from the chair and agreed to, one appointing Mr. Robert Stephenson, the engineer of the Company, and the other authorising the Company to take upon loan the sum of 50,000*l*. in order to enable the Directors to finish the works, and to supersede the necessity of making another call during the present year.

It was stated that it is intended to proceed with the line northward to Newcastle with as little delay as possible.

Thanks were then voted to the chairman, and the meeting adjourned.

[We have received from a friend a long and very interesting account of the proceedings of this meeting; but our space will not permit us to give it. We shall probably give the Directors' Reports hereafter.—ED. R. T.]

RAILWAY PROFITS.

THE result of the winter meetings, so far as they have yet proceeded, of those railway companies whose lines have been for some time in operation, are very encouraging to the shareholders. The Newcastle and North Shields Company have secured a dividend at the rate of six per cent. per annum. The North Union six and a-half per cent. The London and Birmingham Company eight per cent. The London and South Western (formerly the London and Southampton) seven and a half per cent. The Liverpool and Manchester ten per cent. (besides a bonus to the holders of original shares), and the Grand Junction fourteen per cent. As respects the Scottish railways, the dividend of the Glasgow and Garnkirk line is six per cent. The Ballochney ten per cent. The Wishaw and Coltness six per cent., and the Kirkintilloch seven and a fourth per cent. The Glasgow and Ayr Railway, which has not yet been open for six months, has declared a dividend of 12s. per share, which is at the rate of about five per cent. per annum for the time it has been open. The Ballochney Railway has been a most profitable concern. From a statement now before us it appears that the holder of 100 shares, or 2,500*l*. of original stock, might now realise 11,600*l*. of profit over and above his original input stock. This railway has not yet been open for more than eleven years, during which time the stock has more than quadrupled in value.—*Fife Herald*.

TO CORRESPONDENTS.

Omikron.—*Very probably some time or other, but not just now. No risk whatever, in any case. "Safely under all circumstances," to the address in the Post office Directory.*

For the sake of the gentleman personally who has "embarked between 5,000l. and 6,000l." in the Manchester and Birmingham line, we are sorry we cannot agree with him either in his general estimate of its merits, or in the calculations by which he supports it. He will see our reasons elsewhere. Should he desire to reply to them our columns will be freely open to him.

A Holder of 200 Eastern Counties' Shares.—*If we wished him ill on account of his contemptible abuse, we should say—pity the number is not as many thousands.*

Mr. J. C. Ewart.—*The reports which have appeared in the Essex papers, of the late Eastern Counties' meeting, all agree with our own in making no mention of this gentleman as having been a candidate for a seat in the Direction, and in representing* Mr. R. C. Wylie *to have been re-elected. How Mr. Ewart can suppose himself to have been the choice of the proprietary under such circumstances, or how he can reconcile it to himself to act as if he were, he will probably some time or other explain.*

A London Shareholder *did not reach us till after we had written the remarks which he will find in our leading columns. We shall, however, either insert his letter, or make use of its contents (under the condition stipulated) in our next.*

Sir George Cayley *has reprinted, in a pamphlet form, his excellent* Essay on the Prevention of Railway Accidents. *Alluding to the similarity between some of his suggestions and those of* Mr. Bessemer *and* Mr. Curtis, *the honourable Baronet very handsomely observes*—"My object in writing this Essay was, to collect from others, or point out, as well as I was able, the leading mechanical arrangements for ensuring safety in railway travelling, and if I have unfortunately, in the rapid progress of railroad inventions of late, stumbled upon the matured plans of any others beside those alluded to, I must beg them to consider that, in any of the suggestions I have proposed, they were not given as finished models, or as best fitted for actual service, but to point public attention to their *practicability* by exhibiting *one* means of effecting each purpose. Nothing can more completely fall in with my views than to be enabled to show where, and from whom, the improvement contemplated can best be obtained."

A Looker-On *(Gloucester) will see the subject of his letter treated of in a leading article, and probably think that sufficient for the present.*

Captain Moorsom and Railway Direction Reform.—*Two excellent Letters on this subject—from* Examiner *and* A Railway Shareholder—*which are both in type, are, owing to the pressure of the meetings, unavoidably deferred till our next.*

T. T. S.—*We received our correspondent's Letter at too late a period of the week to enable us to make enquiries, but we know that in* Mr. Pettitt's *apparatus the means are provided of sounding the whistle should any of the carriages behind the guard become detached. If our correspondent will communicate with the inventor, or visit the Euston station, we have no doubt all particulars, as to the* modus operandi, *will be supplied.*

Notices of the Hull and Selby Railway Meeting—Messrs. Ransome and May's Improved Railway Chairs—*and* Mr. Birmingham's Statistical Evidence in favour of State Railways in Ireland—*must also for the same reason stand over for a week.*

Communications received from—Gulielmus—Egrub—A South-Western—A Contractor—S. W. S.—A Looker-On *(Liverpool)*—Abel Handy—L. B.

THE RAILWAY TIMES.

SATURDAY, MARCH 13, 1841.

THE proceedings of the General Meeting of the Manchester and Birmingham Company held last week, supply more information than has been usual with the meetings of this Company, though but few grounds for modifying the unfavourable opinions we have so often felt called upon to express respecting it.

The terms of the Agreement with the Grand Junction Company for the use of the 54 miles of their line from Crewe to Birmingham (so often asked for in vain), and detailed estimates of the cost of constructing the remaining 40 (including the Macclesfield Branch of 10 miles) were laid before the proprietors. The annual payment to be made to the Grand Junction Company is not to exceed 1,000*l.* per mile, which at 5 per cent. will represent a capital of 1,080,000*l.*; and the total estimate for the 40 miles to be executed by the Manchester and Birmingham themselves is 1,839,584*l.* 8s. 10d., making together 2,919,584*l.* 8s. 10d., or in round numbers 3,000,000*l.* The average cost of the former will therefore be 20,000*l.* per mile—of the latter about 46,000*l.* (an enormous sum)—the mean of the whole 94 miles about 32,000*l.* For the 54,000*l.* a year which the Grand Junction anticipate receiving from the Manchester and Birmingham, they are to abandon to the latter the whole of "the Manchester traffic to or from Birmingham, or to and from any intermediate place south of Crewe;" and there can be no doubt that for the Grand Junction this is a very good bargain—one by which they may make a very handsome profit, and cannot possibly lose anything. The amount of the annuity, however for which the Grand Junction have consented to abandon their Manchester traffic, may be taken as an unerring criterion by which to determine the prospects of those to whom they have been pleased to hand it over, with all the burden of providing and keeping up the requisite carrying establishment. We may be quite sure that if it had been worth *a rast deal* more than 54,000*l.* a-year net, such keen people of business as the Grand Junction Company would not have given it up for that sum; but say that it may amount in the hands of the Manchester and Birmingham Company to even double, that will but leave them 54,000*l.* to divide upon a capital of 3,000,000*l.*—little more than 1½ per cent. Were all that is, or can be anticipated from the Macclesfield branch or even from the great Extension scheme, to be added, the chance of their ever being able to reach a dividend of 3 per cent. is so remote as to be barely within the limits of possibility. And before the Manchester and Birmingham Company can divide even a single cent among themselves they must first of all pay their Grand Junction friends their 54,000*l.* a-year. Oh, shrewd Grand Junction! All the work thrown on their neighbours, and nothing but profit and the trouble of receiving it reserved for themselves! In point of fact, the sole ground which the Manchester and Birmingham proprietary have for anticipating a remunerative return upon their capital, is the very *probable* contingency of the future possessors of the Manchester and Birmingham traffic being able to net twice as much as is now derived from it, by one of the best and most economically worked Railway Companies in the kingdom, when (fortunate capitalists!) they may hope for some 30 shillings per cent. on their investments. So much for wild and reckless competition!

The abandonment of the original line through the Potteries was treated as usual as a very capital sort of practical joke. Mr. RAWSON wondered "how many shares were held altogether" in the Potteries, that people there should take it in such dudgeon that they had been cast adrift; and cheers from all sides testified that the bulk of the meeting thought this a perfect poser. And when the same gentleman drily observed, that he knew of no Act of Parliament which could "compel men to raise money that cannot be raised," the "applause" and the "laughter" were tremendous. Alas! for the state of moral feeling, of which such observations and such greetings are the indications. The fraud on the Potteries would not have been less a fraud had there not been a single share subscribed for there; nor does any apprehended deficiency in the capital authorised by Parliament to be raised for the execution of a railway in one direction, justify its application to the execution of a railway in a direction quite different. It was no condition of the Act for the direct line through Congleton and the Potteries to London, that the Potteries should subscribe anything; and if the capital requisite was under-estimated, (of which, however, we have never yet seen any sufficient proof) the deficiency might have been made up in the same way as similar deficiencies in other cases have been supplied. The Manchester and Birmingham Company have been guilty of precisely the same sort of breach of faith as the Eastern Counties'; and both are so far, equally indefensible.

WE are glad to find it confirmed by (what we may call) the *Cadell Correspondence*, which we publish in our present number, that the Modern Athenian section of the Directors of the Edinburgh and Glasgow Railway, are friendly to the "concentration plan of Management," and are only opposed to its adoption *for the present*, on account of the offensive manner in which certain rude Boeotians have attempted to cram it down their throats. Hope there is, therefore, that common sense views of the matter may yet prevail over all personal differences and petty local jealousies, and that the ruinous proceedings, judicial and Parliamentary, which Mr. CADELL (a large shareholder, and very competent authority,) states will be the inevitable result of the cram-down system, if further persisted in, will be averted by a prompt recurrence to the usages of polite society. The Edinburgh Directors and people have, beyond all question, been grossly ill-used in the matter, and if peace and amity are to be restored, considerable concessions must be made to them; nor should the Glasgow, Liverpool, and Manchester proprietors—if they study only the real welfare of the undertaking itself—be slow to make every concession needful. The Modern Athenians have (confessedly) THE LAW on their side; and being a generation of lawyers, may be expected to make a stringent use of it to obtain for themselves that consideration, and respect which they deem their due, and to which the large stake they have in the undertaking (considerably greater, we understand, than that of the people of Glasgow,) most justly entitles them.

We observed in our last, that assuming the principle of concentration to be admitted, the circumstance of Glasgow being the place appointed by the Company's Act of Incorporation for the *head quarters of the General Board*, seemed to us to "determine *where* that concentration should be." But an Edinburgh correspondent very fairly observes on this:—"The Act was the result of an amicable arrangement at the time between the two cities of Edinburgh and Glasgow, in which there was a good deal of yielding on both sides for the sake of the common object—it was supposed to settle definitively the constitution of the Company—but if the question of that constitution is to be now re-opened, then it

Digitized by Google

must be just as open to discuss the propriety of Edinburgh being the proper head quarters of a concentrated system of management, as it is to discuss the propriety of depriving it of its present limited share in the direction." Certainly, if the preference given to Glasgow in the Act was only a matter of concession, and not founded on any local superiority which it actually possesses over Edinburgh, the question of which, after all, is the best place for the railway head quarters, is one that must, in the event of any new Parliamentary contest, revive in full force. Concentration is one thing; the *locus in quo* another, which is by no means dependent on the decision of the first.

'Let well alone' is an old and a sound maxim, which the agitators in the present case would have done well to remember. For anything that has come to the surface during this troubling of the waters, we are at liberty to conclude, and are much inclined to believe, that every degree of concentration requisite for the efficient Management of the Railway (the grand point) might be accomplished under the Company's existing Act, providing always both of the local Committees or Boards cordially concurred. At all events, we are quite sure that it would be much easier to effect such a concentration with the united help of both Committees under the old Act, than it will be to obtain a new Act for the purpose, with the Edinburgh Committee, and the influence of all Edinburgh opposed to it.

We predicted in our last that it would not be long before the question between the two local Boards became a question between the two cities, and it will be seen from Mr. CADELL's last letter that it is so regarded already.

We entirely agree with Mr. CADELL in thinking that the only safe and prudent course for the shareholders to pursue is to undo, as speedily as they can, all that they have recently done in respect to the concentration of the Direction. What they must desire as a proprietary body to see, is not the triumph of this or that individual—this or that party—but the triumph of that system of management which will bring the most money into their pockets, from rendering the greatest amount of useful service to the public. All that the Edinburgh Directors ask for is an opportunity of inquiring, *before deciding*, which is the best system—or rather the best mode of carrying out the system of concentration which seems to be admitted on all hands to be the best—an opportunity of comparing notes with their Glasgow colleagues on all the numerous practical points which the question involves—and of discussing them, in all their bearings, frankly, freely, and dispassionately. *They are entitled to what they ask.* Let them have it, therefore: and let that stumbling-block in the way—the hasty and ill-considered resolution of the shareholders—be withdrawn. Let this be done, and so contentions may cease. But let an opposite course be pursued, and the shareholders will find themselves embarked on a *mare magnum* of litigation, where the chances of foundering are many, and the harbours of safety, few and far to seek.

It is possible, nay, extremely probable, that the plan of concentration we recommend would place two or three of the Directors, who have been wantonly instrumental in bringing about the present crisis, in a position of so much awkwardness as to compel their removal. But better that they should be removed, than the undertaking involved in difficulties at a moment when *unity* is all that is wanted to ensure an early and abundant harvest. Better be without their talents, than be the prey of their intrigues. No "snake in the grass"—no great "boa constrictor"—not even as many-headed a monster as the Lernean hydra—should prevent the shareholders from doing boldly their duty to themselves and to the railway. Be it by heel or by brand, but let the vipers be extinguished, and the railway go on and prosper.

THE opponents of Sunday Travelling on Railways appear to be re-organising their strength, but the result, we doubt not, will only be to give another convincing proof of their weakness. That the railway body generally will ever assent to the wishes of the few individuals, whether within the proprietary or without, who are continually agitating this question, we cannot for a moment believe; but in the meantime, a great deal of unnecessary turmoil is kept up, and worse than all, the attention of shareholders is distracted from matters which are of far more importance to their interests than discussions upon abstract points of theology. Success might attend the efforts of the agitators in particular instances, but such success could only be partial and temporary, for if any attempt were made to render the railway system at large subservient to their views, the public would speedily take the matter into their own hands. It is on many accounts therefore much to be lamented that some general rule is not laid down by the legislature—who certainly show no backwardness in interfering in other matters connected with railway management—which would effectually put a stop to further cavil upon this question. A small minority of railway proprietors may fancy that they have a right to do just as they please with their own—that they may shut up or keep open their several lines as caprice (or, if they will have it so, as conscience) may sway them, but the large majority do not forget, that their powers and privileges had their origin in *public advantage*, and that when this great object is postponed to private considerations of whatever kind, these important undertakings become positively mischievous. If railways are destined, as we believe they are, to supersede every other mode of inland transit, and if fanaticism which allowed the old conveyances to pass unquestioned, is to be permitted to interfere with the free use of the new, it requires little foresight to discover that the public will have gained a loss by the alteration. The spirit which would bring about so undesirable a state of affairs must be repressed in the outset; and we trust, therefore, that in all cases where the question comes before them, railway proprietors will show by a large majority of votes that they are determined to resist the attempts now making to curtail the benefits which capital and enterprise are increasingly conferring on the nation. It is not enough that the agitators be merely defeated; they should be defeated so emphatically that they will not venture to show themselves again in the field.

Among the most prominent declaimers against Sunday *railway* travelling is the Rev. FRANCIS CLOSE, incumbent of Cheltenham—we say "*railway* travelling," as distinguished from other kinds of travelling, for the Rev. gentleman appears to have no quarrel with stage-coach travelling on the highway, much less with the carriage travelling of his own fashionable congregation. It would seem, indeed, as if there were something peculiarly "desecrating" in the passage of a locomotive train along a district previously traversed by a dozen or more stage-coaches. Those ancient vehicles with their large complement of biped and quadruped connections extorted no groan from the breasts of the clerical and lay denouncers of the sinful steam carriage. Nay, we find that in one instance in Scotland the Agnews of that district boast of the triumph which religion and morality have achieved in the contemplated shutting up of a railway on Sunday, and the consequent carrying of the mail bags on the common highway! Surely, we repeat, there must be something eminently atrocious in railway travelling if our philosophy could but find it out. Is it in the rail or the motive power? How would our friends have managed had steam transit on common roads answered the over-sanguine anticipations of its original promoters, and driven every other species of conveyance into the shade? Would they, in that case, have advocated the closing of the Queen's highway as they now clamour for the shutting up of the railways? To be consistent, they ought even now to raise their voice as loudly against the one abomination as against the other, but consistency is not at all times to be secured without a sacrifice, and perhaps the carriage congregation of the Rev. FRANCIS CLOSE would not find it very agreeable to trudge on foot to the place of fashionable Sunday resort.

Mr. CLOSE in anticipation of the meeting of the Birmingham and Gloucester Railway Company, appointed for the 23rd inst., specially to consider this subject, has addressed, it would seem, a circular letter to each of the shareholders, which letter has been published in the Cheltenham papers. In this document Mr. CLOSE certainly does not touch upon the argument which he handled so ably on a previous occasion, namely, that the establishing of Sunday trains would lead to an irruption of the riff-raff of Birmingham, Gloucester and Worcester (not fashionable chapel goers) into the aristocratic and exclusive shades of Cheltenham. No; the reverend gentleman in this instance takes higher ground, and as his appeal is a fair specimen of its kind we here reprint it entire. Thus it runs:—

"Cheltenham, March 1, 1841.

"SIR,—Pardon the liberty which I have taken in venturing to solicit your suffrages and support as a proprietor of the Gloucester and Birmingham Railway. You are aware that this line of road has been opened nearly nine months, and that hitherto no trains have been allowed to run upon the Sabbath day, excepted the mail trains. Every success appears to have crowned the efforts of the Company thus far; and it is generally understood that the Directors as a body, have no disposition to violate the repose and sanctity of the Lord's Day by introducing Sunday travelling. You may also have learned that upon the Cheltenham line of road which your railway has superseded, no coaches were used to be run on the Lord's Day,—affording positive proof that no public conveyance was called for on that day. Under these circumstances I am informed that it is in contemplation to hold a meeting of the proprietors upon the subject, and that some persons are disposed to overrule the decisions of the Directors, and to prevail upon the proprietors to open the line to the public on the Sabbath Day.

"As the minister of one of the most populous parishes through which your railroad passes, I am most anxious that a proposition, so injurious to the best interests of my parishioners, should not be carried into effect. Those among your proprietary who themselves appreciate the blessings conferred upon mankind by the benevolent institution of the rest of the seventh day, will, I am sure, feel with me upon the subject. Should you be among that number I earnestly requsst your attendance, and your zealous support of the cause of religion, when any such meeting may be called. How deeply the ho-

Digitized by Google

nour of God, the integrity of his holy law, and the real good and happiness of hundreds of your fellow-creatures are concerned, I need not remind you: and in such a case you will feel that personal ease and pecuniary advantage must be cheerfully sacrificed to secure such important results.

"Should you, however, differ from this view of the subject, I will not do you the injustice to suppose that you do not reverence the Law of God; and if so, I earnestly request you to consider whether in this instance, any plea of necessity can be urged sufficiently strong to warrant a systematic breach of the Divine Commandment? To accommodate a certain portion of the public, who may or may not avail themselves of the conveyance, you not only *employ* a numerous body of servants on that day, but you *compel* them to work, many of them against their wishes and conscientious convictions. Is not this a hard case upon those industrious men whose toil is great during the six days, and for whom, especially, a merciful God has provided one day in seven when they may wipe the sweat from their brow, and rest from their labours? Some persons urge that it is hard upon the mechanics of Birmingham, and other manufacturing towns, not to allow them the opportunity of recreation on the Sunday, but what is this negative hardship, compared with the positive cruelty of forcing hundreds to work on the Lord's Day, on pain of losing their situations and means of subsistence? The wishes of a large and influential portion of my parishioners have already been expressed by their signatures to an address to the Directors. I most anxiously desire to second their pious and benevolent efforts, by inducing you to lend your personal influence to prevent the introduction of Sunday travelling into a district hitherto remarkably exempt from that and every other desecration of the Lord's Day.

"I have the honour to remain, your very obedient servant, FRANCIS CLOSE."

We need scarcely point out to our readers the very cool assumption here made of the whole matter in dispute. It is at once taken for granted that the running of trains on Sunday would "violate the repose and sanctity of the Lord's-day,"—that such an arrangement would be deeply "injurious to the best interests" of the Reverend letter-writer's parishioners—that every one who appreciates "the blessings conferred upon mankind by the benevolent institution of the rest of the Sabbath," must of necesssity be favourable to the views of the writer—that a contrary course involves "a systematic breach of the Divine Commandment," and that cruelty and oppression must inevitably follow any deviation from the course chalked out to the Railway proprietors by this officious Divine. It is very easy to make such assertions, but a matter, we apprehend, of some difficulty to prove them. Why does not the Rev. FRANCIS CLOSE, or why do not some of his co-adjutors, show at once and clearly that the running of railway trains on the Sunday *is* a "desecration of the Lord's-day?" Why do they not prove that a "systematic breach of the Divine Commandment" is involved in the course complained of? If they would—if they *could*—do this, they would at least secure the co-operation of those who are quite as hostile as they themselves can be, to any desecration of a Divine appointment, or to any breach of a Divine Commandment. Until their unsupported assertion, however, is to be received as incontestible proof, they must pardon Railway proprietors for not giving up their own views on the subject, and for continuing to believe that "the Sabbath was made for man and not man for the Sabbath."

It would be easy to enlarge upon the many *non-sequiturs* comprised in the Reverend gentleman's address, but our space will not permit. His argument, that because no horse coaches have hitherto run upon the Cheltenham road on Sundays, *therefore* no railway trains are required, is particularly provocative of remark. Perhaps the Reverend gentleman imagines that the Directors of the Railway Company would run trains on Sunday simply for the pleasure of "desecrating" the day, whether they had passengers or not! His assertion, too, as to the *compulsion* of railway servants need only to be alluded to. Where is the compulsion? If one man has the inclination to prefer the preachments of the Reverend Mr. CLOSE to the performance of a specified duty on a railway, why, let him do it. We have no quarrel with his taste. But if another person chooses to enter the service of the Company upon an understood arrangement as to his duties, what cause has he to complain that these duties are exacted of him? Is the beadle of Mr. CLOSE's church compelled to *work* on Sundays (for work he must) "against his wishes and conscientious scruples?" By no means. It is true that his Reverend employer would inflict upon him the "positive cruelty of forcing" him to work "on pain of losing his situation and means of subsistence," but what of that? That respectable functionary is not thereby compelled to violate his conscientious scruples; if his conscience be of the tender kind described by Mr. CLOSE. No; he may give place to a less scrupulous individual. By the way, what strange notions do some of these Reverend Gentlemen entertain of the pliancy of particular consciences, when they imagine that *any* consideration could tempt a *really* conscientious man to do that which in "his conscience he believed to be wrong!"

THE further proceedings of the Committee of the whole House upon Mr. LABOUCHERE'S Bill for "the better Regulation of Railways," have been postponed till the 22nd inst. Considerable objection had been taken by some of the Companies to the clause conferring large discretionary powers on the Board of Trade, and several petitions to that effect had been presented to the House. In deference to the opinions thus expressed, Mr. LABOUCHERE has consented that some further evidence upon this point shall be taken, and the select Committee of last session has accordingly been reconstituted. The Committee are "to consider whether it is desirable, for the public safety, to vest a discretionary power of issuing regulations for the prevention of accidents upon railways in the Board of Trade; and, if so, under what conditions and limitations." The names of the members are,—Mr. Labouchere, Sir Robert Peel, Lord Seymour, Sir James Graham, Mr. Loch, Lord Viscount Sandon, Mr. Easthope, Lord Granville Somerset, Sir John Guest, Mr. Freshfield, Mr. Thornely, Lord Stanley, Mr. Greene, Sir Harry Verney, and Mr. Henry Baring. It is believed that the inquiry will terminate in sufficient time to allow the measure to be proceeded with this session.

The readiness of the representatives of Government to accede to the views of the Companies in this respect (for there can be no doubt that they could have *forced* the Bill as it now stands through Parliament, whether the Companies assented or not,) ought to be received, we think, as an indication that there is no factious or improper feeling on their part towards railway interests, and we trust that they will be met with views equally liberal. The public safety ought to be the main consideration of all parties, and it is to be hoped that nothing will interfere to prevent the adoption of *the most efficient means* for securing so desirable an object.

AMONG the petitions recently presented to the House of Commons praying for a modification of the tax upon railway travelling, is one from the Manchester and Leeds Company, who from the lowness of their third class fares suffer very severely from the unequal operation of the present mode.

The petitioners represent that their line passes through a district containing a large population employed in various branches of manufacture, and that a great portion of the working classes have frequent and constant occasion to travel over short distances from home for the purposes of their business; that for the purpose of giving facilities for travelling to the local population, the Company have made and are making numerous stations at short distances from each other along the line of the railway; that they have brought into extensive use open carriages suitable for the working classes, and have adopted a very low rate of charge for conveying those passengers, amounting to about one penny per mile per passenger, and have kept a great number of trains running frequently with this class of passengers; that the facilities afforded by the Company to the working classes for travelling by frequent trains and various distances, is attended with an increased expense beyond what is required for the generality of first and second class passengers, although the remuneration for the former is much less than is obtained by the latter; and that in addition to the disadvantages under which the Company have hitherto accommodated the working classes, they have been subject to a tax upon this class of passengers much larger, in proportion to the money received from them, than the tax paid in respect to any other class of passengers, the latter being taxed at the rate of 12 per cent., and the former being taxed at the rate of 4½ per cent. upon the amount of their respective fares. They therefore beg leave respectfully to represent to the House that the rate of taxation is in its effects unequal and unjust, and bears with peculiar hardship upon those Railway Companies who give the greatest accommodation to the working classes; and that, if the modification recommended by the Select Committee on Railways as stated in their fourth Report, were adopted, the public revenue would be considerably increased, the working classes benefited, and a much more extended field of competition in railway travelling be opened.

—o—

RETURNS have been laid before the House of Commons, and are to be printed, "of copies of all Reports to the Committee of Privy Council by Inspectors of Railways; and of every railway or portion of a railway which shall have been opened for conveyance of passengers and goods, after inspection by persons acting under the provisions of the Act 3 and 4 Vic. c. 97."

RAILWAY OFFENCES AND OFFENDERS.

FEW cases which we have had occasion to notice under this head have been adjudicated upon more to our satisfaction than the following, as described in the Manchester papers of last Saturday:—

"On Tuesday last, Thomas Robson, an engine driver on the Manchester and Leeds Railway, was brought up before James Holdforth, Esq., and Thomas Hebden, Esq., the sitting magistrates at the Court House, Leeds, charged under Lord Seymour's Act with having been drunk when on duty on the railway. It was proved that it was the duty of the prisoner to conduct the engine of the last train from Leeds to Brighouse, on Monday last, and that whilst preparing to start he was observed by one of the passengers to be in a state of intoxication. He mentioned the matter to some of the authorities at the station, and Rob-

Digitized by Google

son was immediately taken into custody by the Station Master, and conveyed to gaol where he was kept for the night. Mr. Holdforth, after expatiating on the enormity of the offence of which the accused had been guilty, and of the great danger that might have befallen the passengers and train if his offence had not been so timely discovered, *adjudged him to be imprisoned to hard labour in the House of Correction at Wakefield, for the space of two months*, as a warning to other railway engine drivers."

This is taking a right view of the requirements of the case, and we are satisfied that if the penalties of the law were uniformly enforced as rigorously as in the instance before us, there would be fewer occasions for an appeal to any external interference on the part of Railway Managements. Personal punishment, instead of pecuniary infliction will alone correct the evil.

The *Liverpool Times* records a case of which the issue is by no means so satisfactory. Our contemporary says:—

"A servant of the Liverpool and Manchester Railway Company was brought before Charles Birch, Esq., one of our county magistrates, charged with having neglected to turn in the proper direction certain points or switches, connecting the Liverpool and Manchester and Grand Junction lines at Newton. The man's name was John Bate, and *he was fined 3l. and costs*; but as he pleaded guilty, the particulars of the case were not gone into. It was stated in the room, however, that Bate was asleep at his post instead of being on the watch for the trains, as was his duty."

Surely *this* was a case in which imprisonment and hard labour would have been well bestowed. The punishment was equal, probably, to the stoppage of some 10 days' wages. How would it have been, had extensive loss of life ensued from this man's culpable negligence? Who would have had the odium affixed to them—the Company or the individual offender? Or supposing the man not to be dismissed (which, however, we trust he is), who will be held responsible, should he hereafter take a fancy to sleep upon his post to the danger of the passengers on the line?

On Monday the 1st inst., John Gibson, of Hope Town, Darlington, a waggon-driver on the Stockton and Darlington Railway, was summoned before the magistrates at Darlington, on the information of Mr. Thomas Manton, the superintendent of the Company's police, on a charge of obstructing the line on the 22d February. It appeared he was coming out of the Great North of England line with some empty waggons about the time the first-class train from Stockton was due; a platelayer warned him that the train would be up before he could get out of the way; he, however, persisted in proceeding, and the platelayer turned on the signal. In a few minutes the train came up, and was obliged to throw the steam off and stop. The magistrates gave the man a lecture, and fined him 1*l.* and 3*s.* costs.

On Thursday, the 4th inst., before the magistrates at Bishop Auckland (Durham), Benjamin Scott, of Traveller's Rest, near Darlington, was fined 7*s.* for leaving waggons standing on the main ine of the Stockton and Darlington Railway, at Childon.

Robert Bayles, of West Auckland, hawker, was also fined 7*s.* for riding on a waggon on the Brusselton incline without leave.

Robert Pears, of West Auckland, waggon-driver, was likewise fined 7*s.* for unloading stones on the Hagger Leaxes Branch of the above railway, whereby he obstructed the line.

It will be recollected, that when the inquest was held on the body of the woman Cousins, who was killed by an accident on the York and North Midland Railway, the jury could not agree as to their verdict, and were therefore bound over to appear at the Assizes. They accordingly appeared before Mr. Baron Rolfe on Monday, and after a few remarks were discharged.

At the Adjourned Epiphany Sessions held at Leicester, before John Hildyard, Esq., the Recorder, Thomas Richards, aged 20, was convicted of attempting to defraud the Midland Counties' Railway Company of 225*l.* Prisoner took a parcel to the George Hotel, and insured it as containing the above-named sum. Suspicion being excited, the parcel was opened, and found to contain nothing more than a quantity of waste paper, whereupon the prisoner was apprehended. Sentenced to six months' hard labour.

The following paragraph is going the round of the press, and embodies some hints which we should be glad to see carried out in this country:—

"The Prussian Government, to prevent as much as possible accidents arising on railways from malevolence or neglect, has added to the penal laws of the country, by publishing an ordonnance with clauses to the following effect: 'Every person who shall cause a rupture or derangement of the rails, or shall place anything upon them whereby the waggons may be turned off the line, shall be liable to close confinement, *with or without hard labour, for a term not exceeding ten years*. When any such derangement shall have cause the death or injuring of any one or more persons, the punishment for the first offence shall be extended to from four to twenty years, and for the second offence to from ten years to the whole life of the offender. In case it shall appear that actual loss of life was premeditated, the delinquent is to be tried by the ordinary criminal laws. Whoever by a simple act of negligence shall place the safety of a train in danger, *is to be liable to imprisonment for from three months to two years*. If an accident thereby happens, from which death or injury ensues, the punishment is to be confinement with hard labour for from two to four years. All superintendents, who may be negligent in the performance of their duty, are to be liable to the above-mentioned penalties, are to be dismissed from their places, and declared incapable of being again employed on any railway. *And every Director who shall not immediately discharge a superintendent who has been condemned by the tribunals, is made liable to a fine of from* 36*l.* to 560*s.*"

THE VOICE FROM THE EAST.

From my old Corner, 25th February, 1841.

DEAR MR. EDITOR,—Had a bombshell alighted amidst a groupe of bulls or bears on 'Change, it could not have produced a more comical display of confusion and chagrin than did your publication of the draft I sent you of the forthcoming Directors' Report. Treason! treason! was once more the general cry. Every one said or thought, that it must be one of the *six* who had played the traitor this time (for up to Saturday last, when the document appeared in your pages, it had been kept, or *was meant to be* kept, a profound secret from all the outer circle), but then who *could* it be? Bozrah was asked "whether he had not, in some of his moments of poetical entrancement, accidentally dropped his copy out of his pocket?" "Ah ha! he! he! I thought you would be saying so; but here —there—is *my* copy." The "Glorious Apollo'r" might have retorted—to some effect, *perhaps*—by asking his colleagues of the *Sex*ecutive to show *theirs*; but that was an effort of spirit greatly beyond the poor fellow's reach. The Sam of the party, as if in despair of accounting for the secret in any other way, got up and looked in the clock-case, to see if perchance "the little bird" might be there! Ah silly, silly Sam!

To witness the affair of quills which followed—the chopping and changing—the altering and re-altering—the transposing and re-transposing—the scratching out and scratching in—the great to do altogether—in order to give to the Report such an appearance of newness as might cast a doubt on the genuineness of the published and pirated edition (for that it was *pirated*, I suppose you and I must frankly confess), was entertaining, and would have been more so had it not been quite so tiresome. After wasting some hours upon it, the result of their collective skill was such a disjointed and unintelligible jumble, that they fairly gave it up us a bad job, and handed over the whole of their papers to the clever author of the famous "unannullable" circular, with instructions to do with them what he pleased, provided only he produced something out of them different from what you had published. And such as the Report is which was read to-day, the "unannullable" is entitled to all the credit of it.

One cannot say in reading it, "how different and yet how like!" for there is in fact no real difference except in the entire suppression of one or two things, and the addition of one or two others. The encomium on the stability of the works, which stood in the original, was made a present of to the Engineer, in order that he might modestly insert it into his own Report upon them; and the squib about the railway lethargy of the Norfolk people was withdrawn under an arrangement with the immortal author of "Pooh! Pooh!" that he should seize some convenient opportunity during the meeting to fire it off—an arrangement which, it will be seen, he duly observed. The compliment which the Directors had intended paying to their own liberality in surrendering (when *compelled* to do so by the exposures of the *Railway Times*) their unearned and enormous allowances, was dropped with reluctance; but thereby hangs a little tale, as good as any which the world have yet heard respecting these same exemplary Directors. It was on a fine day in October last, I think, that this great exhibition of modern virtue took place, and as the accounts of the Company are made up half-yearly, on each 4th January and 4th July, I understood, as a matter of course, and I am sure ninety-nine in every hundred did so too, that the surrender was meant to include the whole of the *current half-year's* allowances. No such thing. From the balance sheet exhibited to-day it appears that they drew their full allowances up to nearly the very latest moment of their salaried existence—that though debarred by the magnanimous surrender aforesaid from charging for the whole of the last half-year, they have not thought it beneath them to pocket a sum of "585*l.* 9*s.* 11*d.*" for the last brief quarter, from 4th July to 4th October 1840! Was there ever meanness—ever love of office for the sake of the gains of office—like unto this? The circumstance was remarked upon with some bitterness, by one or two shareholders, who called at the office to see the accounts during the eight days' inspection allowed previous to the General Meeting; and lest any thing should be said about it—to give as little opening as possible for saying anything—it was thought wise that the Directors should in this instance hide their candle under a bushel.

But now for the *additions*. The chief one you will find, Mr. Editor, is one concerning yourself, or rather the *Railway Times*, which is, it appears, to be prosecuted with the utmost rigour of the law, for its manifold attacks upon these immaculate gentry. It could not be in the original draft which I sent you for it was not thought of till *after* it was published. Indeed, I fear me much that it was that publication, with my accompanying remarks, which, as the saying is, did your business. Never before was their rage so furious, so wild, so irrepressible. There had been an accumulation no doubt of gall, but it was that last drop in the bucket, methinks, which caused it to boil over. If I thought, Mr. Editor, you were in the smallest danger from their threatened attack, I should never regret sufficiently that anything from "My Corner" had contributed towards it; but having never communicated any thing but the truth respecting these people, and such truth as there

Digitized by Google

was abundant reason for publishing — and being convinced also, from a close observation of all that has ever appeared in the columns of the *Railway Times* respecting them, from the pens of other correspondents or from your own, that the same strict regard to truth and the public interest has been observed therein, I can but anticipate for the *Railway Times*, a splendid triumph over its vindictive and insensate assailants. I have been in the way of hearing much abuse lavished against your journal for its attacks on this Company; but I have never yet had the fortune to hear a single specific charge of misstatement substantiated against it. Railing, as we all know, is easy; disproving hard and stubborn facts quite another affair.

Mr. W——, made some very sensible observations in discouragement of the threatened prosecution, and for his pains was told yesterday by the Liverpool Directors, that he would not be proposed for re-election. How it has happened that he has nevertheless been re-elected, I am at a loss to understand.* Another candidate Director, who took an opposite course, and the louder the Liverpoolers brayed against the *Railway Times*, brayed still louder than they, has, *though marked for dismissal at the first convenient opportunity*, earned the reward of his wretched subserviency by being elected once more to a seat at the Board—a seat from which it is his wont to pass every Board Day to an outside seat on a certain stage-coach, where he retails to all about him the proceedings of the day, of "myself and the rest!"

"Pooh! Pooh!" is delighted, excited, elevated beyond all bounds, by the prospect of the legal proceedings about to be taken. You have questioned his poetical inspiration, and he is determined to show you that so far as never forgiving such an insult goes, he is of the true *irritable genus*. He went home yesterday after the breaking up of the Board —not as gentlemen are wont to go, westwards by St. Paul's and Somerset House, but by the back slums of London-wall and Smithfield, (in order no doubt that he might the better nurse his wrath in such congenial shades,) and as he passed through the shambles, in a state of excitement, which attracted the notice of all beholders—grinning, ha-ha-ing, he-he-ing, and laying about him with his hands, as if he were cudgelling a team of donkeys —he was heard to exclaim in the words of a late amusing production,—

"And the coroner jump'd from his chair as he heard,
'Bloody work! bloody work!' and 'you rogue!' from the Bird."

I am dear Mr. Editor, your faithful friend,

Q.

P.S.—Can you tell me why Pooh Pooh is like Jehdeiah the Meronothite (1 Chron. xxvii. 30.)?

THE GRAND JUNCTION COMPANY AND MESSRS. PICKFORD AND CO.

Sir,—When the Directors of the Grand Junction Railway contradict our statements, they ought at least to quote them *correctly*, and to contravene them *directly*: and when they publish affidavits, as they say, "without one word of comment," it is scarcely consistent to add such a sentence as the following:—

"As the subject is before the Directors in connection with Messrs. Pickford and Co.'s letter of the 19th inst., to the editor of the *Railway Times*, the Directors take the opportunity of distinctly contradicting, upon the authority of Messrs. Clay and Swift, the Company's legal advisers, the statement contained in that letter, to the effect that something has been done or attempted on the part of the Company, which 'disappointed the expectation of Messrs. Pickford and Co.,' of bringing to trial at the present sittings in London, an action commenced by them against the Company.

"So far as the Directors, or the Company's legal advisers know, there was not the slightest reason whatever why Messrs. Pickford and Co.'s action should not have been tried, *and that* within the next few weeks or perhaps days, if they had chosen to proceed with it in ordinary course, instead of discontinuing it and paying the Company's costs."

Where the fault rests is matter of very secondary importance, and on this point we subjoin a letter from our solicitors quite satisfactory to us. The question is, whether our action was withdrawn because we failed in an attempt to get it for trial in London after Hilary Term, or because we saw reasons to despair of ultimate success.

It is worthy of all notice that while the Grand Junction Directors do not, for they cannot, deny the former hypothesis, they contrive most plainly to infer the latter.

And yet at the very time that inference was penned, they actually had notice of the commencement of a new action on the very same grounds, with merely a change of name; so that instead of getting to trial in London in July we might get to trial in Surrey in April!!

There are several statements in Mr. Comber's letter which we may venture to call erroneous; as for example, the definition of a weighing machine, or the real nature of the "*voluntary* agreement" between ourselves and the Liverpool and Manchester Company.

But, as Mr. Comber admits on the part of the Grand Junction Company the conduct to which we cited him as a witness, it is scarcely worth while, and it would certainly be besides the purpose, to enter into any discussion with him upon these subjects.

We are, Sir, your obedient servants,

PICKFORD & CO.

City Basin, March 1841.

YOURSELVES v. THE GRAND JUNCTION RAILWAY COMPANY.

Dear Sirs,—We have read the statement in the *Railway Times* of the 6th instant. The facts of the case are these. The declaration in your action against the Company was delivered on the 25th January, with notice that the Company were required to plead in four days. If the defendants had accepted the notice, we should have been in time, as we intended, to have given the Company notice of trial for the adjourned sittings in London, but to prevent the cause being tried the defendants' agents insisted that the Company did not reside within 20 miles of London, and that they were therefore entitled to eight days' time to plead. Mr. Baron Rolfe decided at chambers that they were so entitled. This decision rendered it impossible to give notice of trial for the London Sittings, and it not being the practice of the Court to try special jury causes after Easter Term, and as therefore the action could not be tried until next July, we applied to a Judge at Chambers to permit us to amend the declaration by changing the venue from London to Surrey that we might try the action at the Assizes, but the application being opposed by the agents of the Company's solicitors, it was refused by the judge. Being fully sensible of the importance to you that the questions between you and the Company should be brought to as speedy an issue as possible we discontinued the action at the expense of the defendants' costs, and commenced another action on the 22nd February, and the declaration was delivered on the 5th instant, the venue being laid in Surrey and the time within which the Company is bound to plead, will expire on the 13th instant. The only difference between the position the Company are now in and that which they would have been in if they had not opposed the application to change the venue in the first action is, that they have received from you some 20*l.* for costs.

We are, dear Sirs, yours very truly,

BAXENDALE, TATHAM, UPTON, AND JOHNSON.

7, Great Winchester-street,
March 11, 1841.

GRAND JUNCTION CARRYING BUSINESS.

To the Editor of the Railway Times.

Sir,—Having been misled by an advertisement, published by the Grand Junction Railway Company, in which the offer to carry goods between London and Chester, at the rates of 2s. for parcels under 15lb. and 3s. 6d. per cwt. for those above that weight, I immediately availed myself of so cheap and expeditious a conveyance, and ordered a small parcel, weighing 2lbs., and a hamper of wine, weighing 90lbs. to be forwarded from the Golden Cross, which were charged respectively 3s.[4]d. and 16s. 6d.

The answer which I received to my remonstrance against these charges was, that as I had omitted to specify by what train I wished the goods to be forwarded, the Company had sent them by a passenger instead of a luggage train, and charged accordingly.

Though the advertisment above referred to, made no mention of the necessity of particularizing the train, redress has been refused, on the ground of my having neglected to give instructions on that head.

I hope the public will profit by my loss, and

I am, Sir, your humble Servant,

CESTRIENSIS.

Chester, March 3rd, 1841.

DAVIES'S RAILWAY CARRIAGE BREAK

Sir,—I was much gratified on reading the interesting and seasonable communication of Mr. Adams, in your last *Railway Times*, on "Railway Breaks"—as also with his flattering notice of "the ingeniously contrived break" of my friend Mr. Davies; and I only regret that his commendation should have been in any way qualified—arising as the qualification entirely does, from a slight misconception on the part of Mr. Adams; who observes —"The *defect* seems to be that there is no provision for forcing back the breaks from the wheels when not required to be in use." This is completely a mistake, and I beg to call attention to the circumstance, that the connections of the break levers and screw, are such as to work equally well in either direction—backward and forward. On reversing the motion of the screw, therefore, the breaks are forced back from off the wheels with as much force, as is in the other case employed to hold them on to the wheels. Ample "provision" is thus made, and the *defect* mentioned has no existence except in the imagination of Mr. Adams; the removal of this supposed "spot in the sun," will, I am sure, greatly increase Mr. Adams's admiration of this really beautiful contrivance.

I am quite of Mr. Adams's opinion, that the plan of putting shoes under the wheels of railway carriages, is decidedly objectionable, but not "because of the trouble of backing the train, to remove the shoes after use;" inasmuch as this trouble is by no means an inevitable consequence of the use of shoes. In a communication to the *Mechanics' Magazine*, of Nov. 17th, 1832, I took the liberty of pointing out a simple and effectual mode of passing the carriage forward and leaving the shoe to follow, which plan is applicable either to railways or common roads.

I am, Sir, your obedient servant,

WM. BADDELEY.

London, March 3rd, 1841.

North Midland Railway.—The North Midland Company are erecting a bridge under the embankment about a quarter of a mile south of Wingfield station, which will be a great public convenience. The workmen on Saturday had removed a large portion of the earth, so as to nearly undermine the blocks, when the luggage train, drawn by three engines, was approaching, and but for the timely interference of Mr. Simpson, the resident engineer, who caused the workmen to replace the earth and use every means in their power to keep the blocks in their places, some mischief would have ensued. Mr. Simpson instantly discharged several of the leading men, and the greatest care was taken to make all safe before the arrival of another train.—*Derby Mercury.*

* Our friend "Q." it will be perceived, participated, at the date of this letter, in the general impression of all present on this head. He will have seen, however, that though the shareholders supposed they had "re-elected" Mr Wyllie, the Directors insist that they elected a certain Mr. J. C. Ewart in his stead, whose name was never once mentioned to them as a candidate.—Ed. R. T.

EDINBURGH AND GLASGOW RAILWAY COMPANY—FRUITS OF INTRIGUE.

[In order the better to understand the scope of the following communication which we have received from Mr. Cadell, of Edinburgh, on the subject of the lamentable dissensions which have arisen in this Company, we prefix an extract or two from the two printed letters to which he refers—the one of the 19th February, addressed by him to Mr. Leadbetter, the Chairman, and the other of the 2nd March, to "the Liverpool and Manchester Shareholders."—ED. R. T.]

(From Letter of the 19th February.)

It is with undefined regret I had by a printed statement you transmitted to me on the 16th instant, confirmation of a rumour which I had heard from more than one quarter, that the Directors are not drawing cordially together; and, in effect, that at this the most important crisis of the concern, there is a Boa-Constrictor in Glasgow threatening to swallow all the other members of the Boards, both east and west, that is, to set at nought the opinions of gentlemen of undoubted talent and respectability, in whom many of the largest shareholders have the most entire confidence—and that this printed statement was equally matter of surprise to your brother Directors as to the shareholders at large, being *received by all on the same day!* I put it to you if this is what was to have been expected from one to whom all were entitled to look for a line of proceeding that would bear any scrutiny.

No meeting, Sir, so suddenly apprised of such important changes can judge of them properly. You say,—for I presume you adopt all the law and reasonings you have put forth,—"that the question should be authoritatively and at once settled by the shareholders." I say, No! The shareholders should call on the collective Boards for a statement of the whole case, and not come to an off-hand decision on the *ex parte* and unauthorised statement of any individual, whether Chairman or not. The shareholders, besides, are not a legislative body,—they can only decide in conformity to Act of Parliament, and *any one of them* can compel a compliance with it, if any attempt is made to carry changes in the "authoritative" way you propose. The plain common sense course is to call a special meeting of the shareholders,—hear their Directors on the whole question, or appoint a Committee of shareholders (not Directors), whichever the meeting think most fitting, to Report; and as I beg leave, with the Act before me, to doubt the powers, "of which," you say, "no doubt is entertained," said Committee to take the opinion of counsel on the points mooted by you, more especially as I take leave to question the entire ground-work of your statement. But, as if doubting your powers under the present Act, you mention notices of a new Act:—I ask who gave these notices?—by whose authority were they given? *No individual but I a right to give such for a Company without leave asked or obtained, and for purposes not as yet avowed.*

* * * *

It is with pain I am constrained to allude to a part of your own proceedings, allow me to say, somewhat inconsistent with your position as Chairman of a great public Company—one who ought on all occasions to be looked upon with respect by every shareholder, in whatever part of Great Britain he resides. I have learnt while the preceding part of this letter is in the hands of the printer, that about ten days ago you deprecated any appeal to the shareholders on your projected changes; but notwithstanding and without the sanction of your Co-Directors, you proceeded to Manchester and Liverpool, called meetings of all in these great towns interested in the railway, and propounded your own unauthorised plans, and procured their concurrence in them—such a proceeding when known, will, I trust, make these gentlemen act with more caution in future. I fear it will henceforth militate against the bearing you ought to hold as the Chairman of the Company. Your course seems to have been so deftly taken, to accomplish your own views, that the same post which brought your Circular to Shareholders in Edinburgh, brought advice from London of its arrival there; and while those resident here had only one day to send off their proxies, after receiving your printed statement, you were nearly at the same time holding meetings of the gentlemen of Liverpool and Manchester, and bundling their mandates into your pocket, as if all had been fair and above board. I fear you have placed yourself on the horns of a dilemma. If the shareholders act "authoritatively" beyond their powers, the law will control them; and when you come before a Committee of the House of Commons, "we shall be there to see" such an expose, as must result in your resignation of the Chair of the Company.

(From Letter of 2nd March.)

* * * * *

In a word, you empowered him, and those who supported him, to act illegally. The consequence will be, as I think I shall be able to indicate, that if you do not retrace your steps in a manly straight-forward manner, such a course may be forced upon you by one of the least agreeable of modes—the inflexible majesty of the law.

I did not see the report of your meeting of 16th February till my letter to Mr. Leadbetter was printed; but it is somewhat strange that no one asked that gentleman in what shape or form his printed statement of the mode of management propounded to you had come before his brother Directors, and how they had received it. You were all evidently gained over by the *ad captandum* expression, "CENTRALIZATION," and the high-sounding phrase, "Authoritative" powers of the shareholders in regular meeting convened, without any one caring to ask if such powers existed as were so freely chalked out for your dumb proxies. I must say, too, it appears odd that so many clear-headed men should have jumped to a conclusion, without suggesting some investigation. It is this which I am anxious for you to do now, so as to avoid the heart-burnings of contention.

* * * * *

The first result of the silent eloquence of your votes was a formal protest against the resolutions, as illegal; others, and I concurring, have since signed a document embodying reasons for that course. But this is not all; other proceedings must follow, unless you step forward and avert them.

Removed as you are from the usages of this part of the kingdom, you are probably not aware that, by aiding and abetting regulations contrary to law, you incur personal responsibilities, which we, who are non-consenters, are resolved to free ourselves from by regular proceedings—the likely one after the protest is an interdict of our Court of Session, which, if confirmed, (I forget the legal phrase,) renders all your doings nugatory. This is equivalent to an injunction of the Court of Chancery. But another process may be gone into, called an action of declarator, somewhat like motions in the Courts of Westminster to show cause; and with our court, all you gentlemen will be paraded *nominatim*. I think I see the chuckle of some of our merry lawyers, when they behold the array of the millionaires of Manchester and Liverpool, and gloat over the plucking they will have for this "raid across the Border;" and, if you are cast, which is more than likely, you have no recourse against the Railway Company. If you are found to have acted illegally, you will have to pay individually. But, what is more, you may have to thank your lucky stars for an escape; for, allow your proceedings to be the basis on which regulations are founded for the working of the line, and loss of life and limb to follow, with a long-tongued lawyer set to work, before a jury, to make out that all of them flowed from a self-constituted legislature at Glasgow,—verily, you will soon see your dividends disappear.

It is to warn you from such consequences that I, in a feeling of brotherly kindness, although unceasingly occupied with large concerns of my own, sit down to point out to you what I think would save much anxiety, much good money, and put the concern on the footing its *mis*-managers ought never to have deviated from.

I think I hear many say, "Why not get a new Act?" I say, no. There are ample powers in the present one for every purpose; besides, that *we, the shareholders of Edinburgh, will strenuously oppose any Act to take away our vested rights in the present one.* IT WAS FOUNDED ON A COMPACT BETWIXT TWO GREAT CITIES; and it is absurd to suppose that on any accident or calamity happening on the railway, reference is to be made forty miles off, when authority is given to individuals at both termini.* Both interests assisted in procuring the measure, and after as great a struggle nearly as your own of 1825-26 for the Manchester and Liverpool line, neither of them has a right to swallow up the other. Independent of this, Edinburgh has good and sufficient reasons for upholding its own influence. At no distant day it is likely to become the great centre of railway communication in Scotland; the admirable physical qualities for a line by the coast to Newcastle, to connect with the great North of England or Midland County undertakings, the railways now proposed through Fife to connect with Dundee; from Dundee to Arbroath there is one already, and a continuation cannot fail to be carried to Aberdeen; all these, linked with ours by the Newhaven line, must show you gentlemen so conversant with this magnificent mode of communication, that we would be greenhorns indeed were we to give up any rights before the Committees of Parliament, or elsewhere, which would make our city a nonentity in the arrangements for these great, but no less sure, coming schemes.

To the Editor of the Railway Times.

SIR,—As it is rather expensive work to an individual, printing and forwarding long letters to a numerous Railway Proprietary, will you allow me a short space in your paper to inform the good folks in Liverpool and Manchester, shareholders in the above Railway, what I was not aware of when I addressed my letter to them, dated, 3rd instant. Indeed what I have now to state was known here only this day, although the "CASE," had been in hand some days before?

I forwarded to you my letter to Mr. Leadbetter, of 19th February, and in all probability you will have made remarks on the question generally, before I write this. I sent you, two days ago, my letter to the Liverpool and Manchester Shareholders in this Railway; in both letters I adverted to the illegality of the entire proceedings of Mr. Leadbetter, and those who supported him. *My anticipations have been confirmed, and the head of our Scottish Bar has declared them to be so!*—Here is a precious mess for a large undertaking to have got into! and there is no remedy but to call another meeting of the shareholders, and rescind their proceedings, root and branch; as it is an understood maxim, that whatever you build on a bad legal foundation impairs the entire superstructure. No! there is another remedy, and that must come as a sequence, if the gulled shareholders at Manchester and Liverpool do not bestir themselves, namely, a motion in our Courts to annul the Resolutions passed at Glasgow, on 22nd February.

I do not think such a stultification has occurred in any of your great English railways, as Mr. Leadbetter and his advisers have brought upon our, as yet, greatest Northern undertaking. The Resolutions being bad in law, renders all meetings of Directors, flowing from it, equally useless—all committees—all payments—ALL CALLS!!! Here is a precious scrape! My thorough conviction is, that the call made on the shareholders since the meeting of 22nd February, cannot be enforced; and really, sir, to give you an idea how blinded self-willed men will resemble a run-away horse, which every one knows sees nothing before him; these redoubtable Resolutions of 22nd February, which Mr. Rathbone has tried to throw his shield over, can only be held as good bye-laws, provided they unhinge nothing enacted; and if bye-laws at all, or intended as such, must be submitted to several sheriffs of counties—all which has been overlooked!

This is all very melancholy; I think it will be admitted to spoil the *prestige* attached to the management. Here is a decided disorganization—the ship must be righted, and the commander and officers, if not sent the same road as Gil Blas, *but without the ducats*, admonished to be more careful in future.

I avoid all discussion on the clap-trap of "centralization." We know here what value to put upon that, as well as a defence of the point, that the "opinion" of one counsel, however eminent, is not law; but I may remark, that it is a strong confirmation of what other lawyers told the shareholders themselves, at their meeting in Glasgow.

The shareholders in Manchester and Liverpool may get up a subscription whenever they like, for we who have been guided by the Statute, will not pay a farthing of the expenses of those who have so unceremoniously deviated from it. In the mean time I guess, as brother Jonathan would say, the quick perception of these gentlemen will find out, that the completion of the Railway is carried on, at this moment, *on the personal responsibility of the Directors.* Several cases that have occurred here are notorious, and show in broad outline the high character of gentlemen, who would not allow any course of contemptuous usage to come in the way of a great public undertaking.

I am, Sir, your very humble servant,

ROBERT CADELL.

Edinburgh, March 6, 1841.

EXPLANATION OF THE MANCHESTER AND LEEDS RAILWAY TIME TABLES.

[See Advertisement of these Tables in our last number.]

As some difficulty has been experienced in understanding the new form of time-table issued by the Manchester and Leeds Railway Company, which appeared in our paper of the 20th instant, in reference to their opening throughout on the 1st of March next, we have been requested to observe, that by taking the horizontal line opposite to the name of any station you will at once perceive the times of departure from that station either towards Leeds or Manchester, and by noticing the names at the top and bottom of the vertical columns, you will also see to what places you may proceed by the trains of other Companies, after leaving the Manchester and Leeds line. The most important part, however, of the time table to the inhabitants of Manchester, is the fact of a second railway route between this town and London, by means of which, parties can travel to Rugby 30 miles nearer London, at the same fare as is now charged to Birmingham. The fare by this route from Manchester to London, we perceive is only 1*l.* 1*s.*, for third class passengers.—*Manchester Guardian.*

---

* Not, we fear, the only snake in the grass.—ED. R. T.

* Several great English Railways are managed at both termini. The Great Western has been harmoniously conducted on this principle. But the Edinburgh Board never contemplated such a course. *They are anxious for a concentrated management, under proper surveillance.*

LOSH'S RAILWAY WHEEL.

To the Editor of the Railway Times.

Sir,—I have perused with much interest the letter by Mr. William B. Adams, in your number dated 6th instant, on railway wheels, in which the subject is discussed with great ability, but as the author has fallen into some errors with respect to one of the leading iron wheels now in use, viz., Losh's, and as I am closely connected with the manufacture of those wheels, I think it right and but fair that those errors should be corrected. I therefore trouble you with this communication, and beg the favour of your giving it a place in your valuable journal.

In the first place, it is necessary to correct the drawing given by Mr. Adams at page 132, fig. 2, of the wheel in question. The true figure of the wheel as it is now usually manufactured, is shown in the following figure. It will be perceived that in

this, the true figure, the spokes are inserted in the nave at equal distances round its circumference. On examining this sketch it will be found that the wheel in this particular, when properly made, is between the drawing given of it page 132, fig. 2, and that given of Hague's, fig. 3, at the same page, and the conclusion drawn that Losh's wheel is weaker at the centre than Hague's, supposing it to be correct in reasoning, falls to the ground from this misstatement of fact.

Mr. Adams observes, "The sharp angles in the spokes require great care in bending to avoid fracture," this would certainly be the case were the sharp angles made by the bending of the iron, which they are not; on the contrary, the bar of iron is rounded in making the spokes, rather approaching the form of Bramah's wheel, and the angular part formed out of a projection rolled on the iron for the purpose, and thus the tendency to fracture is so much reduced that an instance of it never occurs in practice. I may further state, that during five years that I have been attending to the manufacture of these wheels, an instance of failure in this particular has not come within my observation. But the great fault found with Losh's wheel by Mr. Adams is its want of what he calls elastic resilience, and he goes on to observe, "that at first sight this wheel would appear slightly elastic, owing to the curved form of the spokes, but this cannot be, or the wheel would be very rapidly destroyed, as the spokes would all be subjected to alternate tension and compression, which would produce breakage in the angles where the action would be most violent." From this I am certainly of opinion that Mr. A. misconceives the principle of the wheel; for numerous experiments performed here have proved beyond a doubt that this wheel possesses elasticity in no ordinary degree, while in all that we have repaired I never noticed any symptoms of their working loose at the angles. I am from this led to believe that the compressing power of the outer tyre in cooling is great enough to render the continuous arch formed by the felloes sufficiently firm at the angles to allow that elasticity which Mr. A. himself says, at first sight, is apparent, and which he affirms is so necessary in the construction of a durable wheel without any fracture or working loose at those parts being occasioned. It is true taking this view of the case, that the tyre has to support all the tension of these elastic spokes, but it being an inch and a half in thickness, while the spokes and felloes are only five-eighths, must prove much more than a counterbalance against any tendency there may be to burst it. Experience has taught us how far this elastic property of the spokes may be made available without endangering the tyre. Wheels of every kind have failed, and will fail occasionally, even if made perhaps of the best material, and the liability is greater from the circumstance that in a large manufactory it requires so much attention to see that the iron is properly prepared, and even then a bar deficient in quality may sometimes be produced, so much so indeed is this the case, that latterly we have judged it prudent to try every tyre previous to putting it on to a wheel. I do not therefore contend that Losh's wheels have never given way, but certainly I do assert that I have never yet seen or heard of an instance where a failure has been the result of a defect in the principle of the wheel. Were this the case then all wheels made on Losh's plan would be bad, whereas I could easily procure testimony to prove that there are many which have run several thousand miles without requiring any repair, not until indeed the tyres were worn so thin as to render it unsafe to continue them on the line, when they have been re-tyred, and subsequent use proved them to be as firm and durable as they were at first.

I am, Sir, your obedient servant,

J. LOWTHIAN BELL.

Walker Iron Works,
Newcastle-on-Tyne, February, 1841.

PARLIAMENTARY PROCEEDINGS ON RAILWAYS.

BELFAST AND CAVEHILL RAILWAY.

March 8.—Committee on petition fixed for Monday, 19th March.

BRISTOL AND EXETER RAILWAY.

March 8.—Bill "for extending and enlarging some of the provisions of the Acts relating to the Bristol and Exeter Railway," presented and read a first time.

March 10.—Printed Breviate of Bill laid on the table.

Second reading fixed for Monday, 15th March.

DURHAM AND SUNDERLAND RAILWAY,

March 11.—Bill referred to Mr. Bernal, Mr. Alderman Thompson, and the Hon. Mr. Liddell.

Committee on the Bill fixed for Friday, the 19th March.

GREAT LEINSTER AND MUNSTER RAILWAY.

March 8.—Committee on petition postponed from Wednesday 10th, till Monday, 15th March.

GLASGOW AND DUNDYVAN JUNCTION RAILWAY.

March 9.—Petition for Bill reported, and Bill ordered to be brought in by Mr. Lockhart, Mr. Oswald, and Mr. Dennistoun.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

March 9.—Bill referred to Mr. Bernal, Mr. Wallace, and Lord J. Stuart.

March 10.—Committee on Bill fixed for Thursday, 18th March.

LONDON AND BLACKWALL RAILWAY.

March 11.—Bill "for granting further powers to the London and Blackwall Railway Company," presented, and read a first time.

LONDON AND GREENWICH RAILWAY.

March 6.—Committee on petition fixed for Wedday, 17th March.

MANCHESTER AND LEEDS RAILWAY.

March 5. Resolution of Standing Orders Committee reported and agreed to:—

"That, in the case of the Manchester and Leeds Railway petition, the parties be permitted to proceed with their Bill, on giving the notices in the *London Gazette*, and in some one and the same newspaper published in the county of Lancaster and in the county of York, for three successive weeks; and that the Committee on the Bill do examine, in the first place, how far such order has been complied with, and do report the same to the House on the Report of the Bill."

March 8.—Report from Select Committee on Standing Orders read; Bill ordered to be brought in by Mr. Mark Philips and Mr. Brotherton.

March 9.—Bill "for enabling the Manchester and Leeds Railway Company to raise a further sum of money," presented and read a first time.

NORTHERN AND EASTERN RAILWAY.

March 5.—Petition for Bill reported; and Bill ordered to be brought in by Lord Viscount Mahon, Lord Viscount Grimstone, and Mr. Cowper.

March 9.—Bill "to enable the Northern and Eastern Railway Company to make certain deviations in the line of their railway, and to alter and amend the several Acts relating to the said railway," presented and read a first time.

NORTHERN AND EASTERN RAILWAY (HERTFORD AND WARE BRANCH.)

March 5.—Petition for Bill reported; and Bill ordered to be brought in by Lord Viscount Mahon, Lord Viscount Grimston, and Mr. Cowper.

March 9.—Bill "to enable the Northern and Eastern Railway Company to make a branch line of railway, and to alter and amend the several Acts relating to the said railway," presented and read a first time.

NORTH MIDLAND RAILWAY.

March 5.—Petition for Bill reported; and Bill ordered to be brought in by Mr. Baines, Sir William Molesworth, and Mr. John Parker.

March 8.—Bill "for granting further powers to the North Midland Railway Company," presented and read a first time.

March 11.—Printed breviate of Bill laid on the table.

Second reading fixed for Monday, 15th March.

POLLOC AND GOVAN RAILWAY.

March 5.—Bill "for enabling the Polloc and Govan Railway Company to raise a further sum of money, and for altering and amending three Acts for making and maintaining the said railway," presented and read a first time.

STAFFORD AND RUGBY (LATE MANCHESTER AND BIRMINGHAM EXTENSION) RAILWAY.

March 5.—Petition for Bill reported; and Bill ordered to be brought in by Lord Francis Egerton and Mr. Bootle Wilbraham.

March 9.—Bill "for making a railway from Stafford to Rugby, with a branch therefrom," presented and read a first time.

March 9.—Motion made and question proposed, "That there be laid before this House, the Minutes of Evidence taken before the Select Committee on petitions for Private Bills, relative to the petition for the Stafford and Rugby Railway Bill"; motion, by leave, withdrawn.

March 11.—Motion made and question proposed "That there be laid before this House, the minutes of proceedings and evidence taken before the Select Committee on Petitions for Private Bills, relative to the petition for the Stafford and Rugby Railway Bill:"—(Mr. Warburton:)—Motion, by leave, withdrawn.

Printed breviate of Bill laid on the table.

Second reading fixed for Monday, 15th March.

WEST DURHAM RAILWAY.

March 5.—Bill "to enable the West Durham Railway Company to raise a further sum of money, and to amend the Act relating to the said railway," presented and read a first time.

March 11.—Printed breviate of Bill laid on the table.

Second reading fixed for Monday, 15th March.

WISHAW AND COLTNESS RAILWAY.

March 9.—Bill referred to Mr. Bernal, Mr. Oswald, and Mr. Lockhart.

March 10.—Committee on Bill fixed for Thursday, 18th March.

YORK AND NORTH MIDLAND RAILWAY APPROACHES.

March 11.—Report to be made Monday, 15th March.

Digitized by Google

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A Special Meeting of the Shareholders of this Company was held at the London Tavern, on Tuesday, the 2nd March, as briefly noticed in the *Railway Times* of last week. W. Crawshay, Esq., in the Chair. After the advertisement had been read by the Secretary (Mr. Bourne), the Chairman having stated the preliminary steps required by the Standing Orders of Parliament for the introduction of a Bill, and explained the object for which the Meeting was called, the clauses of the first of the proposed Bills were gone through by the solicitor of the Company (Mr. Crowder); the heads of the merely formal clauses being read short, and the only two of any importance at length, namely, one reducing the shares in the Company from 100*l.* to 50*l.*, and consequently increasing the number of shares from 7,200 to 14,400; and another referring to the leasing of certain property held by the Company, which, after some discussion, were both agreed to; a proviso being added to the latter (chiefly at the instance of the Chairman) making it compulsory on the Company to sell the reversion of the land so leased, within ten years.

A conversation then took place, arising from a question asked by Mr. Moxon, as to the height of the summit between London and Cowbridge. Mr. Bidder, the Company's engineer, stated it to be 260 feet; and further, that this would also be the total summit between London and York. Mr. Moxon, after expressing some surprise at the fall in the price of shares (although personally he had no reason to be displeased with it, as it had enabled him to buy in *cheap*); went on to contrast the advantages presented by this line, for a communication with York, with one summit of 260 feet, instead of 330 feet as at Tring, and a distance of 190 instead of 230 miles by the Rugby line.

It further appeared from the discussion that followed, that the Parliamentary deposits had been made by the Directors, to enable the Company to keep possession of the ground between Stortford and Cambridge, wholly independent of other parties who had lodged plans for effecting the same object.

In answer to other questions from Mr. Moxon, Mr. Bidder stated, there were four summits on the line to York by Rugby and Derby, namely, the Tring, the Kilsby, the Blisworth, and the Clay Cross, all about the same or greater height than the Tring; and five tunnels, varying from three-quarters to a mile and a half long, with two shorter ones, while by the Cambridge line only two tunnels are proposed, Lord Braybrooke's, each about 500 yards long.

Mr. Barclay then inquired whether there was any intention of extending the share-list, to which Mr. Crawshay answered emphatically "never at a discount, while I continue Chairman."

The first Bill was then sanctioned unanimously by the meeting, and the Secretary having read the advertisement calling the second meeting for the approval of the Hertford and Ware Branch Bill, Mr. Crowder went through the clauses as before. The Chairman stated that this Bill had been taken up by the Directors on the assurance of the Engineers, that the whole work, including purchases, could be completed for 50,000*l.*, and that they would not proceed with it unless this were the case; and they also pledged themselves not to proceed with the execution of the work after the Act was obtained without the consent of the proprietors. He further stated, that the expense of working this branch would be almost nothing to this Company, as it could be done by the pilot engine, which will always have to be kept at Broxbourne. In answer to a question from Mr. Barclay it was stated by the Directors, that they did not anticipate any opposition, but that, on the contrary, the inhabitants of the towns were very favourable to it, and indeed were petitioning in its favour. The Bill was then approved of, and after some unimportant conversation, the thanks of the meeting were given, on the motion of Mr. Moxon, to the Chairman and Directors, and the meeting separated.

MANCHESTER AND LEEDS RAILWAY COMPANY—GENERAL MEETING.

[From the *Leeds Mercury*.]

The General Half-yearly Meeting of the Shareholders in this railway was held on Wednesday, March 3rd., at the Company's offices, Clowes's Buildings, Hunt's Bank, Manchester. There was rather a numerous attendance, between 70 and 80 gentlemen being present. Henry Houldsworth, Esq., the Chairman of the Board of Directors, presided.

The Chairman stated that this was the ninth half-yearly meeting of the Company; and in addition to the ordinary business of a half-yearly meeting, some special business would be brought before the Company. He then called on—

Mr. Jellicorse, the Secretary, who read the advertisement by which the meeting had been convened.

The Seal being affixed to the register of proprietors,

Mr. W. Entwistle, one of the Directors, read the following Reports:—

REPORT.

It is with pleasure that the Directors of this Company announce the completion of the main line and the opening of the railway throughout, which important event took place on Monday last, the first day of March.

For the information of the proprietors, the engineers have been requested to prepare a special Report upon the present state of the works, to which the Directors refer with great satisfaction, as it bears testimony in the strongest possible manner to the strength and solidity of the various works on the line generally, and to the soundness and perfect sufficiency of the Summit Tunnel in particular; the latter being specially described as fully equal, in point of security and excellence of workmanship, to any similar work hitherto executed.

The works upon the entire line have withstood the effects, which might be expected from the action of the late severe weather upon works of such recent construction, better than might have been anticipated, and justify the reliance, which the Directors have always placed in the assurances of their engineers, that such would be the case.

The Directors have taken the earliest opportunity allowed by their Act of Parliament of calling the general half-yearly meeting, in order that they may make their usual Report of proceedings for the past half-year, at the same time that they assemble the proprietors for the purpose of laying before them a statement of the financial position of the Company, and obtaining their sanction for proceeding in an application to Parliament this present Session for power to raise additional capital beyond the amount which the Company have power to raise by their existing Acts.

With the view of bringing this financial statement more clearly before the proprietors, the Directors beg to refer them to the several heads and estimates given in their report of March, 1839, at the first meeting of the proprietors which took place after the contracts for the main line had been made, the land chiefly bought, the branches planned and estimated, and the additional capital authorized to be raised for the purposes therein specified; the calculations then made having formed the basis upon which all the subsequent reports were founded. At that time the entire land required for the railway was stated as likely to cost the Company not more than 250,000*l.*; but, although the negociations for the purchases of land originally contemplated were then so far advanced as to justify the Directors in assuming that they could estimate with accuracy the ultimate total amount of expense under this head; yet, in consequence of many cases of difficulty and dispute which afterwards arose, and of additional purchases rendered requisite by local circumstances during the progress of the works, which could not possibly have been foreseen to such an extent, that amount will have been increased to 300,000*l.*, being an excess of 50,000*l.* over the estimates then given, notwithstanding the most earnest endeavours of the Directors to obtain as favourable terms, and to contract this source of expense as much as possible. The contracts for the entire works upon the main line had been then let for the aggregate sum of 1,153,166*l.*; and those contingencies and extra works, which are not usually included in contracts, but which are executed at prices stipulated in the contracts, were estimated to amount to 20 per cent. on the above, or 230,633*l.*; making altogether 1,383,799*l.* for the works upon the main line. The actual expenditure upon them, exclusive of rails, chairs, &c., was up to the 31st of December, 1840, 1,580,951*l.* 13s. 1d.; and the estimates for completing the same, together with the payment of the contractor's retentions, amount to 146,000*l.*, making a total of 1,726,951*l.* 13s. 1d., or an excess of 343,152*l.* 13s. 1d. on the works. This excess consists chiefly in the tunnels, which of all engineering works, involve the greatest uncertainty in the cost, and which on this line in particular, have exceeded all previous conception, not only from the existence of more than ordinary difficulties in the operation of tunnelling, but still more from the great extra strength in the brick-work, rendered necessary by the loose nature of the strata, and a very great increase, from the same cause, in the extent of tunnelling. When the contracts were let, the aggregate length then contemplated was 4,567 yards; and the contract was entered into for the Summit Tunnel (including the driftway, but not the shafts) at 38*l.* per yard forward; but, in the progress of the works three additional tunnels were found requisite, in situations where the open cuttings originally intended were rendered impracticable, by the loose nature of the strata; and the actual aggregate length of tunnelling completed is 5,432 yards, while the actual average expense per yard forward is nearly 80*l.* The excess in the Summit Tunnel alone has been 108,000*l.*; and the original contractor abandoned the contract at an early period, paying a penalty of 3,000*l.* Other causes of increased cost have also contributed to swell the excess—particularly a recent heavy expenditure in the Winterbut Lee contract, where it was found impossible to execute the work as originally designed, from the extreme softness of the ground; the latter being so saturated with water, that the sides of a shallow open cutting, nearly seven hundred yards long, required to be upheld by solid masonry, for which no foundation could be obtained, except by the expensive process of sheet-piling. The additional expense here was no less than 30,000*l.* In addition to the above, 4,000*l.* has been laid out in securing the embankment at Slack's Valley from further settlement, and 3,000*l.* upon the Healy Mill Bridge; the latter having been caused solely by the delay of judgment in the Court of Chancery, which did not allow your Directors time to complete the works as proposed, though the suit of the proprietors of the Healy New Mill was ultimately dismissed with costs. The above items amount altogether to nearly 300,000*l.*, the remainder of the excess of 343,000*l.* having been dispersed over many smaller works, too numerous to particularize.

The next item in the estimate referred to is that of 150,000*l.* for iron rails, chairs, sleepers, and fittings, which is likely to be exceeded by rather more than 40,000*l.*, in consequence chiefly of increased weight of rails and chairs and shorter bearings (which were adopted under the advice of the Company's engineer), and many additional sidings and other extra accommodation in goods sheds, engine sheds, and stations. In the estimate of 150,000*l.*, for Parliamentary and law expenses, engineering, management, salaries, and interest till the time of opening the line, there will be an excess of about 78,000*l.*, of which stamps and interest on bonds form a considerable portion. The unavoidable delay in the opening of the entire line has caused a considerable addition to this item of expense.

The stations, locomotive, and other stock, engine sheds, and other buildings required for conducting the business as general carriers, were estimated, in March, 1839, at an aggregate amount of 350,000*l.*, which will not be exceeded by more than 38,000*l.* This excess is principally caused by the large extension of goods traffic, which, from recent experience, your Directors confidently anticipate, and which, as the proprietors are doubtless aware, demands a far more than proportional amount of power and accommodation, as compared with the conveyance of passengers. Upon this point, the Directors will only mention, that they have considered it necessary to order upwards of 500 waggons at a cost of about 50,000*l.*, and sixteen additional engines; and that it is found expedient to erect workshops, at an early period, in connection with the present engine sheds, and to provide tools, for the purpose of enabling the Company themselves to execute all repairs and minor works in that department, by which they are advised, a considerable saving of expense will be effected. From the above it appears, therefore, that, upon the ultimate completion of the undertaking, there will be an excess, in works, of about 343 000*l.* in land, of 50,000*l.*; in rails, chairs, &c. of 40,000*l.*; in locomotive and other stock, of 38,000*l.*; and, in general expenses and interest, of 78,000*l.*—amounting altogether (inclusive of about 30,000*l.*, paid for surplus stock, chiefly land and buildings, which may ultimately be re-sold) to the sum of 579,000*l.*

The total estimates for the above purposes, given in

Digitized by Google

March, 1839, (exclusive of the estimates for the formation of the extension line and branches), amounted to 2,283,709l. This sum, together with the aggregate excess of 579,000l., as given above, and about 310,000l. for the formation of the extension line, and the Oldham, Heywood, and Halifax branches, make a total capital of 3,172,000l., which is the estimate of the sum now required. Upon the whole, therefore, there appears to be a deficiency of about 572,000l. upon the present capital of the Company, which sum will be required in order to complete and furnish, with all the locomotive and other stock, stations, &c. the main line and the several branches proposed to be formed by this Company; and the Directors have to report, that they have already presented a petition to the House of Commons, to dispense with the strict observance of their standing orders so far as to allow a bill to be introduced, authorizing the Company to raise that amount by the issue of new shares. That this application, when sanctioned by this meeting, will be successful the Directors cannot permit themselves to doubt, as its rejection would inevitably prevent the Company from completing their arrangements, and affording to the public that convenience, and certainty of despatch and safety, that they may justly expect.

The Directors recommend, that application be made to Parliament for power to increase their capital, which may be effected by the creation of new quarter shares, to be issued in the proportion of one share of 25l. for every 100l. of the stock of the Company held by any proprietor, either of the present, old, or new stock. The amount of shares so issued would be 487,500l., which, with the usual power to borrow one-third more, or 162,500l upon mortgage of the tolls, would amount to 650,000l.; part of which sum would be immediately raised for completing the stations and purchasing the additional locomotive and other stock, the remainder being liable to be called up from time to time, according to the progress of the extension line and branches, and any surplus, beyond the amount required, of course remaining uncalled for in the hands of the proprietors. The Directors recommend, also, that the dividends be payable to the holders of the different shares, in the proportion of the capital called up and paid on each respectively, before the end of the half-year for which the dividend is declared.

The traffic upon the line to Littleborough, from 30th June up to the 5th October last, at which time the line was opened from Normanton to Hebden Bridge, amounted to 15,002l. 12s. 6d; and the traffic upon both parts of the line from that period up to the 31st December last, when the remainder of the line, with the exception of the Summit Tunnel, was opened, amounted to 17,463l. 11s. 9d. The total number of passengers carried during the six months ending on the 31st day of December last was 401,883, over an average distance of eight miles and a half each, which is equivalent to a number of 3,415,580 travelling one mile each, or about 7,000,000 per annum. The increase of traffic upon opening the successive lengths at the eastern end has not been proportional to the extent of the line opened; but it should be remembered, that the portion of the line between Hebden Bridge and Normanton was deprived, by its isolated position, of almost entirely all goods traffic passing eastward from Manchester; and that, in consequence of the circuitous route of this Railway, and the charges of vehicles required over the unfinished part of about ten miles long, very few passengers availed themselves of a railway throughout; the greater part of the traffic on that part having consisted of the carriage of passengers and parcels for short intermediate distances. Since the opening, however, of the line from Hebden Bridge up to the north end of the Summit Tunnel, the traffic in both goods and passengers, but especially the former, has increased; and no doubt remains, that, in addition to the passenger traffic, a much larger amount of merchandise, grain, and cattle will be eventually carried than has hitherto been assumed. In making arrangements for the carrying business, the Directors continue as desirous as formerly to co-operate with the carriers, but are at the same time prepared to adopt other measures, should the interest of the Company require them.

During the last two months, the receipts from passengers and goods have averaged 1,863l. 2s. 4d. per week, after deducting the tolls due to the North Midland Company. Taking into view the season of the year, the many serious and unavoidable inconveniences which passengers have experienced from the unfinished, and, in many cases, temporary accommodation afforded them, and which have hitherto deprived the company of any important share of the through traffic, as proved by the fact that the fares yet received do not average 2s. from each passenger, the above amount is fully equal to what might have been expected.

The publication of the weekly returns of traffic was suspended in October last, from the impossibility of accompanying them at the time with any accurate state of the deductions to which they were subject, and without which they were only calculated to mislead the proprietors; but now that the tolls of the North Midland Company are defined, and the temporary disbursements for coaches and omnibuses are either done away with or reduced to a trifling amount, the objection no longer continues, and the directors will willingly resume the publication of the amount of weekly traffic as formerly.

With respect to the bill lately introduced into Parliament for the amendment of Lord Seymour's act for the regulation of railways, the Directors have to report that they have not hitherto thought it necessary to interfere, by petition or otherwise, in opposition to any of the enactments of that bill, although they cannot but fear that some injustice will arise from hasty attempts to remedy evils by legislative means, which practice and experience can alone effectually overcome. On referring to the list of accidents on various railways, on which the recommendations of the commissioners for the security of the public are founded, the Directors cannot refrain from congratulating the proprietors upon the exemption, hitherto, of this company from any such casualty as those mentioned in that report.

The subject of the tax upon passengers carried by railway is one which has claimed the most earnest consideration from the Directors, as being calculated, at present, materially to injure the interest of this Company. The Report of the Select Committee, last year, founded chiefly upon the evidence given before them by Captain Laws, R.N., strongly recommended the adoption of a modification of the present duty, upon the principle, if not quite to the extent, of the system proposed by him; and the Directors entertain confident expectations, that some measure will be introduced, at an early period, before Parliament, which shall be conducive to the advantage both of railway Companies and of the public, by rendering less oppressive the present excessive duty upon low fares; amounting, upon the average fares charged by this and a few other English Companies, and by all the Scotch railway Companies, to no less than 1-12th to 1-10th of the whole, or from eight to ten per cent. It is to be regretted, that, in consequence of the length of time which has been suffered to elapse before the inequality of the present duty has become fully understood, such a measure is viewed as one which must either interfere with the established interests of many of the railway Companies, by imposing an increased rate of duty upon first-class passengers, or must cause a deficiency in the revenue derived from this source; and a strong opposition, therefore, will probably be made to its introduction. But your Directors are of opinion, that neither consequence will necessarily follow; though they admit, that some Companies would lose a considerable yearly sum, unless they should increase their traffic, and diminish the rate of duty, by lowering their charges. The former of these effects may be considered as already proved by experience; and thus, under the graduated scale of duty, which makes the tax proportional to the fare, the interests of the Companies, as well as those of the public, would both lead to a diminution of the fares. As an instance of the unequal pressure of this tax, it may be stated, that, under the law as it exists, an instance is afforded in the passenger returns of railway Companies for the past year; in which, while the number of passengers booked and carried has corresponded almost exactly with the number conveyed by this Company, and the public convenience afforded by the two companies has consequently, in comparison with their respective receipts, been equal; and the duty paid by the Company alluded to has not amounted to 4¼ per cent. upon their receipts, while the charge on this Company has been 7¼ per cent.

Since the last half-yearly meeting, Henry Forth, Esq., one of the original Directors of this Company has tendered his resignation, which has been accepted, and Leo Schuster, Esq., has been named by the Directors, to supply his place.

The period of service of the three following Directors expires at this time, viz.—James Simpson, Esq., Robert Gill, Esq., and William Entwisle, Esq., who are re-eligible, according to the Act of Incorporation of the Company.

Mr. Entwisle then read—

THE ENGINEERS' REPORT.

To the Directors of the Manchester and Leeds Railway.

Gentlemen,—Since our last half-yearly report, the Railway (with the exception of the Summit Tunnel) has been opened throughout, and in the year 1840; and, although an accident to a portion of the invert has delayed the final completion of that work, we are happy to say, that it will be ready for the reception of traffic on Monday next, the 1st of March. Had this unforeseen interruption to the completion of the Summit Tunnel not occurred, the whole line would have been opened, as promised, in 1840.

That portion of the invert which showed symptoms of weakness, and caused us to recommend the opening of the tunnel to be postponed, has now been removed, and re-placed with an exceedingly strong invert of stone; and, we have no doubt whatever, will prove a very ample and sufficient support, and render the tunnel fully equal, in point of security and excellence of workmanship, to any similar work hitherto executed.

The severity of the winter has been a very complete test of the works of the line, and particularly of those only recently finished.

It gives us pleasure, however, to state that they have stood both frost and flood without injury. The cuttings, and embankments, bridges and tunnels, have all passed the winter without a single failure. This, considering the numerous and extensive bridges on the line, particularly those over the river Calder, the gigantic character of the works generally, and the difficult nature of some of the ground, is highly satisfactory, and gives us great confidence in stating that the line will be maintained at a cheap rate.

The greater portion of the arches at the Manchester terminus will be fitted up as warehouses, and ready for the reception of goods by the 1st of March, and, in connection with the hoisting machine, which will also then be ready, will afford facilities for an extensive goods traffic. By the erection of this machine, the loaded waggons can be raised and lowered at pleasure from the railway above, into the arches or warehouses, or on to the Company's extensive plot of land below; thus saving the heavy expense of raising the whole station-land to the level of the railway, and rendering the difference in level a matter of no inconvenience, at the same time giving the Company the full benefit of using as warehouses all the arches absolutely necessary for keeping the railways at the higher level.

By this arrangement also, the bustle of loading and unloading will be kept below, free from the passengers, and the waggons will come up sheeted, and ready to arrange in proper trains for attaching at once to the locomotive engine.

By one of these machines there will be no difficulty in transmitting from one level to the other, 1,000 tons of goods in a day.

The works on the Heywood Branch Line are rapidly drawing towards completion, and bid fair for an early opening in April next. The favourable nature of the materials has enabled them to be constructed at an exceedingly small cost.

We are, gentlemen, your obedient servants,

GEORGE STEPHENSON,
THOS. L. GOOCH.

(To be continued.)

BRISTOL AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

(From the *Bristol Gazette*.)

THE Annual Meeting of the Proprietors in this undertaking was held on Saturday, February 27, at their offices in the Exchange, Bristol.

GEORGE JONES, Esq., in the Chair.

The proceedings were of little interest to any beyond the proprietors. The Report, which was read by the Secretary, Mr. Fletcher, stated that there was little to lay before the proprietors, beyond the pleasing fact that the new arrangement made with the Lords of Westerleigh had produced such an improvement in the income of the Company, as to justify the Directors in recommending that a dividend of 5l. per cent. on the capital stock of the Company should be declared for the year ending 1840. The total receipts for the last year, including a balance of 1,159l. 15s. 8½d. brought forward, amounted to 5,915l. 12s. 11½d.

On the motion of W. FRIPP, Esq., it was then resolved that a dividend of 5l. per cent. on the capital stock, being equal to 2l. 10s. per share, be declared, and that the same be payable on and after the 13th of March.

T. Kington, John Harford, F. Fry, T. Rankin, and H. Fyson, Esqrs. were re-elected trustees.

Thanks having been voted to the Directors and the Chairman, the meeting broke up.

MANCHESTER AND DERBY RAILWAY (CHURNET VALLEY.)—NOTICE IS HEREBY GIVEN, That application is intended to be made to Parliament, in the next Session, for an Act to make and maintain a Railway, with all proper works and conveniences connected therewith, commencing at the line of the Manchester and Birmingham Railway, at or near a certain road branching out of the public highway leading from Stockport, by Adswood Hall, to Cheadle Moseley, in the township of Cheadle Bulkeley, in the parish of Cheadle, in the county of Chester, passing thence from, in, through, or into the several parishes, townships, and extra-parochial or other places of Cheadle, Cheadle Bulkeley, Cheadle Moseley, Stockport, Bramhall otherwise Bromhall, Norbury, Poynton, Worth, Adlington, Hope Green, Bollington, Butley otherwise Butleigh, Butley-cum-Newton, Whiteley Green, Fitherington, Hurdsfield, Upton, Macclesfield, Macclesfield Forest, Sutton, Prestbury, Gawsworth, North Rode, Bosley otherwise Boseley, otherwise Bosley and Lea, otherwise Lea Bosley, or some of them, in the said county of Chester; Rushton, Rushton Spencer, Rushton James, Rushton Marsh, Rushton Middle, Cloud Wood, Heaton, Horton, Horton Hay, Rudyard, Rudyard and Caudery, Leek-Frith, Longsden otherwise Longsdon, Westwood, Leek, Lowe otherwise Leek-Lowe, Leek and Lowe, Harracles, Pool End, Whites Bridge, Endon, Stanley, Cheddleton, Basford, Old Basford, New Basford, Basford Green, Ashcombe, Felthouse, Woodlands, Consall otherwise Cunsall, Ipstones, Belmont, Froghall, Mosslee, Hollins, Kingsley, Whiston Eaves, Whiston, Hazles, Hazles Cross, Kingsley-Holt, Bank Top, Foxt, Morridge with Foxt, Checkley, Lees, Booth, Eaves Ford, Oakamoor, Cheadle, Cheadle Grange otherwise Hounds Cheadle, Above Park, Alton otherwise Alveton, Farley, Cotton, Widness, Rakes Dale, Hausley, Crumpwood, Holbrook, Ellastone otherwise Ellaston, Prestwood, Alton, Quixhill otherwise Quick-hill in Rocester, Stubwood, Rocester Green, Combridge and Croxden, or some of them, in the county of Stafford; and Doveridge otherwise Dovebridge, Eaton, Eaton Dovedale, Sed-sall, Clownholme, Doveridge Woodhouse, Marston Montgomery, Cubley, Waldley otherwise Wardley, Marston Woodhouse, Somersall, Somersall Herbert, Hill Somersall, Church Somersall, Potters Somersall, Aston, Sudbury, Barchill Coton wood, Boylestone otherwise Boilston otherwise Boilestone, Sapporton otherwise Saperton, Church Broughton, Barton Blount, Barton fields, Barton Park, Longford, Alkmanton, Thurvaston, Upper Thurvaston, Nether or Lower Thurvaston, Sutton on the Hill, Upper Mackley, Mamerton, Osliston otherwise Osleston, Oslaston and Thurvaston, Cropo otherwise Cropper, Cropo top, The Spath, Suffield, Lane end, Trusley, Dalbury, Dalbury Lees, Trusley Elms, Dalbury Wood-house, Tyrell Hays, Rook hills, Sneerills, Etwall, Bearwardcote, Humbleton, Rowditch, Thornhill, Radbourne, Mickle Over, Little Over, Pot lac otherwise Pot lock, Markeaton, Mackworth, Normanton, Boulton, Osmaston, Litchurch, Saint Peter Derby, Saint Werburgh, Derby, Saint Alkmund Derby, Little Chester, Darley, and Little Derby, or some of them, in the County of Derby, and terminating at or near the Town of Derby, and on southern side thereof, in the the Township of Litchurch, in the said Parish of St. Peter Derby, in the said County of Derby, and in or near to the joint station of the North Midland, Midland Counties, and Birmingham and Derby Junction Railways; or otherwise terminating near to the said town of Derby on the northern side thereof, in the parish of St. Alkmund Derby, in the said county of Derby, and near to a certain bridge for carrying the North Midland Railway over the Turnpike Road leading from Derby to Nottingham. And it is intended by the Act so to be applied for to take power to connect the main line of the said intended Railway with the Branch Railway to Macclesfield, authorized to be made by the Manchester and Birmingham Railway Company, if the same shall be carried into effect, and for such purpose to make a railway commencing by a junction with the said intended main line, or at or near the Town of Macclesfield, in the Township of Macclesfield, in the said Parish of Prestbury, in the said county of Chester, and terminating by a junction with the said Branch Railway, in the Township of Tutherington, in the said Parish of Prestbury, and in the County of Chester aforesaid, and near to a certain bridge called Beach Bridge, which said last mentioned Railway is intended to pass from, in, through, or into the several Parishes, Townships, and extra-parochial or other places of Macclesfield, Sutton, Hurdsfield, Fitherington, and Prestbury, or some of them, in the said County of Chester. And it is proposed by the said intended Act to incorporate a Company for the purpose of constructing and maintaining the said intended Railway or Railways, and Works, with powers to levy tolls, rates, and duties on and for the use of the same; and also to empower such Company to alter and divert to the extent shown on the plans to be deposited as hereinafter mentioned, such roads, streets, rivers, streams, canals, and railways or tramways, as it may be necessary to divert for the purpose of constructing and maintaining the said intended Railway or Railways and Works, and to deviate in the construction of the said intended Railway or Railways, from the line thereof to be laid down on the said plans, to such extent as will be defined thereon.

And notice is hereby further given, that maps or plans and sections, describing the line and levels of the said intended Railway or Railways and the works to be connected therewith, and the Lands which may be required to be taken for the purposes thereof, together with books of reference to such plans, containing the names of the owners or reputed owners, lessees or reputed lessees, and occupiers of such lands respectively, will be deposited on or before the first day of March in the present year, with the Clerk of the Peace for the said county of Chester, at his office in Chester; with the Clerk of the Peace for the said county of Stafford, at his office in Stafford; and with the Clerk of the Peace for the said county of Derby, at his office in Chesterfield; and that a copy of so much of the said maps or plans, sections, and books of reference, as relates to each of the parishes, in or through which the said intended Railway or Railways and Works will be made or pass, will be deposited for public inspection, on or before the first day of April next, with the Parish Clerk of each of such Parishes.

Dated the Seventeenth day of February, 1841.

BERRIDGE AND MACAULAY,
Solicitors, Leicester.

STAFFORD AND RUGBY RAILWAY.—TAMWORTH.—At a numerous and highly respectable MEETING of the Inhabitants of the Town and Neighbourhood of Tamworth, holden at the Town Hall, Tamworth, on Saturday, the 6th day of March, 1841;

THOMAS BUCKERFIELD, Esq., Mayor, in the Chair;

the following resolutions were unanimously passed:—

Moved by John Hall, Esq., and seconded by W. Platts, Esq.:

1. Resolved,—That this meeting having received with the utmost satisfaction the intelligence of the Stafford and Rugby Railway Bill having triumphantly passed the Committee on Standing Orders do petition both Houses of Parliament to allow the bill for making the said railway to pass into a law, and that the petition now read to the meeting be adopted.

Moved by W. Parsons, Esq., and seconded by W. Robinson, Esq.:

2. Resolved,—That this meeting, deeply impressed with the great importance of the advantages which the Stafford and Rugby Railway holds out to this town and neighbourhood, do request their representatives in Parliament to give the same valuable support to this measure, which they so kindly gave to the Manchester Extension Railway during the session of 1839.

Moved by H. Stokes, Esq., and seconded by T. Bramall, Esq.:

3. That Sir Robert Peel be requested to present the petition which has been read to and adopted by the meeting to the House of Commons, and also to support the prayer of it by every means in his power.

THOMAS BUCKERFIELD, Mayor.

The Mayor having left the chair, and the same having been taken by John Harding, Esq.,

It was moved by W. Knight, Esq.; seconded by E. B. Hamel, Esq., and resolved:

That the thanks of this meeting be given to the Mayor for his able conduct in the chair. JOHN HARDING.

RAILWAY MAP.—Just Published, DAVIES'S METROPOLITAN RAILWAY MAP, being the most accurate Map of London and its Environs, to the extent of about ten miles, ever published; comprising all the Railways and Stations, new Cemeteries, Boundaries of the Metropolitan Boroughs, new Roads, Docks, Piers, and all modern improvements.

Published by B. R. Davies, 16, George-street, Euston-square; Letts and Son, Cornhill; and Charles Chiffins, 9, Southampton Buildings, Holborn; and may be had of all Map and Booksellers.

Price, on Atlas Sheet, 2s. 6d. plain; 4s. 6d. fully coloured. Ditto, mounted on canvass and bound, 7s. 6d.; Ditto, on rollers, varnished, &c., 9s. 6d.

MANCHESTER AND BIRMINGHAM RAILWAY.—At the Half-Yearly General Meeting of the Proprietors, held, pursuant to notice, on Thursday, the 4th day of March, 1841, at the York Hotel, in Manchester, at 12 o'clock at noon; at which meeting there were personally present at the time appointed (in accordance with the requirements of the Act of Parliament) upwards of twenty-five shareholders, holding in the aggregate at least five hundred shares;

ROBERT C. SHARP, Esq., one of the Directors, (the Chairman and Deputy-Chairman being absent), in the Chair.

It was moved by John Bradshaw, Esq.; seconded by George Sandars, Esq., and unanimously resolved—

That the Seal of the Company be affixed to the Register of Proprietors now produced. And the seal was affixed accordingly in the presence of the meeting.

The following Reports and statements of accounts were read, viz:—

REPORT OF THE DIRECTORS.

The state of the works along the line of railway between Stockport and Crewe being a subject of great interest to the proprietors at present, the Directors refer with satisfaction to the Report of the Engineer, and to the sections now exhibited in the room, which, together, remove all doubt as to the completion of the line to Crewe in March next, according to a condition of the contracts.

THE MACCLESFIELD BRANCH.

When the Directors made their last half-yearly Report, they expected the works on this branch to be placed under contract in the course of the ensuing month; this was, however, prevented by circumstances over which the Directors had no control. These matters are now in course of arrangement, and when arranged, the works may at once be let.

THE STATION AT MANCHESTER.

From the numerous designs for a station in this town submitted for the direction of the Directors, in accordance with an advertisement offering a premium for the most appropriate design, they have selected one (the joint production of Mr. Richard Cromwell Carpenter and Mr. John Blyth, of London) which they hope will meet with approval, as combining every requisite convenience for business with a handsome elevation, yet divested of extraneous ornament. Those gentlemen are engaged to superintend the erection of the station, and are now proceeding with the working drawings and specifications, so as to enable the Directors to place the whole of the works between Travis-street and Ducie-street under contract at an early period, and thus insure their completion simultaneously with the opening of the line to Crewe.

The Directors have the satisfaction to report that a negotiation has been opened with the Manchester, Sheffield, and Ashton-under-Lyne Railway Company for the joint use of the station, its approaches, and the adjoining warehouses, upon terms of mutual advantage.

COST OF THE LINE.

Although the Macclesfield branch and the station at Manchester are not yet contracted for, the Directors feel that the Proprietors have a right to expect from them as accurate an estimate as they are able to give, of the total amount of capital that will be required to complete and furnish the 40 miles of railway. After the most careful consideration, they confidently place before them the following statement:—

FURTHER CAPITAL REQUIRED.

For works	£494,432	0	0
Manchester and other stations, engine and carriage depot, workshops, sidings, &c.	108,668	0	0
Land for Manchester Station, and on the Macclesfield branch, after deducting the estimated value of land to be re-sold	13,100	0	0
Engines, carriages, waggons, trucks, horse-boxes, &c.	64,825	0	0
Engineering, law expenses, stamps, Direction, office expenses, and contingencies	12,000	0	0
	£693,026	0	0
Total expenditure to January 31st, 1841	1,106,912	5	2
Payments since	39,646	3	8
Estimated total capital required	£1,839,584	8	10

THE AGREEMENT WITH THE GRAND JUNCTION COMPANY.

This agreement provides that, so soon as the Manchester and Birmingham Railway shall be open to Crewe, the Grand Junction Company shall abandon their station at Manchester, and shall cease to carry any Manchester traffic to or from Birmingham, or to or from any intermediate place south of Crewe; and the Manchester and Birmingham Company stipulate on their part not to interfere with the Grand Junction traffic north of Crewe; nor (except when required for the convenience of the public) to take any traffic from station to station on the Grand Junction Railway. The agreement secures to the Manchester and Birmingham Company the right of working their traffic and using their own carriages, and power on the Grand Junction line between Crewe and Birmingham, together with every other privilege which the Grand Junction Company at present enjoy on the Liverpool and Manchester Railway, on paying a toll to the Grand Junction Company after the rate of not exceeding four fifths of a penny per passenger per mile, and of one penny per ton per mile on goods, the maximum tollage at these rates being fixed at £1,000 per mile per annum, beyond which no further payment is to be made. Should the Manchester and Birmingham Company require a greater extent of station accommodation on the Grand Junction line than can be afforded by the present buildings of the Grand Junction Company, the last named Company will expend any sum not exceeding ten thousand pounds, required to provide these conveniences; the Manchester and Birmingham Company paying a rental after the rate of six per cent. per annum on such expenditure.

The Directors have always considered this arrangement with the Grand Junction Company as one which, whilst it affords to the Grand Junction proprietors considerable benefits, at the same time secures to the Manchester and Birmingham Company, at a comparatively light cost, the important and permanent advantage of an entire line of railway between Manchester and Birmingham.

LINE TO STOCKPORT.

The income and profit derived from passengers and parcels on the 5 miles of railway now open between Manchester and Stockport have been fully as great as was anticipated; and the Directors feel confident that this traffic will more than realize the most sanguine expectations that have been formed of it: and although 450,019 passengers have been conveyed since the opening of the line in June last, the Directors have the greatest satisfaction in stating that not one of them has been injured in the slightest degree by accident.

The opening of a portion of the Manchester, Sheffield and Ashton under-Lyne Railway has lately been announced by the Directors of the Company, and as a toll of twopence per passenger will be payable to this Company, a considerable addition to the income will arise.

LOANS.

Until after the 11th January last the Directors were not in a position to grant mortgages, yet the amount already received on mortgage is 147,008*l.* 2s. 10d., a sum far exceeding the expectations of the Directors. Further sums, amounting to 41,589*l.* have been engaged (together 188,597*l.* 2s. 10d.) and additional offers are received daily,—leading to the confident hope that, when the peculiarly good security offered by the Company to the mortgagees, and the actual position of the Company become more generally known, the money required for the completion of the undertaking will be thus obtained, and so render unnecessary any further call upon the proprietors.

FORFEITURE FOR SHARES.

In August last the Directors passed a resolution declaring 1,234 shares forfeited, for the non-payment of calls then due. All arrears have since been paid upon 78 shares, leaving 1,156 shares now to be dealt with. The Directors recommend the Proprietors to confirm the forfeiture of the

Digitized by Google

following 249 shares, and to authorise the Directors to sell them at such time and in such manner as may appear to them most conducive to the interests of the Company:—

Nos.	Nos.	Nos.
386 to 390	979 to 998	1,154 to 1,156
1,177 to 1,193	1,745 to 1,747	2,866 to 2,885
5,604 to 5,613	8,236 to 8,324	9,580 to 9,589
15,391 to 15,400	17,793 to 17,802	20,070 to 20,080
20,221 to 20,240	21,351 to 21,355	22,226 to 22,235
29,803	29,885 to 29,889, all inclusive.	

ARREARS OF CALLS.

The Directors trust that the proprietors generally will approve of the measures they have lately adopted with a view to compel the payment of calls, and they earnestly hope that those proprietors who are in arrear will relieve them from further proceedings of this nature by promptly paying the calls now due.

The Half-yearly Financial Statement will be submitted to the meeting, together with a general account of the receipts and disbursements of the Company.

BOARD OF DIRECTORS.

A vacancy having occurred at the Board, it has been supplied by the appointment of Mr. Leo Schuster.

In conclusion, the Directors repeat, with confidence, the opinion they have uniformly expressed as to the remuneration this line of railway will afford to the proprietors.

March 3rd, 1841.

ENGINEER'S REPORT.

To the Board of Directors of the Manchester and Birmingham Railway.

Gentlemen.—I have the pleasure of laying before you a Report of the progress of the works during the last half year.

The Stockport Viaduct Contract has been satisfactorily completed; the last stone having been laid on the 21st of December. The work has been executed within my estimate, but there is an excess for contingencies of about 3 per cent. upon the contract amount.

The Castle Street Contract is rapidly drawing towards completion. The heaviest work is the Castle Street archway, 297 yards long, of which about 200 yards are finished; 45,000 yards of excavation must pass through this archway after its completion. All the arches of the Mecker Brook Viaduct are turned. One occupation bridge over the excavation at the north end of the contract is not commenced; all the other bridges, public and private, both over and under the railway, together with the culverts, are finished, or in an advanced state. One mile and a half of road is ready to receive the ballasting for the permanent way.

The Cheadle Hulme Contract.—The viaduct over the Dean Valley has all its foundations laid, except that of the north abutment, and all the bridges for the communications under the railway are nearly finished. Three-tenths of the whole of the excavation are finished. The heaviest work is the embankment at the north end of the contract, containing 164,800 cubic yards, of which 44,000 are executed. One mile is ready to receive the ballasting for the permanent way.

The Wilmslow Contract.—The heaviest work is the viaduct over the Bollin, with an adjacent excavation of 100,800 cubic yards on the north side of the valley. The foundations of the viaduct are just commenced. The heaviest excavation contains 122,000 cubic yards, of which two-fifths are executed.

The Peover Contract.—All the bridges under the railway except two are in progress, some of them are so far advanced as to enable the contractors to carry their roads over them. The south abutment and all the piers of the Peover viaduct are built to an average height of five feet above the surface of the ground. The north abutment will be commenced in a few days. All the culverts are finished, or nearly so. One-third of the whole of the excavation is executed. Two miles and a quarter are ballasted in readiness for laying the permanent way, and another mile is ready for the ballasting.

The Dane Viaduct Contract.—The foundations of ten piers are laid: four are erected to the height of the imposts of the arches, and six have an average height of six feet above the surface of the ground. Both abutments will be commenced next month. The centerings are in readiness, and notwithstanding the suspension of operations occasioned by the severity of the winter, the arrangements of the contractors are such that I do not entertain any doubt as to its completion within the specified time.

The Sandbach Contract.—The greater part of the culverts and archways under the railway are in progress and are nearly completed. Both abutments and all the piers of the Wheelock Viaduct are erected to the height of the springing of the arches, which will be turned, and the viaduct finished in about seven weeks, when the embankment will reach it. The Wheelock embankment is the heaviest work, and contains 260,000 cubic yards, of which 120,000 are completed; the whole is therefore under perfect command as to time.

This contract will complete the line to Crewe, where it joins the Grand Junction Railway.

The whole of the works are proceeding very satisfactorily, and I see no reason to apprehend any disappointment as to the time fixed for their completion, namely, the month of March next year, which nothing but the setting in and long continuance of most unfavourable weather can prevent.

In reference to the cost of the works it is proper to mention that the excess likely to arise upon the contract amounts will be small.

Upon the Castle street contract there will be an excess of about £2,300, arising from the measures which have been and necessary to be adopted to conduct the water out of the excavation to the extensive bleach works of Mr. Sykes, the railway having intercepted the springs which supplied his reservoirs.

I have carefully estimated the amount of contingencies likely to arise upon all the other contracts, and find that including those just specified, they will not amount to more than 2 per cent. upon the lettings.

I however beg leave to embrace this opportunity of stating that after adding the unusually small amount of contingencies now particularised, the whole of the works will be completed within my estimates.

I am, gentlemen, your obedient servant,

GEO. W. BUCK.

1841, March 2nd.

Audited, J. H. STANWAY, Accountant.

It was moved by William Rawson, Esq., seconded by John Hoyle, Esq., and unanimously resolved—

That the report of the Directors be adopted, and that the same with the report from the engineer, and the statements of account now produced, be printed for circulation among the proprietors.

It was moved by J. H. Wanklyn, Esq., seconded by T. T. Taylor, Esq., and unanimously resolved—

That the Half-yearly accounts, up to the 31st of January last, having been produced as required by the Acts of Parliament, and being deemed satisfactory, be and the same are hereby allowed and passed.

It was moved by Henry Newbery, Esq., seconded by Henry Pershouse, Esq., and unanimously resolved—

That the declarations of forfeiture made by the Directors at the respective meetings of their Board, on the 13th and 27th days of August, 1840, of shares numbered 1,154 to 1,156 1,177 to 1,193, 1,745 to 1,747, 8,236 to 8,324, 29,885 to 29,889, 386 to 390, 2,866 to 2,885, 20,070 to 20,080, 29,003, 15,391 to 15,400, 20,221 to 20,240, 21,351 to 21,355, 5,604 to 5,613, 979 to 998, 23,226 to 23,235, 9,580 to 9,589, 17,793 to 17,802, all inclusive, being 249 in number, be and the same are hereby confirmed, and that the same shares be respectively sold at such time or times, and in such manner, as the Directors may think fit.

ROBERT C. SHARP, Chairman.

The business of the meeting being terminated, John Bradshaw, Esq., was called to the chair, when it was

Moved by D. Waddington, Esq., and unanimously resolved—

That the best thanks of this meeting be given to Mr. Sharp, for his courteous and satisfactory conduct in the chair; and further that the best thanks of the proprietors at large are due to the Directors generally, for the great attention which they have shewn to the interests of the Company—for the report which has been read to the meeting, and for having brought this undertaking into its present highly satisfactory position.

JOHN BRADSHAW.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive TENDERS for the LOAN of MONEY, in sums of not less than £300 each, on interest at the rate of five per cent. per annum, for a term not less than three years. The Tenders are to express the sums and the term of years for which the same are proposed to be lent.

The Tenders to be addressed to the Secretary, at the Company's Office in Waterloo-street, Birmingham; to H. Patterson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton-street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 10th day of March, 1841.

AYLESBURY RAILWAY COMPANY.—Notice is hereby given, that the Half-yearly General Meeting of the said Company will be held at the White Hart Inn, in Aylesbury, on Thursday, the 18th day of March instant, at Twelve o'clock at noon, pursuant to the Act of Incorporation of the said Company; at which meeting two Directors will be elected, in the place of the two Directors going out of office.

The Chair will be taken at one o'clock precisely.

Given under my hand this 5th day of March, 1841.
THOMAS TINDAL,
Deputy Chairman of the Directors.

LONDON AND GREENWICH RAILWAY.—Offices, London Terminus, 9th March, 1841.—Notice is hereby given, That the Transfer Books of the Second and Third Capital will Close on Saturday, the 20th inst., and continue shut until Wednesday, the 31st inst.; and that the Half-Year's Interest, at the rate of 5 per cent. per annum, will be paid at this office on and after the 31st inst. (Tuesdays and Saturdays excepted), from Ten till Four o'clock.—By order of the Board. J. Y. AKERMAN.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of six per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1844.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff, or to Messrs. Glyn, Halifax, Mills and Co., Bankers, London, Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years, for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

TO IRON FOUNDERS, AGRICULTURAL IMPLEMENT MAKERS, AND OTHERS.—To be Disposed of immediately, that Old Established Iron Foundry, and Agricultural Implement Manufactory, situated at Greensted Green, in the Parish of Halsted, in the County of Essex, lately carried on by the late Asa Hayward, deceased.

The above business, which is to be put off entirely in consequence of the death of Mr. Hayward, offers advantages and opportunities seldom to be met with.

Any person wishing to treat for the same will be furnished with full particulars, and afforded the most satisfactory means of judging of the concern, by applying to Mr. William Fisher Hobbs, Marks Hall, near Coggeshall; Mr. Abraham Rayner, Halsted; or Mr. Smoothy, Solicitor, Braintree, Essex.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of salt and sea water, and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

RAILWAY MATERIALS AND IMPLEMENTS.—Messrs. MULLINS and MAC MAHON will Sell by Private Treaty on the Lancaster and Preston Junction line, the following articles, in excellent condition for immediate use:—

Three LOCOMOTIVE ENGINES and TENDERS, in good working order, one a 12 inch cylinder, with 5 feet wheels (coupled), and two of 11 inch. One with 4 feet 6 inch driving wheels, the other with 5 feet driving wheels.

200 to 300 Earth Waggons, of the very best construction, part equal to carry 2¼ yards, with 2 feet 6 inch wheels, and part 1¼ yards per waggon, with 2 feet wheels.

Together with a large quantity of Railway Bars, from 30lbs. to 50lbs. per yard, with Chairs and Crossings, and a variety of other articles used in extensive Railway works.

The whole of the above materials, &c. are in convenient situations for either water or railway conveyance to any part of the kingdom.

Application to be made at their Office, Fishergate, Preston.

10th March, 1841.

MOST VALUABLE PATENT RIGHT.

TO BE SOLD BY AUCTION. By Mr. FISHER. (By order of the Mortgagees and Assignee of Mr. Jeremiah Grime, a Bankrupt.) On the 6th day of April, 1841, at Six o'Clock in the Evening, at the Albion Hotel, Piccadilly, Manchester, subject to such Conditions as will be then and there produced.

The very valuable right to certain Letters Patent for England and Wales, bearing date the 21st February, 1838, for 14 years, granted by her present Majesty to Jeremiah Grime, of Bury, in the county of Lancaster, for certain Improvements in manufacturing Wheels which are applicable to Locomotive Engines, Tenders, and Carriages, and which are principally designed to run upon Railways.

The object of this Patent is to construct a solid wrought iron Wheel with Tyre, Flanche, Spokes, and Nave all in one mass, not separately put together as is now usual.

The immense advantages of safety and durability which this wheel possesses over all others, added to the great facility and economy with which it may be produced, render the Patent right a safe and most profitable investment, particularly to parties connected with railways or the manufacture of Locomotive Engines.

A 3 feet 6 inches wheel in one entire mass of wrought iron, and welded at one blow, may now be seen at the Victoria Gallery in the Manchester Exchange.

For further particulars, application may be made to Mr. MAKINSON, 44, Market-street, Manchester, Solicitor to the Mortgagees; Messrs. I. A. & J. Grundy, of Bury, Solicitors to the Assignee; or to Mr. Fisher, Auctioneer, 17, Princess-street, Manchester.

VALUABLE CART HORSES.—Mr. DIXON begs to announce that he is instructed by Messrs. Tanner and Hartnell, the extensive London and Gloucester Carriers, to sell by Public AUCTION, at his Repository, Barbican, on FRIDAY, March 19, 1841, commencing at Twelve o'Clock, TWELVE valuable, young, powerful, CART HORSES, being the two well-known extraordinary fine Teams, that have been working their Waggons between Farringdon Road Station and Cirencester, sold in consequence of the late further opening of the Great Western Railway.

On view, and Catalogues had two days before the Sale.

N.B. Mr. Dixon most respectfully begs to announce, that his sale on the above day must positively commence at 11 o'clock precisely, on the account of the number and value of the lots.

To be disposed of by Private Contract, an excellent and highly lucrative Van and Waggon Business, with the valuable lease of a large business premises, situated in the heart of the City, with capital entrances and in excellent repair, having been recently built.

The Stock, which are in good working condition, may be taken at a valuation, and are parted with solely in consequence of the ill health of the Proprietor, with immediate possession if required.

For further particulars apply as above.

THIRTY-FIVE VERY SUPERIOR CART HORSES, and their Harness.—To be Sold by AUCTION by Mr. DIXON, at his Repository, Barbican, on FRIDAY, March 19, 1841, commencing at One o'Clock precisely, Thirty-five remarkably fine shaped, fresh, young, powerful CART HORSES, the genuine property of Mr. George Burge, have been employed on the Great Western Railway, and sold in consequence of the Contract on which they have been working being nearly completed.

Colours.—Bays, Blacks, Browns, Roans, and Greys.

The above lot of young valuable seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expense for the above Contract, and are now in remarkable fine condition.

Also 25 excellent Brick Carts.

On view, and catalogues had two days before the Sale.

Just published, price 2s., with Engravings,

CRAIG'S ROTATORY STEAM-ENGINE, Explained and Illustrated, with a concise Review of the Invention of the Piston Engine, and a comparative estimate of their relative power and advantages.

"Est quodam prodire tenus, si non datur ultra."

London: Houlston and Stoneman, 65, Paternoster-row.

TO RAILWAY CONTRACTORS, IRON-FOUNDERS, &c. Mr. W. Brown has received directions from Mr. John R. Chapman to sell by Public Auction, on Wednesday, March 24, 1841, at Eleven o'clock, the whole of his temporary Railway Materials, now lying at the Junction of the Aylesbury and London and Birmingham Railway, at Cheddington, Bucks, within one mile of the Grand Junction Canal:—consisting of 100 Tons of Malleable Iron Rails, T pattern) weighing 36 lbs. per lineal yard, and 50 Tons of flange-bottomed ditto, weighing 22 lbs. per yard; also 40 2-yard Earth Waggons, with 30-inch wheels, 3¼ inch Axles, and 4 feet 8½ inch Gauge, 15 one and a half-yard ditto, 3 feet 6 inch Gauge, 3 Hurries, about 25 Tons of Cast Iron Chairs, 20 Sets of Switches and Crossings, and various other valuable Railway Materials. The Rails will be Sold in Ten Ton Lots, and the Waggons in Lots of 5 each.

May be viewed by applying to Mr. D. Montague, of Cheddington; of whom Catalogues may be obtained; also at the Swan Inn, Leighton; the Harcourt Arms, Tring Station; and at the Offices of Mr. W. Brown, Land Agent, Tring, and New Road, Aylesbury.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every exectation. It has been used in Shipping Five Years.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

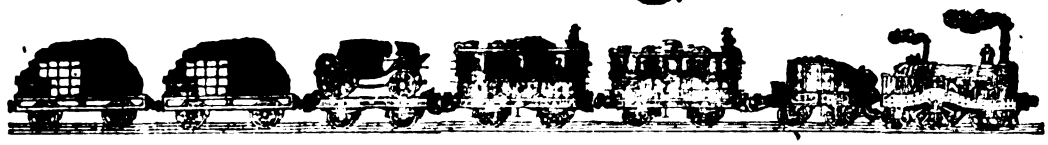
Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, and manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 27, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
ditto, ditto, with reserve of leads	1	14	0

December, 1840.



SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 918, Published this day, Price 3d., contains abstracts of the following recently enrolled Patents:—Lockett's, for certain improvements in manufacturing, preparing, and engraving cylinders, rollers, or other surfaces, for printing or embossing calicoes or other fabrics. Church's, for improvements applicable to wearing apparel, and in apparatus for making the same; and also in the method of preparing the articles for sale. Hicks's, for certain improvements in regulators or governors for regulating or adjusting the speed or rotary motion of steam engines, water wheels, and other machinery. Horne's, for improvements in the manufacture of hinges. Freeman's, for improvements in paving or covering roads and other ways or surfaces. Holmes's, for certain improvements in naval architecture and apparatus connected therewith, affording increased security from foundering and shipwreck. Motley's, for improvements in apparatus and means of burning concrete fatty matter. Whitehouse's, for improvements in the construction of spring hinges and door springs. Also, description with engravings of Ernest's Patent Beer Engine; Bucket wheel for making the most of a fall of water; Improved method of scarfing timber; Whitelaw and Stirrat's Patent Water Wheel. And papers on, The necessity for an improved state of philosophical nomenclature; New Theory of the Universe; New Postage Stamp—forging and coining; Solution of a Mathematical Problem: Perry's Double Patent Filter Inkstand; Howard and Symington's System of Condensation; New Fleet of Steam Frigates; Evolution of sulphuretted hydrogen by Sea Water; &c. &c. &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's Fleet-street, Middlesex.—Saturday, March 13, 1841.

GLASGOW, PAISLEY, KILMARNOCK AND AYR RAILWAY.—KILMARNOCK BRANCH.—TO RAILWAY CONTRACTORS AND BRIDGE BUILDERS.—The Directors of this Railway Company will meet at their office here on Wednesday the 21st April next, at 12 o'clock noon, to receive Tenders for executing the following contracts on the Kilmarnock Branch:—

Contract No. 1.—Being that portion of the line from the main line, near Kilcush, to near High Ardoch, and in length 4,030 yards or thereby.

Contract No. 2.—Being that portion of the line from near High Ardoch to near Doura Mains, and in length 4,420 yards or thereby. The viaduct across the Lugton Water will be included in this contract.

Contract No. 3.—Being that portion of the line from near Doura Mains to near Overton, and in length 3,550 yards or thereby. The bridge across the Annack Water will be included in this Contract.

Contract No. 4.—Being that portion of the line from near Overton to near Carmel Water, and in length 3,720 yards or thereby.

Contract No. 5.—Being that portion of the line from near Carmel Water to Kilmarnock, and in length 3,200 yards or thereby.

These Contracts, besides the cuttings and embankments, will comprehend all the bridges, with the fencing, laying the rails, and otherwise completing the several portions.

The Plans, Sections, and Specifications, with Drafts of the Contracts, will be seen here, on and after the 31st day of March current; and the Assistant Engineer will be at the railway station, Dairy, on the 2nd, 3rd, and 5th April next, at 10 o'clock forenoon, to point out the Contracts, and to accompany Contractors over the line.
